I rose to my toes to bellow out: "That's only my mine, you idiots!" But something had happened beyond my reckoning. The British officers were driving their men back, hustling them into formation. The men were horribly disturbed; they plucked at their cartridge clips and raised a shrill, sullen hum.

"The devil!" panted an officer, running up behind me. "Say, you damned traitor, do you know what happened? Didn't you know the enemy had a big mine under that wall that never got let off? And now it's fired! It will blow this whole place to hell! And those natives in the fort have shot-cartridges and are using them. Treason!"

He ran off in a long, swift arc, was hit, and tumbled asprawl.

I saw clearly what I had unwittingly done. No wonder the colonel had balked at my having that fake explosion, when the real thing was hidden somewhere under the trampled soil! But would it catch—that other mine? My throat tightened as if a steel cord had slipped about it. Where was Aileen? Behind that wall that would be blown into fragments in another second? I started forward.

I hadn't taken ten steps before I saw her—my wife!—rise suddenly, with a leap, upon the wall, her skirts blowing among the bobbing heads of the amazed natives who were representing the defenders of the fortress. Their shouts rang out; but above them I heard Aileen's clear cry:

"Father! Father!"

As a man sees things in an indistinct dream I saw the old impostor run out from his hiding place. He was in a blazing uniform and he waved a sword. . . . The smoke cleared away before a gust of breeze, and the major stood out there, waving his sword. The mine didn't explode. The fiasco was over. The picture was done! I heard the colonel harshly order the arrest of the old impostor, who still flourished his sword; and a squad of men marched out from the ranks briskly. But ——

Just before they reached the old man a native rose to the top of the wall, beside Aileen, uttered a shrill yell, and discharged his piece directly at Aileen's father. He crumpled up abjectly. The fellow, crazed with excitement, yelled once more and turned on Aileen. I caught the ferocious glare in his eyes and my heart burst with terror for my wife.

I bellowed something and leaped forward. The native heard my cry, spun about, and let me have it. I felt a tremendous cold sting right in my palate—it was exactly as though somebody had stopped the camera. The native had turned, dropped his rifle and snatched up a knife, which he held above Aileen's head for an interminable moment. I could neither move nor utter a sound. . . . The flashing weapon in that wild maniac's hand began to descend swiftly, and a huge darkness enveloped me . . . darkness!

Two weeks later I struggled into wakefulness in an Auckland hospital. Nobody said a word to my muttered queries, though they gave me to understand by curt headshakings that I was—that I was alone. A week later they shoved me out on the street, without a word. I made my way to the American Consulate, where they stared at me oddly.

"A steamer sails for the States this afternoon," the consul told me.

"I should like to ask ——" I began.

"Nothing!" he said decisively. "The affair is hushed up. You will find your stuff with the purser. You may thank the courtesy of the government. . . . Lucky man!"

Lucky? I was stung with the memory of what I had lost—of my wife, Aileen! As a man will, among the ruins of his life, I laughed long and loud, while the consul stared at me with a shocked face.

When I embarked on this ship I found my luggage in the room and a note from the purser, stating that he had in his safe a package of films, which he was authorized to deliver to me on my arrival in America—not before. I am waiting till I get ashore—to burn them!

VI

TURNER'S voice ceased. Presently I heard myself saying:

"Of course you will destroy them. But, first, you will look at them. You will have to know—what happened."

"I'm trying to see my way clear to it," he answered in a strangled voice. "I owe ten thousand dollars. I promised her I would justify her father by that picture. I'm ruined! I might make a little money out of what I could cut and splice. But"—he turned his agonized face to me—"Aileen was my wife!"

"Didn't you make sure she—she—that the native finished that—that stroke?" I asked.

There was no answer at all.

The next morning, in the customs sheds, Turner approached me diffidently.

"I got the films," he said thickly. "Someone developed the negatives and made a print—one of the camera men, likely. Good souls! You are right. I must see them—make what I can out of the stuff." Suddenly he cried out: "I must know! Would you go with me?"

That afternoon I found myself, with Turner, in an empty theater that Turner had got the use of for an hour. An unknown operator was fussing over the reels. It seemed that something was unusual about the way they were fixed.

The screen flashed into view at last; and, with the suddenness of a shot, a woman's face occupied the white sheet in front of us. It could be none other than Aileen Forsythe, I knew. For a moment she looked out at me, a splendid and living face, with luminous eyes, the mysterious self-possession of beauty, and the imperious pride of purpose. The operator murmured a homely sibilant of admiration. Turner groaned.

During the next half hour I saw Bismarckshafen before my eyes, with the people he had talked of. There was the bright beach and the compact mass of the fortress guarding it, with its two guns. I saw the competent and thoughtful colonel; young officers smiling at Aileen; grinning natives; the moveless bulk of a shattered cruiser

tilted in the waters of the bay. Flags flew and pennants fluttered. A lively and adventurous sight!

And always the girl—lovely, dominant and inscrutable.

Two long, incoherent reels it ran, shifting back and forth as it told the story of a beleaguered town; of brave assaults; of woman's wiles and the grim reality of a drumhead court-martial. The last foot flashed out into a close-up—the girl, seated bound amid her native jailers, looking out under shadowed brows at death . . . still and mysterious!

"Still another reel here," said the operator.

This time the trampled sand before the fortress appeared. Troops rushed to the assault of the wall thronged with savage defenders.

The scene grew tumultuous; officers rushed to and fro, and it seemed as though strange gallantries took place in every corner of the field.

Then the action stopped. Something false and flimsy exploded, sending up clouds of thin smoke. We caught sight of the faces of men turned toward us, backward from the field, peering at something invisible and ominous. Then, dimly on the parapet, a woman reared herself and called from out the smoke . . . vainly. Into the foreground stumbled an elderly man—the major—waving a small sword. A soldier stepped forward toward him. Then darkness!

"You see?" Turner muttered. "A fiasco! And I shall never know!"

In a cracked voice the operator spoke out of the dusk:

"More film yet, sir—spliced on."

And at the word the screen again boiled with hot smoke, which poured upward in ever denser clouds, only to be wiped away and leave the picture distinct, clear and marvelously detailed.

I think the only thing I first saw was the girl on the parapet, poised above the swaying heads of the dark defenders. She held maimed hands, manacled at the wrist, to the ominous sky, opening her lips, calling full-throated, demanding something of God!

"Aileen!" cried Turner in irrepressible anguish.

As if in response to that cry, while the great hands of brutes clutched at her to seize her and drag her down, she cried again.

Out of the still throng of the attackers I saw a dozen men rush forth; but a crumpled figure on the sand first stirred, rose—and the major leaped again to his feet, sword in hand. Then a native reared himself above Aileen, a flashing knife in his uplifted hand. The two men—the father to the rescue and the savage bent on his prey—for an instant shot defiance across the wide stretch. Then the knife descended; and in its fall I saw the old soldier top the crest and receive its edge.

As he fell, a swarm of brightly clad men leaped upward and cleared the parapet with clubbed rifles. In the mêlée I lost sight of the girl.

The film stopped.

"A bad splice here," mumbled the operator, and busied himself with his apparatus for a moment.

Then the reel started off once more, and I found myself staring down at Turner himself, lying face upward on the field, his sightless eyes fixed on the sky. He was quite alone. . . . Alone? What shadowy form was that dimly shining above him?

"Aileen!" Turner whispered from beside me in the darkness.

Bismarckshafen faded. The battlefield was gone. The machine behind us stopped. On the screen I saw only the great, gleaming, misty figure of Aileen Turner, her splendid and passionate face looking into the unseen; her hands outstretched for the unknown; still magnificent! In the silence she seemed to pierce the distance of a world across; to look into the eyes of the man beside me—her husband—as much as to say:

"We have won!"

Did those fair and lovely lips move? Did they softly call? The man beside me stirred.

"Half a mo'," whispered the operator, and resumed his cranking.

And, as if the curtain had rolled up, I saw a cortège, with military bands, marching slowly along an unfamiliar street, streamers flying, a huge British flag floating from about the casket, which soldiers guarded as it passed between silent-thronged pavements; and just behind the rumbling car a woman walked, alone.

The cortège passed; the screen dimmed into darkness. A last flash! Turner rose. I stared at the figure that faced us from the great doors of a building over which floated a flag—the Stars and Stripes—and saw the face of the woman whom Turner loved.

I leaned forward, rubbing my eyes.

"Wouldn't that beat you?" demanded the operator in my ear. "Your side partner didn't wait for the end of the film. Now where do you suppose he's gone to?"

"He? Turner? Gone to meet his wife," I said brusquely.

"By the way, do you know what that last location was?"

"San Francisco Post Office," the operator answered briefly. "Where did you say your partner had gone to?"

"To the post office," I told him.

A WOMAN IN THE HOUSE

(Concluded from Page 8)

"Hey, yous!" the policeman bawled. "What do you think you are? A pair of statues?"

"Is Hester with you?"

"She's not, lad. She's at home, waiting for you."

"Cut it out, kid!" the driver called. "Get into the van. For the love of Mike, get into the van!"

"Boy, I only wanted to marry her for your sake—to have a woman in the house. That was all."

"Do you want to get pinched?" The policeman came over to them. "Come through with the idea! Where do you get this statue stuff?"

"I'll have to get on the van, father, and deliver the furniture. I'll call down to-night and talk."

"No, you won't!" Sir Patrick said. "I'll get on the van and deliver the furniture too."

They had talked long into the night, and three o'clock was ringing as Sir Patrick left his son in his room at the hotel.

"So that's settled," the baronet said. "You go home to-morrow and get married as soon as she'll let you."

"But why won't you come along, father?" the boy asked.

"Now listen to me, my lad," Sir Patrick said with mock solemnity. "I've been taking care of you for twenty-three years, and I'm through with it. You've got somebody else to look after you now. I'm going to take three or four years to look round this country. I like it. Good night."

"Good night, father." He watched Sir Patrick move toward the door. "Listen, sir," he said. "Tell me honestly: Was that the only reason you had for wanting to marry Hester—for my sake—to have a woman in the house?"

"The only reason."

"On the one unbreakable oath?"

"On the honor of an Irish gentleman!" The baronet bowed.

"Oh, then that's all right!" his son said.

The elder man walked down the corridor and, pausing for a minute at a window, he looked out on the sleeping city. Very cold and lonely it appeared to him, for all its electric bulbs and humming traffic and lighted windows—a place he could never be at home in; a place that cared nothing for him or his people or his old traditions.

And in contrast to it, in his mind's eye there arose the yellow hills of Oriel, with the sun glinting on the gorse, and the sparkle of the frosty roads. He could see the hunt in the morning, the fine horses and the gallant riders, and the cunning dog fox streaking redly away.

"Never again!" he murmured heartbrokenly. "Never again!"

And then, following on that splendid picture, the face of Hester O'Donnell flashed before him—the sparkling gray eyes; the dusky hair; the knotted brows.

"Little Heart of Corn!" he whispered hoarsely. "Oh, little Heart of Corn!"

He straightened himself up suddenly and went down the corridor, his head high and his shoulders square, as a great man should march off into exile for a lost cause.

battleship wrap himself round the inflated remnants o' that hog, aim straight for the center o' the opposition and go through it like a whole armament works, and the battle o' Gettysburg won't be in it with the racket made by ten thousand onlookers as they take the grand stand to pieces to throw in the air in approval!"

Jerry got up at that and commenced to pace the ground. Suddenly he faced me, his face trying as hard as it could to register fight and resolution.

"Yes, but how?" he cried. "How am I to educate myself? How am I to recover my lost nerve and this fear of physical and moral battle? How am I to acquire pluck and courage? Come down to something concrete. Give me some practical help!" He turned up the table and back again. "Man, I need it!" he groaned. "I need it and want it, but I don't know how to go about it!"

"It's my contention," said I, "that bullets and spine and pep is a habit that can be acquired same as chewin' tobacco or standin' for a wife with a harelip because she's got oceans o' coin. What you need is a good smashin' battle with your fists where you win. That'll prove to you that you're as good as any man. One or two o' these will begin to put some self-confidence into you, and then you won't be afraid to tackle larger propositions. As you go on from one success to another aggressiveness and mastery will become a habit. You're probably wantin' to have somethin' happen that'll give you back your gimp all at once. But that's where your regeneration would smack o' a miracle. What you want to do is assert yourself in little things first, sort o' grow up with your backbone."

"Dammit, man!" he cried. "Be concrete!"

"Well," said I, "there's the little episode o' the grub top. Suppose to-morrow you come underneath for your noon feed and find another man in a seat you want. Go up to him, get him by the slack o' the trousers, and haul him into the North American atmosphere. Havin' got him there, drop him—bein' sure there's a fairly sharp-pointed rock underneath him. If he objects haul off and baste him. I'll interfere and save you if he carries you too close to death. But make it known in that cook tent that you want to be known as Jerry Out-o'-My-Way instead o' 'Out o' My Way, Jerry!' Then when you've established a prestige as a small unexploded explosion, try it outside the cook tent. For instance, there's Big Sheehan. The next time he begins to cuss and boot you, order him to stop. If he shouldn't, walk up to him and stand him on his neck. If you survive the battle—well, you'll be quite fit for anything, even to goin' over to the capital o' that rotten state and rescuin' Joe."

"Do you stop to realize that this would mean for me an entire making over of myself—that I'd be doing something I've longed to do ever since I was a boy in school? I've taken orders for so long that it's second nature to agree with my adversary quickly, and I've got to create within me a new mentality."

"Rats!" said I. "All you lack is self-confidence, and if something could happen to show you that you're as good as other men your self-assertion would return all in a lump. And you'd make a discovery, man, same as all assertive folks have: Ninety-nine out o' every hundred men will concede you the argument the moment they see you on the warpath, and grab wildly for the nearest telephone pole to raise themselves out o' your way. There's the hundredth man, and maybe he'd stand his ground. But the courage you'd generated from seein' ninety-nine flee would carry you through the scrimmage with the other. Just stand your ground and let folks know that if they mean to have a war it'll begin just where your feet at the moment may be trackin'."

He smiled grimly. In fact, he sort o' laughed desperately.

"I couldn't be much worse off than I am," said he. "Morally I'm a failure, anyhow. I'll think it over. If there should be a mix-up under the cook top to-morrow you'll know I've at least screwed up my courage to try your advice—somewhat as an experiment. But if I pick a fight at all it will be with one of the strongest characters in the show, not with women."

"Go to it!" said I. "I'm yours till Niagara falls."

The next noon we were eating dinner forty-three miles away. I was studying aëronautics touching on and appertaining to a wing of fried chicken, when out of the corner of my eye I saw Jerry coming. In the ninth hour of his side-tracked life he'd set his jaw like a paving block, and with a face as white as pottery was about to try out my rudiments of success on the show in foodfest assembled.

"Good for him!" said I to myself. "For once in my life I've been o' use to my fellerman. I wouldn't miss this for a month's salary." And I swallowed a hunk of the fowl. That morsel of hen hadn't gone down four inches before the Hand of Destiny screwed in my neck and the Wrath of Judgment took a strangle hold on my trousers. The table flew away from me; the world turned upside down—in fact, the surface of this planet and myself rolled over and over in misunderstanding for a considerable spell, and that mouthful of chicken was stopped from coming up by three mouthfuls of sand that met it on their way down.

It took me just two seconds to realize what had happened and four more to use my feet for the purposes for which Nature made them.

Plainly and distinctly I saw Jerry's two legs climbing over my bench one after the other and depositing themselves under my portion of table.

"You concentrated essence of undiluted gall!" I roared at his ingratitude. "I'll make so many holes in your personality it won't even hold your principles!"

When he turned round his face to view me coming at him, it was chalky. His lips were working wordlessly and running blood where he was biting them to rally his quaking nerves.

"Out of my way!" he replied, his voice breaking as he said it in absolute terror, but trying to make his bluff and prestige good with the gang. "I've—I've been made the goat of this show long enough. I'm tired of always getting out of someone else's way. Now someone can get out of mine!"

As I persisted in approaching him he gave one last clutch at his stampeding feelings and managed to slip me the wink. I realized in that instant that he'd chosen me because I might not kill him so thoroughly dead as others round that table. I'd have forgiven him if he hadn't overdone it. Because when he saw I was still intent on making him and me an assorted package of humanity, he climbed on the seat, grabbed my plate of victuals and hove it at me.

"Look here, you!" I cried. "When I spilled you that advice last night I didn't intend to play the goat for you! I didn't suppose you'd be such a practical joker as to try it on your best friend."

I reached up for his shoulders to pull him down and shake some sense into him; but somehow things failed to connect. Maybe it was accidental, him being considerably excited; maybe it was the intent of desperation. Anyhow, I ran into the granite corner of his knee and heard some of the castings snap in my interior. I don't recollect much more of that encounter. They laid me on a cot a few minutes later and sent for a doctor that dabbled in masonry on the side. He boxed me in Portland cement and left me to my religion. That misplaced college professor had kicked in two of my personal ribs!

That afternoon, when the scaffolding had been removed from my upper stories, Big Sheehan came in to view the remains.

"Gun," said he, "you know that quiet, superior sort o' bum that's been taggin' along for his grub and keep. Well, I want to know what's come over him."

"Why?" said I.

"Because since he laid you out in the come-and-get-it booth, the boys have been speakin' easy when he approaches and the sudden attention seems gone to his nut. Oh, he don't say any more than he has said for some time past, but he acts sort of funny, with an air to him that I don't like. What I want to know is, is he some particular friend o' yourn, or have I your permission to shunt him into our side show as a horrible example o' human mutilation if he should give me any of his superior sass and compel me to chastise him before firin'?"

"I'm sayin' nothin'," said I. "Only men that have been walked on all their lives sometimes turn out terrible exhibits o' a battle in full action when they discover how much scrap and destruction is really permitted by law before the state takes hold. If you see him ask him to come here."

"If he tries any of the funny work on me that he tried on you this noon he'll come here on a door," announced the big canvasman.

It was two hours before my protégé came. He'd had an ear horribly chewed and there was an ugly bruise over one eye. Even in my carefully preserved condition it did me good to see him.

"How come you all desecrated like that?" said I.

He was still very quiet in his speech and behavior. Excepting the extension of the war from Europe onto his face, the only change I saw in him was a half-baleful glint in his off eye and a trifle more compression to his lips.

"Do you know, I'm really beginning to like this," said he very academically. "I want to extend you my apology, however—I really didn't mean to stave in your ribs. I wanted to test out your theory of psychology as to how the rest of the men in this outfit would conduct themselves toward me if I should thrash one who held such a dynamic reputation as yourself. I thought you'd catch on to why I singled you out instead of some one who might have waded into me and knocked all my incipient determination in eight directions. The kicking you was an accident for which my excitement was responsible. As for the psychology of it—you were more than correct. They've scattered before me since noon as if I were a plague."

"Answer my question!" said I.

"Oh," said he, "I've had to throw that man Sheehan off the lot. I figured it out, after thinking over what you said, that I couldn't be of much less use dead than I have been alive, and so I resented a remark he made to me and we went to it."

"Go out!" I ordered. "Bring in some one to corroborate this. I was goin' to stay in bed a week. Such news will have me in the saddle again in two days."

He smiled.

"Success in life hinges on such little things," said he. "My breaking your ribs was an accident, and it gave me a prestige among these rough-and-ready cowmen that I determined to cultivate. That's why I stood up, tempting Fate, against that man Sheehan's brutality. I happened to hit him a stomach punch, when my underclothes were wringing wet with the fright of it. Now I'm worse off than ever because I've suddenly got the reputation of being a holy terror."

"Son, that last statement sent one of my ribs back into place with a bang.

High School Course in Two Years

LEARN in your own home. Here is a thorough and simplified high school course that you can complete in 2 years. *Meets college entrance requirements.* Prepared by leading members of faculties of universities and academies.

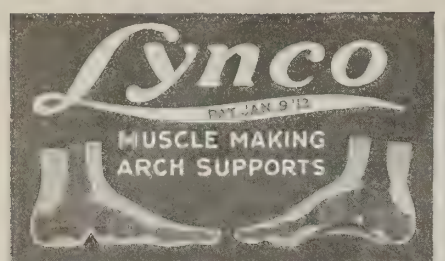
Study in Your Own Home

This course was prepared especially for home training. What if you did not get a high school education? You can make up for lost time now. Idle evenings can be spent in pleasant reading that will give you a thorough high school training.

Write For Our Booklet! Send your name and address today for our booklet and full particulars. No obligations. Write NOW!

American School of Correspondence, Dept. P2383, Chicago, U. S. A.

PLAYS for amateurs; Monologs, Recitations, Drills, Minstrel and Vaudeville Jokes and Sketches; ideas for all kinds of entertainments. Send for free catalog.
DRAMATIC PUB. CO., 542 S. Dearborn St., Chicago



Fallen arch. Entire weight of the body falls dead on the bones. This causes the strain and pain.

LYNCO keeps bones of foot in normal position, allows free muscular action and relieves cause of pain.

Relief for Tired, Tortured Feet

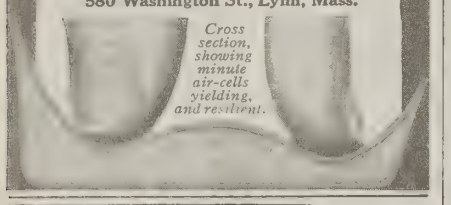
As though Nature grew a soft cushion of resilient flesh where the bones have fallen—that is the relief from pain and torture which Lynco Muscle Making Arch Supports give to feet with fallen arches.

Because they not merely *relieve* the stress and strain, the torture and pain, of the fallen arch, but in time *build up* the fallen arch to its normal condition, Lynco Supports are universally endorsed by physicians and orthopedists.

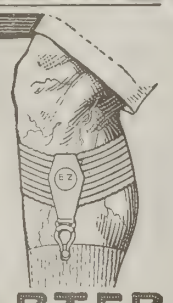
Light weight, durable sponge-rubber cushions, leather covered (no metal). Sanitary, made to fit any shoe and held in place by the foot.

Sold by shoe dealers in most cities, or mailed prepaid on receipt of $3.00 a pair. Give size of shoe and state whether for man, woman or child, or enclose diagram made by standing on paper and pencil-marking around stockinged foot. *Money cheerfully returned if you would rather have it than the supports after 10 days trial.*

LYNN RUBBER MFG. CO.
Makers of Lynco Rubber Soles & Heels
580 Washington St., Lynn, Mass.



MUSCLES and VEINS are NOT RESTRICTED by the



E.Z. GARTER
"THE ONE THAT WON'T BIND"

MADE WIDE for comfort and free circulation. Wide elastic webbing—cool, washable. No straps, buckles, hooks, or adjustments. Can't sag or unfasten.

25c for lisle, 50c for silk. If not at dealer's, send his name and price. THE THOS. P. TAYLOR CO., Dept. S, Bridgeport, Conn.

Dealers: Ask your jobber, or order sample dozens from us without obligation.

Rider Agents Wanted

Everywhere to ride and exhibit the new Ranger "Motorbike" completely equipped with electric light and horn, carrier, stand, tool tank, coaster-brake, mud guards and anti-skid tires. Choice of 44 other styles, colors and sizes in the famous "Ranger" line of bicycles.

DELIVERED FREE on approval and 30 DAYS' TRIAL. Send for big free catalog and particulars of our *Factory-direct-to-Rider* marvelous offers and terms.

TIRES Lamps, Horns, Wheels, Sundries, and parts for all bicycles—at half usual prices.

SEND NO MONEY but tell us exactly what you need. Do not buy until you get our prices, terms and the big FREE catalog.

GET More "Go" Out of Gasoline. Cut your fuel cost. The Oxygenator makes it possible—the greatest dollar-saver ever offered. Improved principle for eliminating carbon. Secures more speed—more power—easier starting—better acceleration. Thousands of users getting greater satisfaction from engine—reducing cost and care of running machine. For all cars, quickly attached. Send for one today. Enclose $10. Give make, model and year of car. Full particulars free.

THE OXYGENERATOR CO.
Dept. M-2, 1919 S. Michigan Ave., Chicago

You just keep right on. Remember the things that a man gets away with in this world are the things that count in the final round-up. I freely forgive you for all your sins and trespasses against me. Keep right on being a holy terror and graduate into a rip-snorter—this outfit always was weak on rip-snorters. Maybe if we had a few we'd have learned long before this how to get Joe out of the clutches o' them crooks over East."

"Jerry Out-o'-My-Way" he became from that night forward. He wasn't a troublesome cuss, and he never went out of his way to pick a fight; but day after day while my ribs were mending I noted that the deference the boys showed him for his self-assertion was having its work. He sure was a peculiar chap. I never could quite make him out. I'd have given much to know his history. Anyhow, he took to slicking himself up, holding his head higher and being readier and more peppery in retaliation when any of the outfit crossed him. He came to me one night. As though it was some sort of disappointment, he said to me:

"Look here, Gun, this is the best joke ever. No one even makes a pretense of standing up to me. I haven't had a really good scrap since that bout with Sheehan. What's the reason?"

"Your reputation is the reason, Jerry. After a man has established a reputation, whether it's as a leader of men or a cracker o' safes, all that's necessary is to patch it up once in a while, like a political fence. Ninety-nine per cent of the world is actin' anyhow, Jerry. That's the thing meant by livin' up to one's reputation. It means livin' up to the thing the world supposes you to be. If half the men in the United States had their hands called to-night, Jerry, there'd be some mighty queer surprises sprung and a readjustin' o' individual values, believe me!"

"Man," said he, "this life with this Wild-West show is just what I've been longing for all my days without knowing it. It's an eye opener, my friend. I never supposed before that so many people that are supposed to represent so much, either in physical force or social position, could be downed so easily when it came to a real test."

"You're right, Jerry," said I, "and you're learnin' fast. If thousands o' men in this country to-night that think they're failures only knew what a little needle would puncture their supposedly impregnable opposition, the common people would be mighty scarce because there'd be mighty few folks left to act in that capacity. Keep it up, man! You got more brains than we show fellers. If you can overcome this fear o' combat that's held you down, you're slated for somethin' better than your new job o' bossin' the canvas gang, take it from me."

"Speaking of other worlds to conquer, Gun, what's the story about this man Dermott, that's one of this firm?"

"More's the pity, Jerry," said I, "that we don't know. As near as we-all can make out, Joe went up to this Bleaseley's house and had a fight with him over the show licenses. There's a bunch o' reformers down in the south end o' the state that have been tryin' to get somethin' on the political gang, and they've tried every way they knew how to get an affidavit out o' Joe to use to expose the methods o' Bleaseley's crowd. Because o' that and the fear that Joe's freedom would bring on an investigation, the bunch has kept a closer watch over him than they would over a rattler. They're exterminatin' Joe, from what meager information we-all have got, simply so the real story of Bleaseley's murder will stop with Joe's breath. There's revenge mixed up with it, which is bad; but the fear o' Joe shootin' off his mouth has frightened 'em more. You can see that if they gave him a regular trial, with the public admitted and all, there's bound to come out facts the machine don't want brought out. We ain't got on to the fine points o' it yet; but we know that from a lawyer's standpoint we're helpless to save him."

"But the governor," says Jerry. "What about him?"

"They tell me," I said, "that you can't nail him any more than you can tack jelly to the wall. Some say he don't know the ins and outs o' Joe's side o' the story, and is content to take what them crooks tell him; others tell us that he just simply lacks the pep to act in this matter accordin' to a white man's conscience. I'm inclined to the last view. Some o' the Bleaseley crowd told him to get out o' the state until the croakin' was over—and he obeyed. But he's a rotten prop in our present predicament, and some o' the boys is debatin' goin' up to the capital and creatin' conditions where martial law is advisable. We can't find a lawyer in the state who'll fight Joe's case against the machine—even the reformers' crowd can't generate a man with brains and weight enough to make an impression. And an out o' the state lawyer won't do because the laws o' different states is different, and, besides, what good would it do anyway, when the machine could put in a loaded jury? I tell you, man, it's the damndest condition o' affairs I ever heard of in all my born days. And Joe's attitude don't help any. We ain't been allowed to see him but once, because they make Joe out a desperate Western criminal that needs a constant double guard. And Joe wrote us, like the dogged old roughneck he is, that he's glad he shot the cuss after the language he used to him, and he won't back down, not even to save his neck. Oh, the whole business is a tangled mess, and so long as the courts are in the control o' Bleaseley's men, and they've got the idea that Joe's dangerous to 'em alive, the man's headed straight for the rope."

Jerry was silent for a long time. Finally he said:

"Gun, I'm going to tell you something."

He didn't tell it to me for a long time, though. He seemed to sit there thinking and weighing his words.

"Gun," he finally declared, "you got me right that night several weeks ago when you lectured me in the commissary department of this show—I have seen better days. I'm going to tell you something about myself—I've been a lawyer."

"It's no news," said I. "Where?"

"In the state in which you said just now that you can't find an attorney fearless enough to jump into the center of this fight and stir things up," he replied.

"No!"

"Yes! Before I descended to tagging round with an open-air show, my nerve gone, my clothes seedy, my face needing a shave, I was a lawyer, and I flatter myself that I was among the best of them. But it was my lack of backbone that did for me, Gun. I let myself go crooked, and you know where that course inevitably leads. Either it's the penitentiary, or it's the condition in which I was when I joined this show."

"Did you ever have experience with this Bleaseley gang?"

"I never opposed them," he acknowledged. "I just didn't dare. It—well, I wouldn't have had the physical courage. I can't talk much about myself or my career, Gun; and I'm not proud of my record. But it occurs to me that maybe I'd have the chance to make up for my record if I could do something to save this man. It's true that he's been made out a man-killing desperado—but since this raw deal has been handed him some different stories of his character have come out. He couldn't have been such a terribly bad man if the boys thought as much of him as you fellows in this outfit do."

Well, I launched forth right there with fifteen minutes of personal reminiscence about Joe Dermott, one of the best old-timers that ever wore spurred leather. And all the time Jerry sat cross-legged on the sod and poked holes in the earth with a stick.

I ended by saying:

"Do you remember enough o' your law, Jerry, to get under the skin o' these crooks with your needle o' vitriol?"

"It isn't my lack of law that stops me," said he; "it's the wonder whether my grit will desert me when I find myself face to face with some of the men I once knew. If my record was lily-white it would be different. But it might be a case of the pot calling the kettle black."

"Jerry," said I solemnly, "a man's life hangs in the balance here, and if ever there was a time when a chap ought to take risks, now's it!"

"There's some things, Gun, that you don't know about this deal, or they wouldn't keep Dermott as closely guarded as they do," Jerry replied. "I know just enough about this gang to appreciate there's some mighty deep reason why they want to get this thing hushed up, Joe out of the way, and the whole rotten circumstances of Bleaseley's death forgotten. I realize that it means more than merely the saving of Joe Dermott. It means that if a man gets into this scrap strong enough to create an influence to save Dermott's life, he's got to dig till he unearths the whole political rottenness of Bleaseley's machine. That's the real reason why no lawyer in the state will take up the case for the reformers and save Dermott. It means a shakedown that the rest of the country may mistake for an earthquake."

"Jerry," I said, "could a man devote his life and his abilities to a better pandemonium?"

I saw the chap's lips were tight and his forehead was wet.

"Do you know what it may mean for me? It may mean jail too!"

"Possibly!"

"But it isn't the thought of bars I'm afraid of mostly; it's losing my nerve at the size of the opposition after I'm started. I haven't had much practice at self-assertion and self-mastery—all I've done is lick a few burly showmen. This is another kind of fight, and it'll be terrific."

"Jerry," said I, "do you recollect how the boys respected you for doin' nothin' more than swipin' at Big Sheehan and kickin' me in the slats? Don't it prove what I said, that it isn't the size o' things against you that counts, but the spirit you assail 'em with? And you did those two stunts almost on bluff—mostly accidental. Who knows but what those fat crooks may cut and run from no more demonstration than you've given here! They look big as a mountain to fight simply because everybody's thought them unlickable. Suppose you call their bluff—see whether they're really that, or just a crowd o' chicken-hearted four-flushers, lookin' fierce and terrible!"

He threw the stick from him into the night and covered his face with his hands. I groaned.

"Oh, Jerry, why didn't you tell me all this earlier," said I. "Poor Joe's got only two more days alive. It's a mighty short time to save him; at the best it'll be a close shave."

"It isn't the saving of him!" cried Jerry. "It's the consequences."

He got up after a while. As he was going off to where the stock was being loaded for the night run down to Springfield, he said:

"The only redeeming feature, if I should succeed, would be that even if it took me to jail I'd feel that I'd played the man."

He went away into the shadows. Next morning he was missing.

It was on Saturday night we had the above talk. Joe's sentence had been reported to us as going into execution sometime during the week commencing the following Sunday night at sunset. We knew that in this case there wouldn't be any time wasted—Joe would probably swing round six o'clock of Monday morning.

I never want to spend another such Sunday. We were staying in a little burg about seventy miles from the capital, and just over the state line because we'd never got the license to play in the state since the murder. The artistic temperament of the outfit was more strung up than usual with the suspense, and we had six more fights between the boys than was usual for the Sabbath.

Joe didn't have any folks excepting showfolks, so Bill was going up to the capital the following day to claim the body. We sat up all Sunday night awaiting the sickening items of the morning papers. In trying to cheer up old Bill I told him about Jerry. Old Bill laughed at me, and I didn't blame him. It was a piece of nonsense to expect that a man that rolled from a box car in the condition Jerry had, that followed circuses for his grub, should be able to stay the wheels of injustice within two days of a man's day, and save him.

I hoped against hope that some word would come from Jerry up to the last thing Sunday night; but nothing came. We telephoned to one of the newspapers up to the capital during the night, and they said that so far as they knew Joe was to hang round dawn.

Well, the dawn came at last. It was cold and clammy, and got you like a dead man's hand. The bunch of us were sitting in the office tent with old Bill. We could imagine the scene that Joe was going through at the moment. Joe had sent us word that he didn't want to go through the hell of bidding us good-by; that he would die with his boots on and no confounded palavering. So none of us went up for any till-we-meet-beyond-the-river stuff, even if they'd let us pull it. Joe was going to the noose like a man, and persisting to the last he was glad he shot Bleaseley and he'd do the same thing again. We sat there till the sun came up.

DELCO-LIGHT

ELECTRICITY FOR EVERY FARM

DELCO-LIGHT IN THE CHURCH

DELCO-LIGHT ON THE FARM

DELCO-LIGHT IN THE RURAL STORE

DELCO-LIGHT MAKES ELECTRICITY UNIVERSAL

DELCO-LIGHT IN THE SUMMER COTTAGE

DELCO-LIGHT IN THE CONSTRUCTION CAMP

DELCO-LIGHT ON THE YACHT

For the first time electric light and power are available to anyone—anywhere.

Heretofore, the benefits of electricity have been confined to those who live in the larger towns and cities.

Now Delco Light makes electric current universally available.

Delco Light is today furnishing thousands of farm-houses with brilliant, convenient, safe and economical light.

It is furnishing power to operate pumps, washing machines, churns, cream separators, milking machines, vacuum cleaners, etc.

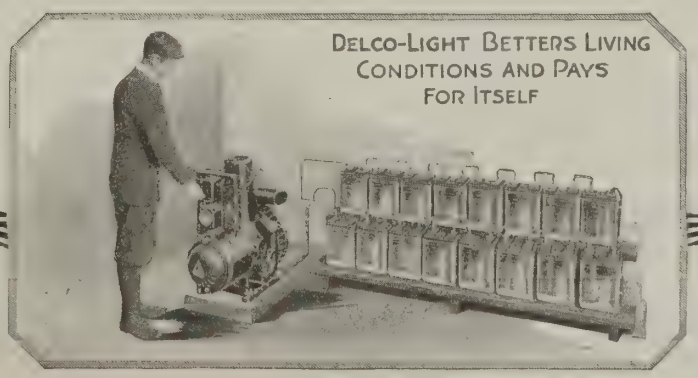
It is lighting country churches, stores and public halls.

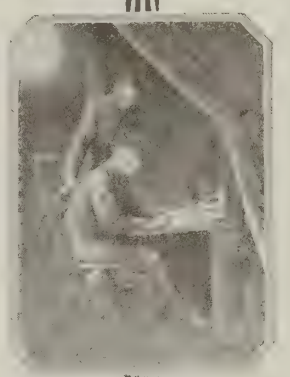
It is furnishing light and power to summer homes and camps, to houseboats and yachts, etc.

It is lighting rural railway stations and construction camps.

It is lighting the camps of United States troops on the Mexican border and it is disclosing heretofore undreamed-of beauties in the depths of Mammoth Cave, Kentucky.

Altogether, over 15,000 Delco Light plants are in operation, and Delco Light offices and service stations are to be found in almost every part of the world.





DELCO-LIGHT ON THE MEXICAN BORDER

DELCO-LIGHT IN THE RAILWAY STATION

DELCO-LIGHT IN MAMMOTH CAVE.

Delco Light is a complete electric plant—the engine and dynamo in one compact unit combined with a set of specially built and wonderfully efficient batteries for the storing of current. The plant is so simple a child can care for it, and so economical that it actually pays for itself in time and labor saved. It operates on either kerosene, gasoline or natural gas.

No Man Knows the Limit

of the

HUDSON SUPER-SIX

A hundred rivalries have proved it the greatest motor car performer that's built. Never has a single type won all the worth-while records. But it still is an enigma. Every month reveals some new supremacies—some unguessed possibilities

We called the Super-Six, when it first came out, a 76-horsepower motor. That was 80 per cent more efficiency than was obtained from the same size theretofore.

Since then we have seen it develop vastly more power than that.

We watched it break all the speed records for stock cars. Then it broke its own records by still bigger margins.

In a hundred cities, Super-Sixes broke the records on local hills. Then one day, in competition with twenty of the world's famous mountain racing cars, all specially built, a Super-Six special broke the record up Pike's Peak, and became the world's master hill-climber.

A stock Super-Six chassis broke the 24-hour record, to prove supreme endurance. ***And broke it by 52 per cent.***

A Super-Six touring car, heavily loaded, ran from San Francisco to New York. It broke the record of a famous Eight by some 2½ days.

But the car wasn't even fazed. So we turned around and went back, ***and again broke the record.***

How Long Will It Last?

For 14 months, in the severest tests known, we have tried to prove how long a Super-Six will last. But we haven't a line on it.

We have run a Super-Six at record-breaking speed for over 3000 miles. But no part or bearing in the Super-Six showed evidence of wear.

Few of us, probably, will ever know how long a Super-Six will last.

A New Condition

The Super-Six, which is a Hudson invention, brings up a new condition.

Friction has heretofore been a motor's greatest foe. Here it is almost nil.

The result, we know, is such performance, such endurance as never was known before. But we have no idea of the limits.

Be Glad It Is a Six

Men should be glad that this great motor is a light and simple Six. That was always, save for vibration, the ideal motor type. And now in smoothness the Super-Six excels all other types.

All these supremacies are attained without adding size or cylinders. We still have the Six simplicity. And this year, by a gasoline saver we greatly increase its economy.

In the past year we have brought Hudson bodies up to the Super-Six standard. Now every Hudson Super-Six looks the ruler that it is.

We built 25,000 last year, yet thousands were unable to get delivery and were disappointed. We shall build 30,000 this year. Just think how much better the Super-Six is known, and therefore how much greater will be the demand. A fine-car buyer who is well-informed can have no other choice.

You will save delay—and perhaps disappointment—if you see your Hudson dealer now.

HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

(Continued from Page 106)

"Waal," said Bill, "I don't know as we can do any good sittin' here any longer. It's all over by now. Let's walk up to town, get the mornin' papers, and see how he took his medicine."

We went uptown. And talk of dragging out the agony! There wasn't one line in them about Joe's hanging!

"Then he ain't been hung!" said Bill.

"Either that or the papers left the capital before the hangin' was concluded," said I. "Then there's two other explanations: The biggest one is that the editors got instructions not to notice the official murder any more than they had the trial. Then way down in the corner of my reasonin', hid in small type and parentheses, is the suggestion that maybe grim, silent, college-professor Jerry Out-o'-My-Way may have had somethin' to do with stayin' the execution."

"Well," said old Bill, "I'm goin' to know for sure." And he tackled a telephone booth and got the newspaper office on the long-distance wire. He came out looking queer.

"It ain't much satisfaction I got," said he, "but the newspaper chap said that near as they could make out a stay o' execution had been ordered. The chap said that pressure had come from somewhere, and probably through the efforts o' Joe's counsel the governor had been brought back in a hurry from his accommodatin' vacation. Must be Lovett's got busy at the eleventh hour!"

"Lovett nothin'!" said I. "Lovett's a machine man or I'll eat my cow rope. The chap that's done it is our ex-canvasman Jerry Out-o'-My-Way. Hoorah for the bantam! He's all wool and a yard wide!"

"Hang on to your celebration," said old Bill. "We'll go back to the lot, change our clothes, and catch the first train for the capital."

Bill had arranged the routing some weeks previous so that on Monday and Tuesday we wouldn't play. It cost him cash to let the show lay idle, but out of respect to his unfortunate partner he did it. Four hours later our train pulled in to the capital.

"Where do you think we'll find him?" said Gridley.

"We'll go to the capitol," said I. "That's where the big show is comin' off, if anywhere. If he ain't there he must be stoppin' at some hotel, and we'll search every register in the place until we find the name Jerry Smith."

We got a taxi and was spun out to the big state tops on the hill, and the very first person we bumped into as we put human feet onto the walk was none other than Jerry. He was just turning to go up the thousand steps of the building, same as us. I hailed him and he looked round.

Jerry in the habiliments of civilization was considerably changed. He'd soaked in a little culture of a barber shop and gents' furnishing department, and powdered the tint of his nose, and he looked more than ever like a college professor. His face was so cold and hard that it looked almost expressionless; and he wore a pair of those heavy bone spectacles that make a human being resemble an owl. I noticed he didn't greet us very cordially. Then I saw that his lips were white and bloodless.

"Man," I cried, "what's the matter?"

But I knew what was the matter. He was scared purple. He started to tell us that nothing was the matter, when gruff old Bill broke in:

"Is this straight stuff about Joe gettin' a stay o' execution?"

"Yes," said Jerry.

"Was you responsible for it?"

"Yes."

It was funny to see them two stare at each other that a week before had been boss and bossed. Bill got sort of blubbery round the eyes like a kid, and he flopped Jerry's strengthless hand up and down and tried to say something. Jerry got his hand loose.

"Don't," said he; "the man isn't saved yet. The governor meets his council in this building on the dot of noon. I've got the chance to appear before them and"—here Jerry smiled a ghastly smile—"impress on them that I'm now Jerry Out-o'-My-Way and that they've got to stand aside. But I wish, Gun, that I'd had three years training thrashing roughnecks in your show instead of what I have. It'd come in handy now."

Bill reached in his hip.

"Have a drink, son," he said.

Jerry pushed the flask away with an effort.

"That stuff don't supply what I need for this scrap," he said. "It only takes away the remaining nerve that I have got."

"Can't we help you any, Jerry?" said I.

"No, thanks," said he.

"If the council should turn down this pardon, which they probably will, bein' machine men, what's next?" I asked, hoping against hope he had more behind him than his quaking determination to shove the ship of state by pushing against the stern.

"That remains to be seen," said he. "I must hurry. It's three minutes to twelve now."

"Can't we go with you, Jerry?"

"No, it's impossible. You wait here till I come out. We'll know Joe's fate by then—and perhaps a great deal more."

I think he swayed as he mounted the steps. We watched him in the distance till he climbed to the top and disappeared between the great pillars.

"Son," said Bill, "they can arrest me and shove me in alongside Joe, but if it's humanly possible I'm goin' up into that there edifice, find the governor's council room, and shove my ear against the door to hear what's said."

We agreed that it was worth a try and we went up. The executive chambers were on the northeast corner of the second floor. They lay at the end of a far corridor, and being noon the capitol was somewhat deserted. At least no one seemed to mind us as we found our way up and saw Jerry standing in the marble-floored distance with his hand on a doorknob. I knew he was summoning all the pep that was in him before going in to be torn to pieces by the bunch that had gathered round the governor.

"Come on, Gun," said old Bill. "If that door ain't too darned thick, let's you and me see if we can't attend on the festive butchery."

The door was thick and the latch was snapped; but there wasn't much fear to old Bill. Silently as a thief and so slowly that no one would notice unless they came out and discovered us, his steady old hand undid that knob and shoved the door open a half-inch crack.

Apparently Jerry hadn't got into action. We knew that because the only sounds we heard were the scraping of chairs, coughing, and the rattling of papers. My heart went into my mouth as someone said suddenly:

"Shut that door! It's been left open!"

Bill and me flattened ourselves against the wall. A party on the other side walked up and snapped the lock closed again. Bill was a gritty old cuss. He waited till he thought they might have forgotten to watch such a thing as the door, and he had it open again. This time Jerry was speaking. It was a hard, unemotional voice he was using.

I knew from the tone of it exactly how his face looked at the moment.

". . . the time was when I was one of Bleaseley's tools like the rest of you," he was saying. "I had brains, but I lacked backbone. Bleaseley got me to do some of his dirty work. Then he used my fall from honesty to bind me tighter to him. Without any astounding amount of brains himself, but with a chunk of aggressiveness that filled the whole inside of him, he used the brains of other men—including yours and mine—to lift himself to his place of power that he held when shot by this showman. Lower and lower I sank, more and more I submitted to Bleaseley's control, until finally it came to the point where for my own good I had to leave. Like a hunted man I went from one place to another. I hated myself for my subservience. If I'd had the grit of the ordinary man I'd have committed suicide. The day came when I found myself as a common canvas bum with a Wild-West show."

"Gridley & Dermott's?" someone demanded.

"Yes!" declared Jerry.

Bill and I could sense the commotion this declaration caused. There were a couple of cuss words; then followed an ominous silence. But evidently Jerry was warmed up. He didn't seem to mind.

"For once in my life I found myself among men who live on the square, ride hard and shoot straight. I was in an atmosphere where nothing counts excepting whether or not a man is a man. I had my eyes opened. I found the spirit of those Western boys slowly filtering into me. I found that there's two kinds of justice—the justice Joe Dermott meted out to Mike Bleaseley and the kind of justice that this state has meted out to Joe Dermott. To make a long tale brief, I passed through experiences that showed me how foolish it was to be afraid of a thing because of its size—for instance, the Bleaseley political machine!"

A big voice boomed out:

"Oh, you did? Well ——"

"You keep your mouth closed, Tracey!" came the sudden sharp order from Jerry's tongue. "I've got this floor and I'm not through talking."

There was more commotion at this, but evidently the chap Tracey was suppressed until Jerry had shot his bolt. He proceeded to do it, and from his tone, momentarily growing deadlier as Jerry gathered courage to proceed, all indications had it a thunderbolt.

"I've been years trying to rally my courage to hold up my head, act as my conscience dictated, and be a man," said he. "It only needed a few experiences of physical combat, combined with a knowledge of the rough deal this state was handing Dermott, to bring me to my senses and make me ask if I had such an awful lot to fear from this crowd of crooks, after all. That's why I'm before you this noon. I'm here to make some statements, and you can like them or not according to your preference.

"First, understand that I don't give a tinker's dam for any of you. Individually and collectively you're the rottenest bunch of grafters out of jail. Your courage is the courage of sneaks; your power is the variety that must be wielded in the dark; your strength is the hidden weapon and the crime that requires protection. You think you're big and strong and all-powerful, because of the numbers of men you've balled up in your political filth. Your enemies think you're a hopeless proposition, because your deeds are shrouded in mystery, and the public conception of you has arisen from a diseased fright of your vague, indefinite, far-reaching proportions.

"Now then, here's the way I've sized this thing up: Political machines, like all other earthly organizations of either men or materials, are man-made. Frequently the worst of them are one-man affairs. What men have done equally competent men can undo. Bleaseley built his machine, not by brains, but by nerve. All that is required to demolish his work is nerve equal to its creator's. Since the last time I had anything to do with the Bleaseley machine I've been out and acquired that nerve. Now I'm going to undo that machine piece by piece, exactly as Bleaseley built it.

"I am here primarily to get a pardon for this man Dermott, and I am going to have that pardon. But to save this man's life means more than your consent to his going free—for that is not absolutely necessary if the governor sees fit to sign it over your advice. It means going against the dictates of the Bleaseley machine, or what now remains of it since its creator passed away. And that means the disintegration of the whole machine. It means that this corrupt organization in control of the affairs of this state must cease to exist, since its existence stands in the way of the better order of things which the pardoning of Dermott stands for."

"Well, and how are you going to exterminate it?" snapped a venomous voice.

"Gentlemen, I have compiled a list of the crooked acts of Bleaseley's agents covering a period of ten years. I have made an affidavit asserting that these practices took place, whom they concerned, and have given names of principals and agents, time, places and figures. To this I have put my signature. Forty copies of this affidavit—any one of which will send both principals and agents to the penitentiary—have been struck off. They constitute the greatest literary and political bombshell that will ever have exploded in these United States of America since the first shot was fired on Lexington Common. There is a certain room in a certain hotel where a young lady this moment sits watching the clock. The moment the hands reach one o'clock this young lady will rise, take up forty envelopes containing these forty affidavits duly sealed and addressed to forty of the leading daily papers of the United States, and proceeding to the railroad station she will journey to a certain town and drop them into the United States mails.

"This last has been arranged so that you shall not use your influence to interfere with those envelopes in the local post office. Most of those affidavits will reach the newspapers in the morning, and appear in print to be scattered over the nation—in

journals over which you have no control and which, like myself, do not give a tinker's hoot for any of you. In the affidavit I have mentioned that the reason the copies have been forwarded to out of the state papers is because the state journals are afraid to antagonize the capitol gang, naming specific publications. I have told what I have discovered of the truth concerning Joseph Dermott's crime, what he heard in Bleaseley's home, how it came about that the governor was sent away so no appeal could be made to his conscience, how Dermott is being railroaded.

"I have given the names of his lawyers, the judge who favored you, have even gone so far as to record the verbatim conversation between the governor and one of your men when he gave the former his orders to get out of the state until the thing blew over. I have made affidavit of your part, Tracey, in the state roads steal, the Rogers Dock Bill and the Willowby milk inspection. Of you, Sullimann, I have told what I have learned in the matter of the charter for Springfield & Western Gas, the Three Rivers town coalition and the automobile-license graft. To you, Redding, I have charged up the gambling graft at Meadowrun, the rake-off from show licenses, and the building of the Brightside Insane Asylum. Then there are various other things in which the public will be interested. There's the Boughton & Boughton Railroad stock issue; there's the matter of the addition to the west wing of the capitol; there's the conduct of the Thomaston State Prison, and the death of Jim McPhale a few days prior to his intended appearance in the Mathers slander suit. Oh, it'll make one warm page for the newspapers. And the public will not be any too pleased to learn these things through out-of-the-state newspapers."

Jerry stopped. The silence in the room was terrific. I could picture those grafters seated round that table like waxworks. When he continued his voice had lost all its nervousness. His tone was the bark of a fighter:

"I'm no fly-by-night reformer. I've no ax to grind beyond saving the life of this man Dermott. I've bearded this 'honorable' board here this noon to call its hand in this matter of state control and dare you to a showdown. Never mind how I found out all these things. I'm daring you now to come out and fight me. We'll get out in front of the people in the light of day and battle to a finish.

"Ah, I see that some of you gentlemen look scared. In fact, I may say that judging from your faces three of you are either debating suicide or planning how to get out of this state before those affidavits reach the newspapers. And this is the high and mighty civic inquisition that has kept honest men in terror, bluffed earnest reformers into believing the Bleaseley organization invulnerable, influenced legislation, and ruled this state with a high and mighty hand! You're a powerful looking crowd, the lot of you!"

"You damned squealer!" one man contrived to whisper.

Jerry paid him no attention.

"Time is passing, gentlemen. It will soon be one o'clock. It lies in my power to stop that young lady from taking the train. Whether those affidavits ever see publication rests entirely with you. If you will assent to this pardon, come to my terms, on one condition I'll see they never reach a post office."

"What is the condition?" a hoarse voice demanded.

"The Bleaseley machine, represented mostly in this room, right here and now must cease to be. Mike Bleaseley is dead. In trying to railroad Dermott you are making a bad matter worse. The thing for you to do is to resign from your various places of influence and quietly leave this state. Let enough time elapse between your separate resignations so that the public will never suspect, and let honest men be honestly elected to your places. Let the Bleaseley machine simply disintegrate. And to prove that I have no ax to grind personally, and that I want none of the reformer's glory which would make me a traitor to men that in the distant past I was connected with, I will agree to do the same. We will all clear out. No one will ever be the wiser for what has gone on within our state's affairs.

"Gentlemen, it will take me half an hour to reach that hotel and stop this young lady. But"—and here his voice was deadly with venom—"don't flatter yourselves that if you assent to Dermott's pardon those affidavits will go out of existence. If you consent to my terms I simply agree to stop those letters from reaching the mails. Instead, the young woman will travel to a certain bank in this state and put them in the hands of a trustworthy official. He will lock them in his bank vault. If I should ever come to my death by violence, and there is the least reason to suspect that the wrath of the Bleaseley crowd for my action of this day was responsible, that bank official is to open that safe-deposit box and hand over that bunch of mail to Uncle Sam. Do I make myself clear?"

"You're givin' us no alternative!" cried another voice.

"I am not! All your dirty lives you've been giving no alternatives to other folks, and for once you can all swallow your own medicine. I don't give a rap what you do after you get out of this state. You're simply to get out and stay out, and some day when a historian writes the record of this state he will have been saved the trouble of including for future preservation an account of the disease that once ate at the vitals of her government and contributed such a dark and shameful page to her story."

"Have a care!" roared a voice.

"Have a care?" repeated Jerry. "For what? There isn't a man in this room I'm afraid of—I've licked men that would eat any one of you at a bite. If any man present doubts it, I'm ready to accommodate him right here behind these closed doors."

"Kill him!" cried a voice.

But nobody seemed particularly anxious to do the killing. Jerry stood there in a silence you could cut like cheese.

In sixteen minutes he joined us at the foot of the capitol steps. There was no greeting as he came up to us. He merely said:

"I've learned something, boys. I wish every man on earth who was the failure I was could know it too. There's many a wall of opposition in front of him that looks impregnable; but it's only manufactured by a lot of human folks just like you and me. In the case of a great influence for evil, those folks who built it were only good people like us gone wrong. There's many a chap in this world who would be astounded how easily he could drive his personality through the thickness of the obstruction in his path to success if he'd only get over being afraid of a thing on account of its size and look at its quality."

He passed a heavy scroll of paper to Bill. Both of us knew it was Joe's pardon.

"Without a whimper!" commented Jerry, jerking his head at the building rearing above us. "Without a whimper!"

"But you had the goods on 'em," said Bill.

"No," said Jerry, "I had their consciences on them. I simply collected all the data I could learn about questionable deals in this state, which the reform crowd was eager to give me. I took the chance that the reform crowd was right. I charged them all up to the grafters—there wasn't detail enough to those charges to hang a cat. But what can't you do with a man who knows he's done wrong? All that was required was the nerve to make the charges. I made them. Thank God that I'm a man again!"

"A four-flush!" gasped Gridley.

Jerry smiled grimly. Then he dismissed the whole thing with a wave of his hand.

"Perhaps after the first of the new year I can join you boys with your show again. I like the atmosphere. I'm doubly glad that I can associate with you without making up like a rummy or disguising my identity; but I really had to investigate this man Dermott's case personally before signing away his life as that bunch of crooks insisted."

The thing hit me with a smash! Nothing had happened up to that moment to disclose what I have since been proud of. I am probably the only showman in the business who has enjoyed the unique experience of having two of his slats kicked in by a governor of what is now one of the most law-abiding of the United States.

Raynster

Reg. U. S. Pat. Off.

RAYNSTER is the newest name in the clothing world. It covers a line of weatherproof garments that is as broad as human needs, and as varied as the whims of Dame Fashion. There is a Raynster for everybody, for any kind of wear or weather.

Briefly, the line includes rubber surfaced service coats for policemen, firemen, watchmen, teamsters, in black rubber, red rubber, tan rubber, single and double texture; it includes the popular single and double texture models for men, women, boys and girls, in a great array of styles.

It includes fine, thin, dressy, rubberized fabrics for smartly dressed women; it includes an almost endless choice in cravenette fabrics that range in patterns from quiet tones to the most charming heather mixtures.

No single page of space permits the telling of the many, many styles and fabrics and patterns and colors.

There are three big things for everyone to remember. First, is the name, Raynster. The next, that these garments are made by the foremost organization in the world employed in making things in rubber—the United States Rubber Company. Third, that the Raynster in your kind, style and fit can be had from a dealer in your neighborhood.

Take no other at any price, for the Raynster is priced exactly right to give the utmost of quality and service in every kind and style.

You can instantly identify the Raynster. This name appears in the coat label; it is the Honor Mark of a great company. Look for the stores where the Raynster signs are displayed. If your dealer hasn't the Raynster, write to us direct at the address below, and we will see that you are supplied.

Look for this label on your coat

Tarvia

Preserves Roads
Prevents Dust—

Monona Avenue, leading to the Capitol, Madison, Wis. Treated with "Tarvia-A" in 1908 and recoated with "Tarvia-A" 1914.

Grand Boulevard and Concourse, New York City. Constructed with "Tarvia-A" in 1911, and treated with "Tarvia-B" in 1913 and 1915.

Maple Street, Winnetka, Ill. Surfaced with "Tarvia-A" in 1916.

A Good Road is as Personal as a Good Automobile—

An automobile is as personal as a prized and petted horse.

When you labor through a tough road—ragged, or stony, or bumpy, or sandy—you feel the evil "personality" of *that* road. *It is your enemy.*

But when your car sweeps over a smooth, resilient, dustless, perfect road, you feel that *that road is your friend.* That perfect road becomes as personal as your car. *Every Tarvia Road has that friendly "personality."*

Smooth and resilient always; dustless in dry weather, mudless in wet weather; a welcome stretch as often as your wheels hit it. If the name TARVIA were painted on it you would say, "Here we are again, old friend!"

You are probably no stranger to Tarvia roads. They are now to be found in nearly every section; in cities and towns, parkways and highways—thousands of miles of them.

But do you know how they are made? Do you know what makes them smooth, dustless and mudless? Do you know why they are so durable and economical?

If not, here is some detailed information that will interest you.

About Tarvia

Tarvia is a coal-tar preparation, shipped in barrels or in tank-cars. It is made in three grades, to be used according to road conditions, *viz.*: "Tarvia-X," "Tarvia-A," "Tarvia-B."

The chief use of Tarvia is for constructing and treating macadam roads, to make them durable, smooth, resilient, dustless, mudless, waterproof.

It is also used on concrete roads, on brick pavements, and even on good gravel roads, to smooth out irregularities, to arrest disintegration, and for repairs.

"Tarvia-X"

"Tarvia-X" is always to be used when you are building a new macadam road, both as a binder and a surface-coating. The old way in building macadam was to use water as a binder.

But a water-bound macadam wears out quickly under modern traffic that loosens the surface, grinds it into clouds of dust, makes heavy mud and leaves the road full of holes.

Results and Cost of "Tarvia-X"

With "Tarvia-X" in place of water, you have a road smooth enough to dance on, resilient enough for rubber tires to grip on without skidding, or for horses to trot on without slipping; without dust in dry weather, without slime in wet weather.

The first cost of making a tarvia-macadam is but little more than the old-fashioned macadam, but the saving in maintenance more than pays this difference. So Tarvia costs you practically nothing.

"Tarvia-A"

"Tarvia-A" is practically a thin "Tarvia-X" used for recoating the surface of a macadam road already built. It is applied hot and adds greatly to the life of the road. It keeps the road dustless, smooth and inviting to traffic, but its use is confined to certain kinds of traffic to be economical.

"Tarvia-B"

"Tarvia-B" is a much more widely used preservative. It is applied cold. It is thin enough to sink quickly into the road, yet strong enough to bind the surface particles together into a dustless, durable surface. "Tarvia-B" offers the lowest cost of road maintenance yet invented.

Tarvia roads invariably reduce taxes for road building and maintenance. They give a maximum of road efficiency for a minimum of cost.

Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department, which keeps up to the minute on all road problems. If you will write to the nearest office regarding road conditions or problems in your vicinity the matter will have the prompt attention of experienced engineers. This service is free for the asking.

If you want *better roads* and *lower taxes*, this Department can greatly assist you.

Illustrated booklet describing the various Tarvia treatments free on request.

With Every Fish

Serve Lemons. For Attractiveness— for Flavor—for Digestion

A WELL cooked dish that looks inviting is already half digested. If also *flavored* well the charm is made complete.

Lemons as a garnish and a dash of lemon juice for flavor make scores of dishes *epicurean* that would be plain without them. That little care in achieving this *perfection* is doubly paid back in the benefits derived.

There's more than merely *art* in garnishing. Why let fish, meat and game lack the *healthfulness* that lemons add?

SUNKIST Lemons come from California. They are mechanically washed until each is absolutely clean. Then wrapped in fresh, crisp tissue and packed in brand new boxes. Sunkist are practically seedless, bright-colored, waxy lemons. Because of fewer seeds they are more easily sliced and quartered. Such lemons are best for garnishing.

Delivered to you by your dealer *in the original wrappers*—if you insist—*all ready for your table.* In order to keep lemons most satisfactorily leave the wrappers on the fruit. This prevents the air from shrinking the skin.

Boston Cooking School Recipes—An illustrated book containing 200 Orange and Lemon recipes by authors of the famous Boston Cook Book sent *without charge* to housewives who answer this advertisement. Send for copy now, giving your dealer's name and address. Also please state your greatest single use of lemons.

The New Hupmobile

The Gauge of Beauty for a Year to Come

FOR years people have bought the Hupmobile for quality, for performance.

Now they are buying it for beauty as well. The world's finest Four has become the year-ahead beauty-car.

We have always built for goodness and performance. We always will.

A Leader in Beauty as in Performance

Those properties distinguish the Hupmobile. They stamp it a car of special values. They give it a special reputation.

To them is now joined the new distinction of style and extraordinary beauty.

In designing for greater beauty, we have looked a year ahead. In this field the Hupmobile is to stand as high as it does in performance.

Supremacy Won in Every Field

Here its supremacy is established. It has won not only over other fours, but over sixes, eights and twelves.

Owners glory in the way this Perfected Four outdoes cars with more cylinders, on the hills, in sand and mud.

Dealers welcome the chance to demonstrate its superior pulling power in any test that brings out the best a car has.

Such a car was deserving of all the beauty we could give it.

Quality Coupled to Good Looks

We began to prepare a year ago. New factories were built. New equipment was installed. Our plant investment was increased by nearly a million dollars.

This was to provide for a larger production. To effect greater factory efficiency. To cut factory costs. To enable us to add more beauty without encroaching on quality.

For that is the last step we could consider. We value Hupmobile reputation too highly. Satisfaction of owners is worth far more to us than any profit we might make by building to a lower standard.

We could build our motor for less. Another car maker has called it "fit for a $3,000 car."

We could save on our clutch; on our transmission; our rear axle. But we have not permitted ourselves to be tempted.

Keeps Faith With Hupmobile Ideals

Hupmobile policy says, in so many words: "To protect ourselves in our constant endeavor to make the Hupmobile even better than it is, we reserve the right to change specifications and prices without notice, or to use equipment other than that specified."

So the new Hupmobile keeps faith with Hupmobile ideals. It remains the same wondrous performer. It will continue to out-perform the multi-cylinders.

See The New Car; See What It Does

It wears a new dress. It comes to you with new beauty, new style, new luxury—which no other car will attain for a year to come.

See the new Hupmobile. Note its betterments. Check its performance against other cars—cars that have more cylinders or cost more money.

That is your one sure way of proving Hupmobile value.

Hupp Motor Car Corporation
Detroit, Michigan

Some of the 25 New Style Features

- Bright finish, long grain, French seam upholstery
- Improved cushions and lace type back springs in seats
- Leather-covered molding finish along edge of upholstery

NATIONAL MAZDA

THE WAY TO BETTER LIGHT

"Oh! I can see a LOT better now!"

Of course you can! When old-fashioned lamps come out of the house, and National MAZDA lamps take their place, you can see the difference at once. Your vision's clearer. Close work is less tiring. And a great source of eyestrain is gone.

For, the first requirement of good lighting is enough light, and National MAZDAS give three times the light without using any more current. Never was electric lighting service lower in price than today.

These Spring weeks are known as House Wiring Time all over the country—*now* is your time to "do it electrically." Wire up for Better Light. Or, if your home is already electrically lighted, see that the lamps are all National MAZDAS.

Buy National MAZDAS where you see them displayed. Buy five at a time in the handy Blue Carton. Let the lamp man advise about sizes—he'll help you get the most light for your money.

THE MAN-KILLER

By HOLWORTHY HALL

ILLUSTRATED BY CLARENCE F. UNDERWOOD

THERE are innumerable ways of beginning a story and only four are absolutely unpardonable. This, of course, is one of the four. ut there was once in Templeton a wishful oman, whose hobby it was to follow the styles, hether in art or in music, in batiste or in terature; and presently she, too, discovered ipling and disregarded the flight of time until he had finished the set.

Now by the grace of God and a heritage om her ancestors she was possessed of large nd beautiful violet eyes; fortuitously she was cquainted with a few celebrities and a swarm f hopeful prospects; and—at least in Templeon—she was called clever. She discerned an pportunity and she trapped it. Not even the nomaly of an undramatic husband and a ong-legged offspring could prevent her from tudying the technique of her subcutaneous ister, Mrs. Hauksbee, and shaping her words nd deeds accordingly. Marvelous to say, she roved a fairly distinguished credit to the foster elationship, and at length it was universally cknowledged that she had married beneath er own intellectual status.

For a decade and a half she amused herself y serving as branch manager in Templeton for he Indian Psychological Survey, and took her ayment in the consciousness that she exercised sturdy influence over anyone who would isten to her. Like her famous prototype, she specially loved to mold the destinies of young nd attractive men; and on one occasion she ucceeded in establishing by a single sentence he ambition of a juvenile satellite.

The man was Robinson Whittier, who had lso read The Education of Otis Yeere, and new exactly how Otis felt. And suddenly she aid to him—because in his attempt to interest er he was stammering flagrantly—she said weetly to him with a glance to correspond:

"Bobby, I don't know where you got your experience; but you're an artist with women!"

Whittier flushed, and went on manhandling his vocabulary in a desperate effort to deserve the hyperbole. He drifted home among the tars that night, and his exultant thoughts were acred to the memory of a rank plagiarist.

The boy Whittier was eager, impressionable, earning, and hardly twenty; and the natural onsequence of that outrageous flattery natually occurred. Everyone takes more or less nnocent pleasure in his own personality; and Whittier, for all his height and weight, was undamentally as playful and affectionate as he cub of a mountain lion.

Previously he had approached women with pprehension and incoherence; but, because he elied implicitly upon the matron who had emboldened him, and witnessed that many older men were in her confidence, he based his future campaign on the theory that she had given voice to a hitherto unsuspected fact. He endeavored, as most of us do, to live up to the blarney. He began to examine, to observe, to file away his notes of actions and reactions, to judge and classify. Four years later he was moderately proud of his achievements; but meantime he had forgotten, as students will, who was responsible for sending him to school. Indeed, she had long since quitted Templeton to live in Pittsburgh, and Whittier had almost forgotten that she ever existed.

And from this point forward she has nothing whatsoever to do with the story.

Miss Standish, Fashionably Tardy, Was Coming Down

To Bobby Whittier, descending from the afternoon local express at Orient Lake, where all good and solvent Templetonians sojourn from May to September, the vision of Mrs. Brewster standing on the platform astonished no less than gratified him. In all his research he hadn't yet sacrificed his sense of proportion; he was ingenuously delighted that Mrs. Brewster had come in person to welcome him, and his formula of homage brought to her eyes a responsive brightness which was somewhat better than mere hospitality.

"Bobby," she said, squeezing his hand, "I knew you wouldn't fail me! Give your checks to Patrick. We're going to drive round by the lake road while I tell you how you're going to save my life. Why didn't you come sooner?"

Whittier delivered the credentials to the chauffeur and anticipated him in opening the door of the tonneau for Mrs. Brewster.

"Surely," he said, "with five men up at the house, they haven't all passed back to the dealer, have they? If they have I loathe 'em for cowardice and bless 'em for the privilege. Say on!"

She nodded affirmatively.

"They've mutinied!" declared Mrs. Brewster, assuming a terrific frown, which was agreeably tempered by the indulgence of her mouth. "They've gone and spoiled my party!"

Whittier, at this moment, was regarding her with manifest admiration. To figure strictly by the calendar she wasn't a young woman; neither, in this age of dancing and fluffy clothes, was she condemned to obscurity by her age; she was possibly forty-two, but she had kept her moods and her complexion youthful, and summer fabrics were amazingly becoming to her.

Whittier was charmed anew, and rejoiced that Patrick, under instructions, was heading for the longest route homeward. But she had said something ——

"Spoiled your party!" he echoed, incredulous.

Anyone else, to produce the same effect, would have emphasized it "Spoiled *your* party!" The inference was complimentary to the extreme.

"Yes—they have!" she reiterated. "And I've been longing and fretting and counting the hours until you got here. It's a girl."

Whittier laughed outright, and builded on his certainty that Mrs. Brewster liked badinage.

"It's been ten years since girls spoiled house parties for me," he stated. "What's the matter with her—can she swim already?"

Mrs. Brewster's lips curved; but she shook her head.

"Bobby, you know I trust you, don't you?"

"If I doubted it," said Whittier, "I should take to opiates and die in a nice muddy gutter."

"You needn't laugh. It's a very critical situation!"

"She must be pretty," guessed Whittier.

"Well, she is. She's too pretty."

"A paradox I refuse to grant," he denied.

"Just the same, she is. She's positively a man-killer!"

"And so your guests have mutinied and you're calling for volunteers? Where is she?"

"Bobby! You sit there and rest your mind, and let me do the talking! You see—I didn't want to confine this whole week to Templeton people; so I asked two men and two girls from outside. She's one of the girls. I hadn't seen her for a season or two, but she was always a dear; so I asked her. And, Bobby, she's all there is to the party!"

"Oh!" said Whittier. "That's superlative!"

"The men are simply crazy about her," related his companion. "Why, if somebody turns on the phonograph you'd think she was a fire and the men were a lot of battalion chiefs! They don't saunter up politely to ask her to dance; they make one wild dash, and the losers sulk and sigh, and then finally remember their manners—or me—and pick out somebody else! They've been impossible! But that isn't the worst of it, Bobby——"

"On the contrary," opined Whittier thoughtfully.

"Exactly! The worst of it is that nobody's having a good time—not even Cecily!"

"That's curious," said Whittier. "Doesn't she care for popularity?"

"I don't know. But I've got a whole houseful of constraint, and I need you. All the other girls are feeling hurt and snubbed and wallflowerish; and Cecily's bored. Imagine it!"

Whittier smiled his allegiance.

"And my pleasant duty?" he queried.

"Monopolize her," said Mrs. Brewster grimly. "I've known you ever since you wouldn't play Post Office, Bobby. I want you to put an end to the nonsense; and you can do it without even working the old conservatory! You're such a genius you won't have the least trouble in the world. You monopolize her!"

"Now, Mrs. Brewster! You ——"

"And as soon as you can get your monopoly under way you'll do three things—you'll make it possible for the other girls to have a wee bit of fun indoors without seeming like second choices; you'll be a perfectly adequate little playmate for Cecily outdoors; and you'll make me a very happy hostess."

"By nightfall," said Whittier resolutely, "my hostess shall be trebly happy—that is, unless my educated feet lose their cunning and my tongue cleaves to the roof of my mouth."

Her smile was an inclusive reward.

"I knew you wouldn't fail me, Bobby!"

"Provided always, of course, that the lady is willin'."

"She will be," promised Mrs. Brewster. "Now to warn you—she's unutterably captivating, and she hasn't any heart."

"Things equal to the same thing," said Whittier—"that's logic."

"She'd flirt with the newel-post, if nothing better offered."

"My rival fills me with contempt," said Whittier.

"She's overwhelmed every man in the house."

"To-night, as a courtesy to you," said Whittier, "I shall give her the opportunity of maintaining the average."

"And you'll save me from nervous prostration."

"I'll do my best," vowed Whittier, "to cheat the doctors."

"She's an expert, Bobby. When she looks at you you'll writhe!"

"I rarely fidget," said Whittier, "and I've been reading a book on will power."

"Temporarily you'll make an enemy of five men, and you may have to arbitrate later with five girls."

"Your friendship is worth fifty," said Whittier. "I renounce 'em in advance."

She leaned toward him and became impressively serious.

"Bobby, I'm really not joking. You will help me out, won't you? It's been perfectly hectic! Nobody's at ease—nobody's vivacious—nobody but Cecily and the man she's with; and I know she isn't altogether joyous. If you'll just institute an old-fashioned rush ——"

"I shall do an unqualified hurl," Bobby asserted. "You've got me all stirred up, and I'm glad I bought a new silk waistcoat. Ask Patrick to drive faster, will you?"

"But—don't forget—she knows your horrid past from A to Izzard."

"My past?" he puzzled.

"Don't you remember your first affinity? And how Cecily used to loiter round so unobtrusively? She's profited by her examples, Bobby. She's infinitely more resourceful than her mother was."

"Mother!" exploded Whittier. "You're not talking about little Cecily *Standish* who used to live in Templeton! That spidery-legged ——"

"Sh-h-h!" said Mrs. Brewster. "She's nineteen, and the water's so cold that we haven't been to the beach yet; so you can't say a word authoritatively. But it's Cecily Standish. . . . And she's a terror!"

The car swung into a wooded driveway; and between the trees Whittier could catch glimpses of a great white house, fronting the placid lake. He stared at Mrs. Brewster in extraordinary bewilderment; long-discarded images were flickering before him; he recalled a certain evening when he had made a confessor of Cecily's mother, and in the midst of his peroration Cecily had been detected in hiding behind the portières.

Whittier's pulses quickened; but after that one spasm of perturbation his magnificent assurance remained intact. The problem was slightly more complicated than usual—that was all. It was a chance for strategy.

"Well," said Whittier complacently, "that ought not to sour my disposition, ought it?"

Nevertheless, there was a subsequent moment when, with a clean dress collar in his hand, he stood contemplatively striving to visualize Miss Standish, and to complete, from the shadowy vignettes of his memory, some analysis that would serve as a criterion for his present conduct. She had been a highly ubiquitous child, with a penchant for sarcastic remarks and shrill laughter; and toward the end of her residence in Templeton she had won more than transient notoriety by giving public imitations of her mother's reception of a courtly visitor.

She hadn't succumbed to Whittier's blandishments—at least, she habitually flung barbed gibes at him when he came up the walk; and in winter she frequently managed to have a snowball or two to fling along with them. And once she had been caught listening behind the portières! Whittier reddened, in spite of himself, and began to fasten the collar.

He balked over his tie—not because he was one of those temperamental and profane bunglers who really ought to wear made-up cravats, but because his mental processes weren't in synchronism with his fingers. Mrs. Brewster's report had originally filled him with enthusiasm; the girl guest, until her name had been mentioned, had suggested novelty and refreshment. He had been strongly predisposed to like her and to find entertainment in her unique character. He had been inspired by the knowledge that, in supporting Mrs. Brewster, he would necessarily have to go out in competition with the field and earn his monopoly by sheer merit of plan and discourse; and this was the warfare he most enjoyed.

But to learn that the triumphant creature of ineffable beauty and unapproachable repartee was Cecily Standish,

He Was Irritated to Discover That She Had Gone Quite Limp

who four years ago had scandalized the town by mimicry which was too professionally accurate to be more than half humorous! . . . Whittier's pupils dilated, and he noticed with signal amazement that the palms of his hands were moist. He inspected himself in the mirror and grinned sardonically.

"Well!" he said to himself. "Are you sixteen years old, dressing for dancing class—or are you just plain buffaloed?"

He buttoned his new silk waistcoat and slipped into his dinner jacket. Of the numbered hairs of his head a few had encroached upon the aisle; he coerced them relentlessly with a military brush. Immaculate, splendidly tailored, he scanned with approval the blond young giant smiling at him from the pier glass, and was about to move away satisfied when automatically he was reminded of a brief but essential rite, and paused to fix his eyebrows in engaging symmetry.

At the conclusion of the ceremony he remained in profound meditation; then again the color burned into his cheeks, and under his breath he quoted a phrase that wasn't morally adapted to the drawing-room. It had flashed across him that the person who had first hinted that a well-groomed man also cares for his brows was Cecily's mother. Women, she had told him, were propitiated by these niceties; and he had bought a tiny implement of velvet bristle forthwith.

"I hope she chokes!" said Whittier piously, and went out to the stairway.

Scattered about the lower floor were several people he recognized, and three strangers—two men and a girl. He was duly presented; he accepted with exactly the right degree of humility the conventional declaration that they had heard much of him; he scrupulously refrained from the crass banality which is the conventional response.

Miss Standish, he was informed, was mad to meet him; as a rejoinder he alleged that in his insane rage to meet Miss Standish he was all but violent. The anteprandial hush ensued; tumblers were heard to clink in the distance; there was a rustling on the stairway—and Miss Standish, fashionably tardy, was coming down.

Whittier, with the rest, had turned to watch her entrance. He was prepared to behold a vivid, smashing beauty, enveloped in one of the modish ruddier shades of burgundy or dregs-of-wine; what he saw was sufficiently astounding to force his lips apart in stupefied vacuity.

Cecily Standish, advertised as the man-killer, was a slim, exquisitely tinted girl of more than ordinary poise; her gown was a dainty specimen of those daintily flowered substances that show to such advantage in melodramas of the Civil War; it had dim roses on it, and bastions of flounces; it fairly exhaled an atmosphere of modesty and sweetness.

And Miss Standish herself! . . . Whittier's heart delayed its functions as he verified the data . . . she was brown-eyed! Before he could properly give thanks that she had escaped the lighter pigments, before he had comprehended the extreme simplicity of her coiffure and the unerring craftsmanship of it, before he had fully appreciated the marvelous blending of her features, Miss Standish, dimpling, had raced down to the lower level.

Then silence—dead, civil silence. The gentle voice of Mrs. Brewster intoned a pair of surnames; Whittier bowed blindly. There was a smooth current of people flowing west and Whittier was carried incontinently along with it. He assisted someone to a seat at the table. He dropped his napkin on the floor. In groping to retrieve it he disarranged ringingly his series of silver accouterments.

A hum of conversation arose and cheered him, and he breathed more freely. He ventured to look at his right-hand neighbor, and found her smiling at him. Her eyes—which, if they had been the hereditary violet, couldn't have been clearer or larger—stifled his budding arrogance. An enchanting warmth crept over him and he was beatified.

"It's quite four years, isn't it?" she said slowly. "Tell me—am I to be afraid of you?"

"Afraid of me!" echoed Whittier. "Why?"

"Why, because," she said, allowing her eyes to display illimitable depths, "you've had so many years to improve and mature—and you were always an artist . . . with women." The last words were barely audible.

"True art," said Whittier, fascinated, though somewhat staggered, "is in the opinion of the critic. I am indebted to you."

And tasted his soup tentatively.

To the continuous gratification of Mrs. Brewster, they were mutually absorbed in each other throughout that dinner and immediately afterward, when Whittier stole Miss Standish from a group of raiders and segregated her for coffee in the living room. In due course the big concert phonograph was commandeered for use; and Whittier, encouraged by Mrs. Brewster's tacit gratitude, and slightly piqued and spurred by the restraints Miss Standish imposed, regardless of their ancient standards, involved her for the preliminary half hour. By that time he was thoroughly awake to his good fortune.

To be sure, she was mainly on the initiative; and she was direct—startlingly direct; but she was so enticing in her sallies and ripostes that Whittier was transported; and when she proposed an interlude on the bricked loggia commanding the lake he acceded with zeal that was almost too prompt to be artistic. He brought two chairs

a one cushion, and concentrated heartily upon his
ndam tormentor.

How quiet you are!" said Miss Standish suddenly.

It's a wholesome compliment to you," explained
Vittier, thinking in adjectives.

That—or ennui?"

That—and uncertainty," said Whittier. "I was won-
ding who invented formality, and why."

he laughed, and clasped her hands behind her head.
T platinous moonlight was kind to her; it lent her
a certain ethereal unreality without detracting from
h alluringly human attributes.

Someone invented electricity,
t," she said; "but there are still
g companies, aren't there? What
w it, specifically?"

Whittier edged an imperceptible
in toward her.

To tell the truth—your name."

Don't you tell the truth habit-
ally, Mr. Whittier?"

Is there any way of answering
tl t question without incriminating
self?"

I think you might answer it
frankly—couldn't you?"

Whittier shrugged his shoulders.
'To save losing energy, like the
d·ky who ran half a mile to get im-
p us enough to jump a two-foot
f ce," he said, "suppose we begin
t double on our tracks. I hardly
e r tell the truth unless it's unex-
p ted."

'Then you're at liberty to be as
fr nk as you please," she informed
h . "And I'm waiting to hear
w at's wrong with my name."

'Was that what I implied?"

'Oh, no; it was purely intuitive."

'A synonym for guesswork," said
V ittier lightly.

Miss Standish permitted a wrinkle
t appear upon her forehead.

'Then you don't believe in fem-
in e intuitions?"

'Why should I? They're not
in inct—they're extinct."

'Oh, but, Mr. Whittier—they're
n ! They're proverbial."

'When you show me the remains
o the cat that was killed by curi-
o y, and the walls that have phys-
ic ears," said Whittier, "I'll try to
c mpromise with you. Until then,
I ag'in' proverbs."

'They're very helpful to some of
u" she insisted.

'Name one," said Whittier, "and
I slay it for you."

"A thing of beauty is a joy for-
e r,'" she proffered.

'Except," said Whittier, "when
it skin-deep. Let's have another."

'"Out of sight, out of mind'?"

'Still, old friends are best," said
Vittier.

'I—well, there's one you can't
d pute."

'It must be an infant among
p verbs," he deprecated.

She had inclined toward him and he was mystified by the challenge in her eyes. She fascinated him and yet he was inwardly advised to hold his emotions aloof.

The impending peril wasn't so much in her forwardness as in her obvious repression.

"'Faint heart,'" she said softly, "'never won fair lady.'"

'And yet," he responded steadily, "there's an old-time maxim to the purport that 'All things come to him who waits.'"

He had also bent nearer to her, and his pose was tense and vigilant.

'I like wit in men," she said. "I like quick thinking—and quick doing. Will you be offended if I say sincerely that you have matured?"

'Sincerity never offends the intelligent," said Whittier, bringing himself sharply to earth and drawing his chair an inch farther away. He was exercising his utmost resistance in order to preserve an impersonal demeanor; for now and then a casual stress in modulation, a passing trick of accenting a clause by an infinitesimal motion of the hands, brought back a clear-cut image of Cecily's mother—and her mother's daughter was a distinct improvement.

'Have I changed so much?" she asked abruptly.

'In some respects so much that you're very foreign—so little in others that when I was thinking of formality I wondered why we weren't using our Christian names."

'Did I ever use yours, Mr. Whittier?"

"No; but there were reasons. Possibly I awed you."

"And now I've changed?"

"I gave you a divided answer—you pays your money and takes your choice."

Miss Standish smiled with her eyes.

"You must mean, then, that you want to call me Cecily?"

Whittier glanced behind him.

"I was thinking consecutively."

"Because there's no reason why you shouldn't. . . . The horizon hasn't altered that much. . . . Who is your confidante now?"

"If I Weren't Persuaded That You're the Apotheosis of Ingénues, I'd Begin to Think You're Flirting With Me"

"I'm democratic," said Whittier; "and—secretive."

"Haven't you any more *impasses?*"

"I don't know that I ever had," he protested.

"One of the three unfulfilled dreams I have," she said musingly, "is to be a confidante. It sounds so—adult. It must be like having the legal and moral authority to open somebody else's mail. Ever since I was a little girl I've had fantasies of men coming to me with their funny troubles . . . and it's never happened. Don't you suppose that for old friendship's sake you could scare up a confidence or two for me? I'd be ever so sympathetic."

"Unfortunately," said Whittier, folding his arms, "my path has been strewn with roses."

He was gradually becoming restive. Miss Standish wasn't considering his prerogatives; she was setting the pace herself, and Whittier shone primarily as a leader.

"In four years! No love affairs?"

"Nary a one!" said Whittier firmly. This was a reconnaissance.

"Oh! . . . Have I misjudged you? Or are you so courteous to me only as a particular favor?"

"If I weren't persuaded that you're the apotheosis of ingénues," he said, "I'd begin to think you're flirting with me."

This was the gage of battle. There were not more than three ways of treating it. Miss Standish was suffused with merriment, which she didn't conceal.

"Which one of us is the ingénue, Mr. Whittier?"

"There's only one way to decide that."

"And—if you'll be so kind?"

"You're too old," he said brutally; he was running along prehistoric lines.

"Too old!"

"By four years—that is, I'm sentimentally enjoined from the laboratory test. I was once a pupil of your mother. But, so far as I'm concerned, I'll refer you to Sydney Porter, the great philosophical teacher, in that illuminating paragraph on the heaving of bricks."

"It's too bad," she hesitated; "but I read so little metaphysics ——"

"The great pedagogue asks us," said Whittier, "whether we've ever seen a man sneak out in the back yard and pick up a rock to throw at a tomcat that was looking at him. He pretends that he hasn't a thing in his hand, and that he doesn't see the cat, and that the cat doesn't see him. And ——" He stopped short and induced a superficial fit of coughing.

"Yes?" urged Miss Standish.

"The context eludes me." This was scientific engineering.

"I seem to have a hazy recollection of the place," said Miss Standish wickedly. "There was something about the value of the tomcat method as opposed to the hot horseshoe, or the blunt joy of a small boy finding a baseball in the grass. But I miss the analogy. You're not planning to hold *my* hand, are you?"

"I was quoting," said Whittier comfortably, "one of the qualitative tests."

He was disillusioned and regretful; the enemy was without skirmishers—she had only heavy artillery.

"And the other one—for which I'm too decrepit?"

"I didn't say that! I said you were too old."

"But when one's too old to be a modern ingénue isn't one pitiably decrepit?"

"Not without exception. . . . They've unearthed a waltz finally. Shall we demonstrate?"

"Why—certainly, if you'd rather," said Miss Standish, rising. She smoothed her skirts and looked directly up into his face. "You frighten me!" she said, turning her head away.

Whittier gasped.

"I—frighten you? That's most extraordinary! What have I done?"

"Nothing."

He would have taken oath that her tone was wistful. He smiled to himself in curbed cynicism.

"Let me give you my solemn affirmation that I'm tame and harmless, Miss Standish."

She glanced at him sidewise with her head lowered.

"Not Cecily?"

"If you look like that at me," said Whittier, unable to oppose an impulse that was two-thirds sheer disinclination, "you'll force me to ascertain which one of us is the ingénue."

"Not by throwing bricks, I hope?"

"No—by the surer system."

"Is it so faithfully precise?"

"Absolutely!"

"I think," she said with a quaver in her voice, "that you and I misunderstand each other, Mr. Whittier." And she looked at him sidewise with her head lowered.

As he surged toward her he was subtly perceptive of error in his judgment. Her sudden straightening indicated a remote possibility that she hadn't realized the significance of her repetition of the coquetry. And Whittier, who couldn't for the soul of him have dissected his motives as he surged toward her, halted, paralyzed by the prohibitive barrier of her eyes.

"Well!" she said, surveying him with calm dignity. "So that's it! That's what you were going to do! I said we misunderstood each other. Matured! And I'd hoped—I'd hoped we were going to be friends! Why you're nothing but a—a conceited lady-killer!"

She darted past him to sanctuary, and Whittier, woefully shaken, tramped on behind her to extenuate and make amends. But in the living room Mrs. Brewster cornered him as he entered.

(Continued on Page 41)

THE PATH OF GLORY

By Mary Brecht Pulver

ILLUSTRATED BY E. F. WARD

IT WAS so poor a place—a bitten-off morsel "at the beyond end of nowhere"—that when a February gale came driving down out of a steel sky and shut up the little lane road and covered the house with snow a passer-by might have mistaken it all, peeping through its icy fleece, for just a huddle of the brown bowlders so common to the country thereabouts.

And even when there was no snow it was as bad—worse, almost, Luke thought. When everything else went brave and young with new greenery; when the alders were laced with the yellow haze of leaf bud, and the brooks got out of prison again, and arbutus and violet and buttercup went through their rotation of bloom up in the rock pastures and maple bush—the farm buildings seemed only the bleaker and barer.

That forlorn unpainted little house, with its sagging blinds! It squatted there through the year like a one-eyed beggar without a friend—lost in its venerable white-beard winters, or contemplating an untidy welter of rusty farm machinery through the summers.

When Luke brought his one scraggy little cow up the lane he always turned away his head. The place made him think of the old man who let the birds build nests in his whiskers. He preferred, instead, to look at the glories of Bald Mountain or one of the other hills. There was nothing wrong with the back drops in the home stage-set; it was only home itself that hurt one's feelings.

There was no cheer inside, either. The sagging old floors, though scrubbed and spotless, were uncarpeted; the furniture meager. A pine table, a few old chairs, a shabby scratched settle covered by a thin horse blanket as innocent of nap as a Mexican hairless—these for essentials; and for embellishment a shadeless glass lamp on the table, about six-candle power, where you might make shift to read the Biweekly—times when there was enough money to have a Biweekly—if you were so minded; and window shelves full of corn and tomato cans, still wearing their horticultural labels, where scrawny one-legged geraniums and yellowing coleus and begonia contrived an existence of sorts.

And then, of course, the mantelpiece with the black-edged funeral notice and shiny coffin plate, relics of Grampaw Peel's taking-off; and the pink mug with the purple pansy and "Woodstock, N. Y.," on it; the photograph of a forgotten cousin in Iowa, with long antennæ-shaped mustaches; the Bible with the little china knobs on the corners; and the pile of medicine testimonials and seed catalogues—all these contributed something.

If it was not a beautiful place within, it was, also, not even a pleasant place spiritually. What with the open door into his father's room, whence you could hear the thin frettings made by the man who had lain these ten years with chronic rheumatism, and the untuneful whistlings of whittling Tom, the big brother, the shapely supple giant whose mind had never grown since the fall from the barn roof when he was eight years old, and the acrid complaints of the tall gaunt mother, stepping about getting their inadequate supper, in her gray wrapper, with the ugly little blue shawl pinned round her shoulders, it was as bad a place as you might find in a year's journeying for anyone to keep bright and "chirk up" in.

Not that anyone in particular expected "them poor Hayneses" to keep bright or "chirk up." As far back as he could remember, Luke had realized that the hand of God was laid on his family. Dragging his bad leg up the hill pastures after the cow, day in and day out, he had evolved a sort of patient philosophy about it. It was just inevitable, like a lot of things known in that rock-ribbed and fatalistic region—as immutably decreed by heaven as foreordination and the damnation of unbaptized babes. The Hayneses had just "got it hard."

Yet there were times, now he was come to a gangling fourteen, when Luke's philosophy threatened to fail him. It wasn't fair—so it wasn't! They weren't bad folks; they'd done nothing wicked. His mother worked like a dog—"no fair for her," any way you looked at it. There were times when the boy drank in bitterly every detail of the miserable place he called home and knew the depths of an utter despair.

If there was only some way to better it all! But there was no chance. His father had been a failure at everything he touched in early life, and now he was a hopeless invalid. Tom was an idiot—or almost—and himself a cripple.

As Far Back as He Could Remember, Luke Had Realized That the Hand of God Was Laid on His Family

And Nat! Well, Nat "wa'n't willin'"—not that one should blame him. Times like these a lump like a roc's egg would rise in the boy's throat. He had to spit—and spit hard—to conquer it.

"If we hain't the gosh-awfulest lot!" he would gulp.

To-day, as he came up the lane, June was in the land. She'd done her best to be kind to the farm. All the old heterogeneous rosebushes in the woodyard and front "lawn" were pied with fragrant bloom. Usually Luke would have lingered to sniff it all, but he saw only one thing now with a sudden skipping at his heart—an automobile standing beside the front porch.

It was not the type of car to cause cardiac disturbance in a connoisseur. It was, in fact, of an early vintage, high-set, chunky, brassily æsthetic, and given to asthmatic chokings on occasion; but Luke did not kn this. He knew only that it spelled luxury b yond all dreams. It belonged, in short, to Uncle Clem Cheesman, the rich butcher who liv in the village twelve miles away; and its preser here signaled the fact that Uncle Clem and Au Mollie had come to pay one of their detestable qu terly visits to their poor relations. They had co while he was out, and Maw was in there now, beari it all alone.

Luke limped into the house hastily. He was mistaken. There was a company air in the roo a stiff hostile-polite taint in the atmosphere. Th visitors sat in the kitchen, and a large hamper, contents partly disgorged, stood on the table. Lu knew that it contained gifts—the hateful, mercif nauseating charity of the better-off.

Aunt Mollie was speaking as he entered—a lar high-colored, pouter-pigeon-chested woman, wit great many rings with bright stones, and a noddi pink plume in her hat. She was holding up a bif cated crimson garment, and greeted Luke absent

"'Three pair o' them underdrawers, Delia—' not a break in one of 'em! I sez, as soon as I see Cl layin' 'em aside this spring, 'Them things'll be j right fur Delia's Jere, layin' there with the rheun tiz.' They may come a little loose; but, of cou you can't be choicey. I've b'en at Clem fur five ye to buy him union suits; but he's always b'en so sti on red flannen. But now he's got two aut'mobil countin' the new delivery, I guess he's gotta more tony; so he made out to spare 'em. And n that hat, Delia—it ain't a mite wore out, an' fur you'll need one it's plenty good enough. I only h it two years and I guess folks won't remember; what if they do—they all know you get my thir Same way with that collarette. It's a little mo eaten, but it won't matter fur you. . . . The g suit you can easy cut down fur Luke, there ——'

She droned on, the other woman making automatic sounds of assent. She looked coc Maw—Luke thought; but she wasn't. Not b darn sight! There was a spot of pink in each ch and she stared hard every little bit at Gramp Peel's funeral plate on the mantel. Luke knew w she was thinking of—poor Maw! She was burn in a fire of her own lighting. She had brough all on herself—on the whole lot of them.

Years ago she had been just like Aunt Mo The daughters of a prosperous village carpen they had shared beads, beaus and bangles u Maw, in a moment's madness, had chucked it away to marry poor Paw. Now she had made bed, she must lie in it. Must sit and say "Th you!" for Aunt Mollie's leavings, precious scr she dared not refuse—Maw, who had a pride as fie and keen as any! It was devilish! Oh, it was k of Aunt Mollie to give; it was the taking that ca so bitter hard. And then they weren't genteel ab their giving. There was always that air of sup ority, that conscious patronage, as now, wh Uncle Clem, breaking off his conversation with invalid in the next room about the price of mut on the hoof and the chances of the Democrats' g ting in again, stopped fiddling with his thick pla watch chain and grinned across at big Tom to fl his undeviating flower of wit:

"Runnin' all to beef, hain't ye, Tom, boy? Co on down to the market an' we'll git some A 1 sirlo outen ye, anyway. Do your folks that much goo

It was things like this that made Luke want burn, poison or shoot Uncle Clem. He was not a l man, Uncle Clem—a thick sandy chunk of a fell given to bright neckties and a jocosity that t no account of feelings. Shaped a little like a log, was—back of his head and back of his neck—al a width. Little lively green eyes and bristling mustaches. A complexion a society bud might have envi Why was it a butcher got so pink and white and sle Pork, that's what Uncle Clem resembled, Luke though a nice, smooth, pale-fleshed pig, ready to be skinned.

His turn next! When crops and politics failed and joke at poor Tom—Tom always giggled inordinately at too—had come off, there was sure to be the one about hi self and the lame duck next. To divert himself of bo expectation, Luke turned to stare at his cousin, S'norta

S'norta, sitting quietly in a chair across the room, seldom known to be emotional. Indeed, there were tim when Luke wondered whether she had not died in chair. One had that feeling about S'norta, so motionl was she, so uncompromising of glance. She was v prosperous looking, as became the heiress to the Cheesm

reat business—a fat little girl of twelve, dressed with a profusion of ruffles, glass pearls, gilt buckles, and thick tawny curls that might have come straight from the sausage hook in her papa's shop.

S'norta had been consecrated early in life to the unusual. Even her name was not ordinary. Her romantic mother, immersed in the prenatal period in the hair-lifting adventures of one Señorita Carmena, could think of no melier appellation when her darling came than the first portion of that sloe-eyed and restless lady's title, which she conceived to be baptismal; and in due course she had conferred it, together with her own pronunciation, on her child.

A bold man stopping in at Uncle Clem's market, as Luke knew, had once tried to pronounce and expound the cognomen in a very different fashion; but he had been hustled unceremoniously from the place, and S'norta remained in undisturbed possession of her honors.

Now Luke was recalled from his contemplation by his uncle's voice again. A lull had fallen and out of it broke the question Luke always dreaded.

"Nat, now!" said Uncle Clem, leaning forward, his thick fingers clutching his fat knees. "You ain't had any news from him since quite a while ago, have you?" The wit that was so preponderable a feature of Uncle Clem's nature bubbled to the surface. "Dunno but he's landed in jail for a spell back and can't git out again!" The lively little eyes twinkled appreciatively.

Nobody answered. It set Maw's mouth in a thin, hard line. You wouldn't get a rise out of old Maw with such tactics—Maw, who believed in Nat, soul and body. Into Luke's mind flashed suddenly a formless half prayer: "Don't let 'em nag her now—make 'em talk other things!"

The Lord, in the guise of Aunt Mollie, answered him. For once, Nat and Nat's character and failings did not hold her. She drew a deep breath and voiced something that claimed her interest:

"Well, Delia, I see you wasn't out at the Bisbee's funeral. Though I don't s'pose anyone really expected you, knowin' how things goes with you. Time was, when you was a girl, you counted in as big as any and traveled with the best; but now"—she paused delicately, and coughed politely with an appreciative glance round the poor room—"they don't anyone hereabouts but's talkin' about it. My land, it was swell! I couldn't ask no better for my own. Four-horse cabs, and the hearse sent over from Rockville—all pale gray, with mottled gray horses. It was what I call tasty. Matty wasn't what you'd call well-off—not as lucky as some I could mention; but she certainly went off grand! The whole Methodist choir

"Well, 's I was sayin', it was a grand funeral. None better! They even had engraved invites, over a hundred printed—and they had folks from all over the state. They give Clem, here, the contract fur the supper meat ——"

"The best of everything!" Uncle Clem broke in. "None o' your cheap graft. Gimme a free hand. Jim Bisbee tole me himself. 'I want the best ye got,' he sez; an' I give it. Spring lamb and prime ribs, fancy hotel style ——"

"An' Em Carson baked the cakes fur 'em, sixteen of 'em; an' Dickison the undertaker's tellin' all over they got the best quality shroud he carries. Well, you'll find it all in the Biweekly, under Death's Busy Sickle. Jim Bisbee shore set a store by Matty oncet she was dead. It was a grand affair, Delia. Not but what we've had some good ones in our time too."

It was Aunt Mollie's turn to stare pridefully at the Peel plate on the chimney shelf.

"A thing like that sets a family up, sorta."

Uncle Clem had taken out a fat black cigar with a red-white-and-blue band. He bit off the end and alternately thrust it between his lips or felt of its thickness with a fondling thumb and finger. Luke, watching, felt a sudden compassion for the cigar. It looked so harried.

"I always say," Aunt Mollie droned on, "a person shows up what he really is at the last—what him and his family stands fur. It's what kind of a funeral you've got that counts—who comes out an' all. An' that was true with Matty. There wa'n't a soul worth namin' that wasn't out to hers."

How Aunt Mollie could gouge—even amicably! And funerals! What a subject, even in a countryside where a funeral is a social event and the manner of its furniture marks a definite social status! Would they never go? But it seemed at last they would. Incredibly, somehow, they were taking their leave, Aunt Mollie kissing Maw good-by, with the usual remark about "hopin' the things would help some," and about being "glad to spare somethin' from her great plenty."

She and Señorita were presently packed into the car and Tom had gone out to goggle at Uncle Clem cranking up, the cold cigar still between his lips. Now they were off—choking and snorting their way out of the woodyard and down the lane. Aunt Mollie's pink feather streamed into the breeze like a pennon of triumph.

Maw was standing by the stove, a queer look in her eyes; so queer that Luke didn't speak at once. He limped over to finger the spilled treasures on the table.

"Gee! Lookit, Maw! More o' them prunes we liked so; an' a bag o' early peaches; an' fresh soup meat fur a week ——"

A queer trembling had seized his mother. She was so white he was frightened.

"Did you sense what it meant, Luke—what Aunt Molly told us about Matty Bisbee? We was left out deliberate—that's what it meant. Her an' me that was raised together an' went to school and picnics all our girlhood together! Never could see one 'thout the other when we was growin' up—Jim Bisbee knew that too! But"—her voice wavered miserably—"I didn't get no invite to her funeral. I don't count no more, Lukey. None of us, anywheres. . . . We're jest them poor Gawd-forsaken Hayneses."

She slipped down suddenly into a chair and covered her face, her thin shoulders shaking. Luke went and touched her awkwardly. Times he would have liked to put his arms round Maw—now more than ever; but he didn't dare.

"Don't take on, Maw! Don't!"

"Who's takin' on?" She lifted a fierce, sallow, tear-wet face. "Hain't no use makin' a fuss. All's left's to work—to work, an' die after a while."

"I hate 'em! Uncle Clem an' her, I mean."

"They mean kindness—their way." But her tears started afresh.

"I hate 'em!" Luke's voice grew shriller. "I'd like—I'd like —— Oh, damn 'em!"

"Don't swear, boy!"

It was Tom who broke in on them. "It's a letter from Rural Free Delivery. He jest dropped it."

He came up, grinning, with the missive. The mother's fingers closed on it nervously.

"From Nat, mebbe—he ain't wrote in months."

But it wasn't from Nat. It was a bill for a last payment on the "new harrow," bought three years before.

II

ONE of the earliest memories Luke could recall was the big blurred impression of Nat's face bending over his crib of an evening. At first flat, indefinite, remote as the moon, it grew with time to more human, intimate proportions. It became the face of "brother," the black-haired, blue-eyed big boy who rollicked on the floor with him or danced him on his knee to—

This is the way the lady rides!
Tritty-trot-trot; tritty-trot-trot!

Or who, returning from school and meeting his faltering feet in the lane, would toss him up on his shoulder and canter him home with mad, merry scamperings.

Not that school and Nat ever had much in common. Even as a little shaver Luke had realized that. Nat was the family wilding, the migratory bird that yearned for other climes. There were the times when he sulked long days by the fire, and the springs and autumns when he played an unending round of hooky. There were the days when he was sent home from school in disgrace; when protesting notes, and sometimes even teacher, arrived.

"It's not that Nat's a bad boy, Mrs. Haynes," he remembered one teacher saying; "but he's so active, so full of restless animal spirits. How are we ever going to tame him?"

Maw didn't know the answer—that was sure. She loved Nat best—Luke had guessed it long ago, by the tone of her voice when she spoke to him, by the touch of her hand on his head, or the size of his apple turnover, so much bigger than the others'. Maw must have built heavily on her hopes of Nat those days—her one perfect child. She was so proud of him! In the face of all ominous prediction she would fling her head high.

"My Nat's a Peel!" she would say. "Can't never tell how he'll turn out."

The farmers thereabouts thought they could tell her. Nat was into one scrape after another—nothing especially wicked; but a

as out, with three numers in broken time; and er cousin's brother-in-law om out West—some kind f bishop—to preach. Honst, it was one of the grandst sermons I ever heard! Vasn't it, Clem?"

Uncle Clem cleared his roat thoughtfully.

"Humiliatin'!—that's hat I'd call it. A strong aur'l sermon all round. man couldn't hear it thout bein' humiliated ore ways'n one." He was ack at the watchchain gain.

"It's a pity you couldn't f gone, Delia—you an' Matty always was so intignate too. You certainly nissed a grand treat, I an tell you; though, if ou hadn't the right lothes ——"

"Well, I haven't," Maw poke dryly. "I don't go owheres, as you know—ot even church."

"I s'pose not. Time was was different, though, Delia. Ain't nobody but alks how bad off you are. nn Chester said she seen ou in town a while back nd wouldn't of knowed was you if it hadn't of 'en you was wearin' my old rown cape, an' she reconized it. Her an' me got 'em oth alike to the same store Rockville. You was so hanged, she said she ouldn't hardly believe it as you at all."

"Sometimes I wonder myself if it is," said Maw rimly.

The Worst of it All Was About Maw's Not Crying—Just Sitting There Staring at the Fire

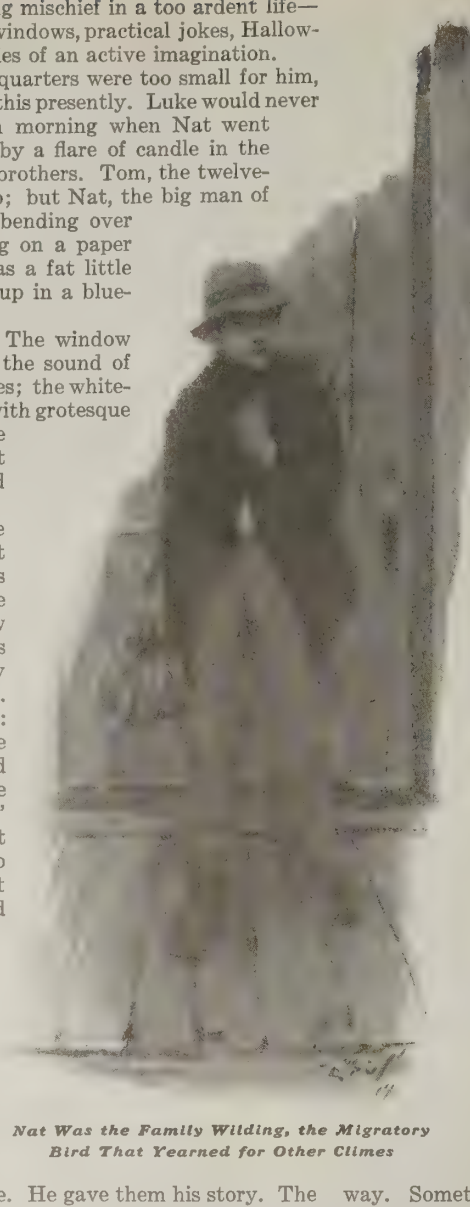
compound of the bubbling mischief in a too ardent life—robbed orchards, broken windows, practical jokes, Hallowe'en jinks, vagrant whimsies of an active imagination.

It was just that Nat's quarters were too small for him, chiefly. Even he realized this presently. Luke would never forget the sloppy March morning when Nat went away. He was wakened by a flare of candle in the room he shared with his brothers. Tom, the twelve-year-old, lay sound asleep; but Nat, the big man of fifteen, was up, dressed, bending over something he was writing on a paper at the bureau. There was a fat little bundle beside him, done up in a blue-and-white bandanna.

Day was still far off. The window showed black; there was the sound of a thaw running off the eaves; the white-washed wall was painted with grotesque leaping shadows by the candle flame. At the first murmur Nat had come and put his arms about him.

"Don't ye holler, little un; don't ye do it! 'Tain't nothin'—on'y Natty's goin' away a spell; quite a spell, little un. Now kiss Natty. . . . That's right! . . . An' you lay still there an' don't holler. An' listen here, too: Natty's goin' to bring ye somethin'—a grand red ball, mebbe—if you're good. You wait an' see!"

But Natty hadn't brought the ball. Two years had passed without a scrap of news of him; and then—he was back. Slipped into the village on a freighter at dusk one evening. A forlorn scarecrow Nat was; so tattered of garment, so smeared of coaldust, you scarcely knew him. So full of strange sophistications, too, and new trails of thought—



Nat Was the Family Wilding, the Migratory Bird That Yearned for Other Climes

so oddly rich of experience. He gave them his story. The tale of an exigent life in a great city; a piecework life made of such flotsam labors as he could pick up, of spells of loafing, of odd incredible associates, of months tagging a circus, picking up a task here and there, of long journeyings through the country, "riding the bumpers"—even of alms asked at back doors!

"Oh, not a tramp, Nat!"

The hurt had quivered all through Maw.

But Nat only laughed.

"Jiminy Christmas, it was great!"

He had thrown back his head, laughing. That was Nat all through—sipping of life generously, no matter in what form.

He had stayed just three weeks. He had spent them chiefly defeating Maw's plans to keep him. Wanderlust kept him longer the next time. That was eight years ago. Since then he had been back home three times. Never so poor and shabby as at first—indeed, Nat's wanderings had prospered more or less—but still remote, somewhat mysterious, touched by new habits of life, new ways of speech.

The countryside, remembering the manner of his first return, shook its head darkly. A tramp—a burglar, even. God knew what! When, on his third visit home, he brought an air of extreme opulence, plenty of money, and a sartorial perfection undreamed of locally, the heads wagged even harder. A gambler probably; a ne'er-do-well certainly; and one to break his mother's heart in the end.

But none of this was true, as Luke knew. It was just that Nat hated farming; that he liked to rove and take a floater's fortune. He had a taste for the mechanical and followed incomprehensible quests. San Francisco had known him; the big races at Cincinnati; the hangars of Mineola. He was restless—Nat; but he was respectable. No one could look into his merry blue eyes and not know it. If his labors were uncertain and sporadic, and his address that of a nomad, it all sufficed, at least for himself.

If at times Luke felt a stirring doubt that Nat was not acquitting himself of his family duty, he quenched it fiercely. Nat was different. He was born free; you could tell it in his talk, in his way of thinking. He was like an eagle and hated to be bound by earthly ties. He cared for them all in his own way. Times when he was back he helped Maw all he could. If he brought money he gave of it freely; if he had none, just the look of his eye or the ready jest on his lip helped.

Upstairs in a drawer of the old pine bureau lay some of Nat's discarded clothing—incredible garments to Luke. The lame boy, going to them sometimes, fingered them, pondering, reconstructing for himself the fabric of Nat's adventures, his life. The ice-cream pants of a bygone day; the pointed, shriveled yellow Oxfords; the silk-front shirt; the odd cuff link or stud—they were like a genie-in-a-bottle, these poor clothes! You rubbed them and a whole Arabian night's dream unfurled itself.

And Nat lived it all! But people—dull stodgy people like Uncle Clem and Aunt Mollie, and old Beckonridge down at the store, and a dozen others—these criticized him for not "workin' reg'lar" and giving a full account of himself.

Luke, thinking of all this, would flush with impotent anger.

"Oh, let 'em talk, though! He'll show 'em some day! They dunno Nat. He'll do somethin' big fur us all some day."

III

MIDSUMMER came to trim the old farm with her wreaths. It was the time Luke loved best of all—the long, sweet, loam-scented evenings with Maw and Tom on the old porch; and sometimes—when there was no fog—Paw's cot, wheeled out in the stillness. But Maw was not herself this summer. Something had fretted and eaten into her heart like an acid ever since Aunt Mollie's visit and the news of Matty Bisbee's funeral.

When, one by one, the early summer festivities of the neighborhood had slipped by, with no inclusion of the Hayneses, she had fallen to brooding deeply; to feeling more bitterly than ever the ignominy and wretchedness of their position.

Luke tried to comfort her; to point out that this summer was like any other; that they "never had mattered much to folks." But Maw continued to brood; to allude vaguely and insistently to "the straw that broke the camel's back." It was bitter hard to have Maw like that—home was bad enough, anyway. Sometimes on clear, soft nights, when the moon came out all splendid and the "peepers" sang so plaintively in the Hollow, the boy's heart would fill and grow enormous in his chest with the intolerable sadness he felt.

Then Maw's mood lifted—pierced by a ray of heavenly sunlight—for Nat came home!

Luke saw him first—heard him, rather; for Nat came up the lane—oh, miraculous!—driving a motor car. It was not a car like Uncle Clem's—not even a stepbrother to it. It was low and almost noiseless, and shaped like one of those queer torpedoes they were fighting with across the water. It was colored a soft dust-gray and trimmed with nickel; and, huge and powerful though it was, it swung to a mere touch of Nat's hand.

Nat stood before them, clad in black leather Norfolk and visored cap and leggings.

"Look like a fancy brand of chauffeur, don't I?" he laughed, with the easy resumption of a long-broken relation that was so characteristically Nat.

But Nat was not a chauffeur. Something much bigger and grander. The news he brought them on top of it all took their breaths away. Nat was a special demonstrator, out on a brand-new high-class job for a house handling a special line of high-priced goods. And he was to go to Europe in another week—did they get it straight? Europe! Jiminy! He and another fellow were taking cars over to France and England.

No; they didn't quite get it. They could not grasp its significance, but clung humbly, instead, to the mere glorious fact of his presence.

He stayed two days and a night; and summer was never lovelier. Maw was like a girl, and there was such a killing of pullets and extravagance with new-laid eggs as they had never known before. At the last he gave them all presents.

"Tell the truth," he laughed, "I'm stony broke. 'Tisn't mine, all this stuff you see. I got some kale in advance—not much, but enough to swing me; but, of course, the outfit's the company's. But I'll tell you one thing: I'm going to bring some long green home with me, you can bet! And when I do"—Nat had given Maw a prodigious nudge in the ribs—"when I do—I ain't goin' to stay an old bachelor forever! Do you get that?"

Maw's smile had faded for a moment. But the presents were fine—a new knife for Tom, a book for Luke, and twenty whole round dollars for Maw, enough to pay that old grocery bill dov at Beckonridge's and Paw's new invoice of patent medicir

They all stood on the porch and watched him as f as they could see; and Maw's black mood didn't retu for a whole week.

Evenings now they had something different to ta about—journeys in seagoing craft; foreign countries a the progress of the "Ee-ropean" war, and Nat's like hood—he had laughed at this—of touching even its fring They worked it all up from the boiler-plate war news the Biweekly and Luke's school geography. Yes; for little space the blackness was lifted.

Then came the August morning when Paw died. Tl was an unexpected and unsettling contingency. O doesn't look for a "chronic's" doing anything so unsche uled and foreign to routine; but Paw spoiled all pre dent. They found him that morning with his heart qu still, and Luke knew they stood in the presence of imn nent tragedy.

It's all very well to peck along, hand-to-mouth fashio You can manage a living of sorts; and farm produ even scanty, unskillfully contrived, and the charity relatives, and the patience of tradesmen, will see y through. But a funeral—that's different! Undertaker that means money. Was it possible that the sordid e of their lives must be capped by the crowning insult, t Poormaster and the Pauper's Field? If only poor Pa could have waited a little before he claimed the sp light—until prices fell a little or Nat got back with th "long green"!

Maw swallowed her bitter pill.

She went to see Uncle Clem and ask! And Uncle Cle was kind.

"He'll buy a casket—he's willin' fur that—an' send wreath and pay fur notices, an' even half on a bury lot; but he said he couldn't do no more. The high c has hit him too. . . . An' where are we to git the re He said—at the last—it might be better all round fur to take what Ellick Flick would gimme outen the Pc Fund ——" Maw hadn't been able to go on for a spe

A pauper's burial for Paw! Surely Maw would mana better than that! She tried to find a better way that ve night.

"This farm's mortgaged to the neck; but I calcul Ben Travis won't care if I'm a mind to put Paw in t south field. It hain't no mortal good fur anything el anyhow; an' he can lay there if we want. It's a r pleasant place. An' I can git the preacher myself—I give him the rest o' the broilers; an' they's season hickory plankin' in the lean-to. Tom, you come alo with me."

All night Luke had lain and listened to the sound of Tom's saw and hammer. Tom was real handy if you t him how—and Maw would be showing him just how shape it all out. Each hammer blow struck deep on t boy's heart.

Maw lined the homemade box herself with soft quilts, and washed and dressed her dead herself in faded outlawed wedding clothes. And on a morning s and sweet, with a hint of rain in the air, they rode do in the farm wagon to the south field together—Paw a Maw and Luke—with big Tom walking beside the ag knobby horse's head.

Abel Gazzam, a neighbor, had seen to the grave; and due course the little cavalcade reached the appointed sp inside the snake fence—a quiet place in a corner, unde graybeard elm. As Maw had said, it was "a pleasant pla for Paw to lay in."

There were some old neighbors out in their own rigs, a Uncle Clem had brought his family up in his car, with proper wreath; and Reverend Kearns came up and—declining all lien on

(Continued on Page 45)

Each Hammer Blow Struck Deep on the Boy's Heart

Tales From a Safe-Deposit Box

The Danger of Safety—By George Kibbe Turner

ILLUSTRATED BY ROBERT McCAIG

I NEVER slide out my own small safe-deposit box from the steel wall but my mind goes back to t at day in the second week after my her died; and I see us all four sit- g there in that little inside room at t bank—and John Snaith at the plain table in the middle, with t long brown box of my father's derneath his stubby fingers.

When I came in—called back from t scientific school in Boston—the her members of the family were eady there.

"They are waiting for you," said lerk I knew—"inside."

I went on through the bank, back the steel gate of the safe-deposit tion. The guard opened it and ssed me in. And the barred gate cked after me. It was the first ne in my life I had ever been be- d one.

"This way," said a cadaverous l man inside, who went on ahead me.

We went through in silence—past gh steel safes, steel-barred windows d steel doors. And I came, for the st time, into the close, empty still- ss of a safe-deposit room, with its ws of boxes in the walls.

My eye ranged round the place, king in the absolute security of it; culating on how any human power uld break in there. Guarded, red, locked, armored—it seemed me as safe and sure as the inside a steel ingot at the bottom of the .

"This is the way," the cadaverous rk stated, going on in, deeper still. Right here."

I pushed back the door from the m, narrow corridor into the ightly lighted room, looked in, d saw across from me the white es of the three women along the all.

A raw white light soaked the place d everything that was in it. My other's face looked white and awn and old. My sister Edith's e white skin was like delicate hite enamel under it. Even Bar- ra Harris' red-and-brown com- exion looked white—all white, cept for two odd red spots upon r cheeks, bright as if they had been painted there.

And in the center, straight underneath the light, sat, ck to me, the thick old figure of John Snaith, the executor, ith the long, thin safe-deposit box of my father before him the empty table.

When I saw the thing, just for a second, I thought again out that stock I had been reading of on the train coming t of Boston—that old conservative stock that had gone wn so since it passed its dividends.

"Do you suppose," the thought flashed over me, for me reason, when I first saw that box, "there could be any that in there?" And it went away again immediately.

I saw my mother getting up to meet me, and Barbara iling at me. I forgot it then, of course, and smiled back; d walked across to them.

I kissed my mother and my sister—and shook hands th Barbara.

"Mr. Snaith," my mother said, "this is my boy."

I turned round and met him. I didn't like the man. He od up from behind the table—a thick old sedentary dy, in a pepper-and-salt sack suit; a rigid noncommittal e, with small, sharp, wrinkled eyes; a straight old outh, drawn on the upper boundary of a square old- shioned mat of grizzled whiskers on his chin.

"How-do-do, young man?" he said.

His voice was dry and brusque. He reached out a dry, uare-fingered hand and we shook hands across the table.

I had known the man by sight, of course, all my life. erybody in the city had seen him, day after day, for two nerations, sitting there, with his unlighted cigar, in the ate-glass window of his old gray-faced bank—the bank that he built and owned and was. But I had never met John Snaith myself or heard him speak before.

"I Thought You Never Were Coming!" Said Barbara. "Get in Here"

I didn't like him, now I met him—either his voice or looks. He was a very different thing from what I had become accustomed to at college.

"A hard face!" I said to myself. "That's the way men get, I suppose, when they deal all their lives in money."

"You can sit there if you want to," said John Snaith, and pointed out a chair beside him at the table.

I went round there and sat down.

I was still less pleased with him. He was crude and blunt and unmannerly.

"That's no way to act to me," I thought—"even if I am a little late."

"And now that we are all here," he went on, looking at my mother, "suppose we start."

My mother nodded then, we all sat up, and John Snaith reached out his hand and started opening my father's safe-deposit box.

"The first thing we've got to do, I suppose," he said, "is to find out just what's here."

From where I sat I saw Barbara reach out and take my mother's hand in hers.

"That's queer!" I thought. "I wonder what she does that for?"

And then it seemed to me, watching them, I had never seen my mother's face so white and drawn and thin.

"Do you suppose," I asked myself, "that she knows something that we don't?"

We never had expected any great inheritance, of course—simply the moderate income we had always had; a comfortable estate invested as an old-time conservative man like my father would invest it.

My pulse jumped up a beat or two as that second idea struck me—and fell right back again.

"Nonsense!" I said. "Women are always anxious."

And I turned quickly round to the quick voice at my elbow.

"You take these," said John Snaith, handing me a pad and pencil. "I'll call them off to you."

And he began taking off the bands from the first package in the box.

The box, I saw, was not a very large one—and not well filled at that. There were three packages there apparently—two large ones and a small one, in an envelope—still lying just exactly as my father left them; and a few scattering, miscellaneous things.

"We'll open this one first," said John Snaith, working at it.

It was quite an old one, evidently. The tape was soiled and dingy.

"It's some time since that one has been opened up," I told myself.

And, just as I was thinking that, John Snaith, tugging, snapped the old rusty pinkish tape, and the dingy package broke out suddenly into a surprising shower of gold-leafed papers, as fresh and bright as new coins from the mint.

I stooped and picked up two that fell upon the floor.

"Hm-m!" said John Snaith, unfolding them one by one and glancing through them with his sharp, quick eyes—his noncommittal face and body never moving.

He handed them to my mother.

"These are just some early things we first put our money in—when we were first married," my mother said to him hastily when she had examined them. "My husband had no great hopes of them in recent years."

"I see he kept them all together," said Mr. Snaith.

His voice, I noticed, was not so hard and brusque when he spoke to her; and his eyes were just a little wrinkled at the corners. "We'll put them down here, anyhow," he said. "We might get a dollar or so, maybe, out of some of them."

And he read them off to me, as my mother looked at them and passed them back. I wrote down after him the names of those gold-plated papers. Queer stuff it looked like to me—gold mines and oil wells, clear back in the seventies—half a dozen probably, more or less. I can remember still the names of several of them: the Argo, the Rectangle, the Nineteenth Chance, and the Comstock Junior.

Worthless, every one of them—even I could see—on the face of it. Holes in the ground, long ago healed up. And there we sat, behind bolts and bars, like treasure seekers in a cave digging out those gold-plated promises about them, bright as when they were made—out from my still, conservative father's safe-deposit box.

It seemed certainly a strange thing—ridiculous! But yet not exactly humorous then—for us.

I could see Edith, sitting up straight and still and high-headed while he read them.

"Heavens!" I said to myself. "I don't understand it. Father—buying stuff like that!"

I was scared a little, at first, while I put it down on my pad. It seemed, upon the face of it, a big pile of money to be put into those shares.

"It looks like quite a lot," my mother said then, almost as if she was answering what I thought. "But it wasn't really. Not very much went into that."

And she passed the last of the things over. She seemed anxious to explain. It seemed almost as if she were trying to defend my father to us.

I looked up quickly then. I thought I heard a sudden chuckle.

"Good Lord!" I said, surprised. "The man is laughing!"

"I'll bet it seemed enough to you those days," he said, and looked over at my mother; a wintry smile still touched the corner of his dry old mouth.

"It did—yes," my mother answered, and laughed nervously.

"We all must do it," said John Snaith, with a twinkle kindling in his small gray eyes. "Sometime! It's a poor kind of man who doesn't have a busted gold mine in his safe-deposit box. It's like the spring fever, or the measles, or calf love. You've got to get it out of your blood. The average man has got to pass through a period of calf investment, just exactly as he has a period of calf love."

"Joking, too!" I thought, still watching him, surprised. "I didn't think he had it in him. But only about money, of course," I thought afterward.

"It's fortunate," he said, "that it comes and passes generally when he hasn't much of anything to lose."

"But my father!" I thought, and smiled; his laughter and what he said naturally relieved me. "My father—of all men!"

I smiled, thinking about him, and how conservative he had always seemed. And now all these gilt-edged bubbles lying all these years in that brown box of his, behind those gates and bars! I stopped short and wondered what was really in the box.

"We'll put that by, the way he did," John Snaith was saying. "That's the discard. It's a strange safe-deposit box that doesn't have one. I'd hate to tell you what they get from some of them."

He smiled at my mother—a rather decent smile, I thought; and she smiled back—or tried to.

I looked round then, underneath my eyelids, to get another glimpse of him—to size him up again. The smile was gone—shut off like a gas jet. I saw again only the same old rigid noncommittal face beyond my elbow.

"Got that down?" that dictatorial old voice asked me.

"Yes, sir," I answered back—as sharply; and waited for what came next.

"So much for that, then," John Snaith said, tying up those stocks—and reached again into the brown box.

There were now two packages left and those few miscellaneous things upon the bottom.

"Here—what's this?" he said with some surprise, examining the little object he had taken from a corner of the box.

"Here's something that belongs to you, Mrs. Hurlbut," he said quickly, passing on the thing to me to give to her.

I saw it when I took it. It was a small child's ring. A little light gold ring, with odd old-fashioned scrolls upon it—and the name Mark was cut upon the back. The ring of their first child, named for my father, who died before he was seven.

I saw Barbara's hand tighten on my mother's as my mother reached out her other hand to take it.

"Go on, please," my mother said. She saw, of course, that we were anxious to do so.

"Now here!" John Snaith spoke up at once. "What's this note?"

And he passed a folded paper to my mother. Her hand was shaking now a little.

"Is that any good?" he asked her bluntly.

"I'm afraid not," my mother answered.

"Why not?" asked Edith sharply, reading the old yellowed thing across my mother's shoulder. "Why don't they pay it?"

"Poor man!" my mother said. "He's dead. His people haven't anything to-day. You remember him," she said to Mr. Snaith. "You must. He was Mark's one particular friend."

"I remember him," said John Snaith briefly, and gave the paper over to me to set down.

"Is it all like this?" asked Edith sharply, sitting back uneasily against the wall.

"All that note was for, in the first place, was seven hundred dollars," said John Snaith, looking at her underneath his eyebrows.

You could see he didn't very much approve of her—or she of him.

"What does that amount to?" asked Barbara of Edith briskly.

"Three Dollars and Fifty-Seven Cents, Cash Assets!" I Said, and Smiled

But I felt that way a little now, as Edith evidently did—pretty anxious. There were now but two packages left in the box. John Snaith took out the small one and opened the envelope.

"Hm-m!" he said again, down in his throat, and sat there staring at the paper.

"This is the certificate," he said at last, looking over at my mother.

She nodded, leaning forward, with her lips apart, breathing hard.

"I'll lay this aside now, for the minute," he said. "We'll take it up later."

He put it down by the side of the box toward me. I saw it as he closed it up. It was shares—I could not see how much—in that railroad stock which had fallen so—that old conservative Boston & Colonial Railroad, which went through our own city, and of which everybody had so much everywhere round New England.

I sat up as my mother had when I saw it, and stared at my father's executor as he drew out the last package from the safe-deposit box.

It was quite a bulky package—there was probably something worth while there, I thought. I couldn't see it, though. I could only watch John Snaith's immovable old face as he looked over it.

"Insurance papers," he said finally, and laid them down.

My mother was trembling.

"Life insurance?" she asked.

"Two thousand dollars—that is all," said John Snaith, and turned to me. His voice seemed harsher than it had at all. "Put that down!"

I scrawled it down and turned and stared at him. I felt a little sick myself.

"That's all," he said.

"All!" said Edith, staring—a look of terror in her handsome face. "What do you mean?"

"This is what you have," John Snaith said, looking past her to my mother, and took up again the lone stock certificate. "This is what it comes down to."

"How much is there of it?" my mother asked him in a strained voice.

"Four hundred shares."

"I was afraid so," my mother said, and leaned back a little against Barbara.

"Shares!" said Edith. "Of what?"

Her face was white as china now, beneath that light.

"Boston & Colonial," my father's executor answered quickly. "You were right," he told my mother. "That is what you have."

"Four hundred shares," my mother said, sitting up again. "How much is it selling for to-day?"

"Forty-one."

"Forty-one!" she said in a high, strained, painful voice. "It was over two hundred when he bought it!"

Then we sat still, listening to her—and Barbara trying to calm her and control her, without success.

"I don't understand it!" my mother cried, while we all sat still. "I don't. I can't! He got it, in the first place, because he said it was so sure and safe. It was the only thing he knew, he always said, that you could buy and put away, and go off and forget about."

"I know," said John Snaith; "there were hundreds who thought that same thing."

"Hundreds, yes," my mother said. "Everywhere! You saw it in the papers! And nobody knows to-day just how it happened—this dreadful thing. Do they, Mr. Snaith?"

"No," he told her grimly; "they do not."

"Your poor father!" my mother started on, talking higher and higher, and more rapidly. "Everything he had! That was it," she said; and her eyes looked strange and wild. "That was it. I knew it. I knew it! Ever since that day it first passed its dividend, he never was the same. All night!" she cried. "All night! Walking—up and down—up and down!"

"Dear," said Barbara, petting her, "don't do that! That's no use!" she said, and put her arm round her.

But Edith sat there figuring; I could see her lips move.

"Four hundred shares! Sixteen thousand dollars?" she said.

Mr. Snaith nodded his square grizzled head at her.

"Sixteen thousand dollars!" she said. It seeme louder in that still, inside room. "Sixteen thousand dc lars! And no dividends?"

"No."

"How could he do it!" exclaimed Edith sharply.

"Edith!" I called to her.

I saw Barbara's black eyes snap.

"How could he do it?" said my mother. "You ungrat ful child! How could he do it! When everybody else h done almost the same thing!"

"That's no excuse," said Edith. "I don't forgive him not a bit!"

Her voice and face were hard as marble.

"Excuse!" cried Barbara. "Your own father?"

"How could he do it!" my mother exclaimed agai talking faster and more hysterically still. "How could do it? You sit here at your ease and ask that? When killed him! When it killed your father!"

Her voice was very high and sharp. But it fell dead once, I noticed, in a queer way in that little inside roo behind the steel walls.

"The question is," said Edith very deliberately: "Wh are we going to do?"

John Snaith stood facing her.

"What you are going to do now," he said, "is take yo mother home."

And Edith's eyes dropped, beaten down for once befo his harder ones.

"Mrs. Hurlbut," said John Snaith; and it seemed to r then that its very roughness and dryness made his voi more comforting—more strengthening and reliable, in way, than a softer one—"you go home now," he said, "a don't bother your head about this thing any long You've had your turn of it. Now we'll take the burden it off you—your boy and I."

"Yes, dear," said Barbara, urging her. "That's t only sensible thing to do."

Even Edith saw that she should go now. She knew, did all the rest of us, how frail my mother was; how fr and short-breathed she had been since my father di But not one of us could quite persuade her.

"I'll take you out," said John Snaith, deciding it. "I going out. I've one or two things to attend to out the anyhow."

And he offered her his arm, with a kind of awkwa courtesy. She took it in an old-fashioned sort of way, a they all went out.

"You stay here," said John Snaith to me, "and wat these things."

I sat there in that little inside room, with my fathe box and those folded papers on the table. I didn't ha manners enough even to get up. I sat there for seve minutes, trying hard to realize what had happened.

Then suddenly I sat up and took my pencil and my p again. I pushed the metal box aside, and that package fool's gold—the gilded mining stock; and I drew in fr of me the only thing of value there—the net resu financially, of my father's lifetime.

"Four hundred shares," I put down, "at two hundr and twenty-five, perhaps. Ninety thousand dollars! Tha what he paid."

I stopped and considered it for a second regretfully in anger, almost. That was what he paid out for it—th thing! That paper on the table was ninety thousa dollars then—real, actual money; gold or silver you co take into your hands. And now! "Four hundred share I put down, at forty-one. A little over sixteen thousa dollars! Just sixteen thousand four hundred dollars, to exact. That's what it was to-day!

"And no dividends!" I said, remembering.

I stopped—feeling stunned and helpless. The more y looked at it, the worse it grew.

"Now suppose we sold it?—as we'll have to, evidently I said, calculating, for the first time in my life, a busin problem of my own. "Say, sixteen thousand at five p cent—eight hundred dollars. And two thousand doll from the insurance—one hundred dollars more." I put down. "Nine hundred dollars a year!"

It was the hardest arithmetic I ever did. That was t only answer. Nine hundred dollars a year!

"Well, that's the end of me," I thought—"one way, ar how. That's sure! I'm no electrical engineer. My car is done, so far as any more education is concerned."

The whole world had changed round—what I was, wh I thought I was, and what I was going to be—since ju about an hour before I walked for the first time back in this safe place—behind the steel-bar gates, to this lit inside anteroom of the safe-deposit vault, to find out wh my father had put away there during his lifetime f safe-keeping. Well, there it was in front of me, on that ba table, all of it—shrunken to a fifth of its size in that o piece of paper!

"But I'm not the question at all," I had the sense think. "My part is simple. I've got to go to work. T question is, with me working, What can we each do? C we even get on then?"

For what could I earn then? What should I possibly worth? Where could I start in?

"You've Had Your Turn of It. Now We'll Take the Burden of it Off You—Your Boy and I"

I got up then and started walking; and when I did I put
ir hand down in my pocket and stopped in my tracks.
I topped and fished out what my hand fell on there—the
ıdy cash I had. I stepped over and slapped it down
ı on the table and counted it.

"Three dollars and fifty-seven cents, cash assets!" I
id, and smiled—a rather melancholy smile before it died
ctirely and left me standing there with a serious face.

It wasn't so very funny when you thought it over.

I put my money back right off and went and sat down
ain, staring at my loosely scrawled figures on the pad.
at there, still studying, when John Snaith returned.

"Got it all figured out?" he asked me.

"No," I answered curtly; "I have not."

He stood up then, and very deliberately took a thin
gar from his vest pocket and put it into the corner of his
outh. He did not offer me one. Twenty was too young,
yhow, for that, according to his ideas probably. But he
dn't want smoking, anyway, I had been told, in his bank.
e only indulged himself in a "dry smoke" in there with
ı unlighted cigar.

"Well?" he said, sitting down, his cigar tilted up a
tle, waiting for me.

"I want to ask you something," I said to him: "It
on't pay dividends, will it—this?"

"No," he said; "I don't expect so."

"Not for years, anyway?"

"No."

"But it's certain to go up—some!" I said, catching at
straws, repeating something I had heard somewhere.

"It may—some," said John Snaith, without a flicker of
anged expression in his face—all perfectly motionless
d still—except a little jerk with his cigar at the upper
ght-hand corner of his gray whiskers.

My first dislike of the man came back again. The cur-
in had come down again over his noncommittal face,
lfore whatever lay behind there. You saw only the two
sarp eyes still peering through it.

"What can we do, then?" I said, excited. "What must
e do?"

"If I were you I wouldn't do anything for a while," he
id. "I'd hold off. When they're all selling is a good time
ıt to sell yours."

"How can we wait?" I said. "Without dividends?"

"I'll see to that," he said. "I'll loan you what you've
ıt to have to live on."

"Loan it!" I said, stammering with surprise. "You
ean you would be willing to let us have your money?"

"Not my money; no—the bank's," said John Snaith
irtly. "On that," he said, and touched the stock certifi-
ce, "as collateral."

"Oh!" I said, understanding and drawing back. "But then? What then?"

"And then you young folks can go to work."

"Of course," I said. "Or I will anyhow. That's settled if I can find a job."

"Maybe," said John Snaith, his eyes on me, "that could be arranged somehow. We've got something planned for now, already—your sister and I—for her."

"What!" I said, dumfounded.

"There's a smart, bright girl," said John Snaith, "and a good one!"

"Edith?" I said.

"No, no! The other one," he answered quickly. "Barbara."

"Barbara!" I said. "She's not my sister."

"Oh, no," said John Snaith back again; "of course not."

And I thought afterward that his small eyes twinkled as he said it. I thought that afterward, but not then.

"Barbara!" I cried. "Work! She has enough money of her own."

And then I stood up on my feet and stared at him. The thing soaked into me at last.

"Did he ——" I said, and stopped and choked. "Did my father ——"

I knew of course my father had charge of what money Barbara's father left her—that interest in the patent he had with my father—when he died and left Barbara to live with us.

"Did he—my father—put all her money in that too?"

"Every cent!" John Snaith answered me.

That was the last straw—too much for me! First, all we had was gone—all our own money practically; my own career; my life, I thought then—all lost! And now Barbara! Marry her? Ask her to marry me now! I thought bitterly that I never, after this, could even look her in the face—after what we—my father had done to her. No! Barbara was gone with all the rest.

I almost lost control of myself entirely then—especially when I turned my eyes down and saw that infernal stock certificate lying there upon the table. I never felt so bitter in my life toward anyone as I did, just for that one minute, toward my own dead father.

"You wouldn't believe it," I thought bitterly, "if anybody told it to you! That fool certificate in that fool box—brought here behind these fool gates and doors, and locked up by a ——"

I could not quite say that about my father. Instead, when I thought it, I struck down my knuckles on the table angrily, and hit the corner of the safe-deposit box and cut myself. Just a scratch it was, but enough to draw the blood and bring me to my senses.

"Calm down," said John Snaith, watching me—and twisted his cigar in the corner of his mouth. "Hold your horses!"

"That's easy enough for you to say," I thought. "You've got about as much soul in your old body, anyhow, as a chilled-steel safe!"

And then I looked at him and sat down.

"Don't take it quite so hard, my friend," said John Snaith—"unless you feel you must. You're not the only one, remember—by a long shot."

"I know," I said, a little shamed. "My mother is worse off, of course. I know. But Barbara ——"

"You aren't the only family," said John Snaith, "that's in this thing, or the worst. Nor very bad, comparatively. Sit down. Sit down.

"Take your pencil now," he told me, after I had taken a seat. "I'll show you something that'll ease you. There's nothing like it when you're down—like thinking how bad the other fellow has been hit. It tends to get your mind off yourself and refresh you. Now here," he said, "just put this down and put your mind to it."

His cigar went traveling slowly from one corner of his mouth to the other—under its own motive power apparently, in his motionless face—while I waited.

"There was a hundred million dollars of this Colonial stock, wasn't there?"

"A hundred, yes," I said mechanically.

I didn't know; I didn't care; I was just faintly curious to find out what he was after.

"A hundred million dollars. Got that down?"

"Yes," I said, and thought for a second how large a sum it looked on paper.

"And say it fell from where your father bought it—say that it fell from two hundred and twenty-five dollars a share to fifty. How much would that be?"

"One hundred and seventy-five."

"No. Altogether, I mean. The lump sum—lost?"

"Oh, yes," I said. "One hundred and seventy-five million dollars." I stopped for a minute, trying to imagine it.

"Now," he said, and put his thick thumb in his vest armhole and sat there—motionless as before—"that's what was lost by somebody—somewhere round New England. That's what all this hullabaloo's about in the papers now."

I nodded.

"You can't pick up a paper nowadays but what you read it—all this hue and cry trying to find out who is responsible—who has got away with all that money.

"You can't blame them, either. It's quite a sum of money when you think of it," he went on. "Quite a little pile! You could wipe out two or three good-sized cities by a

(Continued on Page 90)

THE GUNMAN

By WILLIAM J. NEIDIG

ILLUSTRATED BY KARL GODWI

The taking of a maiden by force from her home while she cries out and weeps, after her kinsmen have been wounded or slain and their homes broken open, is called the Râkshasa rite [of legal marriage].—The Ordinances of Manu, iii: 33.

Therefore they commanded the children of Benjamin, saying, Go and lie in wait in the vineyards; And see, and, behold, if the daughters of Shiloh come out to dance in dances, then come ye out of the vineyards, and catch you every man his wife of the daughters of Shiloh, and go to the land of Benjamin. . . . And the children of Benjamin did so, and took them wives, according to their number, of them that danced, whom they caught.—Judges xxi: 20, 21, 23.

SIMPLICISSIMUS was asked if he could distinguish between shadow and thing shadowed. He replied that he could. Although the shadow is perceived first and the thing shadowed last, the thing shadowed is the substance. It is reality. The shadow, having form only, is mere appearance. The thing shadowed precedes. The shadow follows. Everyone knows the difference.

Simplicissimus was wrong. Everyone does not know. Simplicissimus does not know. He proceeded to prove it by speaking of his own wedding as accompanied by survivals of the childhood of the race. The best man was one of these survivals, he said. The best man represents the strong-armed friend who helped the groom carry off his bride, in the days of marriage by capture. The bridal veil he called a survival of the attempts of the bride at concealment, the wedding ring of the fetters with which she was bound, the old shoes thrown after the departing couple of the angry missiles hurled by the pursuers, the honeymoon of the space of time during which the captor had to hide his prize until her kinsmen were reconciled. He spoke of the bride as still lifted across the threshold as she was when that was the only way to get her across.

Simplicissimus shall be told. That which has survived is not the best man and the wedding ring, but the thing of which these are shadows. Even to-day men who are not fire-eaters have the impulse to carry off the women they love in their arms when they cannot on them, and women who are not servile would not be wholly displeased to be thus carried off. Such instincts are deep-seated and living. It is not necessary to explain them. Certainly they are not related to the weakness of women; neither are they to the brute strength of the cave man, whose wife was a cave woman and as hard as nails. They perhaps lie in the realm of idealization, like our dreams of poetic justice. "If I could, what deeds I would do to compel my beloved to love me!" Or, "Oh, to be loved by a man strong enough to overcome even such and such!"

Gimbel, who was on the inside, said that Paul Lombard knew more about screw machines than his foreman. Paul was the best man in the shop. He was fast in setting up; he was accurate; his judgment of cutting speeds was excellent; he was a man of good habits and dependable. Keiser could hardly have lasted without him. He had only one fault, and that was he was too good-natured. He allowed himself to be imposed upon. Gimbel added that but for this fault Paul would have been made foreman and not Keiser.

A good foreman does not have to quarrel all the time, nor even often, but he must be quick to quarrel.

"Some of the men think he's a coward. But I don't know."

It was not that he was a pacifist—pacifists are frequently the most quarrelsome of men, and commonly self-assertive. He was merely indifferent, neglectful of his rights, lacking in egotism.

He was too meek. He lacked temper.

An incident may be cited illustrative of the disrespect in which Paul was held. He had set up an automatic to cut five thousand shoulderpins, using No. 12 Bessemer rod for stock, which is fifteen ten-thousandths larger than three-sixteenths of an inch in diameter. These pins were to be forced into three-sixteenths-inch reamed holes so as to make a tight or drive fit. As he was laying out the stock Keiser called him away to set up another job, taking charge of the machine himself.

Keiser should have gauged every rod that was used. Instead he put his micrometer on the first piece and took it for granted that the rest were the same size. Usually they would have been, but this once they were mixed, most of the lot consisting of No. 13 rods, which are four one-thousandths of an inch smaller, and therefore slightly under three-sixteenths of an inch in diameter instead of slightly over.

The fault was clearly Keiser's. Keiser, however, blamed Paul for the spoiled work, giving him an ugly scolding. And Paul took it. Any other man in the room would have knocked Keiser down and quit. But then Keiser would not have treated any other man in that manner.

"Tame as a picked porcupine!"

"Our little Polled Angus!"

"What can the lady have eaten? Candy, maybe. Not red meat and cabbage."

This incident was followed by another, when Paul one Thursday looked up the foreman and asked for two days off. Keiser gave his consent; but later in the day when he remembered Paul's steadiness and his possible grievances he called him to the desk. He didn't mean to lose him.

"What's the trouble, Paul?"

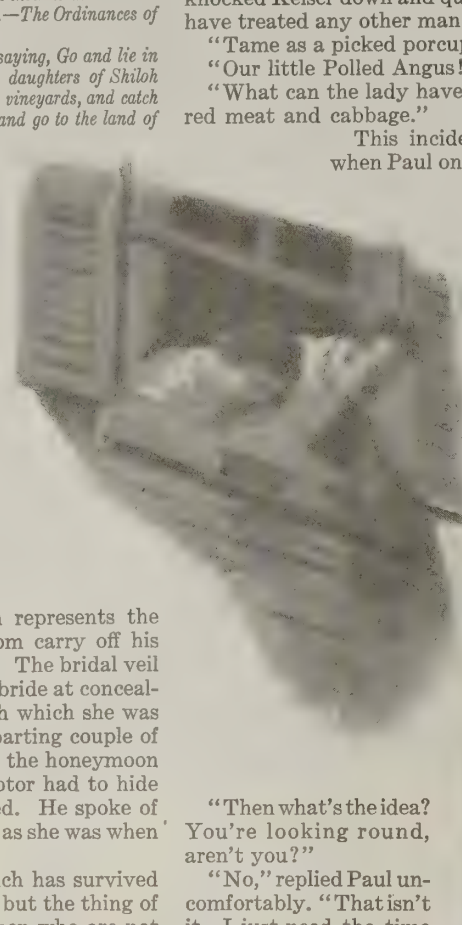
"No trouble," was the placid reply.

"You know I don't mean half what I say."

"It isn't that."

"Is it you want better wages?"

"I wasn't thinking of the wages."



"Then what's the idea? You're looking round, aren't you?"

"No," replied Paul uncomfortably. "That isn't it. I just need the time myself."

"Work of your own?"

"Not machine work."

And that is all he would say. Keiser, who didn't believe him, tried to get him to specify. He merely repeated that there was no trouble and that he needed the time for himself. He did not so much as suspect that Keiser was practically offering him a raise in wages. As the men said, he had clothesline for a backbone.

"He's a worm," concluded Gimbel. "He ought to wear a shoulder truss."

Why the idea of marriage should have come to a man as spineless as Paul is not a mystery. Even a worm will marry. Paul was not a bad match, as invertebrates go. He did not waste his time in idleness, but sold it for money. Some worms waste their time. He did not spend his money in saloons, but saved it. Some worms drink their money. He earned good wages at his trade. Some worms have no trade. For eight years he had lived cheaply and worked steadily. Some worms could have done neither. He had more than twenty-two hundred dollars in the bank that no one knew anything about. Some worms haven't twenty-two hundred cents. He needed a wife.

Any worm with twenty-two hundred dollars in the bank would need a wife, and badly.

Paul thought he needed Vita Monaca. Vita was eighteen and pretty. She could cook, sew and dance. She laughed divinely. She had good sense, too, and was no spendthrift. These, however, were not his reasons for thinking he needed her. His reasons were less sensible. The worm was in love with her.

The Sound of His Knuckles Upon the Thin Panels of the Door Seemed to Fill the Street With Echoes

Unfortunately there were difficulties. Vita's father w one. Although he was a good American and own property in Milton Avenue, he still maintained his Sicili prejudices and social distinctions. Vita proved to another. When old Monaca found that Paul was serious his intentions he ordered him out of the house. And V backed him up.

Paul was only a workman and the son of a workm Vita was the daughter of a landowner.

"What difference does my father make?" asked Pa "What if I am a workman? I have money in the bank.

Monaca went to some pains to explain.

"In Sicily it is all different. A seafaring man would let his son marry my daughter, because he is above n But a landowner like me is above a man who owns land. In Sicily you are a *bracciante*—a man who works the day. Your father was a *bracciante*. A *bracci* cannot be received into the family even of an owner mules, nor can his son. So you can see it is not possi you can marry Vita."

Paul readily acquiesced, as was his spineless custom. Vita regretted his readiness she gave no sign. The mat was hopeless. Paul did not try to see her again. He indeed spend a few evenings in the Newberry Libr reading books of travel and encyclopedia articles ab Sicily, and spent a few further evenings in the Ital saloons along Division Street, where he picked up one two disreputable acquaintances. He remained what was, however, and Vita what she was. Eventually would forget him and he her.

It looked as if Vita would be the first to forget. So after Paul's disappearance she found herself receiv attentions from a man of her own class, whom her fat favored. This man, though not a landowner, was the s of a landowner, and was tall and handsome. He had yet settled down, and was therefore usually short of fun although at times he spent money freely. He was alw on the point of making his fortune by a turn in real est but somehow he never did. When he had earned a lit more Vita expected to marry him. His bank account m have been lean, but at least he was a man good family and possessed a spine.

II

PAUL, the invertebrate, closed the shop d behind him and looked at his watch. Twen five minutes before six. He turned eastwa walking rapidly like one who has no time waste and yet who has time enough. This Thursday evening. Keiser had given him Fri and Saturday off, and Sunday was a holid It would seem as if he ought to have time enou for almost anything. At Clark Street he bou an evening paper. A little farther and he ente his usual restaurant.

It occurred to him as he pressed the latch t probably this was his last visit to that restaura or perhaps to any other. Nevertheless, he not make it an occasion. Finding a seat at counter instead of at one of the tables where would be expected to remember the waitr he glanced down the bill of fare and lected one of the cheaper dishes—pot ro with noodles. This with fried potat bread, butter and coffee cost him twen five cents. He ordered no dessert, par because he did not like baker's pie, par for reasons of economy. He had other u for his money.

The reading of the paper consumed o the time required for the serving of order. He did not hurry through his m but neither did he tarry over it. When was through he paid his check and left restaurant. Paul's first errand was t basement tailor shop, where he was gi a freshly pressed suit of clothes. The s was one he had bought when calling u Vita. His next errand was to his own roo Here he hung the suit over the back o chair. He also felt each of three pockets the suit he was wear to make sure that cert funds remained av able—two hundred a fifty dollars, plus fif plus fifty, together w some change. He th scrubbed off his ha with a nailbrush, was his face, combed his h

b shed his hat, exchanged his shoes for a new pair. He d not change his shirt or collar, although these were soiled fr n the day's work. Returning to the street, he stopped a he corner for a shine. Dress begins at the feet.

He now started out northerly and westerly, walking as b ore without haste and without waste. His objective, r ched after as little zigzagging as possible, proved to be a uilding only recently completed upon a side street a oining a church. This he entered boldly and yet t idly, as if not quite sure of himself. When he came to t third floor he found a key in his pocket and unlocked t door of the right-hand flat. He made no attempt to m ve quietly nor did he take any of the precautions of an i ruder. No one except himself was in the flat, and he k w it.

He closed the door, struck a match, and lighted the gas in the vestibule hallway. He then walked out into the l -hand room, from it to the bathroom, then into a c tral room that also opened from the vestibule, and f lly into a room i the rear, lighting t gas in each.

The latter room p ved to be a small l chen. It was not d ferent from other l chens except pos- ly in one respect. E ery article in it, f m linoleum to tin r per, was new. T e blue-flame oil s ve had never been l hted. The pol- ished steel skillet s ll bore its cabal- istic price mark in p ase crayon. The d hes in the pantry w re still coated with o ginal dust. And t e supplies were n w. Various sacks a d parcels, cartons a d boxes stood o out tied in their o iginal strings. It s s as if kitchens h d been invented o ly that afternoon.

Paul glanced over t e various articles i the room as lov- ingly as a young h usewife might h ve done. He knew t e contents of every p ckage, had c ecked off every re- q irement as he saw h had made sure t at nothing was l cking. There it all w y complete. He l oked over the p ckages, fingered t o or three of them, rearranged them upon the shelf of t e pantry or upon the kitchen table. Then he crossed the r om to the ice box, swung open the door, closed it, and l ted the trap from the ice reservoir, noting that the supply h d shrunk rather less than he expected. He next went to t e rear door, which opened upon a covered porch. Here h found a quart jar of milk and a pint jar of cream, left w thin the hour. This he had ordered by guess as to quan- ty, but it would serve. He took the bottles into the house a d placed them in the ice box against the ice.

When he had completed his errand in the kitchen he turned to the adjoining room. This likewise was newly f rnished. The furniture was of fumed oak, and though n t expensive neither was it the cheapest to be had. There w as even a sideboard with glass doors, the shelves of which w ere bright with silverware—knives, forks, spoons, salt c llars, ladles, and the other contents of a small chest of s od plate. He had debated leaving them in the chest, b t decided that the display looked too intentional. The s deboard also contained a number of pieces of glassware, e ch most lovingly chosen. Table linen there was as well. N thing had been overlooked.

The third room was the bedroom. Paul had spent more m ney on this than on both of the other rooms combined, a d to-night as he looked over its appointments he felt well r warded. Not the smallest article was missing—not so m ch as a toothbrush. He had bought even a box of talcum a d a powder puff. These, however, he had added in a s irit of frolic; he hoped that Vita would laugh when she s w them. If he could but make her laugh—he hardly k ew how to complete the thought except in terms of m ney.

He would readily give five hundred dollars if he could make her laugh after her arrival in that room.

He was now approaching the heart of his display. About the furnishings of the kitchen he was fairly sure; also about those of the dining room and the bedroom. But the furnishings of the clothes closet opening off from the bedroom—these had worried him. If he could have done so he would have begged off from buying them. Gowns, skirts, waists, coats—the closet was almost too small for the display. The more intimate articles he had placed in the drawers of the dresser.

Guesswork? Not wholly. He knew Vita's weight and height, her complexion, the color of her eyes. He had a friend who said he knew what a girl like Vita would like and need. Probably he did know. He was a floorwalker in a cloak store. Anyhow, there they were—unimaginably fluffy and dainty. Paul was counting rather strongly upon the effect of this trousseau. He had spent as much on these gowns and whatnots as on the entire furnishings of the three-room flat, less perhaps a hundred dollars. He hoped that Vita would like them.

Vita Saw the Big Janitor Creep Into View, Saw Paul Strike Down the Pistol and Grapple With Him

He now looked at his watch. Fifteen minutes after seven. His appointment at Roti's was for half-past. Sam Foresta was to meet him there and they were to complete certain arrangements that had been under discussion during the preceding week. He turned out the gas in the bedroom, and then in the bathroom, kitchen, dining room and vestibule. A moment later he had locked the door of his flat and was feeling his way down the dark unfamiliar stairway.

Roti's, on Division Street, was usually crowded in the evening, but not as early as this. Paul found Sam waiting for him at a table removed from the bar. No better setting for a friendly conspiracy could have been asked. Sam had already ordered wine and cigars. The preliminary delicacies had been attended to during previous conferences, so that they could talk with complete frankness.

Paul little suspected the thinness of the ice over which he was walking. To his mind Sam was a romantic semibandit who could be hired to do mild deeds of violence for money. Such and such service was worth such and such a price. No formula could be simpler. But Sam was not a romantic semibandit; he was merely a predatory male who had to make a living by his wits. To him Paul was merely a source of income. He needed his money. He was a Sicilian and knew no reason why he should not assist in a marriage by capture. But after payment was made, if there was more money on the other side he was still for sale.

"What success?" asked Paul.

Sam began to hedge.

"I can get a good car and a driver I know pretty well. The driver can help us in the house, so as to make three hands without bothering to find another. He's a good nervy man. That's what you need. You never know what's going to come up in a job like this."

"Then that's settled."

"Not yet. The trouble is, this man I'm telling you about wants more money than I counted on. The car costs more too. I told them I'd let them know to-night."

"You offered to do the job for three hundred."

"Provided. But now they're wanting more money. You can see yourself how it is. The work is risky. You can't blame them. We may have shooting. You can't tell."

"No, no! No shooting!"

"We have to be ready, don't we? Ready with guns?"

"No shooting!" repeated Paul.

"Then there's the danger of arrest. You know what that means—ten years apiece."

"We considered that."

Sam looked at his companion thoughtfully. He was trying to make up his mind how much Paul would give.

"I know, but I have to be careful. If it wasn't that I needed money I wouldn't touch the job with a rake."

"Expect to be arrested?"

"How can I tell? Suppose it's a girl over on the Lake Shore Drive, and her father worth five millions—what chance would I have? He'd set a hundred men after us. He'd offer rewards that would make three hundred look like hairpin money."

Paul smiled patiently. It did not occur to him that Sam might like nothing better than to help abduct a girl whose father was worth five millions and could offer rewards.

"This girl is the daughter of a grocer and lives on Milton Avenue."

Had he been alert he would have noticed the interest with which his information was received.

"This Milton Avenue right east of here?"

"I'll tell you," said Paul, ignoring the question. "I'll give you three hundred and fifty. That's more than it's worth, but I'll stand the fifty to get the thing over with. What do you say?"

Sam was suddenly curious to know more about the possible complications. Who was the grocer?

"I'd have to know who it was."

"Do you mean it's all off?" asked Paul.

Sam leaped for the tiller and brought his boat into the wind.

"No," he replied hastily, "I didn't mean that. I meant that I'd have to know what to count on. I'll do it for that price."

The next moment he perceived that Paul was as tractable as ever and that he had not intended the remark as a threat.

"Money when you pull off the job?"

"Money down! I wouldn't stir my little finger for my best friend until I saw his money. Not on a job like this. It's too risky."

"A hundred down?"

Sam, reflecting that he was probably able to enforce the payment of a debt of this nature, made a concession.

"Two hundred down, and the rest when we reach your rooms."

To this Paul good-naturedly agreed.

"To-morrow morning at five, sharp. Where shall we meet?"

"On the street somewhere. How about the west side of Clark, between Oak and Walton Place, at nine minutes before five? You pick me up; then we'll drive on slowly and work back to Milton."

"And after that, so I can tell the driver?"

Paul ingenuously gave him the number of the house, again failing to notice Sam's peculiar interest in the information, and the fact that he began skillfully trying to add to it.

"I see. Odd number, east side of the street. I think I know the house. It's Caminetti's place."

"Monaca's," corrected Paul.

"And after we come out, where? I have to tell the driver. We'll be too busy in the morning to think about streets."

Paul unsuspiciously told him the location of the three-room flat.

"In the morning, on Clark!"

With that they arose and walked down the room. Paul left at once, but Sam tarried. He had other appointments to keep before he was ready for the morrow. Paul might have slept even less well than he did had he known the nature of them.

III

HUMAN conduct is sometimes curiously inconsistent. At exactly nine minutes before five o'clock a big black limousine passed the corner of Oak Street, headed south on Clark. Fifty feet farther it overtook an invertebrate but carefully groomed pedestrian, stopped, the invertebrate entered, the door closed, and the machine continued leisurely on down the street. Except for a false license plate the limousine was as honest as a pecan orchard. Those riding in it looked to be honest also. Inside were Sam and Paul; and in the driver's box Sam's selected chauffeur. All were fastidiously dressed, as if for a wedding.

The car, after devious wanderings in Kinzie, Wells, Huron and Oak streets, at last turned into Milton and drew up before a slate-colored house with green trimmings. Paul had intended having Sam go to the door; but Sam had pointed out that improved results were to be expected if he went himself, and like a worm he had acquiesced. He, therefore, descended and climbed the steps.

Now that the worm was face to face with Monaca's inhospitable door he was sorry he had not been firmer with his bandit. This was really Sam's work. He had been a good-natured idiot. However, he knew what he had to do. Although his knees were trembling he kept his wits about him, and did not forget to stand close to the house so that a person looking down from the window upstairs would not recognize him as Paul Lombard. Otherwise Monaca's instant suspicion would have been aroused.

Then he knocked. Although he did not knock loudly the sound of his knuckles upon the thin panels of the door seemed to fill the street with echoes. Every door should have a bell; he might just as well have blown a police whistle, he told himself. Even so there was no response. He looked at the cracked green paint of the door panels, listened, waited, and when he made sure that no one had been awakened by his summons, knocked again somewhat more sharply.

Again he listened and waited. This time his alert ear heard someone walking across the floor upstairs. Monaca was awake and was crossing to the window to look out. Paul knew what he would do. He would see the car and see a man at the door. His grocer's mind would then become curious to know the occasion of the early call. Timidity, however, would intervene. He would ask his wife to take an observation through the curtains, she would rise and cross to the window, she also would become curious, and eventually the master of the house would thrust his legs into trousers and his feet into slippers and clump downstairs to the door.

This was in fact what happened. Monaca looked, called his wife, she crossed to the window, there was an interval devoted to hasty dressing, another interval devoted to the descent of the stairs in the twilight of morning, and the master of the house opened the door.

"What is wanted?" asked Monaca.

Paul's first thought curiously was of his foreman. If Keiser and the men in the shop knew what he was up to—— But he forced himself to speak the words he had prepared, and a moment later forgot about Keiser.

"See if this message is for you," he replied, feeling in his pockets as if for an envelope.

At the same time he stepped inside. The next instant Monaca found himself looking along the black barrel of an automatic pistol.

"Make no sound and throw up your hands!"

"I have no money in the house."

"Don't talk! Turn slowly with your hands up and walk through that door into the parlor."

Monaca had no choice but to obey. Meanwhile Paul's confederates had joined him. The opening of the door and the disappearance of Paul into the house constituted the prearranged signal for their entrance.

"Now stand with your face against the wall."

Although without his glasses, Monaca had been quick to recognize his daughter's discarded suitor in his captor. His recognition of his errand naturally followed, since he had been born in Sicily and was not a fool. His statement as to having no money was intended to mislead. Yet there was nothing he could do. He took his position against the wall, as ordered, resting his hands upon the flat surface above his head.

"Guard this prisoner," said Paul.

Had Paul been looking at the right man he would have seen a queer thing at this point. He would have seen Sam wink his right eye at Monaca. The thing was absurdly purposeless, not to say impossible, and must have been due to an accidental twitching of a muscle.

By this time Mrs. Monaca's heavy step was heard on the stairs. Again Paul had permitted himself to be given the ugly work by Sam. At the time the matter seemed unimportant; now he would have given money to escape explaining the situation to Vita's mother.

"Mrs. Monaca," he began as she appeared in the doorway, "don't be frightened. You will not be harmed."

She was not so quick as her husband to understand.

"What has happened?"

"Please step into the parlor."

He stood aside and she entered the room. When she saw her husband, and the two men standing guard over him with drawn pistols, her hand went to her heart.

"What—what is it?" And then: "Is it—Vita?"

Paul had already crossed to a rocking chair. This he dragged to the farthest corner of the parlor, placing it with its back toward Monaca and the men guarding him.

"Sit down and remain perfectly still. We may be burglars. Whatever we are, we are desperate men and well armed."

Mrs. Monaca, who had begun weeping softly, seated herself as directed. Paul, as much agitated as she, forced himself to think of his ultimate object. This was Sam's work, not his. He repeated it—he was an idiot. He should have stood in the background, or perhaps not have appeared at all. Too late now to change it! What was begun must be completed.

His ultimate object was Vita herself, and she came next. She was probably still asleep in her room. The thing he was about to undertake was going to be the hardest of all. He was tempted even now to call Sam aside and trade tasks with him. But he did not. He still had the soul of a worm. He did not begrudge an additional fifty dollars; he was fearful of confusion and failure. He therefore crossed to the door, passed into the hall and ascended the stairs to the second floor.

"There's the Danger of Arrest. You Know What That Means—Ten Years Apiece"

Paul knew that the parents occupied the front room. Nevertheless, he made a hurried inspection of it. The next room also; although, as he at once saw, it served as little more than a storeroom.

Vita's room was in the rear, but Paul was taking no chances.

He now found himself standing before the door at the end of his road, the door of the girl he intended to marry. He did well to hesitate before entering that room. Marriage by capture in books of travel is one thing; it is quite another in one's own family life. What would she say? What would she do? How was he to make her marry him after he had her? What can a man do to compel a girl to do what he wishes her to do when she stubbornly refuses to do it—a girl like Vita?

However, either this way or not at all. The worst th could happen was better than that nothing should happ It is frequently so in life. He knocked lightly on t door, and without waiting for an answer turned the kn The next moment he was standing inside her little roo hat in hand, his pistol in his coat pocket out of sight.

Meanwhile, the two professionals were standing gua over Monaca and his wife in the parlor. Sam's object remaining behind now became clearer. Nothing was sa while Paul crept upstairs; but when he was out of heari Sam began speaking softly in the dialect of Palermo.

"He is nothing to me. I am a Sicilian. I lead him the nose."

"What do you mean?" asked Monaca.

"How much would it be worth to have the girl back And he added, indicating the driver: "This man wor with me. Other men also. All the men I need."

"I'll give a hundred dollars!" was the prompt reply.

"Make it five hundred."

"A hundred and fifty. I have no more. I'm poor."

"Five hundred," repeated Sam.

Monaca shook his head. The amount was too large. hadn't it and couldn't raise it. He would give a hundr and fifty. That was all the money he could possibly g hold of.

"Think it over," said Sam.

"I have no more."

"I didn't say talk it over. We've talked too mu already. No more talking."

Paul looked into Vita's questioning eyes. She was r yet fully awake, and did not grasp the significance of presence. Of herself she never would have grasped it.

"Who is it?" she asked. "What is it?"

It is not easy for a sensitive man to talk like a tra wrecker to the girl he loves. He much prefers to think c a pretty speech in advance, one that will lead him gradua to his point.

"Don't you remember? Your father is a landown while my father is what you call a *bracciante*. In Sicily t son of a *bracciante* does not marry the daughter of a lar owner. But this is America."

He lost the thread of his speech, stopped, became co fused; then the train wrecker's thoughts in his heart bu forth passionately.

"Vita," he cried, "I love you! I want you! I've co to take you with me to be married!"

Vita by this time was wide awake.

"You have no right in my room!"

"I think you don't understand," observed Paul soft

"Leave my room!"

"Your father and mother are downstairs under gua I have two friends with me, both armed. I also am armed

He took his pistol from his pocket, showed it to her, a replaced it, though without pointing it at her.

"I am in control of this hou No harm will come to them or you provided you do as I say. have come for you. I intend take you with me a marry you. I sh not use force unles have to, but if nec sary I shall take y with me by for You must understa that I am a desperate man, cou ing my life as not worth a can unless I have you. I love you. I cannot marry you I don't want live."

"I will not marry you. I will die first."

"You will not die. I will not let you. And y will go with me. I will make you."

"No!"

"Will you come quietly with me or not?"

"No!" panted Vita. "No!"

"Then—I must carry you off in my arms."

"Don't touch me! Don't dare to touch me! I bite! I'll scratch!"

The rest is not pretty to tell. Paul, loathing hi self, gritted his teeth and seized the girl in his arm bedclothes and all. She struggled, tried to bite, tried scratch. Her captor, the good-natured spineless machini the man whom even Sicilian Sam had twisted about his lit finger, held her until she had exhausted her strength by h struggles. Then he tied her wrists together with a han kerchief, and tied another handkerchief over her mout and tied her ankles together, and wrapped her in a blank as if she had been a mere milliner's dummy. He knew th she would never cease to hate him. Her smoldering ey told him that. But he knew that, if he did not steel h heart and carry the thing through, still less would s cease to hate him.

He wrapped her in the blanket, lifted her in his arm and carried her down the stairs and out the door of h

(Continued on Page 109)

Cabbages and Other Luxuries

By FORREST CRISSEY

A CERTAIN rather cynical housewife lately remarked that, so long as the advance in food prices was confined to the common necessities of the table, she would remain serene, because her family used so few of them; but when the big lift struck the list of luxuries she would begin to worry. Probably this satirical observation might have been aptly made by the chief of the commissary department in several million luxury-loving American homes, where the problem of family expense is initialed C. of H. L. instead of H. C. of L. The cost of high living is by no means an idle phrase in these days of magnificent incomes and princely expenditures.

The delicate implication that nothing so common as a necessity, nothing less exclusive than a luxury, could be admitted with impunity to the table of the elect is both suggestive and illuminating when one approaches the task of taking the food problem of to-day apart and attempting to make a profile map of it.

"Luxuries!" exclaimed the manager of one of America's most fashionable restaurants when I repeated to him the remark of the woman who implied that her family seemed inclined to scorn anything that did not come in the disguise of an imported delicacy. "Before you go far along that line of inquiry it will be well to establish a base line in the shape of a new definition of what it takes to enable an article of food to qualify as a table luxury. If you admit that this is merely a matter of price then you might as well make up your mind to revise almost the entire list of food articles familiar to you under the heading of Luxuries.

"There is hardly a day that does not bring me a jolt or two right along this line. For example, the American mind is not trained to consider corned-beef-and-cabbage as a table delicacy of sufficiently exclusive character to entitle it to an intimate association with truffles, pâté de foie gras or real Russian caviar. But right here is where you are awarded another guess on the rank and station of this good old American dish, which has descended to us from the days of our Puritan forefathers. This very morning I paid six and a half dollars for about seventeen ordinary cabbages; and bought them at wholesale at that! Before the war they would have cost me seventy cents.

"To my notion, this fixes the station and rank of this celebrated washday dinner team on the American table and gives it a new rating right at the front in the luxury column. You might argue that, as corned beef has not kept pace with the ambitious advance of cabbage from the lowly and obscure seventy-cent class into the six-and-a-half-dollar circle, this conclusion is ill-considered; but do not for a moment forget that it would be as easy to please the American public with a performance of Shakspere's great sentimental masterpiece with Romeo appealing to an empty balcony as to offer corned beef without cabbage to the people of this country and have them accept it."

The Juliet of the Boiled-Dinner Team

CABBAGE is certainly the Juliet of the team; and as a social climber it has made a record in the season of 1916 that a Becky Sharp might envy. In this connection it is interesting to note how exclusiveness and expense sharpen the appetite. More of our patrons call for corned-beef-and-cabbage than ever before. Just tell a man who has a reasonable amount of money to spend at the table that the cost of a very common article of food has multiplied itself anywhere from five to nine times, and his mouth will water for that dish until he orders it. That's human nature—and it has a whole lot to do with the restaurant business, I can tell you!"

The elevation of the common garden variety of cabbage into the luxury class has caused no end of confusion and embarrassment in food circles. It has even disturbed the financial serenity of great wholesale houses. For example, you have only to mention the word sauerkraut in the head office of one of the greatest wholesale grocery jobbing houses in America to get a very quick and spirited come-back. The reason is this: In February, 1916, this concern made a contract with one of the largest sauerkraut packers in the country for a very large quantity of this desiccated delicacy from the cabbage patch. The contract price was five dollars and twenty cents, delivered in New York. The cartage added about forty-five cents, making the total cost five dollars and sixty-five cents.

The Traveling Salesman Who is a Master of His Calling is About the Most Competent Witness Concerning the Pressing Food Problem of To-Day

Of course the cabbage seed was not even sprouted at the time when this purchase was made; but the jobbing house immediately set a price to its customers on this product of six dollars a barrel, and continued to sell it at that price until the season was well advanced and rumors of a short cabbage crop caused it to be put up to seven dollars and twenty-five cents. Then the blow fell—and the cabbage growers of the country woke up to find that a sudden and untimely freeze had almost completely wiped out the cabbage crop in a night.

But let the president of this big wholesale grocery house tell, in his own words, just how the humble barrel of sauerkraut broke through all official barriers and obtruded itself into the head office:

"There is a provision in this house," he explained, "whereby trouble out in the field comes to my desk whenever the incoming kicks become sufficiently numerous and spirited to merit a special consideration from the chief officer of the company. Suddenly a whole flock of complaints from customers who had not received the sauerkraut they had bought alighted on my desk. Of course I immediately sent for the department head who would naturally dictate the shipments from the factory to us, as well as O. K. the outgoing shipments of sauerkraut.

"The situation finally disclosed by my investigation was that the packer from whom we had bought our supply of kraut was unable to deliver a very considerable proportion of the amount for which we had contracted, and which we had resold at a price ranging from six dollars to seven dollars and twenty-five cents. He couldn't deliver simply because our contract had specified that the kraut should be cut from cabbage heads of a certain size, and only a small part of the crop in the localities of the factories operated by this packer attained the required size before the freeze came.

"For seventy years this house has delivered one hundred per cent of its futures; and, of course, I was not going to have it fall down on a batch of sauerkraut, no matter if it did involve a loss of several thousand dollars in order to maintain the record it had enjoyed for almost three-quarters of a century on the score of delivering all the goods that it sold to its customers. Consequently the proper department head was instructed to go out into the open market and buy enough sauerkraut to fill all our futures.

"I hardly care to say how many hundred barrels that took; but I am willing to tell the price we were obliged to pay: It was twenty dollars a barrel. There is nothing very exhilarating to the wholesale merchant in paying twenty dollars a barrel for sauerkraut and delivering it to his customers at from six dollars to seven and a quarter; but there is no little satisfaction in the feeling that the house is able to keep up its end of bargains made with its customers, no matter how much loss we may suffer in doing so."

The Rose-Strewn Path

ANOTHER New York wholesaler took a more ingenious method of making good on his sauerkraut sales. When the kraut packer laid the cards upon the table and said that delivery was impossible, but that he stood ready to do anything that seemed fair, this grocery jobber cleverly suggested that he believed his customers would accept a payment of five dollars a barrel in lieu of the profit they would make in the actual handling of the goods. This settlement was arranged, each retailer who had ordered kraut receiving a check, issued by the packer, based upon that rate. It was not a money-making transaction for the wholesaler, but it saved him quite a heavy loss.

"Right here," remarks one of the largest and ablest grocery jobbers in America, "is a point that apparently almost every political food investigator is inclined to overlook—the fact that the established wholesale grocer is not a food speculator in the common and uncomplimentary sense of the term; though he must buy a very large part of his goods before they are grown or produced in marketable form. The regular merchant must always consider the permanent interests of his customers—if he doesn't do this he might as well go out of business, for he will not last long with the trade. He must protect his customers just as carefully as he protects himself—and perhaps a little more so! If he so far loses all perspective on his business as to take a temporary advantage of the retailers who give him their trade year after year, and makes a big speculative haul out of them, he may rest assured that they will resent this by a withdrawal of custom that will cut deep into the reputation of his concern with the trade at large.

"On the other hand, the speculator who buys up a whole lot of foodstuff of any sort, holds it until prices are high and then begins to dump it on the heads of the trade is fundamentally a market demoralizer who hasn't a friend at court and who is cordially hated as a disturbing element, alike by wholesaler and retailer.

"When investigators once really grasp the principle that the interests of the established food merchant and the speculator in foods are diametrically opposed to each other, he will have learned something that he has not apparently understood up to the present time. Big market fluctuations are not good for the wholesale grocer; he gets his best profit when prices are steady, when trade operations move according to standard, and when he is able to see the end of a deal from its beginning.

"The same observation applies to the retail merchant too. When he can be reasonably sure of making a certain small percentage on his turnover, without worrying about whether he ought to buy heavily on account of a probable advance in prices or whether he ought to buy below his normal needs because of a likelihood of a declining market, he is in the best possible position to conduct his business upon a sound and economical basis, to give his customers good goods and good service, and to build up a satisfied trade."

When the interviewer made the mild observation that he had been led by newspapers and political investigators to believe that in these days the wholesale food merchant—not to speak of the retailer—was treading a path strewn with the roses of unprecedented profits, this big jobber tossed the ball back with this exclamation:

"Oh, certainly, it's nothing but roses from morning till night! Let me give you one little experience, an illustration that is typical of scores of others which we are up against every day in this period of high wages and

war orders. Incidentally it involves one of the most popular of all modern table luxuries—the olive.

"Not long ago the head of our olive-packing department came to me with a long face and said that it was only a question of two or three days before he would have to shut up shop and throw his girls, several hundred of them, out of work. The trouble was that he hadn't a pound of glass in which to put the olives—and all green olives are packed either in bottles or glass jars, as everybody knows. His supply of these containers had been ordered last July and he had bills of lading showing that the goods had been shipped long ago. At once I got the president of the railroad, over which the goods had been shipped, on the wire and explained to him something about the size of our freight business and how badly we wanted that glass. He came back with the statement that he couldn't move a wheel carrying that kind of freight, and if I didn't understand the situation my own traffic man would explain it to me, as it was too long a story to be told over the wire.

"In a word, it looked as if we had lost out in getting our glass delivered. But I knew that if we closed the olive-packing department our customers would soon be clamoring for olives—and besides, the loss in allowing about five hundred careful girls to drift into other lines of work was an altogether too expensive waste to be tolerated. Consequently I determined to solve the transportation problem I was up against, at any cost.

"After our traffic man located the big glass shipment I called in the head of our trucking department and told him to make up a train of five-ton trucks and take them down to a little station back of Trenton, New Jersey, where he would find our cars standing on a siding. The expedition was to be in charge of a competent man. The head man on each truck carried a good big wad of spending money with him and general instructions were given to break into the cars and take the glass—and the consequences, too, if there were any. All the men knew just what to do in case of trouble. Well, they came back with the glass, all right; but the breakage was big, and so was the expense. I'd hate to tell anybody what the transportation on that glass cost us, but you may take my word for the fact that we shall not make any money on the olives going out in the glass to which we gave an automobile ride from down below Trenton to our olive-packing establishment.

"This is not an isolated case, either. Much the same sort of thing is happening all the time. If I hadn't kept our olive factory going our skilled girls would have gone to munitions plants, candy factories and other manufacturing concerns, and we should have been obliged to train other girls in their places—a very costly process."

Rising Prices

NO MAN who is not in a position of high authority in a big food business can fully appreciate what a daily terror the transportation problem has become. Embargoes are run on the off-again-on-again program and it takes an expert to keep track of them; goods shipped from the West months ago are standing on sidetracks at way stations while trainloads of munitions are whizzing past day after day and week after week. Occasionally a local freight will manage to sneak a few cars of common merchandise from one way station to another. That's a fair picture of freight forwarding as it is done to-day, according to the whole fraternity of food jobbers. The wholesale grocer puts in his time making frantic appeals to the transportation officials to get his goods off the sidings and rolling steadily toward his place, while the food investigators are equally busy trying to get a good hold on his heels.

Every process of moving or handling goods costs the merchant a whole lot more than it did before food prices started to soar. This immense increase in the cost of doing business has touched almost everything that goes into his operations. Containers of every sort, kind and class, from the roughest packing box to the finest tin can printed in colors, have increased in price enormously. The advance in the kind of paper most used by the wholesale merchant has been about forty-five per cent, and it is still going up. Nails, twine, string and wire have also kept pace with boxwood and paper.

One Atlantic Seaboard wholesaler says that the drivers to whom he paid from fifteen to seventeen dollars before the war are now getting nineteen, and that all his wage workers have been advanced at about the same rate. This increase in labor cost is, in his opinion, typical of the rise that almost every wholesale grocer has been obliged to grant to hold his men. Even men on salaries have been given some concessions, which count up to a big total on the pay roll of every large establishment.

"The net of the whole matter," says the head of a great food house doing a heavy exporting business, "is how much the wholesale grocer makes, how much he does, and whether his service entitles him to the margin that he is able to get. Personally I'm willing to confess that this house has never been able to make three per cent on its turnover in any year since I've been in position to know anything of its affairs—and I've been brought up here. How many other lines of business can you find of which this can be said?

"This is not because we're not up to standard in our line, either. I believe that the trade in general will cheerfully grant that we're considered leaders and highly successful. In a word, if we are not making three per cent on our turnover you are going to have some trouble in finding any wholesale grocer who does better than that. We are typical of the trade in general in that we depend upon big volume and quick turnover for profits. When volume is comparatively small and turnover is relatively slow, then we get off on the wrong side of the ledger.

"Then there is still another element to which we must look in order to make anything worth while and operate upon the slender margins that obtain in this trade—the most careful, thorough and economical methods in both the operating and the financial branches of the business. If we didn't hold our business down to the soundest lines of administration our margins would do the disappearance act and show up in red ink, in company with a minus sign. This observation, I believe, applies to the trade in general. The possible average margin in this business is too narrow to allow room for any fancy steps, any experimenting, any loose-jointed ambling, any careless or untested methods of procedure.

"I can name a dozen lines of business where the elbow-room is several hundred per cent greater than in this. It takes a trained tightrope walker to keep to a margin of less than two per cent and pay dividends. The very strenuousness of the task has developed a high order of administrative and executive talent in this line of trade. You will look far and wide to find a higher average in any other branch of commerce. Close figuring is the key to success in the wholesale grocery business, and the man who attempts to operate without this key is going to find himself out on the sidewalk, staring at a sheriff's-sale notice on the door of his house.

"Where the average profit on turnover is less than three per cent, the consumer certainly has no just cause of complaint. I believe the public will agree with this statement. Of course there is a small margin of kickers—as narrow as the food jobber's margin of profit—who could not be convinced that any business man is giving them a square deal—especially any merchant handling foods. But they run about two ounces lighter than a cork on the average, and are not worth considering."

This merchant makes open confession of the fact that if he closes this business year with a handsome total profit he will have his export trade to thank for it, at least in a large measure. It is not denied that there is a good margin of profit in selling food supplies to the armies of the Old World, and those jobbers that have taken contracts of this sort are taking good care to get prices not obtainable in domestic trade from their regular customers.

Naturally opportunities of this kind are not open to all wholesale grocers, but are generally confined to the leaders of the trade, who are in positions of strategic advantage both financially and geographically. The smaller inland grocery jobber has not, in other words, much of a chance to get a war order that will yield him a fat profit.

"It Doesn't Occur to the Average Provider to See Whether Good Substitutes May Not be Found"

The Wholesale Grocer's Ambassadors

PROBABLY the country contains no class of men more fully informed on food values and food prices than the traveling salesmen who carry what is called a general line and sell to the retail trade. These men—at least those that represent strong houses and are assigned to territories of importance—are not mere order takers by any means! They do not travel from store to store with their eyes shut; but they are trained observers of trade conditions, who occupy a position that gives them a bird's-eye view of the entire stream of trade, from the grower or manufacturer to the consumer. The retailer relies upon the traveling salesman who enjoys his confidence, and in whose judgment and character he places the greatest dependence, for the information and advice upon which his buying is done.

The wholesaler has a keen realization that his traveling salesmen must make good in the capacity of special counselers of the retailer, or else forfeit the standing of their house. Therefore, these ambassadors to the counter of the retailer are systematically fed with the latest information upon the supply and availability of every article of food. The price book carried by a general-line salesman representing a large wholesale grocery house in a country territory is about as thick as an unabridged dictionary, and is a loose-leaf affair that is kept right down to date by the daily insertion of new leaves systematically sent out from headquarters.

While these sheets contain the latest quotations on from ten to fifteen thousand articles, the price book of the traveling salesman would be much thinner if its contents were confined exclusively to prices. Instead, it bristles with the facts that are taken into consideration in accounting for the prices and that have a bearing upon future prices and values. It is, in fact, a very terse compendium of crop forecasts; a crisp analysis of the quality of crops or supplies already harvested or in hand; a condensed commentary on transportation and consumptive conditions, and on the latest improvements in the preparation of foods, in packages and containers and on new methods calculated to improve the eating qualities of foodstuffs.

Naturally the alert and progressive retailer looks to this careful, equipped ambassador from the wholesale house not only for the information upon which to base his prices but also for the ammunition of fact and argument to be used in selling the goods to his customers, and explaining to patrons the reason why certain articles are cheap or dear, or an improvement over the previous output in the same line.

Inevitably this sort of relationship brings to the traveling salesman who stands well with his trade a rather intimate view of the retailer's trade and troubles. Selling goods is only about half of the traveling salesman's job, the other half being to get the money for them, build up his customers into better merchandisers, and thereby increase their buying capacities. It is inevitable, then, that the traveling salesman must know the business of his customers as well as or better than that of his own house.

All this makes the traveling salesman who is a master of his calling about the most competent witness who could be called into court to testify concerning the pressing food problem of to-day, where the responsibility lies for prevailing high prices, and who is getting the big end of the profits, where profits exist.

"The position of the average retail grocer of to-day," declares one of the ablest traveling salesmen of my acquaintance, who has a big house behind him and enjoys to a peculiar degree the confidence of his trade, "is about as uncomfortable and unbusinesslike as could well be imagined

(Continued on Page 101)

BRIGGLES "GOES WEST"

By Nalbro Bartley

ILLUSTRATED BY MAY WILSON PRESTON

HAVING secretly bought young Truesdale's house, though he remained Truesdale's valet, Briggles saw no harm in occasionally leaving his personal effects about Truesdale's rooms! Bursting into rage as he discovered the moth-eaten collar box and a flock of his former ties, now limp strings, Truesdale would resort to harsh words. Upon each occasion Briggles was tempted to say:

"Young man, have a care! You're sloping on your rent."

But he refrained. The final triumph must be more dramatic. So he meekly removed the box and went about polishing Truesdale's bankrupt boots. Meantime Truesdale entertained royally up to the last sou. Gay supper parties drank unpaid-for wine and nibbled truffles in the Pompeian dining room, with Truesdale gracefully toasting every white-shouldered, French-gowned guest.

Rising from his prayers Briggles often speculated what would happen should he tiptoe down the backway and throw open the pantry door dramatically, saying "Out upon you!" He would shake his head and remark how sorry he was the ladies would have to walk to town, since the automobiles had been seized by a lurking creditor! They would stalk like wretched beggars through the snow. He would stand triumphant in the doorway, his rotund, pink-pyjamaed person with its sandy-topped head and shrewd, twinkling blue eyes imprinted forever on their consciousness.

No! He would wait for one of Truesdale's supreme dinners with artistic lies woofing away at a great pace. Then he would turn out every blooming Yankee swank, and ring for claret and an apple dumpling with hard sauce. He would sit in Truesdale's place—and eat with his knife if the mood seized him. It was no sillier than wearing lizards on your shoulder and asking them:

"Shall muzzy catch wuzzy a fly for his brekker?"

Unexpectedly Truesdale took him into his confidence, saying in his light, irritating fashion:

"Briggles, do you know you're working for a pauper? I'm on the downright! Every tack and rag in this shack, and the shack, too, are sold to some old freezer who's lying low!"

Here was chance to burst into ownership, upbraiding him for his lost estate, his fallen manhood, his impossible ardor for this Sheila Morgan, a red-haired, gray-eyed goddess who had been heard to murmur "Carrots" as Briggles passed!

He should have said:

"I own the shack! Cook can pack you a lunch, and then you go tell that worming little tyke!"

But he never did. Each day brought a greater expectation of the *dénouement*. It obsessed him somewhat. He would wait for Truesdale's rags-and-tatters ball, then he would stride into the conservatory and signal the Hawaiian orchestra to stop. He would adopt a Napoleonesque attitude as he said:

"I've no objection to your dancing until midnight—but it's nigh onto two. In my 'ouse such a thing is not permitted!" And as they would rush toward him with straitjackets he would flourish the title deeds.

Presently this seemed tawdry and overdone. He would wait until Truesdale and a few friends were sipping their *demi-tasses*. That would be more subtle. He would step gracefully and say:

"Young gentlemen, may I ask you to move to the servants' sitting room? I'm going to nap a bit on the *chaise longue!*"

This, too, was discarded. In all the drama he had seen the interest was most tense when the two leading characters held the crisis of the plot in their exclusive lines.

He would tell Truesdale alone:

"Master Martin, you ought to be ashamed of yourself, and I thank God your mother 'asn't lived to see it! I own the rug you're standing on, even if I laced the boots that 'ide your feet. I'll lace 'em no more. . . . I own this 'ouse! I made my pile in steel—overnight—why couldn't you?"

But as yet the opportunity seemed not ripe. Perhaps Mr. Stoker proved an excellent obstacle. Briggles had decided on buying him from Truesdale no matter what outrageous sum was asked. Mr. Stoker was a small, square black dog with flourishing grizzled whiskers, centered by two soulless, shoe-button eyes. He was a working terrier, used to lead out the pack, and his uncle was in the royal kennels. Sired by Champion Matchbox and dammed by Maid of Perth, Mr. Stoker retained his dignity of name even in Briggles' most exasperated moments.

"Mr. Stoker, there's a bone shower awaiting you in the pantry" was his way of announcing Mr. Stoker's dinner.

"Will you please step out, Mr. Stoker?" he would ask, swinging back the gates. "Will you tell me if you were nibbling the gloves I left in this chair?"

Mr. Stoker, always noncommittal but omnipresent, even at the moment of Truesdale's proposing to Sheila, accepted Briggles as a man and brother. They understood each other remarkably well.

Briggles often confided to him how the thing had come about, painting dark portraits of Truesdale's future, punctuating them with weedy little tears which he attributed to colds. He would be waiting for Truesdale's return from some noisy party, when he would retell Mr. Stoker the story of his life, with the ultimate pot of gold at the end of the rainbow.

Mr. Stoker never wearied of the story; he was a flattering canine. He would sit, emotionless but tense, his shoe-button eyes centered on Briggles' round red face with its low knobby forehead topped by sandy-white hair.

"Ah, Mr. Stoker," Briggles would begin, "there's no telling 'ow far a man may rise or fall! I'm an hoptomist. I believe in everybody being 'appy—and good. The two be twins! Everybody can be 'appy—every one of God's creatures." Here he would give a wheezy little laugh like drawing the long-neglected cork from a vicious bottle. "Even the lobster 'as rosy moments!" At which Mr. Stoker's stub of a tail would wag appreciatively.

"'Ere's Blister Briggles owning an estate on the 'Udson," he would continue. "They called me Blister, Mr. Stoker, because as I lay in me mother's arms, 'twas all I reminded 'er of—she was literal—very literal! I've come on, 'aven't I?"

Briggles hoarded his salary and tips in a red-silk stocking. When the stocking took on dangerous avoirdupois a loan association helped it bant. When the loan association began to pay shares Briggles took a flier in steel. Inside of two months he had more money than Truesdale's debts! And he bought Truesdale's house and furnishings from a reticent selling agent, binding him to secrecy and chuckling at his own deepness. What he would do with the house he did not know. A combination of forces inspired the sale—a retaliation of class fostered by America's independence, an uprising against Truesdale's pleasant teasings and, although flatly denied to himself, a loyalty, a hatred of seeing a stranger flaunt into the property. Truesdale's mother had been an English girl; Briggles was houseman in their family, retiring to start a tavern. After the English girl married an American she wrote for Briggles to set them right. American servants annoyed and bewildered her.

"She's a Sea Serpent," He Told Mr. Stoker Sadly. "'E's Gone, Mr. Stoker; We May as Well Pack!"

So Briggles came. Five years later, returning home after his mother's funeral, little Truesdale, crying but not clear yet as to the reason, rushed out to Briggles—not to his father—to be comforted. It was then that Briggles really assumed the charge of Truesdale's career as well as the care of his tiny, stiff black suits. And now Briggles had bought the house unbeknownst to him!

Briggles had watched young Truesdale grow into a handsome, brilliant man, with extraordinary ability as a chemist, and every promise of making a name for himself in science. Briggles had seen women, fat and short, lean and tall, young and old, suffragists and classic dancers, gurgling débutantes and beaming dowagers, make violent, shameless love to Truesdale. Truesdale's blue-black head merely shook in humorous dismay at their attentions. Briggles never had to worry on the score of marriage. Whenever he saw a tiny danger signal flying, such as the new soubrette at the Follies, he would sound Truesdale cleverly, as he had done in previous years regarding stolen bonbons or slidings down forbidden banisters in one's best pantaloons!

"Oh, the little girl with the curls?" Truesdale would say nonchalantly, but to Briggles' happiness of soul. "Why, the only thing she has to look forward to is starring in Her Double Chin." At which Briggles would beam and slip away.

When Truesdale was thirty and had gambled away half his estate with lackluster interest, Sheila Morgan was given him as a dinner partner. It was a foregone conclusion they would love each other.

The introduction and necessary preliminaries to the affair were about as senseless as if one had said, "Mr. Montague, may I present Juliet Capulet—awfully nice girl, home every Sunday evening," and expected a six months' prelude of discussing the weather.

Briggles, watching from the offing, knew the worst the first moment he saw them together. Sheila and her family were taking dinner with Truesdale.

"She's a sea serpent," he told Mr. Stoker sadly. "'E's gone, Mr. Stoker; we may as well pack!"

Sheila wore a chameleon on her orchid tulle frock. She really hated the little thing, but it was the vogue, and she took an odd delight in doing bizarre, unbecoming things and being liked in spite of them. My Lady Handicap, Truesdale came to call her.

Truesdale hated the chameleon. He called it the green icicle, although it basked on his cuff and he ordered Briggles to let it have an airing on his tropical palm. The green icicle and Mr. Stoker and Briggles were put in the same also-ran class. Nothing mattered but Sheila, and life assumed a new, charming pattern. Truesdale stopped gambling and went into the deserted laboratory at the top of the house. Briggles, beaming with pride, waited for him to astonish the world. After two weeks Truesdale announced joyously that he had found the right perfume for her—two weeks working on a perfume for a red-haired, gray-eyed sea serpent, who merely said:

"You're the most worthless handsome man I ever liked. I loathe perfume. Pour it on Briggles!"

Briggles heard her say "Pour it on Briggles!" His stout British soul began to rebel then.

For a year Truesdale lived in an expectant state, grubbing about to find a suitable post, trying to regain his money. He walked and rode with Sheila, was her dinner partner and her dancing partner, called four times a week, entertained the family with wonderful dinners, and showered her with every gift she would permit. Also Briggles caught him in the very act of trying to find something which rimed with her name.

Briggles endured a great deal that year. He resented Truesdale's loving her, but he resented far more Sheila's

not worshiping Truesdale! He used to muse to Mr. Stoker of winter evenings over her stupidity and selfishness.

"She's selfish—sea serpents always is! She'll get bony, if I don't miss my play—neck full o' accordion plaits at forty. Eyes'll turn green! Then she'll wish she 'ad one single smile from 'im—but then it'll be too late! It'll be too late!"

Briggles waxed enthusiastic over the tragedy, stirring his pint of warm rum punch and wriggling his stubby toes in glee. Mr. Stoker was a lukewarm confidant, since he persisted in paying Sheila homage, even walking with her unattended by Truesdale or Briggles.

"There's bad blood in you!" Briggles would say savagely upon his return. "So you've been a 'love'—'ave you? And 'didn't chase a single kitty'—oh, you blighter! Your sire was kicked out o' the pack. I'd take oath on it! Get in 'ere! Who says that man and beast could be like brothers' lies!"

Later in the evening, when Mr. Stoker laid his square, whiskery jaw on Briggles' knee, the shoe-button eyes twinkling up at him, the dog was forgiven to the extent of a ham bone.

Then something happened between Truesdale and Sheila—no one knew what. Perhaps her father disapproved of Truesdale's shaky finances; or the Austrian count, ogling her all season, made Truesdale seem a prosaic American bent on skidding. Whatever it was, it caused Sheila to plunge into mad gayeties, flirting outrageously, wearing extreme clothes, saying and doing extreme things, physically overdoing until lilac shadows crept under the starlike eyes. It caused Truesdale to go on skidding. He stopped trying to save or retrench, and he gambled and rambled along as if he did not care a hang.

Everyone had fancied them engaged. Truesdale mentally had been engaged ever since he had first met her. But one day Sheila said to him:

"I can't go on, Martin. I can't love any one I don't respect, and I do not respect you—there's no reason for your throwing away money."

"Oh, it's the money, is it?" Truesdale snapped. He knew it wasn't and he had no idea of saying so. The words just tumbled out of his lover's disorderly, discouraged brain that needed a sound housecleaning!

Sheila, hurt to the heart—for she had intended only a warning—sent him away. He came back to plead with her, but she would not listen.

"If you'd say you'd marry me, then I could show you," he urged.

"Any man who asks a woman to be a crutch for him on his way to the altar will be a cripple all the rest of his life," she answered. "Martin, I'd like to find an excuse for you—I've even—hunted—for—them."

"All out because of the war?" he asked flippantly.

She shook her head.

"You lack something—I don't know what. Something that you've yet to discover within yourself, or something you've discarded in your folly. Why have you lived along at such a pace?"

Anyone but an angry, turbulent lover would have seen that the girl who was speaking adored him.

"I don't know—natural worthlessness perhaps. I only dabbled in chemistry. I had a lot of money, and I never learned how to say no! Maybe that's the thing. An irregular love of pleasure clutched me—I often think of working in earnest, I've an idea or so I'd like to see go. But it has always seemed as if there were plenty of time and plenty of money, and such a lot of fun going that I must get in on! That's the truth," he laughed nervously. "I know I'm building a stone fortress round your heart by telling you this; and making such a swashy, no-account excuse. If I should confess to some daring crime or to some morbid tragedy which had left its warp, you'd coo and gurgle and forgive me—well, I can't lie. There hasn't been anything. I rather think you're well out of it, Sheila, because you can say no!"

After a moment she burst out impetuously: "But I can't, Martin; there's the trouble. You and I are alike, only you're too stupid to see it. We ought to marry opposites. Have you never thought of it? It's as plain—as plain as it is that you'll be walking the streets for work and I'll be a silly spinster simpering behind my fan! I ought to marry a man who would beat me—just a little—make me stop my nonsense. The thing that makes me wear extraordinary clothes and be a vivid butterfly that will fade in a few more seasons needs to be beaten! You need some plain and gentle woman who will make you feel ashamed of yourself. That's it! I've wanted to find the right word for a long time. You need to be shamed. Love or scoldings or threats haven't done any good. But if someone were to make every bit of your six-foot self burn with self-contempt, you would run away and hide until you had fought it all out; then you'd make your mark. I'm right, Martin; we're too much alike to do each other any good."

"You think I'm satisfied with that explanation?" Truesdale answered. "As if I couldn't beat you"—his lips curved into a half savage, half tender expression—"as if you couldn't shame me!"

"You'd pet me before the sting of the blow had vanished and I'd forgive you before you were thoroughly inoculated with self-contempt." She shook her reddish-gold head sadly. "You need to marry a woman with a different idea of a good time—not me, whose idea of pleasure is to wear a dancing frock requiring but one hook and eye!"

When Truesdale went away the best he took with him was a promise that if she could ever shock him into a realization of what an idler he was she would do so—and he had declared that if he ever saw an opportunity to administer corporal punishment he would turn bantam weight! Both had laughed—and cried within themselves.

Briggles had borne with Truesdale nobly. Britta, Sheila's French maid, could have told similar tales of suffering had she been able to speak the English language. Everyone said that Truesdale was the handsomest and gayest dinner guest to be had and that Sheila had played with him, dashing about in her startling frocks, with half a dozen suitors tagging after.

II

THE *dénouement* came during the late fall. It was unexpected and most disappointing. Truesdale, finding fault with his cravat, upbraided Briggles, who bore the reproach without comment, for talking back to Truesdale only resulted in a stormy scene of mutual reproach. And after the combat Truesdale always gave him a five, and Briggles always poured out a saucer of pure cream for Mr. Stoker!

Waiting for Truesdale's return from a round of useless calls, Briggles sulked in his room. Mr. Stoker napped on the hearth mat. Comforted by a rum punch pungent with orange peel, Briggles read a short-story weekly, his heart glowing over the simple stories. He had just drained the last of his glass, remarking to Mr. Stoker on the serious

"Briggles, You Packed His Boxes When He Went to School, Didn't You?" "I Did," Admitted Briggles Grimly, "and When He Went to Jail!"

drawbacks of being a dog, when Truesdale rushed in, as pale as if he were convalescing from a long fever.

"Is it true?" he shouted, dragging Briggles to the middle of the floor, Mr. Stoker all tangled up in their feet and his welcome unappreciated. "Have you sneaked and spied and fawned on me all these years, saving your wages and your tips and nosing about stocks until you could buy my house and actually put me out—is it?" He shook him so violently that Briggles' yellow-white hair streamed in hysterical little pennants over the knobby forehead.

"Answer—have you bought this place—have you? You're a lying scoundrel, a sneaking hypocrite—a low sort of cheap knave if you have!"

Briggles' triumph tumbled into ruins. For some strange reason he branded himself the most infamous criminal in the United Kingdom.

"'Ow did you know, sir?" he gasped.

"Then it's true! You've bought the place—well, tha good!" Truesdale laughed unpleasantly.

"That's a fine way for me to reward my father for l fortune—my mother for—for her collection of laces," added incoherently. "You'll appreciate those laces, wo you, Briggles?"

"Sir, when your mother was presented I 'ad the pleasu of folding the lace scarf round 'er. She said I did it bet than the court mantua maker." Briggles grew a sha paler. "I loved your mother, sir, or I shouldn't 'ave co to a strange country to watch over 'er—and over you af she was taken."

"I beg your pardon," Truesdale answered quietly. "I angry with myself. That's it. I—I can't talk as I feel. say wrong words because there are no words to say w I feel. Then it's true—you've owned this place for mon and kept still. Were you never going to cry out?"

"I was, any number of times; then I thought I'd le run on a bit, no 'arm was coming to it. I'd tell you, may round the first of December."

"Believe in doing your Christmas shocking early, eh Truesdale walked to the alcove and pushed back the vel curtains. "You can keep the curtains all drawn lik grave, now that you own them. Pardon me this once I let in a little of the sunset." He jerked them rough Briggles' practiced eye saw his hand tremble.

"May I ask 'ow it came to your notice?"

"Miss Morgan. She's downstairs now. She knew I w running into the ground—I think she rather liked the w I disregarded her advice—it's what she'd do if she wer man. And to—to shame me, she wanted to buy the hou some idea of holding it up as a prize. Woman you l owns your house! Must buy it back from her before sh marry you—jump higher, higher, Fido, the lump of su is way, way in the air! That sort of thing. Well, when ferreted it out that you owned it she told me and I said lied. Yes, I said 'You lie!' and she picked up her ca and answered 'We'll go to your house, or whoever's ho it is, and find out.' Here we are. If you'll excuse I'll go down and beg her pardon—tell her my valet bought it." He left the room.

Briggles eyed Mr. Stoker and Mr. Stoker ey Briggles.

"I'll watch 'im that 'e don't act desperate," Brig promised Mr. Stoker. "She's a sea serpent—I alw said it. What did she want with the 'ouse? is what asking."

Mr. Stoker's shoe-button eyes asked as plainly shouting: "What did you want with it, Briggles?"

Briggles scratched his disordered hair ref tively.

"It's roused 'im. That's good. Mr. Stol when 'e comes back 'e'll be all in—lovers' qu rels, you know. And when one is a sea serpent the other a lazy little prince ——" Briggles pou some more punch to compose himself.

Truesdale, facing Sheila, was saying gravely

"I beg your pardon. Briggles bought the pl He saved his wages, played the stocks and w They usually buy a shop and live in the rear, on the front door, lots of tatting doilies. Briggles didn't—he played for high stakes got them. I don't know or care what he's going do with it. I'm glad you didn't get it, for I th Briggles is a gentleman, Sheila; that he bough with a cold-blooded eye to an investment. I do think that you, with the spending mo of an empress, had any other intent cept your exotic way of teasing me, o telling me that you didn't care. A poo more simple woman would never h dreamed of such a thing."

"You think that?" she asked steadi gathering her fur cape about her.

"Yes, I do," he retorted, with the t der passionate eyes of stabbed youth.

"I did it to shame you, Martin, cause I—I cared. I hate you now The last rang untrue but she said forcibly. "Because I thought that you were in my debt, if I could in a way make you see things as you ought —— I didn't w some stranger to buy and take away even your mothe laces. But someone did it far more effectively than I—y valet."

In the throes of his shame and not yet admitting t fact, Truesdale took her arm roughly.

The girl shrank away from him.

"You said that you needed to be beaten and I to shamed. I think I'm taking double measure—from valet and from the woman I love. But it would have be a cheap trick, Sheila, not worthy of you," he persisted w blind egotism.

"Women don't bother buying country places when th own two or three in their own right."

Truesdale flushed.

"You need to be beaten—just the same," he answe with unintelligent, unjust, cave-man logic.

"Why?" Her eyes narrowed. "Because you're wrong d a good friend tries to save you, you want that friend aten? It's yourself you should lash."

He saw her to her car.

"I'll be going, naturally, so I'll say good-by. Thank you r the try!"

Sheila bowed gravely. The car whirled off. Out of ght, she turned to look back wistfully. "There are fferent meanings to the word 'beaten,' boy," she murured, "and I lose!"

Truesdale, scuffling through the woods half the next day, atless, with an old cap tossed on his head, felt beaten o. Reflected pain perhaps! To his mind it was as ridicous for Briggles to buy the place as for Mr. Stoker. iggles—and Sheila knew it; Sheila trying to buy the ace and hold it as a ransom . . . Had he come to be ch an utter plaything? But did she mean it—was it to one of her daring pastimes, her teasing triumphs? What as the use of asking? Briggles had bought it! Truesdale entally slipped back to being a tiny tearful d in new shiny black, clinging hard to Briges' warm hand as they passed a certain closed or, and he heard Briggles say: "Little mas-r, let's you and I play ninepins!"

Returning at dusk, fired with resolve, Truesle met Mr. Stoker and Briggles pacing anxusly up and down.

"I'll not need anything," he said, ignoring r. Stoker. "I'll start to pack to-morrow."

Briggles looked in dismay at Mr. Stoker. Mr. oker, gorged to the teeth with chicken pat-s, had no wish to be dragged into any dreary ndlord-and-tenant dispute!

"Master Martin," Briggles' voice quavered, would you consider staying on a bit? I'm ot keen to do anything immedjit!" He aved his hands like a woman.

"I'm going west." Truesdale walked to his room.

Briggles and Mr. Stoker pattered after.

"West, sir?" said Briggles, his blue es like glass beads. "Oh, sir; not—not r west?" Truesdale nodded.

In England there is a phrase, "going est," which defines a surreptitious jolly rty with popping bottles. Lately Tommy tkins has borrowed the phrase to express outard indifference when the regiment receives arching orders. "Going west" means trenches, lly bread, thin soup, mud, barbed wire, shrapl, shreds of men left here and there. Fritzies aiting behind every tree twig! Truesdale and riggles had adopted the phrase. They never oke of going to the war but always as "he's ne west," or "the west looks bad."

"Our west—to polish off old Fritzie?" Even r. Stoker pricked up his ears and stopped angling Briggles' last copy of the short-story magazine.

"Our west, Briggles, to polish off myself! Oh, not in ny insane melodramatic way—that's what's wrong with e! Trying to live like a comic-opera hero instead of an merican. I'm going with Cary and Fraser in the Paris boratories as an experimenting chemist. They'd asked he before—remembered some asinine stunt I did experienting about taking lactic acid from fatigued muscles. sent a cable from the station. It's no firing line and niform and sobby diary to be reprinted; it's just trying o do something besides discover synthetic perfumes or ——" Truesdale's lips fluttered.

"Do something besides discover cynic perfumes for sea rpents," Briggles finished heatedly. "She is—she is—e is!"

The joy of saying so was glorious.

"You mean Miss Morgan?" asked Truesdale sharply. Be still!" Then he laughed. "Who am I to talk so to ou, living in your house, sleeping in your bed? Oh, toker, old top, we're a funny pair!"

"You'll make good over there," said Briggles. "Master lartin, I'm proud to pack your boxes. Going west—to speriment—things—in—things," he finished raggedly, lowing his nose. "That's good! Licking good! Going polish off old Fritzie! I'm glad the blooming 'ouse is line. You'd 'ave stuck like a leaf in the gutter as long as our mortgages 'eld!"

"So she said! That I needed to be shamed—I was angry ien. I said she needed to be beaten—I am shamed. But e shan't be beaten, Briggles; she must win!" He looked Mr. Stoker as at a respectable, emotionless measuring ick by which to steady himself.

"Did she say that?" asked Briggles, astonished that a a serpent wearing a green icicle could speak so wisely.

Truesdale nodded.

"But she won't know for a long time. Maybe it'll be o late. . . . Briggles, are the trunks all ready for tion?"

"All but mine—it squeaks."

"What the devil do I care about yours?"

"What am I to put my 'jammies in?" Briggles asked bitterly.

"Your house," Truesdale laughed.

"Can't float a 'ouse on the pond, can't crowd 'em with yours."

"What are you driving at?"

Briggles looked in injured dismay.

"Sir, I'm going west!"

"You, a bloated landholder ——"

"You think this roast beef is going to let Yankee bacon beat 'im to the pan?"

Briggles lapsed into American slang. "Sir, I'll be useful, laying out everybody's clothes—laying out men if they need me! I've an idea or so that might come 'andy.

"Miss Morgan: Will You Kindly Watch Mr. S. for This P. M.? He is Extra Wild and I am Busy Packing"

Ahem—'ow's this—listen sharp! Clouds is water, water will freeze. The Zepplins—nasty bouncers—sails in clouds; make up something rippling that'll freeze the wings of hangels, shoot it through cannon into the sky—freeze the clouds with the Zeps in 'em, let 'em say their prayers in a snowbank for a year or two. I'll think up a knapsack of 'em while we're going acrost! I'm an able-bodied man, sixty last Boxing Day, never 'ad rheumatics or been married. You think you're going to ship me, now that you promise to be a credit? That's gratitude—I'm willing to ask the hangels! The years I've stuck by and watched you make an ass of yourself, took care of your mother's lace, fed and unfleaed Mr. Stoker—just because I won a little kail and bought your 'ouse, so you could always buy it back when you stopped being a lunatic, just because the sea serpent turns out to be a lovin' mermaid trying to save you, you think you'll go west alone and blow yourself up in a laboratory trying to make sneeze powders to tickle Fritzie and make him miss aiming straight? No. Briggles goes west!"

"Don't!" said Truesdale, in a muffled voice. "It isn't fair; it's ——"

"You want to make me a 'ermit, do you? Leave me in this 'Udson wilderness at the mercy of this beast." Mr. Stoker blinked innocently. "Cheat me of the pleasure of coming back with a 'ero? Well, you won't!"

Truesdale stumbled over to him in the same boyish way he had done years ago when something went wrong that needed Briggles' diplomatic adjustment. He put his hand on the dumpling of a shoulder in the tender, rare fashion of man comrades.

"All right, we'll go west," he said.

"And we'll come 'ome—to Mr. Stoker," Briggles added cheerfully.

Truesdale refused to see the "lovin' mermaid," much as Briggles urged it.

"Not till I'm home! I don't want any grandstand play of going to the war, when I'm merely going into a nice laboratory full of interesting smells. Just fussing round trying to oil up my brain again. I'll write her after I'm there!"

That evening, reducing luggage to its slimmest possibilities, Briggles looked at Mr. Stoker reflectively.

"It's a bloody shame you're denied the power of speech," he said; "what a grand little tattletale you'd be! You could walk right in and say, 'Oh, Miss Sheila, 'e is dead gone on you, and 'e 'as come to 'is senses, but 'e stays stubborn! You thought 'e was going to be a poor bar fly—you'll find 'im in the roaring lion pen! But 'e won't come to you—'e won't let poor Briggles tell—so slip over and kiss 'im good-by. And kiss Briggles, too, while you're about it.'"

Mr. Stoker hung his head in admission of inefficiency.

"You can't, you poor beast. What's to become of you in a boarding kennel, any'ow?" Briggles' eyes took on the tints of small glass beads. He bent over and lifted Mr. Stoker in his arms.

"Could you be trusted—you little ratter—you wouldn't turn at the door to chase a Maria, would you? Would you go in? Oh, if I thought ——" He paused, his forehead perspiring profusely. Then he ended solemnly: "If I dream of boiled bloaters and green tea—you'll be sent!"

III

AS NERVOUS as a bridegroom, Briggles rang the bell at the Morgan château and stepped back among the trees as he watched Mr. Stoker disappear inside, skinning deftly between the calves of the Morgan doorman. He flattered himself he had timed it well. Truesdale was in town for the afternoon, and he had phoned the Morgan household to ask if Miss Sheila was in, saying that he, Briggles, was sending her an important message.

Sheila, greeting Mr. Stoker on the stairs, stooped for the note attached to his collar. In Briggles' labored, cramped writing, she read:

"*Miss Morgan:*—Will you kindly watch Mr. S. for this P. M.? He is extra wild and I am busy packing Mr. T.'s things as he sails for the war—trenches—next week. Mr. T. is very particular about Mr. S. and I am afraid something might happen at the last moment. I hope you will not say anything about this, but Mr. S. has already eaten a pair of brushes and I am very nervus. Will call for him at six. B. BRIGGLES."

Briggles, giggling like a schoolboy as he laid out the things to be mended, listened to the doorbell with a guilty air.

Suppose she was merely returning Mr. Stoker by a servant, scorning the flimsy, rather silly—yes, it was certainly both flimsy and silly now that he paused to reflect—method of telling her the news. Suppose she wrote Truesdale a haughty, never-to-be-forgotten letter accusing him of having servants act as peacemakers! He, Briggles, might better man a Zeppelin and prepare to be frozen in the clouds! The one remaining maid asked superciliously: "What'll I say, Mr. Briggles? It's Miss Morgan to see you."

"Show her up!" he said stoutly. So she had come! It wasn't turning out the way he planned. Briggles' romantic brain fancied that she would keep Mr. Stoker and telephone Truesdale to come and get him—that would be the proper caper. But he might as well make a jolly mess of it now he had started.

"Up here, Mr. Briggles?" repeated the maid.

"'Ere!" Briggles dusted off housecoats nonchalantly. "So you balled it up, you anæmic rodent!" he greeted Mr. Stoker in an undertone. "Did you attack the fur rugs and get her mommer poppin'?"

Sheila followed Mr. Stoker into the room, half ashamed, half eager.

"Briggles," she asked hastily, "did you do this on purpose—did you? And did he know?"

"Miss Sheila I'd be flayed with the flat of 'is sword if 'e dreamed it! I thought it was my duty, you 'aving come so close to buying my 'ouse!" Sheila smiled at him.

"I'll always thank you, Briggles. But you don't think he would have come to say good-by?"

Briggles shook his head.

"No more chance of it, Miss Sheila, than there is for 'em to make rubber oyster pockets for dinner coats! 'E was done proper. Ashamed—and for good cause. Doesn't want you to see 'im until 'e 'as something deserving of kind words. But I thought it was my duty ——"

"It was—it is your duty." Sheila picked up a necktie. "Briggles, if you'll never, never tell, may I help pack? Are these going in there?"

"Yes—a little neater, please, 'e's frightful to suit—and it's supposed to be done by Briggles." Here came another rusty, cork-pulling laugh in which Sheila joined faintly.

"Yes, of course. When is he going—where—what is he really going to do? Remember, he's not to know I ever asked a syllable." Briggles told her.

"I accompany 'im," he finished gravely.

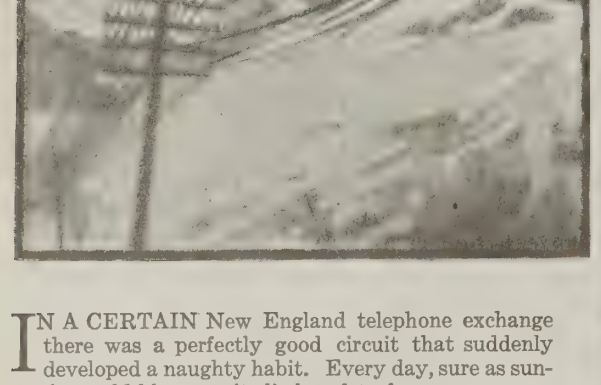
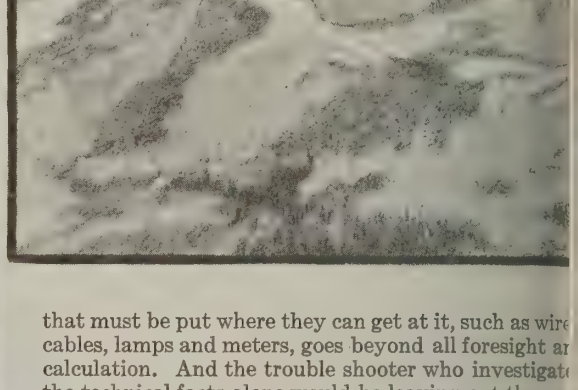
BUG HUNTERS OF INDUSTRY

Sherlock Holmes, Trouble Shooter—By James H. Collins



DECORATIONS BY J. GORDON SMYTH



IN A CERTAIN New England telephone exchange there was a perfectly good circuit that suddenly developed a naughty habit. Every day, sure as sunset, it would blow out its little safety fuse.

Telephone current is exceedingly mild stuff—about the mildest form of electricity used for any ordinary purpose. Its amperage, or volume, is so slight that the common way of gauging it, in the absence of instruments, is to touch the tips of the wires to one's tongue. Then it gives a weak saltish taste, and that stands for the energy which carries conversation. It almost gives one a suspicion that Nature doesn't think mere talk worth much electricity! The voltage, or pressure, is so feeble that it cannot ring your telephone bell. For this you generate a little stronger current by turning the hand crank of a magneto, or in cities the ringing is done by machines at the telephone exchange.

Because telephone juice is so mild, any stray current of higher energy can injure telephone equipment. So, at the central office, each circuit has a safety fuse, which burns out instantly and breaks the electric path when an electric-light current or lightning discharge wanders into the plant.

Well, every day in this New England exchange a wandering surge of high potential would dart into the place, from goodness only knows where, and burn out the fuse on that particular circuit. No other circuit was ever bothered, and as soon as the wire chief had put in a new fuse, even this circuit was well behaved and normal by all tests. Until next day! Then, without rime or reason, "Spit—flash—pop!" it would burn out again.

The wire chief put his best trouble men on to that problem, and they went out over the circuit, telephone by telephone, and pole by pole, to see where high potential might be leaking in. Everything was tested and put in such good order that in a little while this circuit was a model in maintenance. And still the mysterious high-potential visitor gained an entrance every day, and none of the trouble men could find out where it came from.

The Solution of the Riddle

FINALLY the wire chief went out himself. One telephone on that circuit was a slot instrument, located in a trolley waiting room near a park. This waiting room was closed in winter. The wire chief had got hold of one clue—the mysterious high potential called regularly each evening, about seven o'clock. He went to the waiting room and watched at that hour. Presently the trolley company's park watchman came along, glanced into the waiting room, turned up its electric lights for a minute and satisfied himself that everything was right. When he turned on the lights they burned dim for a few seconds and then flashed bright.

The wire chief got into the waiting room and made an examination. He found that the electric lights were grounded on a water pipe. So was the telephone protector. In winter this water pipe was moved toward the main to prevent freezing. That gave a poor ground for the electric lights. They burned dim until their current had forced a path over the telephone circuit and blown out the wire chief's fuse. As soon as they burned up bright the watchman had been satisfied with his inspection and turned them off, going on his rounds, serene. The wire chief, putting in a new fuse, had found his circuit normal. And then they had done it all over again the next night, and the next!

When commodities are made in a factory, under our American system with its quantity output, and standardization, and automatic machinery, and close figuring for minimum costs, there are many chances for defective stuff to slip through and get out into the world and make trouble. This is safeguarded as far as possible by rigid factory inspection and tests.

The chances for trouble are even greater with things like telephone equipment, electrical apparatus, gas meters, adding machines, typewriters, trolley cars, railroad locomotives, farm machinery, and so on; for these pass out of the supervision of the factory inspector. Time and the elements may play upon them, the public and the inquisitive employee can experiment with them, and there will be interference by animals, birds, insects—even plants!

The problems that crop up are different, diversified, perplexing and often amusing. To deal with them there is the trouble shooter, an emergency man who takes the field on short notice prepared to cope with novel troubles at any time. He must know pretty much all the technical shortcomings that arise in his line. He must also be a sort of Sherlock Holmes, able to make deductions that will locate trouble for which people are responsible. And when the trouble is found he must be resourceful in schemes for ending it quickly.

They had a heavy sleet storm in Ohio, and it weighted the branches of trees along a thirty-three-thousand-volt electrical transmission line so that they touched it at hundreds of places, putting the circuit out of action. An emergency man cleared this trouble by real trouble shooting. He took a shotgun, walked along the line and shot the ice out of the branches, or shot them off, and with three hundred twelve-gauge shells brought twenty-six miles of transmission line back into good order.

In another case a trolley company had trouble with loose insulator pins on its poles. These pins were of wood, and shrank with weather, and the trolley wire would come down; and, no matter how frequently the line was inspected by a man walking the track with his eyes open for loose equipment, it was hard to forestall trouble. An emergency man hit on the idea of inspection with high-power field glasses; and this worked so well that one trip over the road revealed a hundred and sixty defects that could not have been seen with the eye alone—loose pins, broken insulators and broken wires—which, when repaired, made the line proof against breakdowns for several months.

Trouble shooting must always take in the human equation; for what people will do to apparatus of the types that must be put where they can get at it, such as wire cables, lamps and meters, goes beyond all foresight ar calculation. And the trouble shooter who investigate the technical facts alone would be leaving out the mo important factor in his problems.

All the trolley cars on Manhattan Island take the current, not from an overhead wire but from a charge rail in an underground conduit. The opening to th conduit is a slot only seven-eighths of an inch wide, ar it would seem as though hardly anything could fall in such a narrow opening. But in the everyday routi almost everything imaginable does fall in; and troub men who clear the short circuits that stop New York su face cars have long ceased to be capable of astonishmen

The speeding taxicab drops its tire chains in the slot. truckload of steel rods jangles up the street and a few te foot lengths of metal fall off and get into the slot. Ste hoops from baby carriages and barrels are found causi short circuits—the small boy loses them down the sl Wire, bolts, horseshoes, and like junk, are removed quantities amounting almost to tonnage. Not long ago ca were stopped in the rush hour by twenty-eight feet of wi cable that tangled itself round the contact shoe of a c This cable was only one-eighth of an inch narrower than t slot, but it got in. The emergency crew removed it phi sophically.

A Penitent Colored Brother

IN A SOUTHERN telephone exchange the switchboa suddenly blazed out in a mass of lighted signal lam giving the idea that every subscriber wanted to talk at t same moment. When operators plugged in to respond th found the lines dead. Investigation showed that somebo had sawed out ten feet of a six-hundred-pair cable a m away, and later a negro thief was caught when he tried sell that piece of cable. Before he went to jail a troub man explained the damage he had done; and the color brother was really sorry—thought he had simply be stealing a piece of lead pipe to get some breakfast mone

"Boss, if I'd 'lowed you-all talked frew dat thing I never done it," he said. "Lawsy me! I thought dat w mighty funny-laid pipe!"

Birds of the air cause trouble, and beasts of the fie Quite a comprehensive museum of natural history might formed of creatures that have been taken out of telephor telegraph, electric and trolley equipment. Rats, mi squirrels, owls, hawks, cranes, woodpeckers, and the lik will gnaw insulation, climb poles, perch on cross arms a get entangled in wires. If they interfere with high-tensi lines they usually pay the penalty, which is instant electr cution; and the manager of the central-station compa has a natural-history specimen to exhibit, placard "This is why the lights went out last night."

In subtropical localities weird air plants have form the habit of growing on aërial lines. Wasps and be select homes in electrical equipment; and it is n believed that certain beetles attack the lead sheathing telephone cables, though everybody laughed at t notion when it was first advanced.

Weather and accident as sources of trouble are a sto in themselves—snow, sleet, winds, floods, fire, explosio and the like, will wreck equipment, perhaps over h a state, turning the trouble man out, like a fireman soldier, for days and nights of constant work.

But just because trouble comes in so many forms, a takes in so many factors, it appeals to the real troub shooter. He is one of the most resourceful fellows the organization, always ready for a new problem, a has a rough-and-ready technical knowledge that cann be got from books.

Some telephone engineers lunched daily at a dow town restaurant. One day the proprietor told them th

BRINGING OUT BARBARA

The Experiences of a New York Débutante

II

By ETHEL TRAIN

ILLUSTRATED BY CLARENCE F. UNDERWOOD

UPON the following morning I awoke with a quivering sigh and that lassitude which follows keen emotion. Not only did I feel that mother and should never understand each other, but I didn't care much whether I ever saw John Randall again or not.

When the maid tapped at the door with a summons to go at once to mother's room, I knew what that summons portended. The subject of our disagreement of the evening before was to be reopened and the pros and cons of the discussion rehashed. I found mother, half dressed, in the setting appropriate to such midmorning attire—her boudoir. But, under the shimmering folds of her negligée, her whole figure was taut with determination.

"Barbara," she began, "have you notified that young man who was here last night that he's not to expect you at his studio on Thursday?"

"No," I said; "I haven't. Why should you call him 'that young man,' mother—as though you didn't know him?"

"Because I don't intend to know him," she returned, "except in the most general way. He's forfeited his right to anything more by presuming to invite you, a mere child, to come to his studio—a thing that's unheard of! The effrontery of it! No sooner had he got himself asked to my house than he seized his opportunity, through an introduction to you, to try and break into society."

"Now mother!" I smiled. "As though *I* could help anyone socially! Why, you yourself say I don't know how to stand, or walk, or behave, or wear my clothes!"

"Nevertheless," she replied, "you are my daughter."

So might the Czar of Russia have spoken in referring to the czarevitch. It was difficult for me to get her point of view as I watched her sitting there, so attractive, her glossy hair full of high lights, her rounded arm, delicately tapering at the wrist, lying along the arm of the chair. She would have died rather than say "I am a pretty woman"; yet she had not the smallest hesitation in declaring "I am not!" Hers was an arrogance not of person but of place.

"Have you thought," I suggested, "that maybe he doesn't want to get in? Perhaps he wouldn't care about it. He's pretty busy painting, you know."

"That's utterly absurd," she retorted. "Of course he wants it! Everybody does who hasn't got it, in every country of the world. What do you suppose the *nouveaux riches* in America give lavish entertainments for, if not for that? If they're impossible themselves they try to buy social position for their sons and daughters, to whom they've been able to give the advantages they have missed."

"You don't have to do a thing," I commented. "I should think you'd be glad."

"That's where you're wrong. I have a great deal to do. I've got to keep going. People are so easily lost sight of in this country, where everything is in a continual state of flux. Take the Blaisdens, for example. You remember the Blaisdens?"

"I've heard of them. Didn't they give a series of musicales about two years ago?"

"They gave wonderful musicales!" she replied. "Caruso sang at the last one."

She paused, and I remarked:

"It seems to me I haven't heard the Blaisdens mentioned lately."

"They're never mentioned," she replied. "They've dropped out. They went abroad at the end of the season and haven't been heard of since. The Glynn Rollinses took their house. They considered themselves lucky to get it, as it's an ideal house for entertaining. Everybody goes there, just the same."

"Poor Blaisdens!" I sighed. "Perhaps they had to pay Caruso out of the rent! Doesn't anyone care enough about them to ask?"

"People haven't time. There are always things to go to. It doesn't take a generation to be forgotten; it's a matter of months."

"If it's as impersonal as that, why bother?" I questioned. "Any unforeseen circumstance, such as the death of an aunt or an illness, would break up the whole scheme. I'd much rather have a few friends whom I could count on to come and see me if I were ill, or call me up on the telephone whether I happened to be in mourning or not. Then there'd never be any break to bridge over—no worry about trying to get back. One would have a freer mind for other things."

"What things?" she asked impatiently.

"Oh, I don't know," I evaded, flushing in sudden reserve; then, deciding that this was unfair to her, I brought myself to add: "Reading, studying, thinking things out. In my case painting, perhaps."

"Painting!" She took me up. "There you are! I don't believe you ever thought of such a thing as painting until you met that man last night."

"Yes; I did," I assured her eagerly. "Oh, I love it so, mother! I've been painting—a little—for years. Oils and water color, both. And I did lots of caricatures at school; cut them out of black paper. The girls thought they were killing. I've got one of a fat lady, upstairs. Shall I get it?"

"Another time," she put me off, dismissing my poor little achievements as unworthy of notice and thus wounding me to the quick.

"You won't have much time for reading and studying, and such things, after this," she went on in a manner distinctly disparaging to all intellectual pursuits. "You'll have enough to do to get ready to 'come out.' I begin to realize that I ought not to have kept you away so long; but, now it's done, we must make the best of it."

"Is it so serious as all that?" I asked, intimidated. "Can't I just go to parties, when the time comes, for the fun of it?"

"Don't refer to cosmopolitan entertainments as parties," she corrected. "You'd find the dances extremely formidable if you hadn't laid a foundation with the dancing men."

I wondered whether the dancing men had any other avocation, or whether the whole of their activities was comprehended in that term, as one speaks of "performing bears."

"Is Allan Denning a dancing man?" I asked.

"Yes," she returned with an increase of cordiality in her tone; "and you made an excellent beginning with him last night. That was one reason I was so determined not to have you get mixed up in any way with this painter and his friends, whoever they are. The most exclusive women of my acquaintance are only too glad to get Allan Denning to come to their houses. Do you imagine for one moment that he's going to stoop to enter into competition with a nobody for the favor of a mere schoolgirl? Don't deceive yourself! If he sees you going about with outsiders he'll let you drop; and your stock will fall—not only with him but with all the other young men of his sort."

As she spoke I recalled Allan Denning's cool stare at John Randall last evening, his whispered "Who is that? I don't remember having seen him before," which had dispelled my first pleasant impression of him.

"Mother," I said with intense earnestness, "suppose I don't want the sort of success you've planned for me? Suppose the very thought of it is repugnant to me? Suppose I don't care for men of Allan Denning's type and do care for those of Mr. Randall's? Since it's a matter of choice, oughtn't it to be left to me to choose? I'm not fitted by temperament for the sort of life you lead. No matter how hard I try, I know I shall not succeed in being a credit to you. Why not drop the whole perplexing business and let me go to college? If I went back to school next year I could pass the Bryn Mawr exams in June. Let me, mother! It would make me absolutely happy. . . . After all, it's my life that's in question, isn't it?"

"Yours!" she cried in high indignation. "You think only of yourself. What about my life? Hasn't my every thought been centered on your coming out—for years? Didn't I build a house that was bigger than I needed just to be able to do the thing properly? And now you say you don't want it! It's perfectly ridiculous! How can a girl of seventeen, who's had no experience, know what she wants?

Do you imagine I'm going to allow you, in your childish ignorance and conceit, to knock down at one blow what I've been building up ever since you were born? To rob my social career of its climax?"

I saw that my case was hopeless. Mother needed me in her business. There was nothing for it but to give in. How could I continue to oppose her and live under the same roof? If I did existence would be hell! I was the under dog, and I knew it. On the side of the oppressor there was power.

"What do you want me to do?" I asked with heavy heart. "Write Mr. Randall a note?"

"Yes, dear," she replied with an entire change of tone and manner. "Sit down at that desk. I'll word it for you."

"Dear Mr. Randall," she wrote through my agency: "I am sorry not to be able to come to your studio on Thursday, as we are moving to the country to-morrow."

"To-morrow?" I repeated, incredulous. "I thought we weren't going until next week."

"I've changed my mind."

"On my account?" I asked with a slow flush. "Do you think I'd go to the studio on the sly, mother? Is that the sort of girl you think I am?"

"It's not that," she replied hastily. "I'm doing it in order to supply you with an excuse."

I chewed my pen and waited for her to go on with the dictation.

"With appreciation of your kindness in asking me," she concluded. "Sincerely yours, Barbara West."

When I had sealed the envelope she pressed the bell for her maid.

"Yvonne," she directed, "see that this is sent at once by messenger. No answer."

Thus definitely the episode was closed. All that day I expected signs of dismantling, but did not see any.

"How can we move on Thursday?" I asked at dinner. "Why, this house is going full tilt! Not a single thing's covered up or put away. And how is the other house to be got ready five days before the time?"

"My dear child," mother explained with a slight smile, "it's perfectly simple. The Long Island house is never really closed. It's easily put in shape with an extra staff of cleaners. I telephoned the superintendent this morning

"Do You Think I'd Go to the Studio on the Sly, Mother? Is That the Sort of Girl You Think I Am?"

to attend to it. As for the town house, I never have anything touched until I'm out of it. We take our final meal with the silver on the table. It's the only way to live nicely."

At this calm statement my mind went back to a house I knew in the Southern city near my school. I had been privileged to enjoy its hospitality on several occasions through a classmate, whose home it was. How did its mistress live, if not nicely? Many a rare bit of old china had arrested even my inexperienced eye, when passed to me in her own hand at teatime. The furniture in her cool parlor, the lace at her wrist, were as fragile and exquisite as herself. Yet that house was "put away" regularly at the first sign of warm weather every spring. The entire staff at this gentle lady's command consisted of two old fat mammies.

For the first time it flashed upon me that she must be in straitened circumstances. I had never suspected it amid the several daintinesses with which she was surrounded—all cherished heirlooms. She would have considered it lacking in taste to display her poverty. What would she have thought of our display of riches? Even our lavishness of housecleaning suddenly seemed to me indecently ostentatious. And why suppress every sign of the business of living? It would have been inspiriting to hear the whir of the machinery, instead of silencing the parts with a surfeit of oil. "Father," I asked, "do all the people you and mother know live in big houses?"

"Oh, no," he answered; and I felt immensely relieved until he added, smoothing his little black mustache: "Many of them prefer apartments now. The Abercrombies have a whole floor of that new apartment house on Fifth Avenue. It has twenty-six rooms and eight baths. I met Abercrombie at the Racket Club yesterday, and he said they found it very comfortable."

During the whole of the next morning I was aware, in my room, of the faint rustle of tissue paper in the hall. When I emerged the maid's arms were buried in it up to the elbows, while her nose pointed toward the cavernous depths of one of a double row of trunks. This was the sole indication of our impending departure.

We lunched as usual at half past one. An hour later, according to schedule, we got into the automobile, crossed the Queensboro Bridge and, at the discreet pace that was all the tiny car was capable of, approached our destination by an uninspiring and filthy route. It did not even remotely suggest the country, this flat and sordid stretch; all that could be said for it was that it was not the city. On an average of once every two minutes a big touring car would shoot by us and we should be obliged to eat its dust, which puffed in at our one open window.

We had barely composed ourselves after an interval of gasping, gagging and swallowing before another would come hurtling along.

Mother submitted to this discomfort entirely undisturbed. It was customary not only to live on Long Island until July but to arrive there by this means of transportation. Heat, dirt and ugliness, since they were part of the scheme, were all to be endured with equanimity.

After the lapse of an hour the scenery—if scenery it could be called, punctuated every few miles, as it was, with mean little villages, road houses and saloons—improved somewhat, and the air grew less dense. Presently we began to pass inclosures marked off by tall iron railings, and through wrought-iron gateways we glimpsed blue macadam driveways, edged by trees and greenery, leading to those considerable mansions which, like those who had built them, were so fortunately situated as to be able to turn their backs upon all that was unlovely in their surroundings.

Ours was one of the largest of these. When we reached its boundaries I watched its somber palings ominously approaching, one by one, and, without pause, flitting by, with a feeling as little cheerful as though I had been a corpse at my own funeral. Once we had turned in at the gate and the ironwork had been left behind, the resemblance to a cemetery was diminished, though the clipped shrubbery and the swept driveway kept it from being wholly dissipated. However the pebbles might fly and crunch under our tires, I knew that within the next five minutes all traces of our arrival would be raked away.

What was the object of moving from one house to another if such moving was to afford no variety, no change of scene? We had descended stone steps in New York; we were ascending stone steps in Westbury. The servants who stood immovably waiting were duplicates of those who had served us at luncheon—the same patent-leather pumps; the same white stockings, shapely calves, knee breeches, braid, faces of acquired vacuity. How dull it was to be rich if you were also unimaginative! Duller even than being poor!

Instead of going upstairs, I wandered into the drawing-room and stepped out through the window onto the upper terrace. The garden occupied the lower one. My eye swept it unemotionally. Think of a garden that fails to thrill the being in June! It is unworthy the name of garden, being merely a space allotted to horticulture. The garden at school—ah, that was a garden, indeed, with a very riot of flowers, growing in Southern profusion—anywhere—anyhow! In this garden they were set out, row by row, with mathematical precision, the varieties differentiated by means of wooden labels, upon which their botanical names were written in ink.

"What a Pretty Dress! This Hat Does Look Funny With It"

To call a rose by its nickname would have been undue familiarity.

After an interval I caught sight of mother on the lower level, moving about among the beds. I had seen her last in dark blue and now she was daintily dressed in mauve. A gardener had sprung up from somewhere. Him she appeared to be directing in some way, vaguely pointing with a folded mauve parasol.

"How did you get out without my seeing you?" I cried, running down to her. "And how did you happen to change? Have the trunks come already?"

"I came out through the billiard room," she answered. "Of course the trunks have come! They arrived by motor truck three-quarters of an hour ago. Yvonne has unpacked half of them by now, with two housemaids to help her. Hurry and change your gown. I'm expecting several people for tea."

As I obeyed I wondered whether Yvonne had arrived by motor truck, too, sitting beside the driver. At any rate, she had been transferred by some speedier method of locomotion than ours. While I was dressing, motors began to arrive, and when I came down the great hall was already swarming with guests, mostly dowagers in resplendent embroidery, lace veils and pearls.

I was introduced to a great many of them, who talked rather about me than to me, making such comments as:

"Came home only day before yesterday! How glad you must be to have her!"

"Not very tall for seventeen, is she?"

"She must meet my girls. Could she dine with them next Monday? Oh, no—no one will be there who is 'out.' Just the younger set."

They stayed until nearly seven. When the last group had gone mother announced hurriedly:

"I must fly! We'll be late at the Rudford Joneses as it is. They're at Oyster Bay, and it takes half an hour to get there."

"I didn't know you were dining out," I replied, rather disconsolately.

"We always dine out when we don't have people in," she said. "I've ordered your dinner served in my sitting room, Barbara."

"Let me have milk toast on a tray instead," I begged. "Then I won't have to have a man watching every mouthful I eat. Besides," I added cannily, "it'll be much better for my digestion. I've been stuffing myself for two hours with all kinds of little cakes."

"You're as greedy as you can be!" returned mother, shocked. "Well, do as you like."

"It wasn't greed," I explained as she started upstairs. "It was just something to do. I couldn't stand there unoccupied while all those women looked me over to see whether I would do for their children to associate with."

I awoke next morning, in accordance with long established habit, promptly at half past six—too early to get up. It was, in fact, too early to wake up, for our household habitually remained wrapped in slumber until nine. Yet I was ravenously hungry.

"What would they do," I wondered, "if I should come down at half past seven and demand breakfast? I think I'll try it. They'll be sweeping or something," I conjectured as I went downstairs.

But "they" were not sweeping. There was no one about. "They" were imitating the matutinal habits of their employers.

"The butler's probably having his breakfast served in bed," I thought scornfully. I had no use for that butler. "Wonder what'll happen if I ring this bell!"

I pressed it, and for a long time nothing happened. Finally a footman in shirt sleeves, peering round the screen that hid the pantry door, withdrew his head with a jerk. The next moment he reappeared with his coat on, arms at his sides militarily, and I made my wishes known. He vanished and, after at least twenty minutes, came back with very bad coffee, which I was sure had been designed for consumption below stairs, an overfried egg, and some cold damp toast left over from the day before. No trace of the chef's hand here!

When I went back to my room it was just as I had left it—my things scattered here, there and everywhere, bedclothes rumpled on the bed. No doubt the housemaid was still dreaming.

This, too, I supposed, was a part of what mother called living nicely.

I pottered about for an hour or two; and then all at once the house burst into activity. People walked, creaked and thumped overhead and under; carpet sweepers groaned; brooms swished; trays clattered.

At eleven mother came to my room, hatted and veiled, with a little bag in her hand.

"Get ready, Barbara," she instructed me. "The motor will be here in ten minutes."

"Are we going for a drive?" I asked eagerly. "How nice! I'm crazy to get some wild flowers."

"We're going to town," she returned. "I've got some shopping to do. We'll stop at Yvette's and pick up your blue crêpe de Chine gown with the jacket. That ought to be ready to-day. And I think I can find you a hat at Rothenstein's."

"Can't I wear my old clothes," I questioned, "just to go shopping? We shan't see a soul."

"We'll see everybody," she returned, "at luncheon."

"What a pretty dress!" I said an hour later, with gratified glance at myself in the long mirror at Yvette's. "This hat does look funny with it."

"It certainly does," agreed mother. "We'll go right to Rothenstein's now."

At the millinery shop the shades were drawn to keep out the heat, and numbers of gray-garbed girls lounged about, yawning. Most of them had yellow hair and very red cheeks.

Mother selected a dainty hat of silver lace, trimmed with tiny flowers and a narrow silk bow. It looked like a boudoir cap and the price was forty dollars. I knew better now than to utter any protest aloud, and even my inner objections were lost in admiration of the skillfully wrought flowerets. The hat certainly did offset the shape of my head. Made it look trim and compact, I decided, turning it left and right as I held up a hand glass for its better inspection.

oming out we met Miss Wier face to face; and I realizl, to my dismay, that I was strutting like a peacock.

Mother," I said, my face burning under my coquettish h, "this is Miss Wier. I've been dying to have you mt her."

How do you do, Miss Wier?" said mother graciously. "ve heard so much of you from Barbara. I wish you cld come down to the country and spend a night with us-sometime."

Thank you so much, Mrs. West," was the reply; "but I' leaving the city to-day. I'm delighted to have this glmpse of you, Barbara. I should hardly have known y, you look so—smart."

here was renunciation in her eyes. Before I knew it sl was gone.

hated my new finery now. I wanted to tear it all off and tlow it into the street, since it had come between me and r friend. I longed to convince her that it had wrought n change in me—that it never would. But presently a dbt arose in my breast. Hadn't it begun to affect me—jt a little bit?

ighing and perplexed I sat very still in my corner and wched the summer pedestrians moving along slowly uler the gayly striped awnings of the shops, until we tned into Forty-fourth Street, which purred with mots, each pausing for a moment to drop its quota of women igala attire at the restaurant door and then passing on. Ayed in cutaway, "dickey" and top hat, with a cane in o hand and a pair of castor gloves in the other, an occasnal male was to be glimpsed amid this female galaxy.

Such get-ups—or should I say gets-up?—I had heretofe supposed had no existence outside the imagination of woever wrote What the Man Will Wear in the theater pgrams.

One ape, with face merely vapid, bowed to mother; aother, with something in his expression that made me sink, lifted his hat as we passed; tn an old one, who was not ented to the privilege, since he did n greet her, looked me up and dwn with an odious leer that nde me crawl.

But once inside the portals I bgan to enjoy myself, as I always eoyed music, bustle, heat, hurry al noise when I was allowed to ban observer instead of having t take part in the show.

'Isn't this a spree?" I whisped. "I'm so afraid you won't hable to get a table, mother."

'The table was reserved yest day," she said, "by telephone. Tere's the head waiter now."

The person designated, after hving greeted her with the smilin cordiality that was evidently apropriate in a head waiter but vich would have caused a house svant to be discharged, ushered uto a tiny table for two just inse an open window, and darted o to other preoccupations.

'What will you have, Barbra?" asked mother, studying t menu.

"Nothing much," I answered. 't's so hot, isn't it? You order i There's Mrs. Aspinwall over tere with the stiff woman in yllow, and that horrid-looking gl—if she is a girl! Is she a girl, nther?"

Mother followed my eyes.

'Look how she's made up, nther," I went on, horrified—"ke a chorus girl! Her lips look a though they were bleeding! Ie never seen anything so disgting!"

At this moment the object of o inspection opened her little si bag, selected therefrom a minte mirror, deliberately exained her features therein, gave a w critical touches to her hair, pt the mirror back, closed the bg, picked up a fork, and began todrod the food about indifferelly on her plate.

That's Ruth Alvord," mother eplained. "You mustn't form shdash judgments, Barbara. Rth is a very intelligent girl. He mother is Mrs. Barton Winslo, a friend of mine. You'll get in trouble if you're not more ceful of what you say."

"What would you do," I asked curiously, "if I should begin to powder and rouge? to say nothing of behaving like that in a public restaurant!"

"You couldn't," was the reply. "You're not 'out.' She is. It would be very bad form in a girl who wasn't out. Ruth has been out two years. Of course she does make herself rather conspicuous; but she's all right at heart."

By which she meant not what she said, but that Miss Alvord was the daughter of Mrs. Barton Winslow and must be accepted, without question, as such.

At this moment the waiter who had taken our order came hurrying up.

"What are those little black things?" I asked suspiciously, watching mother, who, having laid a square of dry toast upon her plate, was now spreading it sparsely with something extracted from a dish surrounded with ice and garnished with small slivers of lemon. "Do I have to take any?"

"Sh!" she reprimanded, looking at me as one might look at some uninitiated relative from the country. "It's caviar—fresh caviar. Don't be childish, Barbara! Certainly, take some."

"It's rather good," I admitted; then, the waiter having once more left us, I asked half banteringly, half affectionately: "Are you ashamed of my ignorance, mother?"

"Not of your ignorance," she replied, "but of your complete unconsciousness that you are ignorant."

Glancing across the vista of tables just then I caught the eye of the Alvord girl. Seeing herself observed, even by another girl, she instantly drooped her shoulders, thrust her chin out in an attitude of studied boredom, flicked a speck from her gown with one long white finger, and let her mouth fall into disdainful curves. "She's not unconscious of anything she does," I reflected. "I wonder if that's the manner mother'd like me to acquire?"

"By George! You Can Paint! Why Didn't You Tell Me?"

Our luncheon over, mother barely glanced at the slip that was offered her, folded. Opening her gold purse she took out a bill and laid it beside the bit of paper on the salver. As it was swept away in the waiter's hand I saw the double X in the corner. I expected mountains of change, but when it came there were only three quarters and a two-dollar bill. Mother picked up the quarters and waved away the bill.

The waiter who pocketed it had a haggard face, seamed with illness or former want. My meeting with Miss Wier had started me thinking, and now this face suddenly loomed terrible to my eyes, typifying all the miseries of the poor. I dared not look at the man as I followed mother out. Somehow I felt that we had insulted him with our money—made him an accessory in our crime.

As mother threaded her way among the crowded tables, walking erect and bowing graciously here and there, I hung my head, unhappy and ashamed.

"Must we do more shopping?" I asked wearily while we were waiting for the car to come up. "Couldn't we go and hear some music somewhere?"

My spirit had trailed along the earth for so many hours that I felt an urgent need of something to lift it up; but mother negatived the suggestion. She had a "fitting" at three and an appointment to look at some Chinese rugs at four.

"I wish I could get into the woods," I said, when at last we were on our way home, "and sleep in my clothes, and have nothing to eat but what I cooked myself."

"The woods," replied mother, "would be extremely uncomfortable at this time of year, with the mosquitoes. You're much better off where you are."

"But I'm not there," I objected. "It's not living in the country to spend the day in town."

"It's what everybody does," said mother. "If you stayed on Long Island in the daytime you'd stay there alone—except on racing days, of course, and during polo week. But that's over."

"Let me stay alone sometimes," I begged. "I shouldn't mind it a bit. I can always find plenty to do."

"No," returned mother with decision. "I'm going to take you about with me. The season is half over. People will be leaving for Newport and Bar Harbor in another three weeks. You mustn't lose a single chance of being seen."

We went to town every day that week and the next. We lunched sometimes at one hotel, sometimes at another, and once we visited an Italian restaurant in an obscure street, which people were beginning to go to. At night we had dinners, formal and informal. At the former I appeared, dressed in my best, stood about until all the guests had assembled, and made my escape while cocktails were being served. At the latter I remained throughout the evening. Twice I dined out with other girls and boys. The first lot were of my own age and younger—comrades in the transition stage, whose awkwardness gave no indication of the stupendous changes, physical and mental, that were going on inside.

The dinner was a pompous affair, but the dancing that followed was good fun. The boys trod on my toes until I volunteered to teach them the steps, and then the evening was mine. How queer we should have looked to adults, had any adults been there to see! There were none, as all adults were at entertainments of their own. Some of us had shot out like telescopes; others had their heads growing between their shoulders. Some were fat, some lean; for even your Long Island cannot escape its awkward age.

The second assemblage to which I was introduced consisted of the butterflies of next year—the grubs of last. They foreshadowed that which was to be and gave no sign whatever of what had so recently been. The girls had acquired a knowledge of what was to constitute their stock in trade—from

SPY STORIES

By Melville Davisson Post

SKETCHES BY W. D. I. ARNOL

LADY X, at the head of a department of volunteer relief work, was in Paris. It was her intention to go later into Holland. She would not be permitted to enter Belgium. But from Amsterdam she could obtain reports, at first hand, on conditions in Belgium. In Paris she put up at one of the great hotels on the Rue de Rivoli.

It was springtime. The horse-chestnuts in the Garden of the Louvre were beginning to come out. The promise of an awakened life was over France. And with it an awakened hope for the success of the great advance that everyone expected the Allies to make. The secret of this drive the War Department was taking every precaution to preserve and Germany striving by every device to discover.

In her passage through the hotel Lady X was accustomed to see an aged Frenchwoman, of the peasant class, engaged in scrubbing the floor. The peasant seemed to be a miserable, perpetually saddened creature. She had a habit of looking wistfully after the elegant Englishwoman. But Paris was full of saddened and miserable persons; an individual among them would not greatly impress the visitor. Lady X thought nothing about the matter.

On the morning before she set out from Paris on her journey to Amsterdam this old peasant woman came timidly into her room. She said that her son was a prisoner of the Germans in a detention camp in Belgium. She wished to send him a little money. She gave Lady X the address of a person in Amsterdam who would see that the money got through the lines to her son in the detention camp. Then she produced three five-franc pieces and begged Lady X to turn them over to the person in Amsterdam.

The woman was old and wretchedly poor; in that state of unmoved despair which seems common to the peasants who have lost everything. One event in the interview profoundly impressed Lady X: The old woman kissed the three five-franc pieces.

"They will carry also," she murmured, "a mother's love to the son in the German prison."

Lady X was moved by the sacrifice that the three five-franc pieces evidently meant to the aged scrubwoman, whose pay could have been only a few sous, and who must have denied herself everything in order to assemble this trifling sum of money. The Englishwoman promised to deliver the money, and the old peasant went out.

The Message of the Coins

WHEN Lady X arrived at Amsterdam she took the money to the address the peasant woman had given her—a tiny shop in a poor quarter of the city. And the incident was closed, except as material for a pathetic page in Lady X's memoirs when, later, she should write out her recollections of the Great German Invasion.

We may depend upon it that Lady X will not minimize, in the narrative of her memoirs, her important services to the Allied armies. But it is certain that she will never realize how tremendous a part she actually played. She, in fact, carried to the enemy's headquarters in Belgium precisely the information that the whole Secret Service of France was taking every possible human precaution to conceal!

The three five-franc pieces contained the most ingenious secret cipher that was ever devised by anybody.

One of these coins bore the name of the sector toward which the great Allied advance of June the second would be directed; the second coin contained the number of divisions that would be assembled for this drive; and the third carried the date upon which the Allies had determined.

Figure III

Figure IV

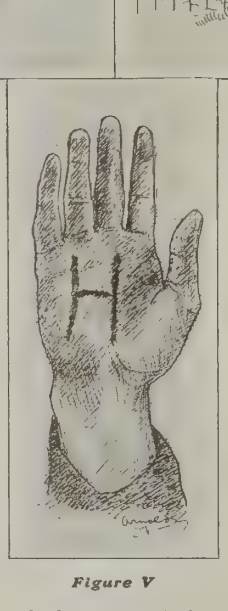

Figure V

Figure I ex- plains the composition of this cipher. It consists in dividing the reverse side of the five-franc piece into twenty-six equal divisions, radiating like spokes of a wheel, from the center to the circumference. Each of these divisions stands for a letter of the alphabet, beginning with A at the top and encircling the numerals like the face. In order to spell out a word on a coin thus laid off it is necessary only to make a slight scratch or indentation within the division covered by the letter one desires to use. The position of the letter in the word is indicated by its relative distance from the center of the coin.

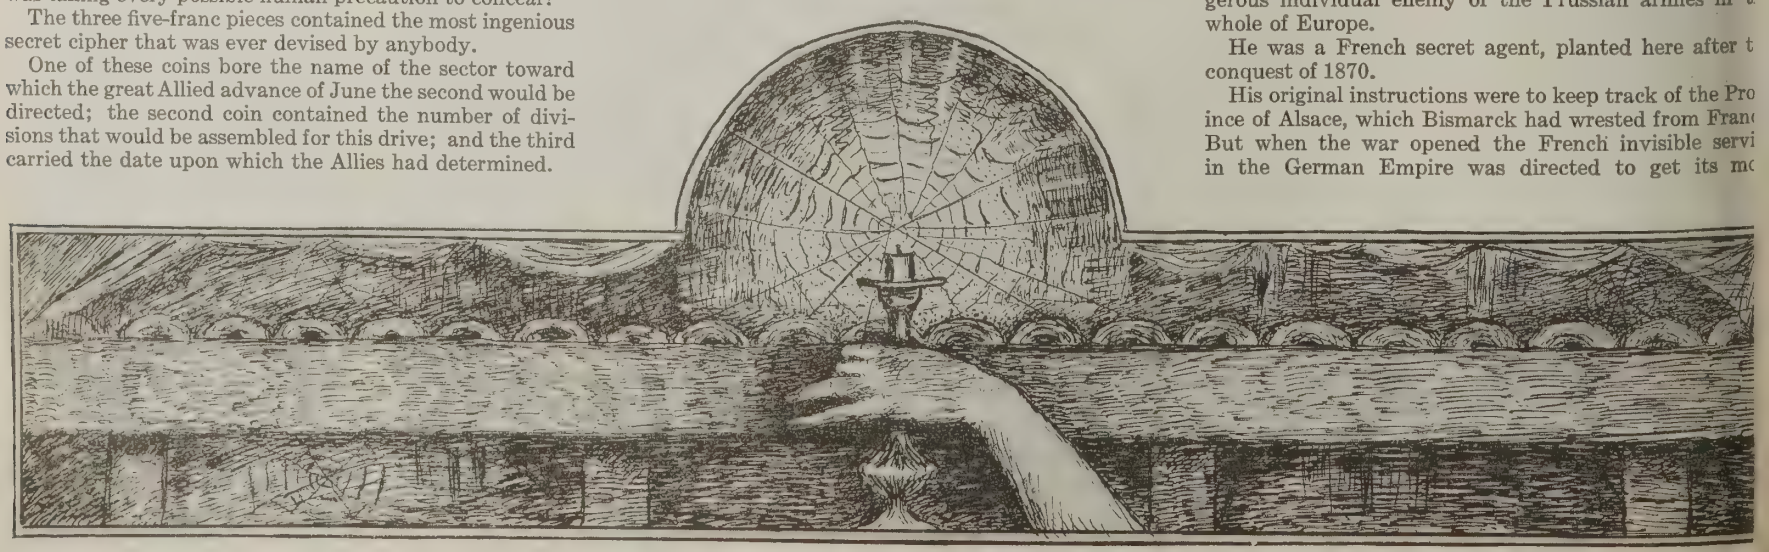
Thus, a letter beginning the word to be used is nearer than any other to the center of the coin. The succeeding letter will be a little farther out from the center in its division—and so on; the final letter being the farthest out toward the circumference of the coin.

It will be seen at once that a safer or more difficult cipher could hardly be devised.

No one would imagine that the scratches or indentations on a silver coin which had been in circulation could constitute a definite cipher. They appear to have no order. Unless one had the key to the cipher, one would hardly consider them for an instant. And yet when the coin is laid off in equal divisions, each representing a letter—A at the top, in the position of 12 on the clock face—the cipher becomes at once so simple that anybody could use it.

Figure II shows the five-franc piece which bore the word "Somme"—that is to say, the sector toward which the drive was to be directed.

This extraordinary device discloses the extreme cleverness of the German spies in France.



The French authorities were, this time, taking every precauti against leaks.

No one, unless a person of unque tioned standing and integrity, cou leave France in any direction wit out being subjected to the minute scrutiny. It is said that clothi and baggage were taken away fro persons wishing to go out of t country at that time, and duplicat furnished by the authorities, in ord to prevent anything being carri out concealed among person effects.

But even with this rigid surve lance it was the custom of t authorities to return to everyo so searched his money and jewelr Consequently, it will be notice this device circumvented the mo rigid precaution of the French polic Besides, it was extraordinarily sa Nobody could be shot for a s because he carried in his pock French coins scratched or indented in no apparent order, by the wear of commercial usage.

But ingenuity is not alone with the German authoriti on the Wilhelmstrasse.

The French secret agents, especially in the provinc adjoining Alsace, have been of inestimable advantage the Allied armies. In spite of the closest German milita supervision, they have easily been able to send importa military secrets through Switzerland into France.

One of the mediums used is extremely curious.

The Old Nationalist's Secret

BEE culture is an important industry in certain parts Switzerland. Chamonix honey is famous all over E rope. A great deal of attention is given to the bee in th part of the world. Little magazines or pamphlets devot to this industry are published at various places. They co out at certain periods and have a wide circulation, like t reports issued by various industries, or those sometim sent out by our Government.

For a very long time, at a village in the province of Bad adjoining the Swiss border and near Alsace, one of the little pamphlets has been issued. The publisher is an c man, apparently devoting his life to the study of bee cu ture. Every now and then he gets out a little bulleti which goes everywhere over Switzerland and the neig boring provinces.

This bulletin has always the same conventional cove a straw hive from which a number of bees are wingi upward into the open. The picture is old and formal. has been used a great number of years, and it nev changes.

The great war seemed distant from this isolated villa in Baden.

Life there continued as before. The old naturali issued his bulletin from time to time, as he had been accu tomed to do for thirty years. The military authoriti considered the thing harmless and paid no attention it. What injury could an old, apparently half-senile b student do to the great German Empire with his drea pamphlet? In fact, the man was perhaps the most da gerous individual enemy of the Prussian armies in t whole of Europe.

He was a French secret agent, planted here after t conquest of 1870.

His original instructions were to keep track of the Pro ince of Alsace, which Bismarck had wrested from Franc But when the war opened the French invisible servi in the German Empire was directed to get its mo

nportant information to this man. he Secret Service did not know by hat means its advices would be nt into France.

No one knew the secret of the eehive except the aged naturalist nd a certain division of the French Var Office, in Paris.

It was this man who informed the rench authorities that the great erman drive, after the failure at the Marne, would be directed against erdun. The information was conveyed on the cover of his bee pamphlet under the very eyes of the erman Intelligence Authorities in aden.

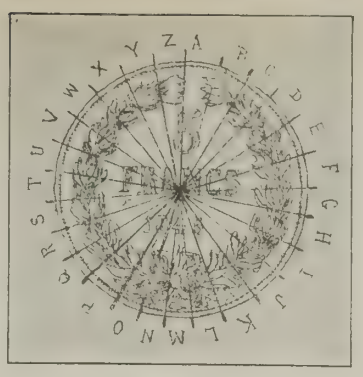


Figure I

The conventional picture of the hive and the winging ees on the cover of the pamphlet was a formal cipher.

In order to read it one has only to consider a few simple hings: Divide the cover into twenty-six equal parts by arallel vertical lines running from the top to the bottom f the page. The spaces within these vertical lines each represent a letter of the alphabet, beginning on the left with A. he second thing to remember is that the little bees coming p from the hive are not all perfectly formed. One is to ake into consideration only the bees that have four wings ppearing in the picture. All the others are to be ignored. ach of the bees having four definitely formed wings represents a letter.

After laying off the cover in the manner explained above, ne moves a ruler from the top of the page downward, oting that the bee having four wings which first appears epresents the first letter of the word in the message. And y continuing the ruler downward, keeping it always parllel with the top of the page, the second bee, representing he second letter, will appear—and so on until finally the nessage is spelled out.

Figure III shows this conventional cover as it was accusomed to appear on the pamphlet. Figure IV shows it as a ipher spelling out the word "Verdun."

This cover had been used for so great a time that everyody was familiar with it and no longer gave it any attenion. A slight rearrangement in the position of the bees, nd the tiny detail of the four perfect wings of the bee to ave significance in the cipher, were not sufficient to indiate—to persons familiar with the cover—that any change ad taken place in it. But they were sufficient to advise he French armies that the German Crown Prince would make his supreme assault in the sector of Verdun.

The Feats of Two American Dare-Devils

THIS is a very old cipher idea. The writer's attention has been called to this cipher used with a water sketch of the sea, in which the forms of flying gulls were indicative. This form was translated precisely like the bee cipher. But this latter device lacks the confusion that comes into the cipher with the unformed bees. One might understand the cipher which the gulls would indicate and at the same time find it impossible to read the bee cipher unless he should discover that only a certain type of bee was indicative.

In the active prosecution of the war one hears of the most extraordinary and daring adventures—adventures surpassing those imagined by the novelist and that move us with a thrill of which mere fiction is wholly incapable. Perhaps no spy story of the war equals the experience of a young girl from one of the fashionable colonies in New England.

Miss Z was under twenty. She was a perfect type of the athletic American young girl of the period. She had the daring love of adventure and the physical prowess that go to make the young girl of these colonies an equal of the boy. The death of the father left her and her brother a large fortune. They had gone everywhere about the world, but for the most part their lives had been spent in a French château, in one of the districts now in possession of the German invaders.

Figure II

When the war came on the brother entered the aviation service in France, and the sister presently joined him. With wealth, influence and the charm of youth one can accomplish almost anything. The young woman was able to establish herself in a primary hospital near the Front.

But this position did not satisfy her love of adventure.

What she would have liked was a position in the Aviation Corps—a thing entirely out of the question. However, fatality, that world force which seems to take a sinister pleasure in setting every human calculation at naught, provided her with an adventure beyond anything she could have imagined.

One evening her brother came to her to say that an advancing German column had occupied the château which they owned in the invaded sector, and was storing it with war munitions for some planned advance. She said:

"Let's burn it."

It did not occur to him how this determination could be carried out. Whereupon the girl boldly proposed that he should take her across the border in his aëroplane, alight in the meadow behind the château, and put her down. Disguised as a scullery maid she would get into the château and set it on fire. Then, an hour before daylight, he could take her up at the same point in the meadow, about a mile southwest of the château toward the French lines.

The country was perfectly familiar to the pair of foolhardy youngsters, and they were able definitely to locate the point of descent.

They saw only two difficulties: They must have a night of low fog and a permit from the French authorities for the American to go up with an observer. The young man, who stood high with the authorities, got the permit.

On the first night of low fog they undertook the thing.

The American had taken a friend into his confidence. This friend, who was to be the observer, gave his place in the machine at the last moment to the girl, who, dressed for the part, in the fog was not identified by the French inspector. Of course the French authorities would not have permitted any such mad adventure if they had been aware of it. But they were deceived about it and the thing was undertaken.

The two youngsters made the landing safely inside the German lines.

The girl removed the disguise by which she had gotten past the French inspector and concealed it under a hedge. She had now the appearance of a French scullery maid, and as such she actually got into the château and succeeded in setting it on fire.

The Germans quartered in the château put the fire out and set about to discover how it originated. They learned that the scullery maid had gone down into the wine cellar in order to get some bottles of champagne for the officers on duty. The fire had caught from the candle.

It is a rule of German investigation that no accidents shall happen.

They brought the girl into the drawing-room of the château before what we should call a drumhead court-martial, composed of the officers who happened to be in the château at the time. They asked the girl how the fire happened. She said that she had gone into the wine cellar with a candle; that the champagne called for was of an old vintage and in a remote, little-used portion of the cellar; that the beams of the cellar at this point were low and strung with cobwebs; and that when she stood up on tiptoe to reach the bins the flame of the candle had ignited the tinderlike cobwebs.

The officers hearing the story were uncertain. If she was telling the truth she ought to be transported and held. If her story was a lie, and she had intentionally set fire to the château, she ought to be shot.

The command at this point was under the young Prince von B., a Hungarian officer brought up with the Austrian reserves. He came into the room where the summary court-martial sat. He stood for some time behind the officers, looking on. Then he went out.

Presently he came back with a cobweb in his hand.

"This story is a lie," he said; "a cobweb is not inflammable."

And he held the cobweb in the flame of one of the candles. It merely shriveled, like an asbestos thread. Then he broke up the sitting of the drumhead court-martial.

"I will take charge of this thing," he said.

The officers understood him perfectly. German prestige had suffered from reports of the death penalty inflicted in such cases. The prince had determined to take charge of this matter himself, and to see that the fewest persons possible should have any knowledge of the disposition of the prisoner.

This conviction was established when he dismissed the officers and ordered them to put at his disposal three men from his personal guard, with rifles and trench tools. These men were soldiers of the regiment, coming directly from the family of the prince; in fact, servants of his household.

When the drawing-room was empty and the doors closed, he spoke to the girl.

"Mademoiselle," he said, "I have saved you from detention. Explain to me now how you expected to return into the French lines, and I will see you on the way."

A Ghastly Situation

HE SPOKE earnestly, looking at the girl across the table. Nobody but a woman would have believed him. But the girl did believe him, and asked him to return her to the meadow southwest of the château toward the French lines.

The prince went to the door of the drawing-room, opened it and gave some orders. Immediately three Austrian soldiers, under arms, entered the room. The officer put on his cap and greatcoat, and the five persons left the château. The girl walked between two of the soldiers; the third followed; and the Prince von B. led the way.

They went southwest along the road, for perhaps a mile, until they reached the meadow the girl had indicated. She was now profoundly disturbed. Not only had she delivered herself to death at the hands of this firing squad but she had also delivered up her brother to them. She would be shot, and afterward they would wait here to shoot him down when he endeavored to alight according to their arrangement.

It was now long past midnight. The fog was growing thinner.

The Austrian soldiers entered the meadow. The officer ordered the soldiers to stop; then he advanced a few paces farther with the girl. She was now certain that he intended to direct her execution. But, instead of giving any order to his firing squad, he spoke in a low voice to her.

"Mademoiselle," he said, "you are not French. You are an American. I have seen you with your brother at

Submarines and Peace

THE greatest warriors of a hundred years ago were only a little better equipped than Alexander and Cæsar. Napoleon could throw a cannon ball a few hundred yards, and lost Waterloo because he was ignorant of the movements of big bodies of troops a few miles away. Nelson spent weary months chasing the French fleet without being able to locate it, and once passed it in the night at little more than modern gun range. The new weapons are so many conclusive reasons for limiting warfare by concerted action of the nations.

When privateering reached such a stage that any nation, by employing it, could demoralize the world's commerce, the nations got together and suppressed it by agreement because it was intolerable that any nation should, at will, turn such a pest loose upon the ocean. Unrestricted submarine warfare is privateering raised to new power. In the hands of any nation it can make the sea dangerous for all nations. With such further development as seems probable, it may, in a few years, be capable of virtually closing the sea to world trade.

It is intolerable that any nation should possess such an instrument and the unrestricted power to use it at will; for that would imply that any nation might pretty nearly foreclose sea trade.

The submarine cannot be merely suppressed, as the privateer was, for it has too great possibilities of usefulness. There must be a still more powerful international compact to restrict it.

Within a few years, no doubt, air craft will follow the Deutschland across the Atlantic, and any nation may possess an air fleet capable of raining destruction upon its neighbors. Exploits of the Zeppelins show that a nation at war, and answerable to nothing except its own will, may be expected to alter the rules as it pleases, and to use any weapon as it sees fit.

There must be a surer restraint than a nation's own will—a power above the will of any nation which is capable of enforcing the combined will of all nations. The new means of destruction and the certainty that science will produce still others are so many conclusive reasons for a league of nations to restrict war.

The Case of Belgium

TO THOSE victims of the war who had the highest claim upon our sympathy we have given a fraction of one per cent of what we have made out of the war. In calling the splendid organization that has fed millions of Belgians "American" we have been taking credit under false pretenses, for practically all the credit is due to a few individual Americans, and practically none at all to the country.

That the "American Commission" has had to depend almost wholly on foreign money is now becoming very well understood abroad, and the credit that was once given us is turning into reproach.

Certainly this is not because the situation of Belgium is not well understood in this country. It is not because the American people are less generous than any other people. It is because they simply have not reacted to the Belgian case. It has not got through to their emotions.

Probably the explanation lies in our insular habit of mind. It is difficult for Americans to feel any intimate interest in a situation on the other side of the Atlantic. A disaster in San Francisco or Baltimore readily strikes into their imaginations; but one in Brussels stirs only the surface.

Those whose emotions are warmly engaged with Belgium can find circumstantial evidence of this in their own far cooler feelings about helpless war victims in Poland. Mostly they do not react to the tragedy there.

War Taxes

IN THE fiscal year 1862 the net ordinary revenue of the Government amounted to fifty-two million dollars. Four years later Civil War taxes had raised it to five hundred and twenty million dollars—a tenfold increase.

Before the Civil War the United States Government was a notably inexpensive affair, almost its whole cost being met by moderate import duties. Civil War brought the internal revenue taxes, a stiff income tax and a sweeping increase in import duties. Only the income tax was abolished; and ten years after the army was disbanded expenses of the Government were nearly six times what they had been before the war.

To meet the cost of the Spanish-American War additional internal revenue taxes were levied, yielding over a hundred million dollars' increase in revenue. This raised the Government's receipts above five hundred million dollars; and they never again dropped below that mark. Indeed, a few years after peace was restored they crossed six hundred millions, and but a few years after that reached seven hundred millions.

In fine, war brings a great increase in government expenses, a large part of which is permanent. Broadly speaking, government expenses move only in one direction—upward. In little over a year we have had two "emergency" increases in taxation, doubled income tax, inheritance tax, excess-profits tax, and so on. The emergency will pass, but probably the taxes will not.

Yet, this winter, a proposal that would probably have saved thirty million dollars in the cost of operating the executive departments—by simply introducing adequate bookkeeping and cutting out duplications—was defeated in the Senate. Congress' callous indifference to economy in the present situation is especially irritating.

Censorship

UNFORTUNATELY newspapers cannot be completely trusted in the matter of printing news. Though infallible in respect to the conduct of all other human enterprises, they are liable to error in conducting their own business. In a situation where bad judgment or bad faith on their part might cause extraordinary public harm, it is necessary for the government to hold a hand over them.

Some sort of press censorship is as inevitable a feature of modern warfare as the aëroplane is. What sort of censorship it was, if this country were at war, would depend a good deal upon the newspapers themselves.

They responded to the shock of the rupture with Germany in admirable fashion—affording a very encouraging contrast to nineteen years ago, when all that some of them could see in a war with Spain was a fine chance to sell sensational extras. But actual war would be a severer test. Newspapers whose staple occupation is inflaming public opinion could hardly be expected to resist the temptation when opinion rose to a highly inflammable temperature.

Actual war would, no doubt, bring some sort of public control over the dissemination of news. That control ought to be just sufficiently rigorous to accomplish the ends in view. If a nod would do it, only a nod should be used. If it required a club, a club should be used; for in a country at war there can be no freedom for the press, or for anything else that interferes with the paramount object of prosecuting the war most efficiently.

As the chief danger is that news will react injuriously on the military situation, it has been the rule to put military men in charge of the censorship; but, as military men tend to look at everything from a strictly professional point of view, they make poor censors. If the United States should come to a censorship, a capable newspaper man ought to be put in charge of it, with military advisers.

Preparation

THE position of the United States after the break with Germany required immediate consideration of plans for raising an army. That position, in spite of every permissible effort to avoid it, was at the edge of the world war. We should by that time have clearly comprehended one fact about that war—namely, that all prophesying about it was vain. From the moment it began we had been hearing that this or that operation or cause would quickly bring it to an end; peace was always a few months off. Yet, in fact, the war had steadily increased in extent and violence.

The familiar prophecies were sounding even more loudly than ever at the beginning of February. England would be starved into submission in three months; or Germany was at the end of her resources and must collapse by midsummer.

It would have been as fatuous to rely upon these predictions then as it had been to rely upon similar predictions in the past.

The prophets might be right this time; but they had not been right before.

The intelligent course would be to say that the war might go on indefinitely; that its scope might be still wider, its violence still greater; and to make preparation accordingly.

That, for the United States, would involve raising a considerable army as quickly as possible after war was declared.

The machinery to that end was lacking. The Government should set about devising it—perfecting plans whereby the young men who were best able to serve in that capacity, and the most serviceable, would be picked out and put to training.

After looking at that war for thirty months we ought to have a clear and sober realization of what it might require of any nation which got into it.

Popular Loans

WHEN Jay Cooke was selling United States bonds direct to the people, during the Civil War, a great point was made of getting the obligations of the Government as widely distributed as possible, and into the hands of small investors. Cooke placed over a billion dollars of government bonds; but in a comparatively few years after the war almost all the outstanding bonds were in the hands of banks and large investors.

To finance the Spanish-American War the Government offered for public subscription two hundred million dollars of three per cent bonds, giving preference to small subscribers. There were two hundred and thirty thousand subscriptions for five hundred dollars or less, and the total subscriptions amounted to a billion four hundred million dollars. This was considered a great success, but, as the bonds immediately went to a premium over what the preferred small subscribers had paid, a great majority of the latter promptly sold out in order to get the quick profit, and within a few months nearly all the bonds were in the hands of the banks and a comparatively few large investors.

It was calculated at the time that if the Government had thrown the bonds open to unrestricted competitive bidding, without giving a preference to small subscribers, it would have realized five million dollars more for the issue; and probably many of the small subscribers were merely agents acting for bond houses, and the like.

No doubt a great many small investors would buy a four per cent government bond, with the intention of holding it; but it is doubtful if a bond bearing a lower rate would find permanent lodgment to any considerable extent in the hands of individuals of modest means.

A Few Sound Spots Left

THE speaker said sadly that the United States had become so softened by downy living, so addicted to extravagance, so infatuated with luxury, that the old fiber was nearly all eaten out of it, and there was hardly any fighting spirit left.

The audience evidently agreed with this view. As the women slipped costly furs over their shoulders and filed out to waiting limousines, and the men incidentally considered where a few hardy American citizens could get a bite of supper at twenty dollars a plate, they talked about the degeneracy of their country, and how far it had sunk in sensual sloth. Their minds were oppressed by the thought of millions of farmers, draymen, machinists and brakemen, on the other side of the Hudson, who were presumably at that moment drinking vintage wine and uproariously applauding cabaret shows; and of countless women who rose at four A. M. in order to get the family washing started before breakfast, and put on their diamonds and went to bridge parties as soon as they had washed the supper dishes and attended to the milk.

For two years hardly a champagne cork has popped east of the Alleghanies but it has been attended by a sigh over the appalling effeminacy of the Teamsters' Union and the Amalgamated Association of Freight Handlers. Luxury has engulfed the country; but above the flood, like Noah on Ararat, we see bands of stern and impervious patriots who never think of mere creature comforts—having carefully provided themselves with a butler, a housekeeper, a valet, a lady's maid, two footmen, four parlor maids, six chambermaids, a cook, two second cooks and three chauffeurs to think of those base subjects for them.

The only sure way to escape being enervated by luxury in the United States, it seems, is to spend a hundred thousand dollars a year.

OUR ARMY OVERSEAS

What the Americans Now Fighting With the Allies Could Teach Us of Modern Warfare—By Will Irwin

A BRITISH staff officer, home on leave, was discussing with me, last autumn, the training of the New Army. To prove a certain point, he pulled down from the shelf of his library a treatise on tactics, which was a textbook at Sandringham before the war. When he had read the reference he slid it back on the shelves and smiled a restrained British smile.

"I've a number of seventeenth-century books on military affairs," he said. "I'm a collector, you know. I'm going to put this with them—it's a museum piece. Nearly everything published on the subject before 1915 is in that class!"

At about the same time a Canadian officer, who came over with the First Expeditionary Force, remarked:

"When we got to France we thought we were more or less finished. As a matter of fact, we had to unlearn almost everything we learned in our home preparation. We've brought our system of training up to date now; and it is basically different from what it was in the autumn of 1914."

The art and science of warfare have changed since the beginning of this war. Devices hitherto unknown have been introduced; devices believed obsolete for two centuries have been revived, improved and set to new uses. Surprise, the best card in the pack of such old-time generals as Napoleon, Von Moltke or Garibaldi, has almost been counted out of the game. No two successive great wars of the past have been so different in method as the Boer War of 1899 and the General European War of 1914–17.

Of this new warfare the officers of our army know comparatively little in theory and nothing whatever in practice. Not one of them, from the highest bureau chief to the latest graduate of West Point, has ever fired a gun at an aëroplane; has ever used a trench mortar; has ever done his part in that gigantic coördination of artillery known as curtain fire. Probably not one ever directed, even in practice, a grenade attack. Except for our military observers in Europe, who get, like the war correspondents, occasional glimpses of action, none has ever witnessed these tactics of the new warfare. And such instances comprise only some of the broad lines.

Men Who Can Teach Modern Methods

THERE are a thousand finer points worked out since the war began; every time you talk over military affairs with a British, French or Italian officer you get from him a bewilderment of details, all new, all hitherto unpracticed by any army under the Stars and Stripes.

As I write this, we seem to be on the verge of war; that question may be settled before these lines reach print in

The Screen Above is Part of the Scenery to Conceal the Gun From Aviators

THE SATURDAY EVENING POST. Almost our first act will be the creation and training of a real army. To that task we bring singularly small experience; it is like establishing an engineering school with professors and instructors who know only theoretical mathematics. Doubtless we should "muddle through," Anglo-Saxon fashion, with the help of our American common sense and inventiveness. But it would take time.

However, perhaps we do not need to muddle through. We have the professors, trained or in training, to teach the new warfare, if only we have the common sense to perceive the fact, and the diplomacy and breadth of mind to seize opportunity. The men who can teach us—a whole army corps of them—are now in training on the European battlefields.

Lord Northcliffe, who knows as much about this war as almost any man, has just registered his guess that about fifty thousand American citizens, all natives, are serving now under the flags of the Allies. When Northcliffe, last summer, estimated that there were thirty thousand Americans in the New British Army alone, I was inclined to doubt him. I saw more of the New Army afterward and came to believe his figures accurate. Absolute proof is impossible, because many of these men are officially concealing their nationality, though they admit it privately. Sixteen thousand—I have this figure from a reliable source—are fighting with the Canadians. The rest are scattered through the various "Imperial" forces. I found some of them even among the Australians and in the navy.

The French Army is said to have used from ten thousand to fifteen thousand American citizens in the war. This estimate includes not only our men in the Foreign Legion and our aviators in the American flying squadrilla, but our star ambulance corps and our volunteer physicians, who have made themselves expert military surgeons. As I shall show later, the ambulance men have their direct military uses for us; and the need for trained military surgeons, as distinguished from civil surgeons, is obvious.

The Taking of Gorizia

GOING farther eastward, we reach a curious and puzzling situation. Most people will be surprised to know that the American influence in this war is strongest at the Italian Front. Officers in charge of Italian mobilization told me last year that the Italian Army contains at least two hundred thousand men who have worked in America. After two or three weeks with the Italian Army I fully believed him; never, not even among the High Alps, did I hail a company but I was answered in English, and must needs talk with from one to twenty soldiers about what one little Italian, from Chicago, called "his other home."

The Italian military engineering will be a marvel of warfare when the whole story can be told; and the actual work has been largely done by men who learned expert digging in our mines, our railroad-construction camps, our great reclamation works. The network of Alpine roads by which, even in the dead of winter, one mounts to pinnacles inaccessible before the war, save to daring Alpinists, were blasted out by men who learned their blasting in Pennsylvania coal fields. The famous tunnel-and-gallery, by means of which the Italians took Gorizia, was driven mostly by miners from our West.

Also, some at least of the direction is American. An engineer who had to do with planning this work, and who is responsible for the almost equally famous operation of

blowing the top off the Col de Lana, is a graduate of Cornell and has his office in San Francisco.

Now perhaps I do not let the eagle scream too loudly when I say that Americans tend to be good masters of men. Moreover, the boys who have gone over to fight for the Allies are generally of high intellectual and moral quality. Some of them, it is true, are merely adventurers, the kind of men who must get into a fight wherever it offers. Most of them, however, are boys of education and ideals, who fight for the Allies because they believe in human liberty, because they have felt the call of their blood, or because they wish to repay the loan of Lafayette. As a consequence, many of them have gone up into the corps of officers.

Promotion, it happens, is freest for Americans in the British Army. It is almost impossible to distinguish the Americans in khaki, by manner and speech, from their Canadian comrades. I had the experience of seeing a British officer regularly for a week before learning that he was a citizen of the United States. For they get their commissions usually on the fiction that they are Canadians by birth, and they hesitate to admit that they have told an excusable lie and enlisted under transparently false pretenses. Both parties to the transaction understand this.

From Old Kentucky, Canada

I have a friend who went to England, early in the war, seeking a commission. He had a fairly good military education, and men of this kind were in demand just after the battle of Ypres, when Britain was trying to plug the military gap in any way she could. His case was investigated to make sure that he meant business. When the government satisfied itself he appeared before a functionary of the War Office to get his papers.

"British subject?" he was asked.

"Yes," lied the American.

"In what part of the empire were you born?" asked the Briton.

"Canada," replied the American, as he had been told to do.

"What province?"

Now this was unfair and unexpected. The American, though strong on gunnery and tactics, was weak on geography. He had never even heard that Canada was divided into provinces. He was born, as a matter of fact, in the Blue Grass country; and so, more by instinct than by reason, he faltered:

"Kentucky!"

"Ah, yes—Kentucky!" replied the Briton.

And so it stands to this day on the enlistment papers of a certain highly efficient officer in the Royal Artillery.

So, because the game is played under cover, it is impossible for any man to get a complete list of the American officers in the British Army. I can, however, set down a few instances in my personal acquaintance as an example of what these men might teach our new army. To prevent embarrassment to them, I shall mention no names.

A young actor of the purest American stock enlisted as a private in an English regiment. His efficiency and soldierly qualities attracted the attention of Lord Kitchener. Since he had a good general education, he was given a commission at once. This regiment was sent to the trying Ypres salient. Here his abilities raised him within a few months to the rank of captain. He won decoration and further promotion by one of those heroic deeds that would have been themes for ballads in old wars, but which scarcely draw a newspaper paragraph in this war—they have grown so common. He found his company cut off in an advanced position. His orders, given before shellfire cut the telephone, were to hold on. By nightfall the company was out of water and almost out of ammunition. He sent volunteers into No Man's Land by night to bring in the canteens and bandoleers of cartridges from the dead—and held out for thirty-two hours longer, until a new attack by the British relieved him.

All this time he fooled the Germans as to the size of his force by putting helmets on the parapet and propping up the dead. At the end he had only a dozen unwounded men. So he became a major. He was wounded at the Somme last November; and, had this happened some six hours later, he would have gone back to the hospital a lieutenant colonel, for his superior in command was killed in the same action. He has recovered and is back at the Front. In the normal course of events this American, before the war is six months older, may be colonel of a celebrated British county regiment, comprising ten or fifteen battalions of twelve hundred men each. Indeed, the rank of brigadier general is not beyond his reach.

The Saving of Verdun

This man, like most other officers trained in the great war, is not only an all-round soldier but a specialist. He is an expert on the use of grenades in attack. Few officers in our army have even seen a modern grenade. The grenade and the machine gun have almost supplanted rifle fire in trench fighting, and this most important weapon has a technic all its own. No one now on American soil could be such an instructor for a new army as this American major in the Blankshire Regiment of His Majesty's Expeditionary Force.

I know of two other American majors still surviving in the British Army. Doubtless they, too, have specialties; and, even if they are only all-round practitioners of modern warfare, they can teach us things of which we never dreamed. There is also a lieutenant colonel, in charge of motor transport. What happens behind an army is often as vitally important as what happens at the Front. The motor car arrived since the last general war; its uses to the commissary and supply department are all new. It was motor transport, superbly handled, that saved Verdun. I have heard that the French used eighteen thousand motor-trucks when that action was at its hottest; and, having seen the hinterland of that battle, having watched the trucks flash by, hour after hour, twenty seconds apart, I can well believe this. If accounts be true we had difficulty in handling less than a hundred trucks in our invasion of Northern Mexico.

A certain American, whose business reaches both sides of the water, has a highly intelligent and promising son, who got most

Sustaining nourishment—

The invigorating meat juices of selected beef combined with the nutritious properties of choice vegetables and hardy cereals—that is what you get in this appetizing Vegetable Soup.

Here you have a nourishing, tempting, perfectly balanced food. It comes to you a finished product, completely cooked and seasoned; prepared as daintily and carefully as it could be done in your own kitchen.

And it is all ready for your table in three minutes—

Campbell's Vegetable Soup

You could not produce a better soup at home. You would find it more than difficult to produce its equal—and a good deal more expensive.

We include the best Maine-grown white potatoes, the best Jersey "sweets," tender Chantenay carrots, fine large rutabagas from Canada, "baby" lima beans, early peas, choice okra, celery, cabbage and tomatoes, and the favorite "Country Gentleman" corn—juicy and sweet.

We blend these in a rich beef stock, together with rice, barley and "alphabet" macaroni. And we flavor the combination temptingly with fresh herbs, delicate little leek—grown on our own farms, and a snappy touch of sweet red peppers.

No other food is so consistently effective in body-building and nerve-building as good soup eaten every day. This is the verdict of the foremost dietetic authorities. And all experience proves it.

Nourishing food is the foundation not only of firm flesh and muscle, but of the active energy and nerve-force which mean efficiency in everything you do; the efficiency which your men folks need in their business; which your boys and girls need at their studies and their play; which *you* need in order to be at your best. This is one of the vital problems of your home.

Your grocer will supply you with these wholesome Campbell "kinds" by the dozen or the case, if you wish. And this is the economical way to buy.

LOOK FOR THE RED-AND-WHITE LABEL

THIS WAY OUT—By Frank Condon

IN ONE of his numerous statements to the reporters Old Schopenhauer, the German sunbeam, makes the following remarks about one of our best-known sexes:

"A man reaches the maturity of his reasoning powers and mental faculties hardly before the age of twenty-eight; a woman, at eighteen. And then, too, in some women it is only reason of a sort—very niggard in its dimensions. That is why women remain children their whole life long; never seeing anything but what is quite close to them, cleaving to the present moment, taking appearances for reality and preferring trifles to matters of first importance."

There you are, with the referee counting ten on the ladies and the crowd going home! Maybe this official opinion settles the question and maybe it doesn't. Personally I agree with the gentleman. Whether you do or not depends largely upon whether or not you are living at home in the bosom of your family, in which case you go out into the kitchen and talk to the gas meter whenever Schopenhauer is discussed. I'm a bachelor, and I can go round agreeing with such sentiments and not lose any epidermis.

True, the sage never got to be what you could call wildly popular with women, and the modern advanced female who reads him is likely to have nosebleed toward page ninety, where he steps on the pedal and tells exactly what he thinks about the sex.

But you can bet this year's coal that Old Man Schope spoke a lot of words that never went through his hat; and every time I think of Irma Canfield and her mother I feel anew that the philosopher was wholly there and carried a large line of the goods.

I don't want to spread abroad the impression that I'm always for Schope, because I have my friends among the wrong sex, and I value them. They're all right, no matter what they do; and that's no narrow statement, because they're always doing something extraordinary that would get them examined by a specialist, if they were men.

This brings me down to the time when the Canfields breezed back from Europe, before the big trouble began across the sea. Irma and her mother returned, dragging Jim Canfield behind them, just as they had lugged him over.

When they started they had to pry him off the Canfield Ranch by main force and with words and music, because Jim certainly hated to go abroad and learn something polite and cultured; and they had to drag him back because his vitality was gone.

This was all before Jake Davis and I worked for the Porter Outfit and I was Jim Canfield's right-hand man. Jake was his left-hand man, being naturally left-handed about everything in life. And when Jim went away, with a tear in his eye, he left the property in our care. It was the old Canfield Ranch, just north of Phœnix, Arizona, and for a time thereafter Jake and I led a care-free existence.

During the long absence of the Canfields, one of the citizens who distinctly did not receive post cards from Europe saying "This is our room: wish you were here" was Aleck Colby, a friend of mine and Jake's, and more than a friend to Irma—that is, Aleck and Irma were sort of aiming at each other, and had been for years.

The Canfield Ranch ends just this side of the main irrigation ditch, north of Phœnix, and Aleck Colby's property begins on the other side, both being valuable lands and covered with alfalfa, cucumbers, dates and other prosperous vegetables. Aleck and Irma used to ride in to school together before Central Avenue was paved, and Aleck stood mighty well with Jim Canfield, as he did with all the boys. Aleck was and is a regular guy, and nobody knew it better than Irma.

Then along came one of these lovers' quarrels, and the long-standing affair blew up with a loud bang. Aleck no longer drove up the road in his red automobile. Irma dismissed him, and for a while he pretended to like it and took up with some sweet-faced girls from town; but later on he turned silent, and I knew that he was about as happy as a man who has just had the doctor tell him to fix up his will.

From the day of that quarrel Irma was a changed girl; and her mother was a changed girl, too, though probably not on Aleck's account. Anyhow, the two of them began reaching out for higher things; and when two female members of your family begin that, it is just as well if you start walking across the desert, without food or water. Jim Canfield worried—and why wouldn't he?

Mrs. Canfield subscribed to art publications and Eastern magazines showing you pictures of society ladies at Newport watching the tennis matches, with their feet crossed so that you couldn't be under any misapprehension about the kind of hosiery they were wearing in the "bong-tong" circles. Irma began to study French and expression—whatever that is—and her mother started reducing exercises up under the eaves, which made no change whatever in either the eaves or mother. The final crash was the trip to Europe, into which calamity Jim Canfield was dragged headlong, giving off loud squeals of protest.

So they packed up and left us; and after that nothing much happened until one day Aleck stopped me on the road in front of the Power Station.

"They're back!" he said.

"The folks?" I asked in surprise.

"The same," Aleck went on. "They got into New York to-day on the Pretoria."

"You call that getting back? There's a lot of long loose miles between New York and Central Avenue."

"They'll be here soon," he continued, looking more cheerful than I'd seen him in weeks; "and you'd better begin making this ranch shine. I've heard some news, and I think you'll find things are going to be run on a different plan in future. Her father writes me that Irma has changed a whole lot since she went away."

"She could change a whole lot and still be a fine girl," I agreed. "What are the changes to be?"

"Couldn't say," he remarked—"except that you can't go to Europe and come back the same as when you went away. Europe leaves a mark on you."

"Not on me, it don't. I've got some marks; but Europe never made any of them. I'll be glad to see the folks."

"I'll be, too," Aleck said, smiling sort of ruefully; and I hoped then and there that Irma hadn't contracted any foolish notions over on the other side. I've heard of such things.

In a week Jake and I began to observe signs and portents, and Jake was seriously disturbed. First, there came a wild-eyed man from Phœnix, who rambled through our peaceful ranch, taking measurements with a yellow ruler and looking into closets, which seemed none of his business. He informed us he was going to redecorate the place; and he did, ruthlessly and without regard for the human emotions.

It was a comfortable, homy ranch before this deluded gent started in; but when he finished it looked like the Ohio Building at the World's Fair. All it lacked inside was a blue-uniformed person to take your tickets and a place to check children.

Next, there appeared a landscape gardener; and he scaped energetically round the place until it all looked unfamiliar and repulsive to the normal eye. He was followed by a maniac who owned an art-and-burnt-leather store, and who had received telegraph orders to leap in and smear up the house with modern art wherever he saw raw spots; which he did, with that hearty enthusiasm which marks the mentally unbalanced.

Jake and I stood by helplessly and surveyed these ancestral changes with disapproval; and we knew in our hearts that if Jim Canfield had been there he would have agreed with us. Women were at work again; and, as Schopenhauer says, you can't hold them responsible under the law, Nature having fitted up the outside of their heads most admirably, but the inside not so well. In the midst of our woes Aleck Colby suddenly went away, leaving us flat.

"He's going to Chicago," Jake informed me with a pleased grin; "and he ain't going just for the fun of riding on a train. Who knows but what he'll patch things up with Irma?"

"Once she had a lot of sense," I agreed; "and if she ever regains her normal mind I'd like to see Aleck and her start housekeeping. But you can't tell what Europe has done to her. She might want to marry one of those titles."

"Aleck had a title once," Jake said reflectively. "He was the lightweight champion of his college."

II

THE next alarming thing that happened was a telegram from Jim Canfield. I'd had telegrams from him before and some of them were surprising; but this one knocked us cold:

"I am forwarding one French chef. Meet him at the station. J. K. CANFIELD."

That was the wire in plain English, and yet I knew that Jim Canfield wasn't sending us one French chef. Any chef, French or otherwise, bound for the Canfield Ranch, was starting his journey over Jim's unconscious form; and I knew it. Once more I observed the gentle activities of the two ladies in their pursuit of higher things, because we didn't need a French chef round that ranch any more than a mackerel needs sideburns.

"Whatever do we want one for, and what is it?" Jake asked me querulously, reading the telegram over my shoulder. "Looks like the boss has gone clean off his bean. What do you do with it when it comes?"

"Well, you can't play it on the phonograph," I told the ignorant booby. "A chef is a cook with a college education, who wears a paper hat and can disguise food by pouring things on it. The boss had as much to do with this chef thing as he did with the last Chinese rebellion."

"Seems queer Jim'd send such a thing," Jake murmured.

"Since the female section of the Canfield family began aiming at the higher life, there's no telling where they'll stop. Most likely the next thing will be an incense burner with gargoyles on it, or a sacred fountain full of Psyches."

"Keeping all this new stuff in mind," said Jake, "it don't look to me like Aleck's patched anything up with Irma."

I thought the same way; and from then on Jake and I lingered round, waiting for the French chef in vain, not knowing precisely what we would do with him when he arrived. Meantime Aleck Colby returned from Chicago; and when I saw him I knew he hadn't smoothed things out with Irma. He was bluer than a bluefish. All he would say was that the family was in Chicago and well, and would be home soon.

"Did you by any chance run across a French chef?" I asked.

"Chef?" he said.

"They're sending us one by fast freight, and we're to take care of him till they get here."

"That's funny!" said Aleck. "A French chef!"

"It may not be so funny as you think. There are people on this ranch who may un-chef that French chef as soon as he lands."

Aleck apparently hadn't heard; but he appeared interested in the new culinary arrangement, and from then on our doleful neighbor spent most of his time on our ranch, feeling most likely that he'd have to go away for good when Irma got home.

Jake and I infested the railroad station in Tempe until the authorities regarded us with suspicion; but finally we were rewarded, if you care to put it that way. It was a beautiful warm, sunny morning, exactly suited to meeting French chefs; and long before the Eastern express stopped we knew there was some kind of unusual activity on board, because we could hear it.

Ordinarily the ten o'clock train from the East comes in as peaceful as a nun, gives the engine some water and goes onward into the West. But not this morning. From where we stood it sounded as though somebody was taking Paris. Vigorous yells oozed out through the open windows and shattered the clear calm; and the minute the train stopped a brakeman leaped off, hanging on to something at which he pulled, dragged and clawed.

Following him was another brakeman, and he was hanging on to the other end, which he was pushing, shoving and ejecting; so, between them, they were getting something off the train, and the something was our new French chef, as per Jim's wire.

I knew that the little man between the annoyed brakemen was our long-awaited chef, because he was speaking fluently in a foreign language. He was howling like a wolf. He was also kicking, scratching, gouging, smiting, bruising, pelting, prodding and walloping the infuriated brakemen; and at the same time he was addressing them in a series of shrill, piercing yowls. The brakemen held him off like you would hold a wild cat that has just gone insane on your hands.

"There's our new chef!" I said to Jake looking on with admiration. "Whatever do you suppose he's been doing?"

"I dunno," Jake answered; "but it looks as if he'd exasperated a large, capitalized corporation."

The battle raged on. We approached the captors and their quarry, and announced that we were from the Canfield Ranch, and that they were probably holding our new chef.

"He's yours, is he?" snorted one of the officials; and there was a distinct lack of courtesy in his tones. "Thank heaven, he's somebody's!"

"He ain't ours by choice," I said defensively; "but the boss shipped him and I suppose we've got to take him. What's he been doing to your railroad train?"

"Can't you see?" denounced the other brakeman, keeping our chef from his purpose of removing the official's eye with his thumb. "And right now he's comparatively peaceful. This ain't anything, compared to what we've been through."

"You must have had a good trip," Jake interposed. "What ails the little man?"

"He's just about ruined the railroading business round here for months to come," replied the conductor, who had come up with reënforcements. "Go on and take him, if he belongs to you; and the farther you take him the more all right it'll be with me. This trip pretty near cost me my job."

Jake and I accepted him gingerly, the same as you would take hold of an extra-hot comet; and then we learned some of the disgraceful details, the brakemen being relieved and willing to talk.

It seems the little Frenchman was an amorous party who imagined you got on board an American railroad train and immediately flirted with lady passengers. He had followed this theory with painful results, the ladies objecting unanimously. A couple of traveling husbands had offered to throw him quietly off the back end of the train, where he could hit on the flying rocks and be killed without annoying anybody and the Pullman conductor had wired for permission to do something drastic.

Seven irate women, young and old, had informed the railroad company that they would bring suit, and that it was an outrage and a disgrace; and, as nobody on the train could talk enough French to get the chef to quit waylaying females in the vestibules, the trip was one constant uproar, with somebody always contemplating on committing bodily assault upon our new hashslinger.

"I'm telling no lie when I say we've had all we want of him," said the conductor, waving his hand to the engineer. "If he's yours, you keep him; and don't let him go riding on trains, because his next trip is liable to be his last."

That's the way our acquaintance began; and when the express pulled out the passengers leaned from the windows and grinned at us as though we were on the wrong end of some joke we hadn't yet found out about.

The first thing that happened was a fight. Before Jake knew what was occurring, the Frenchman climbed up one side of him and down the other; and I will admit at this point that Frenchmen are quick and nervous in their movements. Jake was surprised and lost quite some skin before he could defend himself. After that he hit the chef twice, and we carried the body over and laid it in the bottom of the ranch automobile.

He was small, as I said, and he wore a blue suit and yellow spats and patent-leather shoes. He had no hat on, owing to his manner of leaving trains; but on his head was a wisp of yellow French hair, and he looked the least little bit like a sand chuck-walla. He was thin and scrawny and wrinkled; and why he should think he'd be strong with the ladies is another one of the enigmas we find in life.

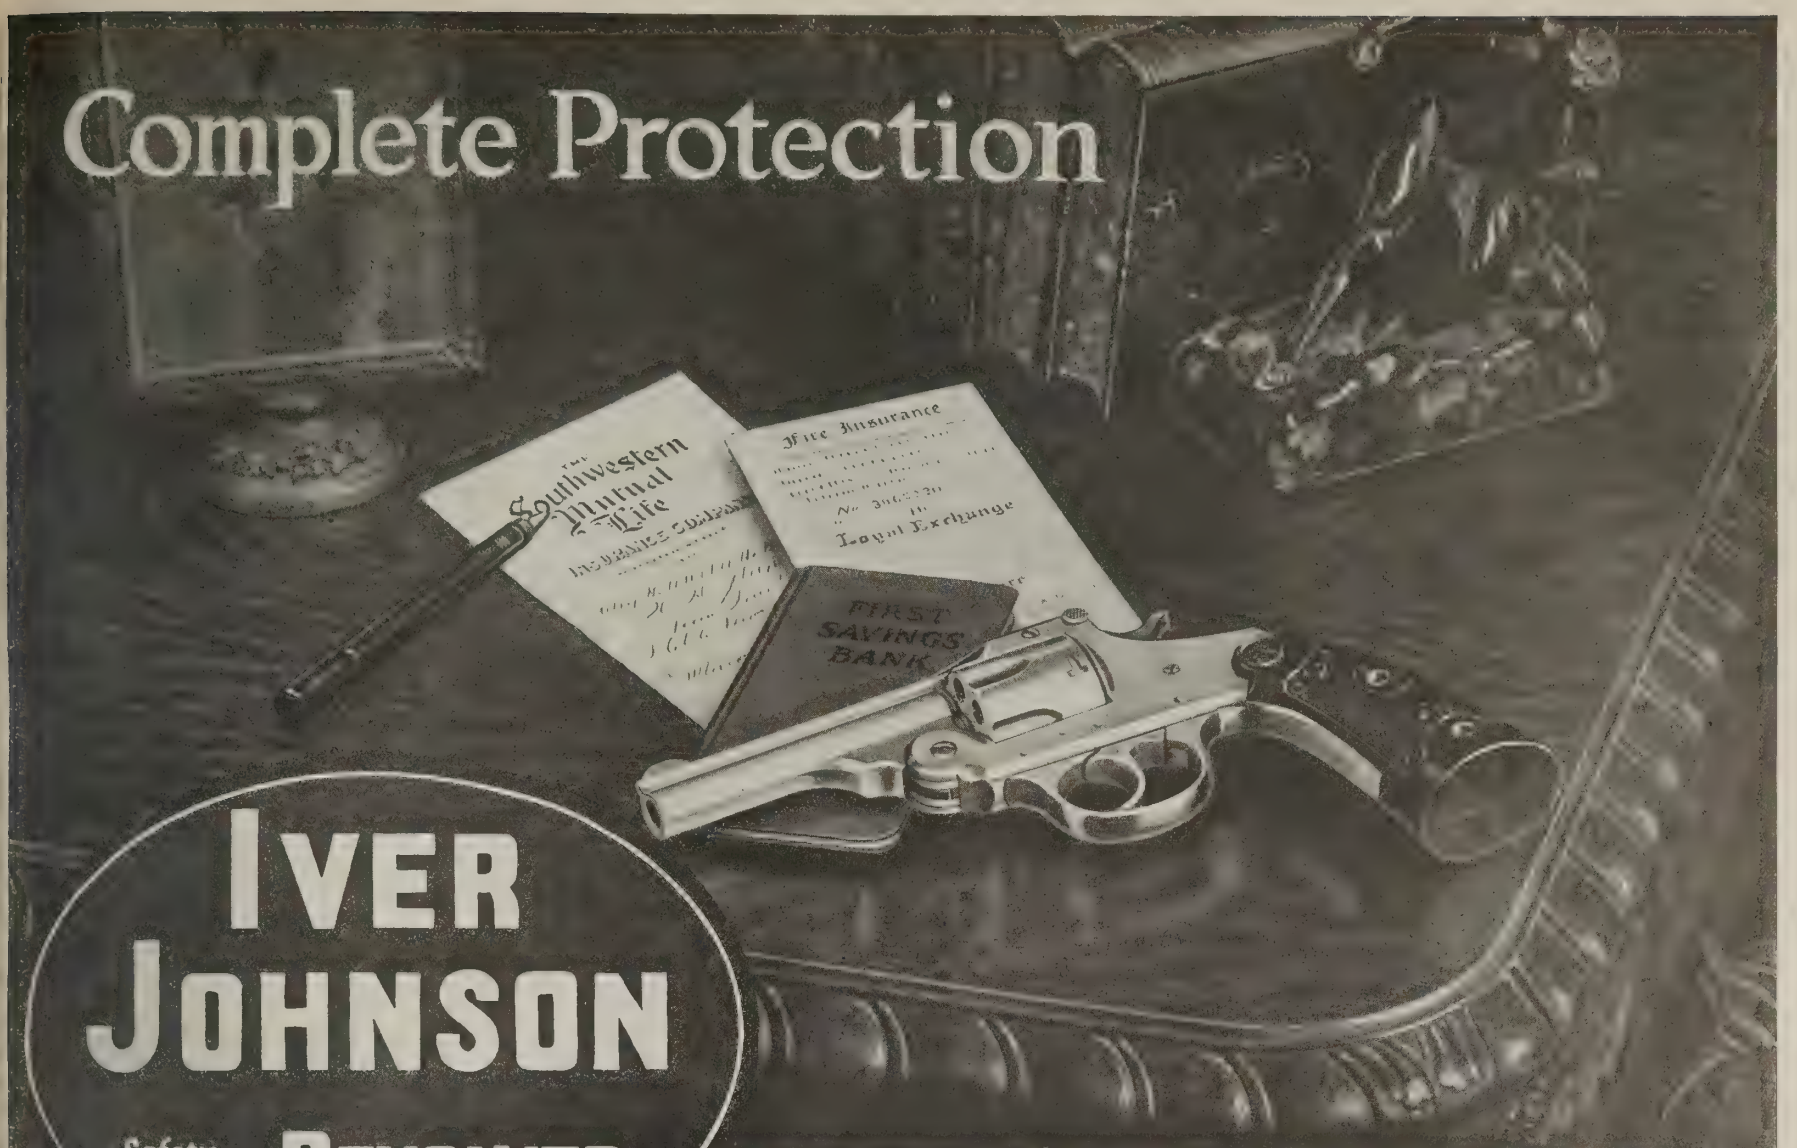
Complete Protection



IVER JOHNSON
Safety Automatic **REVOLVER**

Is *Your* Home Protected?

THE *whole truth* of this preparedness idea has just hit me. For years I have carried insurance on my life, health, house and household goods. I have tucked away a comfortable nest egg in the bank to forestall a rainy day and financial reverses. And all this while I have kidded myself into thinking that this was *all* the protection that any husband and father *could* throw around his family.

Defending the lives of my loved ones against the felonious attacks of prowling burglars—this never occurred to me.

There isn't a streak of yellow in me. I've never been called a coward in all my life. I just didn't give it a thought. I've been so busy with—

When I saw the great loophole in my scheme of home defence I felt guilty. I upbraided myself for my neglect. I hit the trail to the nearest hardware store and bought this trusty Iver Johnson Revolver you see lying here on the table.

My *trusty*, *friendly* Iver Johnson.

I've never had to shoot at a man. I hope I never shall have to. I never think of my Iver Johnson as a brutal, terrible weapon. I look upon it as a *friend*. The very knowledge that I have it gives me a sense of security.

Have *you* thought of a revolver as a friend before? Will you give your family protection that is one jot short of *real*, *full*, *complete* protection? Can you in justice to your wife and children defer answering this question another day?

When you buy a revolver buy a *good* one. The Iver Johnson is the safest small fire arm made because its *safety device* makes it proof against accidental discharge. You can Hammer the Hammer. Hammer model with Regular grip, $6.75; Hammerless model with Regular grip, $7.50. Both models also with "Perfect" Rubber or "Western" Walnut grip.

Iver Johnson Bicycles can't be beat for speed, strength, easy riding and long wearing qualities. Racing, Cushion Frame, Truss Frame Roadsters and Mobicycle models. $35 to $55. Juveniles $20 to $25.

Iver Johnson Motorcycle is conceded by engineers to be the most scientifically designed and best built motorcycle ever produced.

Iver Johnson Shotguns—Iver Johnson Champion Single Barrel Shotguns ($6.50) and Iver Johnson Hammerless Double Barrel Shotguns ($20) give as good results and look as good as guns costing twice as much.

Three Iver Johnson Booklets Sent Free

Indicate which books you want: **A**—"Arms," **B**—"Bicycles," **C**—"Motorcycles." They tell how to make dollars go farthest in buying revolvers, shotguns and cycles.

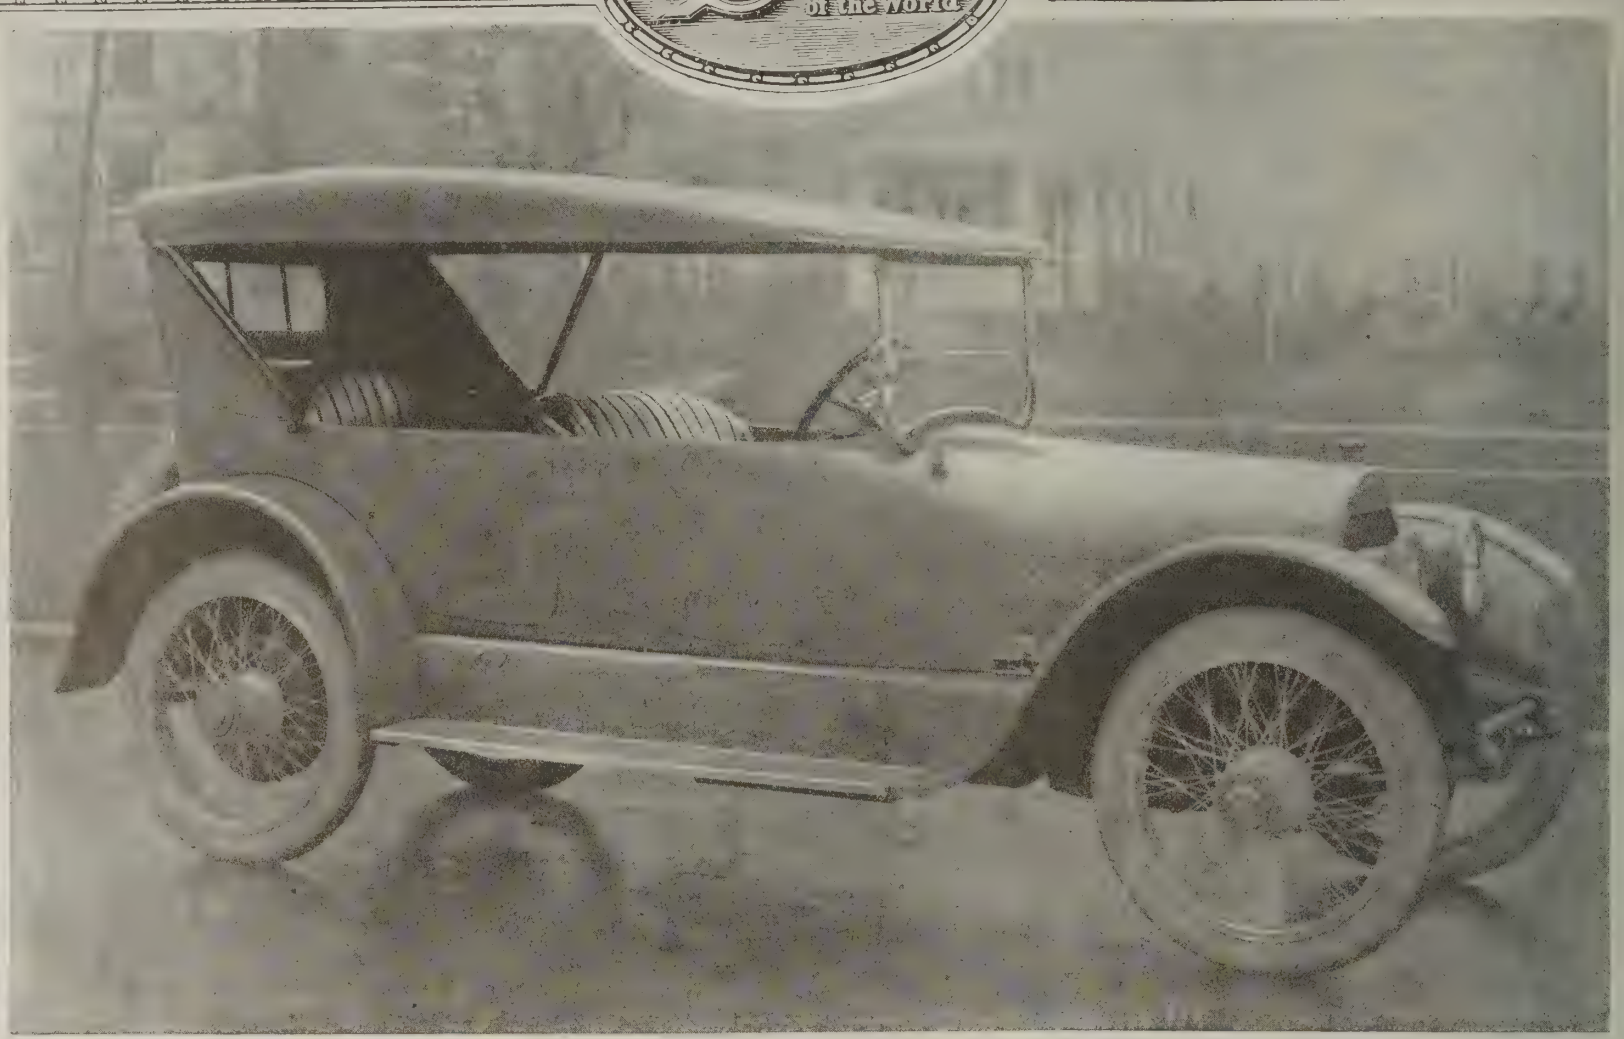
Cadillac
Standard of the World



The Cadillac's Newest Creation

MANY motorists have evinced a preference for the style of car which has come to be designated as the "Sport" type. But they have not been disposed to content themselves with a mechanism deficient in those qualities which make for real snap and zest in motoring.

In the new Cadillac four-passenger Phaeton there is combined, a car of low sides, inclined windshield, speedy lines and a chassis of surpassing mechanical excellence.

In striking contrast with the usual car of comparable body type, it affords the acme of luxurious riding qualities, lending itself admirably to the requirements of the small family.

That the mechanism of the Cadillac V-type "Eight" represents the most advanced development in motor-driven vehicles, has passed beyond the stage which admits of discussion.

Once you have driven a Cadillac, its charm has spoiled you for motoring of the ordinary kind.

You may set greatest store upon quietness, or steadiness, or smoothness, or speed, or comfort, or all-'round roadability, or upon body lines that are smart and racy, and at the same time pleasing and beautiful.

But it is when you see and feel how, in the Cadillac, all of these qualities are so successfully blended, that you awaken to the realization of how intensely fascinating your motoring can be.

The complete line of Cadillac cars is as follows:—Seven-Passenger Touring Car; Four-Passenger Phaeton; Two-Passenger Roadster; Four-Passenger Club Roadster; Four-Passenger Convertible Victoria; Seven-Passenger Convertible Touring Car; Four-Passenger Coupé; Five-Passenger Brougham; Seven-Passenger Limousine; Seven-Passenger Imperial; Seven-Passenger Landaulet.

Cadillac Motor Car Co. Detroit, Mich.

An amazing low price

$35

for this big, high-grade Cabinet Phonograph

The Wilson-Ashland

Plays all makes of disc records with rich, full tone

A splendid, high-grade mahogany finished cabinet phonograph—built on the same scientific principles as the highest priced instruments. This superb instrument does everything any phonograph costing five times as much will do. Constructed entirely of wood. See it—hear it—the proof is the phonograph itself.

Points of Superiority

1. A large cabinet instrument, 35 inches high, 17½ inches deep, 15½ inches wide.
2. Tone Chamber of same wood as a piano sounding board.
3. Gives rich, full, clear tone and precision in recreating sound.
4. The Ashland tone regulator makes possible loud or soft playing. Volume of sound under absolute control.
5. All records played without a second's delay. Simply reverse reproducer to change from one make to another.
6. Speed of playing easily regulated.
7. Double spring motor same as used in many high-priced instruments.

Has every essential feature found in the highest priced instruments. Your assurance of satisfaction is the broad one year's guarantee of Thos. E. Wilson & Co.—a half-million dollar corporation.

If there isn't a Wilson-Ashland dealer near you—send $10.00 and we will ship the instrument subject to examination by Express—balance C. O. D. Or send $35.00 with order. We will include two high-class standard records and needles for all makes of disc records FREE with each order for machine. *Mail coupon NOW!*

THOS. E. WILSON & CO., Chicago, U. S. A.

Enclosed find $10.00. Ship at once to the undersigned, f. o. b. Chicago, one Wilson-Ashland Phonograph, price $35.00. Balance $25.00, C. O. D. allowing privilege examination—money returned if not satisfactory.

(Continued from Page 30)

"For a chef," Jake said, breathing hard and trying to stick some loose skin back in place, "this sucker starts off good, don't he? Maybe you have to tame these things before they chef right."

"I don't know much about them," I admitted—"especially foreign ones who can't talk our language. I'd know exactly what to do with a Mexican or a Chink, but not a Frenchman."

"I'll know what to do with him if he comes my way again," Jake added resentfully; "and right after I get through doing it the Old Man won't have no chef. What do you suppose made the boss start anything like this?"

"His wife and daughter. Do you believe Jim Canfield, a sane and sober ranchman, is going round collecting chefs? Not a chance! He did what his womenfolks wanted, same as with the decorations. Jim'll probably show up wearing a red vest and a high hat."

Well, we drove the French fireless cooker out home, stopping several times on the way to settle some odd problems that arose. The chef came out of his state of coma toward the first ditch, climbed over the side when we weren't looking and started across the surface of the wide brown world on the run.

Jake chased him half a mile and brought him back full of yells and French exclamations. I should say that you can curse freely in French if everything the little man said was cursing; and it all sounded so. He wept like a girl who has lost her first engagement ring. He shrieked and clamored, and tore at his own hair and then at Jake's. He raised his hands to heaven and invoked things on me and Jake that would have ruined us had they come true. Then he ended up unexpectedly by kicking Jake, and Jake had to tend to him again.

In his altercations with the railroad system, Poison, which was his name with us from the start, had lost part of his wearing apparel, and before we reached the Canfield Ranch he had lost some more; so it wasn't much of a home-coming for the new chef.

"Now," said Jake, "where'll we put him?"

"They usually keep a cook in a private boudoir over the kitchen," I said, which Jake already knew.

"Yeah; but this is no regular cook," he retorted. "And, furthermore, we've got to watch him; otherwise he'll escape. He ain't exactly pleased with his surroundings."

"If he wants to escape we can't stop him."

"We can, and we will!" said Jake with determination. "The boss told us to keep him, and we're going to do it if it kills him."

"Which most likely it'll do," I said ruefully, looking over to the hitching post, where we had tied up Poison during deliberations about his future.

We finally decided that the only secure place for a wild-eyed and incoherent chef was the bunkhouse, where we could lace him up at night and sort of keep an eye on him; and accordingly we rammed him into Joe King's old bunk and threatened to shoot him if he moved out without permission. To make this plain we had to show him what we meant by shooting, since he couldn't understand regular words. I showed him; and this part of his Western experience scared the gizzard out of him, though he was never in any real danger.

"We'll probably have him thoroughly broke by the time the family gets home," I said to Jake. "I can see he ain't used to the wild free life of the desert, and we can save the boss a lot of trouble."

So we did that. We'd let Poison escape, and then run him down on ponies, lassoing him without regard for wounds and contusions. We'd shoot the air round him full of noisy bullets, and every so often Jake and I would turn in and lam the daylights out of him.

It was bully exercise for us at that, but sort of wearing on Poison, who began to take on a haunted look after the first few days. He fought back good and plenty; and don't think taming him was a one-sided job. It wasn't. The way he fought and ramped round the place, and yowled, was simply amazing; and when he suddenly decided to do something to you, you didn't know a thing about it till somebody asked you was the bone broken.

"Why don't you settle down and be peaceful, you little spotted toad?" Jake demanded of him often; and then Poison would open his mouth wide and pour words on us.

I've often thought it would be interesting to know what he was talking about, because he always illustrated his remarks with motions, leaps, hops, waving of arms, sudden bounces and jabs; always finally ending up with a violent assault upon either Jake or me, whichever was nearest.

As I said, we kept in good physical trim, just working out daily with the chef; and he began to wear a battered look long before he gave in and said "uncle."

Eventually we tamed him. He lost his fire, and it became safe to walk near him. We put him to cooking and made him clean the bunkhouse, sweep out, chop firewood, haul water and do all the loose chores round the place; so that he was tolerably busy. Meantime the Canfields lingered on in Chicago; and Aleck Colby spent his time on our ranch, watching Poison and making suggestions for his education.

The chef afforded Aleck genuine amusement; and that's what Aleck needed, because he was a sad fish those days, left to himself. He used to come and sit on our fence and watch Jake teaching Poison his lessons; and every little while Aleck would laugh heartily.

III

THEN came more news from Chicago. The family was starting for home very soon; and Irma wrote me, as foreman of the property, to prepare for events. Here's the very note:

"We shall be along in a few days, and I trust everything on the ranch is in good order. Some of my friends may precede us; and I wish you to treat them with cordiality, in case any of them arrive before we do. The Count de la Tour is among those I expect. He is a stranger and must be treated with extra courtesy. He is coming with letters of introduction to the family from the Prince Borizzi, whom we met in Paris. As I said, be very nice to the count, because none of us has yet met him and he will judge us by our hospitality. Give him the best the ranch affords and make him comfortable until we get there."

"Get that?" I said to Jake. "She's been meeting princes and such; and, when you think of it, why would a count come over with letters to the family? Maybe he's heard Jim Canfield ain't a pauper—hey?"

"Looks like this family made a specialty of Frenchmen," Jake answered.

"All this means no good news for poor old Aleck," I remarked. "You can see what has happened to Aleck. Irma comes back with her head full of foreign nonsense. Hence, this tidal wave of foreigners."

"And," said Jake firmly, "I'm getting so I've sort of lost my taste for Frenchmen."

Answering the stern call of duty, we once more began spending our time down at the railroad station, always taking care to lock up the madhouse chef before leaving the ranch.

The count arrived at last, and we recognized symptoms of his coming slightly ahead of his actual arrival. He was occupying the last coach on the train; and he was not occupying it in any casual or offhand manner, either. Again the distant roar of battle surged across the quiet desert, and the sand turtles looked up in surprise.

The train stopped and gave off a relieved sigh; and at the same moment a suitcase came through a rear window, bringing part of the frame with it and sprinkling glass on the right of way. After that we heard more sounds of scuffling, the impact of fists; and it all began to look like the regular conventional arrival of another Frenchman in Tempe. Jake opened his mouth and stared at the back platform, where a tangled group was emerging, one emerge after another.

"Do them suckers always arrive fighting?" Jake inquired admiringly.

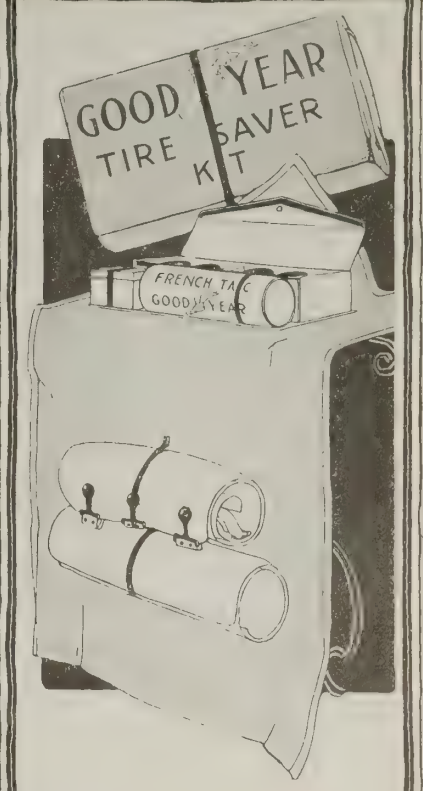
"Seems nothing less than that," I admitted; and just then the hard-working train hands succeeded in ejecting the Count de la Tour.

He came off en masse, as it were, with railroad officials clinging to him like bees to a hive. I counted five angry porters, brakemen and others, all engaged in hurling a large, fat, hairy individual off their transportation system.

When they all stood up and wiped off the cinders of battle, I saw that the count was a husky person, largely concealed behind whiskers, and that he had a reddish complexion and a white hat with a feather in it. He carried a cane and was trying to commit murder with it, but the crowd was too large.

"He looks worse to me than Poison," Jake announced.

"Another lady-killer," I remarked, looking at the whiskered Gaul; and that's



It Earns Its Place on Every Ride

Possibly a Goodyear Tire-Saver Kit in your car would be superfluous equipment. You might never meet any trouble your "spares" couldn't cover satisfactorily.

And just as possibly, a Goodyear Tire-Saver Kit might prove to be the most valuable thing you had along—by saving you the long walk to the nearest garage, or the discouraging search for a farmhouse with a telephone.

But whether you use it or whether you don't, a Goodyear Tire-Saver Kit earns its place on every ride, by providing you complete peace of mind. With one in your car, you know you are prepared against any tire accident short of complete ruin.

It is a handy package, containing tire putty, self-cure tube patches, inside and outside protection patches, cement, talc, tape, valve parts, pressure gauge and the like—complete and compact.

Its cost is trifling in comparison with the everyday comfort it gives.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

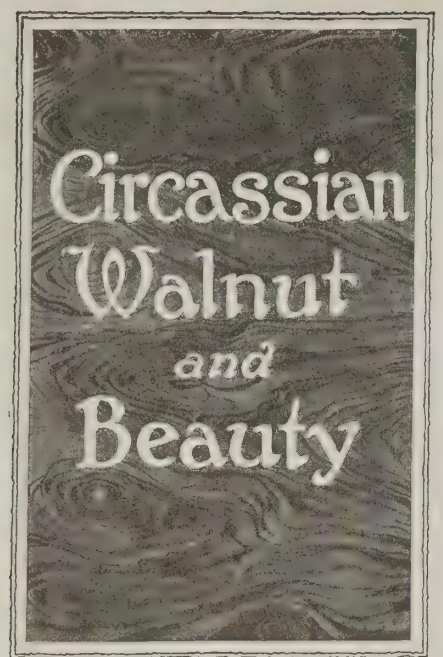
GOODYEAR
AKRON



YOU can not expect your walnut furniture to reflect its true beauty, unless it is clean and shining—free from dust, dirt and soil. Its radiance is dimmed—the beauty of the grain is hidden.

Just try cleaning and polishing all your furniture and wood work this way: wet a piece of cheese cloth with water, wring it almost dry, add a little

O-Cedar Polish

and go over the surface, then polish with a dry cloth. You will be astonished at the result—your furniture will reveal hidden beauties.

Remember, O-Cedar Polish is equally successful in cleaning, polishing and beautifying all woods and all finishes.

All dealers sell O-Cedar Polish in convenient sizes (25c to $3.00) with this distinct understanding—if you are not delighted with the results, money will be refunded without a question.

CHANNELL CHEMICAL COMPANY
Chicago-Toronto
London

where that name "gall" comes from, too, meaning a mistaken gent who imagines the opposite sex is all excited about him.

Four bitterly annoyed railroaders let go of the count's right leg and surrounded him, while he combed clinkers out of his whiskers and cursed the American nation.

"Well," Jake said critically, "I'll say one thing for these Frenchmen: They hate a quiet morning. You suppose they all act that way, once they get onto a train?"

"I don't know," I answered; "but if we've got to go and gun this here count into submission, then the time has arrived when I quit my job. Jim Canfield hired me for a ranch hand and not a lion tamer."

The railroad company halted the proceedings long enough to ask us indignantly were we expecting the hairy one; and we replied that we were guilty.

"And don't you call him names," I cautioned. "He's a count."

"Didn't we bring you one Frenchman the other day?" demanded a bruised brakeman. "And wasn't we having the same trouble with him?"

"You did and you was," Jake agreed; "but we ain't responsible. We can't help ourselves."

"Just when my wounds were healing up from that other nut, along comes this one!" remarked another official; and then Jake and I assumed full charge of the count.

We learned that he had suffered during the trip from the same delusions as the chef, and that the lady passengers had been bothered considerably.

We calmed him by telling him we were from the Canfield Ranch and were qualified to take him in tow and overwhelm him with that hospitality for which the West is justly famed. Jake explained this by using words from the English language, shouting them into the count's right ear and, when he failed to understand, repeating the process in louder tones. It is Jake's fixed idea that anybody will savvy English if you holler it loud enough at him.

The minute we removed the count from the railroad and the smell of raw locomotives he calmed down at once; and I concluded that there must be something hostile between Frenchmen and rolling stock. He was as nice and quiet a guy as you'd want to meet, and the opposite of the fighting fool we kept chained to a leg of the bunkhouse bed. Of course he couldn't speak English, and that was against him; but we were doing fairly well with the sign language by this time.

The count was pleased with everything, just as the chef had been annoyed with all things; which shows you the difference between high and low blood. We drove up to the ranch and unloaded the new guest, treating him as respectfully as we knew how, and asking him what would he have to drink.

We escorted him with pomp up to Jim Canfield's new private bedroom, which had been done over in the Cleopatra style by the demon decorator, and was now all riotous with art and things, so that I knew Jim would never dare take off his clothes with the light on. We staked the count to Jim's new and unsullied bed, hung in modest scarlet drapery, and told him he would find the bath towels in the lower drawer; after which we bowed ourselves out. The count seemed mildly astonished by the lavishness of the decorations and the profuseness of our hospitality; in fact, he seemed a trifle stunned, though we put this down to his being a stranger.

When he began to understand that Jake and I were there solely to contribute to his personal comfort, he exuded words all over the place, using his hands and feet to express his gratitude.

We brought him some cigarettes and cigars and a fresh bottle of the boss' private stock gin, and told him to ask for whatever he wanted. Then we left him with a deck of cards and the phonograph, and went out to think up new amusements and recreations for a foreign count who is awaiting friends.

From the very beginning Whiskers got along with me and Jake, and gave us no trouble whatever. True, he tried to kiss Jake by way of thanking him for the oil heater we brought in, and he talked incessantly; but, so far as fighting or trouble was concerned, the count was a babe in arms—a suckling lambkin compared with the fire-eating Poison, who was still on the end of a chain after sundown.

We went into the bunkhouse, where the chef was cooking lunch, and ordered him to brew up a mess of waffles for Whiskers.

"And cook them right," Jake ordered, "because they're for a fellow citizen of yours."

Poison responded in his fluent manner, but apparently he didn't know about the arrival of Whiskers; and, as he was only the ranch cook, why should he know?

So there we were, with a couple of Frenchmen on our hands—one of them kept constantly at work so he wouldn't leap into trouble, and the other in Jim Canfield's best room, eating quantities of expensive food and keeping mildly stewed on gin fizzes. From the start the count showed an aptitude for gin fizzes; and we knew how to tend to that part of the hospitality, all right.

Day by day Aleck Colby came over to see how everything was getting along. Meantime the Canfield family dallied in Chicago.

IV

YOU would think that I'd had enough trouble by this time, but there was more heading my way; and prominent among the fresh news items was the fact that Marie Canfield suddenly returned from Yuma. Marie was a sort of left-handed relation and was generally regarded on the ranch as one of life's trials. She came, in the beginning, from a distant branch of Jim's family, and Jim had taken her in, despite his wife's annoyed protest. Marie was as wild as a Maine crow, and she had run away from two previous homes and once from Jim's, joining such things as movie companies and circuses.

We had all long decided that Marie ought to settle down before some ill luck reached out and got her; but she was twenty-one, very nice-looking and full of sudden impulses. So the chances of her settling were remote.

Marie helped out with the daily chores, and was a cross between a servant and a member of the family; and we were all hoping she would find some decent young fellow and marry him. During the first of our stormy days with the French inundation Marie was in Yuma; but she came back home.

I stopped my pony with a shock of surprise one afternoon, and looked upon two objects in the distance. Poison and Marie Canfield were out taking the air; and I learned, upon inquiry, that Marie hadn't been ten minutes upon the home reservation before Poison saw her and made for her with a glad cry.

There was a fine combination for you—a wild young girl who needed seven grown citizens to watch her, and our maniac chef; both of them having the combined common sense of a wild ostrich. I discussed this serious situation with Jake, because there was a permanent order on the ranch that no employee was to bestow attentions upon Marie. Our new chef was now breaking Jim's rule with éclat and abandon; and it would be hard to make him know what that rule was or to force obedience, in view of his conduct on board trains.

"I'll go and get him by the scruff of the neck," I said to Jake; "and after that he'll let Marie alone."

"Why so?" Jake demanded.

"Why so!" I sneered. "Do you think it's all right to leave those two hairpins to their own devices? They'll start something that nobody can finish; and then Jim Canfield will have the trouble of burying you and me."

"I don't think that way at all," Jake went on, pretending to reflect. "Haven't we all said that Marie ought to get married and settle down?"

"Sure we have; but you don't expect her to marry Poison, do you? That's the same kind of settling down as when you throw something into a geyser."

"What's the matter with Poison?"

"Not a thing in the world! Only he's a butterfly, flitting brightly from flower to flower. You might as well talk about marrying off a lightning bug."

"All right," Jake said obstinately; "but I'm thinking about it, and the more I think the better it sounds to me. As for his flitting, he flits the way we point."

That being settled in Jake's half-portion mind, he went right ahead with the details; because, once Jake sees a way out of anything, he goes ahead blind. Personally I was undecided. We waited for some time and observed the attitude of the prospective victims toward each other; and it seemed suitable for matrimony.

That didn't mean much, so far as Poison was concerned, because he had only one attitude toward those of the opposing sex.

If Your Feet Hur After Walking—

the most *probable reason* is that you've been wearing narrow, bonebending shoes. Shoes that cause corns, bunions, flat-foot, callouses, ingrown nails, etc.

It's easy to have comfortable pain-free feet, if you wear Educators. Because Educators are broad-toed and roomy, and give all five toes a chance.

Made for
MEN, WOMEN AND CHILDREN

Introduce your whole family to Educators today. You all *need* them—especially the children. Educators mean lifelong insurance against foot trouble.

Insist on seeing the word EDUCATOR on the sole of the shoes you buy. It guarantees the foot-protecting, orthopædic Educator shape that "lets the feet grow as they should."

"Bent Bones Make Frantic Feet" is a free booklet that tells you a good many things you don't know—but ought to know—about the care of the feet. Send for copy today.

How We Trade-Marked Printing Papers That We Could Not Watermark

OUR problem was to identify Warren Standard Printing Papers.

We had standardized their quality and standardized our methods of manufacture.

We were proud of these papers.

They were made so well that when you asked for them you were entitled to the assurance that you were really getting them.

They Could Be Watermarked

It was possible to watermark these papers with their trade-mark names.

But a watermark is a variation. You cannot print over a watermark without a printing variation, and variation was one of the big faults we had eliminated when we standardized our product.

We had to identify the papers. It wouldn't do to watermark them.

So The Warren Top Sheet Idea Had Its Birth

Every case of paper that leaves the Warren Mills has the top sheet printed on our own cylinder presses in our testing plant at the mills.

These top sheets are printed under ordinary press room conditions, with engravings of varying size and character.

They show exactly the results that any printer should be able to get from the same paper.

We say we have standardized the quality of Warren papers. The Warren top sheets prove it.

When your printer takes off the cover of a case of Warren Standard Printing Paper, there on top is a printed sheet, bearing a serial number that identifies it as being from the same run of paper as the rest of the case.

If you have selected WARREN'S CAMEO, there is your top sheet to prove that this paper gives to half-tones the soft "unscreened" appearance of a platinum photograph. If you have bought WARREN'S LUSTRO, the top sheet shows you fine engravings and delicate vignettes printed like engraver's proofs.

The top sheets in cases of WARREN'S CUMBERLAND COATED or WARREN'S SILKOTE give the printer definite standards for printing his engravings on this stock. In a case of WARREN'S PRINTONE the top sheet demonstrates our contention that PRINTONE is "Better than Super, Cheaper than Coated."

The Warren Top Sheet is even better than a watermark. A watermark can give great confidence in a paper's printing quality, but a printed "top sheet" is the visible result of an actual test. It is the evidence before your eyes.

Reproductions of specimen top sheets are printed in the 1917 Warren Suggestion Book. This book is a guide and a help to any man about to buy printing. It shows engravings printed on papers best suited to their requirements and tells how to be sure you are selecting the right stock for the work you have in hand. This and supplementary booklets will be sent you, without charge, if you ask for them on your business letterhead.

ALEXANDER

The Overshadowing Factor of Beltdom

FIFTY years ago this month, Alexander of Beltdom first put his powerful back to the wheels of industry and made them hum with production.

Year after year he outstripped others by his superior force, till today he towers over Beltdom, the major choice of American industries.

Mills, plants, shipyards and factories that were small when this leather belt first quickened their pulse have grown big and strong with Alexander.

His is the might to move the ponderous machines that break the will of steel, and his the nimbleness to spin with tendons taut the skein of delicate silk.

No arm so strong, no speed so steady, no grip so sure as Alexander's. Let Alexander Tight-Line Leather Belts rim-grip every power pulley in your plant.

ALEXANDER FOR FIFTY YEARS

(Continued from Page 34)

But Marie was plainly fond of the little man and his yellow hair, probably because she had never met anyone before who couldn't talk English and who went to work with spats on.

"The question is," Jake said to her by way of subtle introduction, "What are you going to do about our chef? We've got to be careful of him."

"We can handle our own affairs, smarty!" Marie told him. "You and Andy think you know everything; but you don't. I know something that would surprise you both."

"She'll marry him," Jake said to me later on. "Now let's go and have a long, earnest conversation with Poison."

We drove him into a corner behind the range and told him to hold still while we endowed him with words about his future. Did he desire to enter a state of wedlock? Would he consider marriage from a personal standpoint? Was he prepared to take on a wife and go ahead earning an honest living for her? In brief, would he marry Marie Canfield?

It took us thirty minutes to get this into his head; but when he understood that we were asking him to marry Marie Canfield he agreed, with both hands and feet.

"And," said Jake, "you can live right here on the ranch, with a steady job before you."

Aleck Colby showed up that morning and we told him the news.

"Fine!" Aleck said, grinning. "They're going to be married, eh? I don't suppose anyone would object if I started them off with a little stake. I've always liked Marie, and I'm glad she's getting married."

Aleck slipped me his idea of a little stake, which would open your eyes if I told you. When I talked with Marie and showed her the edge of the roll she gave in without a dissenting vote, and put the dough away in her hand bag.

"It's funny you take such an interest in his," she remarked; "and it's going to be funnier later on."

Meantime Whiskers spent his entire life in bed, deluging himself with luxuries and getting crumbs on Jim's new and artistic decorations. He had come to the conclusion that life in our wild free West means a state of constant repose in blue pyjamas, where you do nothing but eat somebody's food and remain moderately full of gin fizzes. If no more counts drink gin fizzes down the ages they will all have a fair average on what Whiskers did to Jim's visible supply.

We had set Saturday morning for the imposing ceremonials, and Jake went over to Phœnix on a minister hunt. He ran down a Reverend Joshua Ewing, who promised to show up on Saturday morning, bringing along his book and uniting materials. We invited a few select guests, consisting of all the ranch hands and some boys from the neighbors', and all was ready. On Friday night I got a wire from the boss saying that the family would be home Saturday.

"Maybe they'll blow in on time and witness this here wedding," Jake said with the pride of one who has finished a monumental work.

"No," I said; "Poison and bride will have to get that eleven o'clock Western train, so the folks won't be here for the last sad rites."

Early Saturday morning Jake and I drove over to Mesa on a hurry-up telephone call about one of our men who had busted into jail, expecting to return in time for the wedding; but on the journey home our machinery exploded and we stuck there on the hot desert for two hours, with Jake cursing me, while I swore at a man in Michigan. We knew we should miss the wedding we had cooked up with such pains, and it made us both boil, like our radiator.

When I finally unscrewed the right piece of machinery and threw it away, we started back and reached the ranch half an hour after the happy pair had departed to catch the honeymoon train in Tempe.

"Well," Jake said gloomily, getting out, "we might as well rush over to Tempe and see them off. You wait here a minute and we'll go, if you can start that perfect piece of mechanism."

He went on up to the house; and when he came back he was running and flushed, and you could hang a pair of horseshoes on his eyeballs.

"Say," he yowled as he came up, "do you know what we went and done? We made a mistake!"

"Who made a mistake?" I asked in surprise.

"You did, and so did I!" Jake panted. "We married off the wrong guy! This ain't no chef at all. He's the Count de la Tour!"

"Go on!" I said with forced calm.

"He's the Count de la Tour, stupid! The minister just told me. He got the name during the ceremony. When you come to think of it, that's the first time anybody bothered to ask Poison what his name really was. This'll about kill Irma!"

"You act a little as if it was killing you," I protested. "Get in the automobile and we'll go over to Tempe. Accidents will happen."

Jake climbed dazedly into our little tin lizard and we started for Tempe Station. Halfway over he grabbed my arm, filled

How to Grow a Home Garden

SEEDS, soil and sunshine do not make a successful garden. "Knowing how" brings the rich reward of fresh, crisp vegetables all through the season.

The necessity of a successful Home Garden has never been so important as it is this season. Prices are high—and will go higher by reason of the food supply situation. The home garden will help you reduce living costs.

The Corona Garden Guide

The care, cultivation, fertilization and all that goes to make a garden vigorous, healthy and profitable is fully explained in this new book. Special chapters are devoted to fruits, flowers, shrubs, trees and vines. All instructions given in simplified form by classes and by months.

Be assured of garden pleasure and garden profit this year. Get The Corona Garden Guide. It will be sent for 10c to cover postage, packing, etc. A book retailers would sell for 50c. Supply limited to one copy in each family. Send today.

For Your Good Cheer

You get at a Hotel Statler the real essentials of good cheer—for those things are Statler specialties. For instance:

Good food—
Solid comfort—
Luxurious rest—
Attentive (but unostentatious) service—
Your own way about things (for "the guest is always right" in a Statler hotel)—
Every convenience (from a private bathroom to a morning paper that you neither have to ask for nor pay for)—

Those are some of the things that keep your today's tiredness and discouragements within today—and send you out into tomorrow rested and refreshed and cheered. It's the Statler theory that those are the things a hotel is really for, and things it must give you before it can satisfy you.

You get more for your money—unquestionably—at a Hotel Statler. And your satisfaction is always guaranteed, whether you spend $2 or $20 a day.

The Largest Hotel in the World

HOTEL PENNSYLVANIA, New York, will be a Statler-operated hotel. Now building, opposite Pennsylvania Station. With its 2200 rooms, 2200 baths, it will be larger than any other hotel now in existence or under construction—and will likewise set new high standards of convenience, service and distinction.

with a sudden thought. "Then Whiskers is the chef!" he exploded. "Suffering saltpeter! And we've been feeding him waffles and gin without restraint! When Jim hears that a chef has been living in that new-art bed —— Murder! And Irma asked us to take good care of the count—and look what you've been doing to him! You all but killed that little guy."

"I did?" I retorted. "That's good—that is! I suppose you never laid a finger on him, you big brute! You keep on talking and I'll tell Irma what you did to him."

"I think," said Jake, "I'll get out here and go back and chase Whiskers off the ranch."

"You leave Whiskers alone!" I corrected. "Jim Canfield may want a little exercise."

When we reached the railroad station a jabbering crowd surrounded the newly married ones, and I gazed with fresh interest upon the Count de la Tour, formerly Poison. He had on a neat blue suit and fresh spats, and he showed no signs of wear. He grinned at me affably, clasping his bride's arm and pressing it, I noticed, near the end which held on to the hand bag containing Aleck's roll.

"Can't you see through all this?" I asked Jake. "This Count de la Tour came to Arizona to marry money. Somebody must have told him to go and bust into the Canfield family, and he did his best—only he's slipped his clutch into the wrong gear. This little turtle expected to marry Jim's daughter, and of course it may be a big disappointment to Irma, but I think not. That's why he married Marie without a quiver. He's got the Canfield girl and he thinks he's fixed for life."

"And he is too," Jake chuckled; "but not the way he figures!"

Meantime Marie pranced round her new husband and informed the bystanders that she was a countess, which she was, without any doubt in the world. The count grinned from ear to ear and kept consistently in the neighborhood of the dough.

Two trains came in, one of them bringing the Canfield family, the other being the one on which the Count and Countess de la Tour would begin their honeymoon. Jim Canfield came overboard first, with a whoop, and shook hands with his faithful henchmen; and then I saw Irma and Mrs. Canfield. The old lady was carrying a lorgnette, through which she stared at the populace. Marie rushed over and shook Jim by the hand.

"What is all this?" Jim asked, gazing at the crowd.

"I'm married!" Marie said proudly, dragging Poison to the front.

Jim looked at me with a question in his eye.

"Yeah; they're married, all right," I said lamely. "Marie's got herself hitched and settled at last. I thought you'd be sort of glad."

"Who is the little man?" Irma asked.

"That," said Jake, swallowing hard, "is the Count de la Tour."

"My husband!" added Marie with pride.

"Oh!" said Irma.

Her eyes opened a little wider, and then she began to laugh. Mrs. Canfield turned the trick lorgnette upon Poison and gave him both barrels. Jim Canfield grinned; and I knew it was no fake grin either.

"I thought," the boss said to Irma, "the count came out here with letters of introduction!"

"Maybe he did," Jake said; "but never saw no letters—did we, Andy? A how, it looks as though he came to Ariz to marry somebody named Canfield; that's what he done, though there ain't financial twist to it he thinks there is.'

"All right," Jim went on; "but wh become of that chef mother sent out?

"Chef!" Jake said blankly; and I denly thought of Whiskers, still curled in Jim's blankets, using Jim's gold sa razor and smelling of gin fizzes.

"Listen!" I said to the boss in a voice; and then I slipped him the new his hairy chef.

"What!" Jim shouted. "Mrs. C field," he went on, turning to his wife, terrible thing has happened to our ranc will go and tend to it."

We all started over to where the auto biles were waiting, with the boss ahead looking satisfied.

"This," he said to me in a low tone, the excuse I've needed. You stick by while I go and kill that guy! I never wan a chef anyhow."

Well, we piled into the machines and parted for the ranch; and at the same t the count and countess, still smiling, be their honeymoon.

When we reached home Jim went up stairs three at a time, and a minute l there was a large uproar in his private su I could hear him saying "You will, you?" and the howls of a whiskered pa whose life of ease had come to a sudden e

Five minutes later the chef came d ahead of Jim, wearing a pained expres and in a hurry to go somewhere. We tur him over to the Chinaman, with order put him on a railroad train bound for a where east of the Big Muddy.

Somehow or other, on that ride bac the ranch Aleck and Irma sat beside e other; and when I looked they were talk and laughing over the ludicrous affair, Irma said something about Poison t made Aleck roar.

A few nights later Jake and I were behind the barn, and the moon was shin so that we could see two figures not far Aleck and Irma were studying how world looks under moonshine, and t were as close together as you can get study Nature.

"That wasn't such a bad mistake a all!" Jake snickered, poor mutt that h "Do you suppose Aleck knew the little was the count all the time?"

"Did he?" I laughed; and for the f time I showed Jake a roll of green and low things, which Aleck had handed me good conduct and proper acts. "He what's coming to you," I went on; "tho you don't deserve it, seeing I did the w When you come right down to it, a mist is something that ain't intended; so business certainly wasn't a mistake. C on away and leave them two with t moon!"

Then I dragged Jake up to the house we counted our wealth—the sum of hor endeavor.

"What with those two females fool with chefs and counts, this ranch c near having trouble," I remarked. "Sc penhauer was certainly right when he that women have only about one-fourth much intelligence as men."

"Did he say that?" said Jake, looking from his new funds. "There's a guy like to meet!"

The correspondence of big business is dictated to The Dictaphone

They started dictating to The Dictaphone in 1911. Today they dictate to 78.

They have 54 Dictaphones in constant service.

They dictate to The Dictaphone in their Rochester and New York offices.

Dominant minds that have placed American industries at the pinnacle of world achievement were quick to realize the value of The Dictaphone.

The trademarks and plants of a small group of these great industrial and business leaders are illustrated.

They dictate to The Dictaphone. They have proven it the *one* right way to handle correspondence; as have hundreds of other concerns of equal prominence, and thousands of businesses whose organizations are perhaps less in scope but equally progressive.

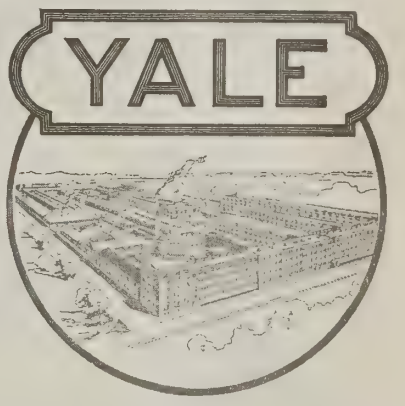
Big business, and little business, too, need The Dictaphone. It fits in perfectly—whether in the 100 stenographer concern or the one stenographer office.

The Dictaphone is as indispensable as the telephone. And like the telephone, its greatest value and importance are measured by its ability to help the executive *directly* in his own work.

The full value of The Dictaphone is for every office where system is a *fact*, where time-saving is important, where economy counts, wherever a typewriter is employed.

They adopted The Dictaphone in 1911. Today they use 86 Dictaphones.

They installed The Dictaphone in 1910. They now require 23 Dictaphones.



Dictaphone users for more than ten years—they use 83 Dictaphones.

You can't buy a Dictaphone under any other name
The Genuine bears the name The Dictaphone

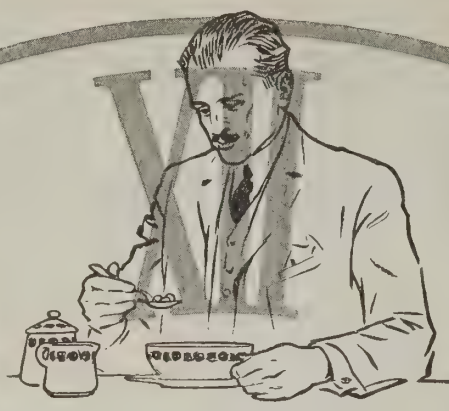
This Advertisement was dictated to The Dictaphone



It's at Noon

Says the man. This whole-grain dainty doesn't tax the stomach. It doesn't interrupt one's brain work. Yet every atom feeds.

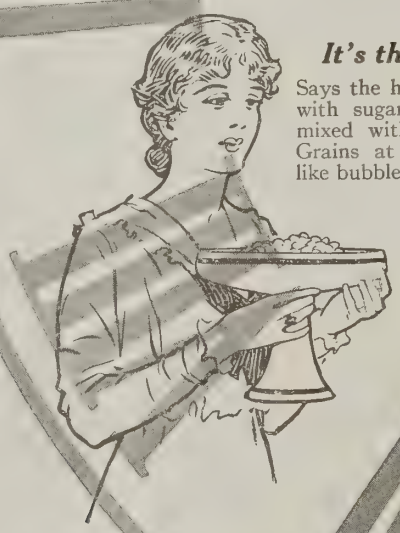
It's at Playtime

Says the boy. He carries Puffed Grains with him. For these thin, flimsy bubbles are delicious food confections.

It's at Candy Time

Says the girl. I use Puffed Rice in all my candy making. These tidbits taste like nut-meats, and they make the candy lighter.

The Puffed Wheat Hour

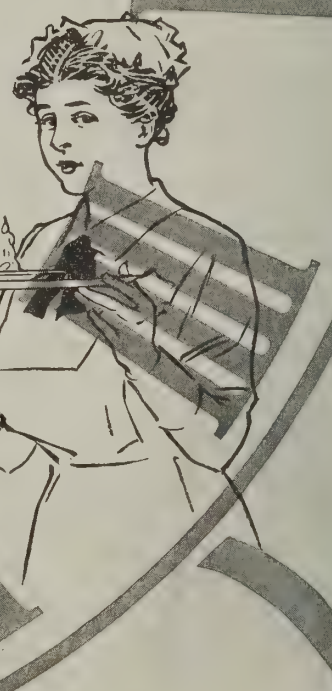


It's the Morning

Says the housewife. Serve with sugar and cream or mixed with fruit. Puffed Grains at breakfast taste like bubbled nuts.

It's at Bedtime

Says the child. Puffed Grains are airy, flaky, toasted, crisp. Nothing else is half so good, floated in bowls of milk.



It's at Dinner

Says the cook. I use Puffed Grains as a nut-like garnish for ice cream. And I serve these toasted, whole-grain wafers with my soups.

When Is It?

Puffed Wheat and Puffed Rice, when first invented, were classed exclusively as breakfast foods. The morning dish, with cream and sugar, ended the Puffed Grain day.

Then people tried mixing the grains with fruit, and they found the blend delightful. Now a fruit dish without them seems incomplete—like a short-cake without crust.

But these are whole grains made wholly digestible. And people want whole-grain foods.

So they floated these bubbles in bowls of milk, and served them for luncheons and suppers as well as for breakfast. That brought a new delight. These crisp, airy grains—eight times normal size—made a perfect dairy dish.

Now thousands of busy men lunch on Puffed Grains. And with countless children this is the good-night dish.

The taste is like toasted nut-meats. So folks began using Puffed Grains like nuts. They used them in candy making, in frosted cake, as garnish for ice cream.

Now Puffed Grains are all-hour foods. They are unique in their food value. Their bubble-like form is enticing. And no sweetmeats or bonbons are any more inviting. Now whole-grain foods are being served, at every chance, in place of things less healthful. And millions of children now get their quota of whole wheat.

There are no other foods like Puffed Grains. No other way has ever been found to so fit a whole grain for digestion.

Puffed Grains are made by Prof. Anderson's process. The whole grains are sealed in guns. The guns are revolved for sixty minutes in a heat of 550 degrees.

When the guns are shot, a steam explosion occurs inside every food cell. Every granule is blasted so digestion can act. And the grain is puffed to a thin-walled bubble, about as flimsy as a snowflake.

Thus every element in the whole grain is fitted for nutrition. And the grains are made so dainty that one never gets enough.

For variety's sake, keep three kinds on hand. And serve them whenever you can.

THE MAN-KILLER

(Continued from Page 5)

"Splendid!" she said. "It's been the most peaceful hour yet! But —— Why, Bobby! What's the matter with you? Don't you like her?"

"Great!" said Whittier lugubriously. "We're getting along fine. But one of us ought to go back to kindergarten."

"You or she?"

"That's the deuce of it," said Whittier, biting his lip. "I can't find out."

For the remainder of the evening she was invisible, and on the following morning she had already breakfasted when Whittier appeared. He had no means of detaching her from the central coterie which later formed on the loggia, and he could deduce no plausible pretext for apologizing to her before an audience. Furthermore, he wasn't persuaded that she really required an apology. He didn't know whether he had vitally affronted her or whether the procedure was entirely in accordance with her intentions.

In other words, she had put him so swiftly on the defensive that he couldn't estimate her, even approximately. But, because an apology never operates as an insult, he lingered near her, externally diffident, secretly distraught; and eventually, at noonday, he earned five minutes by the boathouse, and spoke rapidly and without circumlocution.

"Yes," said Miss Standish at the end; "I will on one condition."

"Name it," said Whittier.

"If you'll tell me," she said, "what made you think I'd let you?"

Whittier's vanity took to cringing, and cringed abnormally. He remembered that Cecily's mother had utilized the smallest technical lapses from stern propriety, the tiniest familiarities on the part of her guests, to leash them forevermore. And could anything in the world so rivet a man to the wishes of a girl as to have created the necessity of being forgiven? When his only alibi must be the irresistibility of the girl? Whittier preferred finesse and he hated strictures.

"Suppose we agree," he hazarded, "that bygones are bygones. I'm groveling in the dust . . . that isn't flippant; it's a fact. . . . I want to make a fresh start on even terms. Can you do that?"

She put out her hand impulsively, and Whittier took it as though it contained dynamite.

"I do want to be friends with you," she said. "There's every reason why we should be congenial. We'll start over."

"Thank you!" said Whittier gravely with a mental reservation.

He was both amazed and alarmed at the revelation that next burst upon him. Miss Standish had forgiven him thoroughly; so thoroughly that he was embarrassed. Not content with conveying the absolution to him, she actually capitalized her position; she appropriated him solely to herself at every legitimate contingency, no matter how many candidates begged for the escort. And Whittier, who loathed to take his conquests by default, was resentful and displeased because she so patently intended to throw herself at his head.

In the abstract he liked her. He liked girls of spirit. He knew that she was beautiful and he had always held beauty as a virtue. But in her demeanor there was a quality that baffled him; he felt oppressed and fugitive. She was, as Mrs. Brewster had indicated, too pretty, too alert, too seductive. And yet at times Whittier was sensitive to an indefinite sort of girlishness in her: a girlishness apart from her diction and her behavior.

He couldn't reconcile these opposites of hers; and he distrusted them. She was the only woman who had recently nonplused him, and he was savage about it. Either she was perplexing him deliberately and shamelessly or she was courting him obliquely; and in either case he couldn't endure the terms. So that on Tuesday he was disquieted, and on Wednesday he was annoyed, and on Thursday he would gladly have resorted to bribery in order to dodge what the other men called his luck. She was adorable—but she was predatory; and Whittier was unutterably tired of furnishing himself as quarry.

On Thursday there was a woods picnic across the lake; Whittier, by constructive duress, ferried Miss Standish to the rendezvous in an erratic canoe, and talked about moose hunting in Maine. He was well aware of her desire for silence during the passage, but he was too wily to permit the resultant atmospheric pressure. He knew she was looking at him in appraisal, and he didn't want that to endure, either.

Once, when she transferred her weight without notice, he smiled in retrospect. He was a famous swimmer, and he had rescued no less than seven languishing maidens from accidental capsizings. The shore was hardly a furlong distant; he thought whimsically that an admirable course, in case of upset, would be to disappoint a designing flirt by adopting the style of legendary stalwarts—to stun the victim by a hook to the jaw and then tow her by the hair to land.

At this juncture, as though she had appraised him to finality, Miss Standish again transferred her weight without notice; and the canoe rolled majestically on its side and emptied its occupants into a lake that was unhealthily, penetratingly cold.

Blowing porpoiselike, Whittier splashed forward to where Miss Standish was frantically struggling to buoy herself by the bow of the unstable vessel. There was anger and scorn in his heart; he was incalculably disgusted with her; the obsolescent subterfuge appalled him.

"No danger," said Whittier coolly. "Paddle round a second while I right her."

"B-but—I can't swim!" she gurgled.

Whittier dived under the arms that would have strangled him. He was positive she wasn't telling the truth; he grudgingly praised her histrionics. She was playing her part so naturally that a less expert diagnostician might readily believe she couldn't swim. And this was Mrs. Brewster's protégée!

"All right!" he said, behind her. "Keep your arms down or I'll have to —— Keep your arms down!"

He got an effective hold and maintained it while he stowed away his watch in the security of a side pocket. Then, with the least romanticism imaginable, he kicked out for the nearest beach. His light tennis flannels and shoes impeded him but little; Miss Standish, white but self-possessed, was an easy burden.

Whittier was glad that he had outstripped the main party and that none of the other voyagers were in sight; he was anxious to salvage the canoe and have the affair over before there were spectators to add to his discomfiture. He sounded, and felt sand under his toes. He stood up and attempted to place Miss Standish on her feet—and was actively irritated to discover that she had gone quite limp.

"Here we are!" said Whittier in her ear.

There was no response. Miss Standish was displaying all the symptoms of a dead faint.

Whittier told himself that if this was a sham it had the verisimilitude of a scene rehearsed by Belasco. But if it was a sham, what was he to do about it? There was perhaps one chance in a hundred that she was really overcome by cold and shock; would it be humane for him to ignore the possibility?

"Shucks!" snapped Whittier.

He gathered her up and carried her briskly through the shallows to the beach. She was heavier than he had fancied, so that he traversed the last few yards at a pace which betrayed his aspiration to get rid of her without delay. He deposited her in a warm hollow of sand and stared down at her in embarrassment.

And then, before he had made the first move to revive her, her eyes were wide open; and there was panic in them, and some other emotion. Whittier was slow to comprehend. She murmured plaintively.

"What is it?" he asked, stooping to catch the answer.

"I must . . . be . . . such a . . . frump!" said Miss Standish with difficulty. That was indisputable evidence!

"You are, indeed!" coincided the artist, taking heed of her stringing hair and her clinging garments. "So am I. What's the difference? Feel better?"

She nodded and closed her eyes.

"It was so . . . silly of me!" she mourned.

"I'll tell you," said Whittier: "We'll walk round a bit. Come on—I'll help you."

He assisted her to rise, and had to continue his aid after she had risen.

"What will—people say?" she queried, forcing a queer little smile.

"They'll say somebody rocked the boat," said Whittier. Far beyond the canoe, which

Your Child's Musical Future?

WILL your child's playing be a joy to listen to—full of beauty and feeling?

Or will it be poor and indifferent—the kind that no one wants to hear?

Lessons on a *good piano* are what make the difference. A poor piano spoils the child's music-sense; teaches sound habits that are never entirely overcome, just as a bad associate would teach bad habits.

Let *your* child learn music with a Hallet & Davis Piano. Because it is one of America's oldest pianos. Because its purity and volume of tone, its correctness of touch, its durability of construction all are guaranteed by 78 years of honored reputation.

Before buying your piano, do not fail to send for our catalog and prices. Write for them today.

Hot Water Like Magic

A Hot Bath the Instant You Want It

YOU'RE accustomed to getting Cold Water *instantly*. Think of the delight of securing Hot Water in abundance in the same way—regardless of the hour or how much has been used before!

Humphrey Hot Water Service brings you this convenience. A mere turn of the faucet and cold water is heated to order—instantly.

Think what a convenience! Abundant hot water *for every need*. No work—no fuss—no waiting!

You CAN Afford It!

The cost is only 1-10 cent a gallon. You pay only for the water you use. When you turn off the faucet you stop the expense. Compare this with fuel-wasting coal stoves or coils or heating tanks.

Insist on the genuine Humphrey—the original Gas Heater with the original features. For sale by Gas Companies and Reliable Plumbers *everywhere*.

If you can't find the Humphrey write at once for beautiful Booklet, "Hot Water Like Magic." We'll make it easy for you to have Humphrey Hot Water Service.

This is a "Sad" Complaint

"I have been using ACME Dry Batteries on my auto, and they don't have them here now. *They say the reason they don't handle them is they last too long*, and I can agree with them on that. I want 12 more. If you sell them less than by the barrel send me price and I will send you draft."
A. L. Houltshouser, Estherville, Iowa.

Acme Rapid Fire and 1900 Dry Batteries

have extra powers of endurance. Their lasting qualities have brought them into general favor.

Use the ACME RAPID FIRE for ignition. It is constructed especially for that purpose, and is a wonder. The ACME 1900, famous for its long life, can't be beaten for telephone and general service, including ignition.

If YOU cannot get ACME Dry Batteries write us at the above address.

was obligingly coming ashore, he saw a tiny flotilla rocking on the surface of the lake. "Let's speed it up—shall we?"

Miss Standish, swaying a little, clung to him. He was fully as draggled as she, but somehow he retained a modicum of that transcendent dignity which had sat upon him for at least two days. The arm which guaranteed her balance was as passionless as an iron bar; his service was to her sex and not to her. Miss Standish sniffed.

"I'm sorry," she said; "but my—my knees are all wabbly. Please don't let's walk."

"That's all right." Whittier was peering over the water at the approaching fleet.

"And I'm ashamed."

"Are you?" he inquired.

"And disappointed," she added.

"That's too bad!" said Whittier. "So am I."

"You're not a very heroic hero," she commented, trying to laugh.

"I'm essentially businesslike, don't you think?"

"Extremely! . . . You weren't moaning or praying, or—or anything!"

"I was hunting for a barrel," he explained.

Miss Standish stumbled and caught at his shoulder. The boats were within hailing distance now and someone was shouting at them.

"You probably think I'm very childish," she faltered; "but I was . . . rather wishing . . . we'd turn turtle . . . out there."

"Oh, you were!" said Whittier, enlightened. "Well, you got your wish, didn't you?"

"I certainly did! I'm all right now, thank you."

"What was back of it?"

"Why, nothing . . . except I wondered how you'd act in emergencies. One does, you know."

"Are you fully informed now?"

"Oh, yes! But—I didn't tip us over on purpose."

"There wouldn't have been much danger if you had," said Whittier.

"Still—I wouldn't have been likely to try, would I?"

"I hope not," conceded Whittier, wringing out his cuffs.

"They're almost here!" said Miss Standish. She looked up at him, and Whittier winced; he could have approximated her next statement to a syllable. "This is an awfully queer way to say 'Thank you'—but I do say it."

"It's a perfectly sufficient way," he acknowledged.

"I don't think you've been very gracious about it," she flashed with unexpected vehemence. "You act almost as though I'd intentionally inconvenienced you. But I do thank you; and I want you to know, if it'll make you feel any differently—that I can swim."

"Ah!" said Whittier.

"Like a duck!" she admitted. "And I thought I'd ——"

The party had landed, and the onrush of excited girls and men destroyed the remainder of the sentence.

Generally speaking, it was a successful picnic; but Whittier and Mrs. Brewster's butler, who had been brought along as factotum, enjoyed a minimum of it. Whittier was uncomfortable, he was wrathful, and he was incorrigibly taciturn. He sat stolidly on a jagged stump, taking some pleasure in the inconvenience of the location, and watched Miss Standish, who found a place for herself and rested there immovable.

The gayety of the others stirred him not at all; he felt abased and mortified to have participated in an abortive trial by ordeal; and as he inspected Miss Standish critically he wasn't especially relieved to recall what manner of instruction she might have had from her mother. In any event he was through! He took pains to be assigned to another bark for the homeward journey, and when he reached the house he encamped in solitude until the dinner hour, and dined uncommunicative.

Thereafter, by dint of watchfulness and skill, he contrived to escape Miss Standish until ten o' clock. There were in the house only six men, six girls and Mrs. Brewster; and Mrs. Brewster was a hostess who believed in the percolating system as opposed to the sedentary. Whittier had to flee from one cluster to another at a second's omen; he had to efface himself at one point and display great vivacity at another; he had to summon the ultimate atom of diplomacy to secure his freedom; and then, followin this so arduous maneuvering, he heard Mr Brewster summoned to the telephone jus as the friendly phonograph was swung int battery, and there was no refuge for hir left.

Five couples were on the floor; Mis Standish stood alone, across the room, an Whittier was unpartnered. He wanted t slink out to the loggia and smoke unmo lested, but his accountability to Mrs. Brew ster forbade the luxury; so he wandere leisurely to the corner where Miss Standis was waiting, and bowed superficially.

"May I have the rest of this?" he asked

Miss Standish, unsmiling, shook her head

"Wouldn't you rather go out on th lawn?"

Whittier recoiled.

"Surely—if you say so."

She wavered, then walked slowly ou through the great French windows, an Whittier, scowling, trailed her. They wen down the brick steps to the ground and ou upon the expanse of tree-dotted turf. Twic they promenaded solemnly to the boathouse on the third lap Miss Standish addresse Whittier point-blank.

"Why don't you like me?" she aske suddenly.

He was startled, but not repulsed. He tone was so intimate and yet without guile her manner so ingenuous that he had n immediate reply.

"You did at first," she said sorrowfully "I saw it in your face. That first night yo were here, I mean."

"Yes; I did," granted Whittier. "Im mensely!"

"Then what's happened? What have said? What have I done? Why—if there' any justice in things I ought to be the on to dislike you! But I don't!"

Whittier cleared his throat.

"Miss Standish ——"

"There's another thing: You asked i you couldn't call me Cecily. And I wante you to!"

"If you're in a temper to hear truths I'n in a temper to tell them. Are you?"

"Of course I am."

They wheeled and began the march t the boathouse.

"I've never talked like this to any girl i my life. You're sure you want me to?"

"Yes."

"You think I've changed since that firs night?"

"Why, you've said so yourself."

"And you don't know the reason?"

"No; I don't."

"It's this," said Whittier: "If you tal to everybody as you did to me that firs time you'll find that some men like it an others—I, for instance—don't."

She made no reply until they had wheele at the landing.

"I don't understand you."

"The *argumentum ad hominem* is abou played out," said Whittier. "It's lost it potency. Some men don't want to b rushed."

"Rushed!" she said. "*Rushed!*"

"Rushed is the word! Now I suppose it' only once in a hundred years that any ma dares to talk to a woman this way; but yo started it and I'm going to finish. After ward you'll hope I hang for it; but it wa your invitation. We'll take me, for example When I came here I liked you as soon as saw you. Then you tried to put me in cage. And I couldn't stand it. I wanted t be normal and natural with you, and yo wouldn't do anything but swap innuendoes How could I feel normal and friendly unde those conditions?

"And after that session on the loggi there were a dozen other instances—an finally that little escapade to-day. . . A man wants to hunt; he doesn't want t be hunted. This kills any friendship be tween us—that goes without saying; but did hope you'd change as time went on, be cause I was so ready to—to be very fond o you. And, instead, you ——"

Miss Standish had come to a standstil and was leaning against the trunk of a lila tree. Her eyes were strikingly wide an her breathing fitful. Something about he caused Whittier to grow uncertain of hi authority to deliver lectures; something about her made him suspend his arraign ment.

"And you . . . you thought . . . I was doing . . . that!"

"Why, what else should I think?" he demanded with a tonal stoutness that was wholly artificial.

Miss Standish shivered.

Power—Strength Endurance

Abundant reserve power—ample strength—great endurance—these are the features that have put GMC Trucks in the front ranks of the world's motor trucks.

Power and to spare—for the hard pull up steep grades—thru sand, mud and snow.

Strength in abundance—to carry the rated load with absolute safety under all road conditions—with surplus strength for emergencies. Each part is built with a factor of safety that assures long life and defers replacement.

Endurance beyond the ordinary—built to stand the hard service motor trucks in daily use must withstand to be profitable, they give years of consistent, dependable service at reasonable operating and maintenance cost.

GMC Trucks are built in all practical sizes—¾ to 5 ton capacity. Six sizes in all—each size better suited than all the rest for a certain class of work.

See the GMC dealer in your locality, or write TRUCK HEADQUARTERS direct.

(Concluded from Page 42)

"Why, that's terrible!" she said. "That's terrible!"

"Now look here," said Whittier; "if you ——"

"Wait!" Miss Standish motioned commandingly. "You thought I was—I was egging you on?"

"Naturally. Yes."

"And—would other men have thought so?"

"Everyone in the house does think so! They thought so before I came."

She wet her lips and turned to him. There were tears in her eyes and in her voice was a trace of huskiness.

"Are you sure of that?"

"I know it!"

Miss Standish dropped to the foot of the tree and sat there gazing out over the blue-black surface of the lake.

Whittier, deeply concerned, attempted twice to speak; but she arrested him minutely.

At length, with a tremulous exhalation, she raised her face to his and gestured.

"Please sit by me," she said, subdued. "I've got to tell you. . . . You make me! . . . You see, in Pittsburgh it isn't as it was in Templeton. . . . I've been away at boarding school for three years. We haven't many friends. I've hardly any at all of my own age. Mother doesn't want young people round, somehow, any more. . . . This is the only real house party I've ever been to. And I love people—I want everybody to love me. When I got here I was scared pink . . . the girls were so lovely, and the men were so big and handsome . . . and I felt out of place. And I didn't know what to say, or—or anything! And then I remembered how mother used to be in Templeton—and I could always imitate her!"

"Good Lord!" exclaimed Whittier.

"And for a day or two everyone was wonderful to me, and I was so happy! And then—the girls stopped being so nice to me; and then you came—and I thought we'd be friends, anyway. And ——"

"Then why," he inquired, "did you treat me the way you did?"

"Treat you the way I did!" Her voice rose slightly. "How did I treat you? I didn't care if you knew I liked you! I thought men wouldn't notice one if one didn't pretend one hadn't any sense! The others wouldn't—they didn't until —— And then I forgave you—after you'd shocked me more than you'll ever realize—because I wanted one friend here who'd understand! . . . I thought you did! . . . And every time I tried to be myself something about you kept pushing me ahead to be mother some more—you'd laugh, or you'd look at me ——"

"Why," said Whittier thickly, "did you upset that canoe? So I'd take you ashore, wasn't it? So I'd ——"

"No! I ——"

"You said you couldn't swim; and then, after ——"

"But I can swim—I can swim just as well as you can! Only when that silly old canoe turned over my foot was caught under a thwart. And when I jerked it out I hit it on the side and hurt it— so I couldn't even paddle with it for a minute. It wasn't sprained or anything, but I couldn't use it for a minute; and then when it didn't hurt so much I was chilled—things got black—and the next I knew you were looking at me so unkindly ——"

Whittier was breathing hard, and his voice was husky.

"Haven't you been—deviling me?"

"No!"

"Then why did you make it seem so? I wanted you to be yourself."

"I've told you," she sobbed. "I didn't know there was any other way to interest—m-men!"

Whittier was getting a new interpretation of some of the sensations that had lately swept him.

"Cecily!" he said. "Please don't cry!"

"I w-wanted you to like me ——"

"Cecily, I do!"

"No; you don't! You couldn't!"

"But I do! And, more than that ——"

"And I w-was afraid of you, t-too! They told m-me you were . . . like that! And I remembered what m-mother said to you once ——"

"Cecily! I'm not like that!"

"B-but they told me ——"

"You mustn't believe them! You've made me fearfully unhappy, Cecily."

"H-how?"

"Because I didn't want to think you talked to every man as you did to me."

"I n-never did before—I don't want to! But I wanted you to ——"

Whittier put his arm round her so gently that she was undisturbed.

"Cecily! Cecily! What are you like?"

Her tear-stained face was so close to his that he could already fancy the warmth and softness of it against his own.

"Why—I'm just a—a girl!" whispered Miss Standish, trembling.

"Are you?" said Whittier. His arm tightened round her. "I'm just—a man! And do you want me to like you? . . . I do! Do you want me to—to love you? . . . I do! And I'm the most despicable man in the whole world; but ——"

"No!" whispered Miss Standish.

"I am! I've thought awful things about you! I've thought mean and cowardly things about you. But now ——"

"Now you are a friend of mine?" she breathed.

"Lover!" said Whittier unsteadily. "And I didn't know it—until just now!"

Slowly they inclined together—the man-killer and the artist among women. Tenderly, delicately, awkwardly their lips met. It was the most inept of kisses, the most timorous, the most blundering. It was ecstatic, but amateurish; for, as a matter of fact, their twin reputations were founded side by side on treacherous sand, and they were both in the class of ingénues.

THE PATH OF GLORY

(Continued from Page 8)

the broilers—read the burial service, and spoke a little about poor Paw. But it wasn't a funeral, nohow. No supper; no condolences; no viewing "the remains"—not even a handshake! Maw didn't even look at her old friends, riding back home between Tom and Luke, with her head fiercely high in the air.

A dull depression settled on Luke's heart. It was all up with the Hayneses now. They had saved Paw from charity with their homemade burial; but what had it availed? They might as well have gone the whole figure. Everybody knew! There wasn't any comeback for a thing like this. They were just nobodies—the social pariahs of the district.

IV

SOMEHOW, after the fashion of other years, they got their meager crops in—turnips, potatoes and Hubbard squashes put up in the vegetable cellar; oats cradled; corn husked; the buckwheat ready for the mill; even Tom's crooked furrows for the spring sowings made. Somehow, Maw helping like a man and Tom obeying like a docile child, they took toll of their summer. And suddenly September was at their heels—and then the equinox.

It seemed to Luke that it had never rained so much before. Brown vapor rose eternally from the valley flats; the hilltops lay lost entirely in clotted murk. By periods hard rains, like showers of steel darts, beat on the soaking earth. Gypsy gales of wind went ricocheting among the farm buildings, setting the shingles to snapping and singing; the windows moaned and rattled. The sourest weather the boy could remember!

And on the worst day of all they got the news. Out of the mail box in the lane Luke got it—going down under an old rubber cape in a steady blinding pour. It got all damp—the letter, foreign postmark, stamp and all—by the time he put it into Maw's hand.

It was a double letter—or so one judged, first opening it. There was another inside, complete, sealed, and addressed in Nat's hand; but one must read the paper inclosed with it first—that was obvious. It was just a strip, queer, official looking, with a few lines typed upon it and a black heading that sprang out at one strangely. They read it together—or tried to. At first they got no sense from it. Paris—from clear off in France—and then the words below—and Maw's name at the top, just like the address on the newspaper:

MRS. JERE HAYNES,
Stony Brook, New York.

(Continued on Page 47)

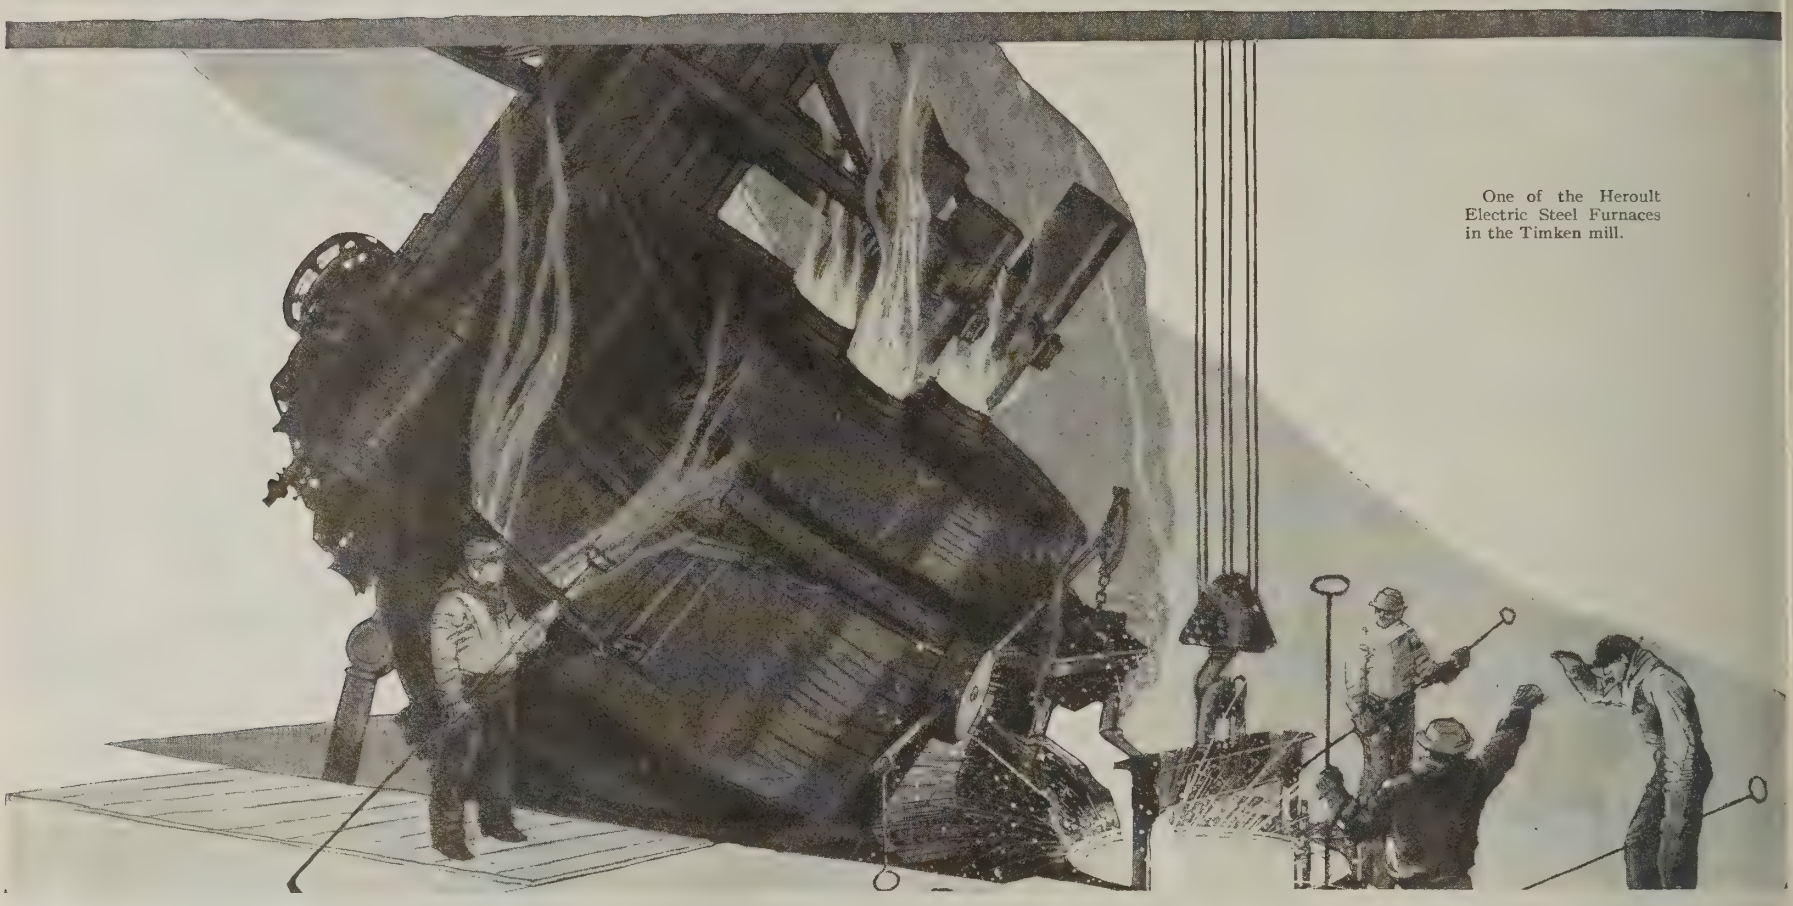
TIMKEN BEARINGS



One of the Heroult Electric Steel Furnaces in the Timken mill.

Metal and Mettle

The mettle of Timken Bearings has been tried and found true through years of usage at points of severest service in the majority of high-grade motor-cars.

The metal from which Timken Bearings are made has always been subjected to the most rigid tests to insure Timken quality.

The different processes of manufacture have also been supervised with the most thorough inspection—the world has been searched for the most accurate automatic machinery—machines designed by our own engineers have been used to make Timken Bearings still more perfect—and the steel tube from which the cups and cones are turned has been drawn in the Timken Tube Mill.

All of this has made possible a control over quality that has resulted in the production of the finest bearings that money can buy for your motor-car.

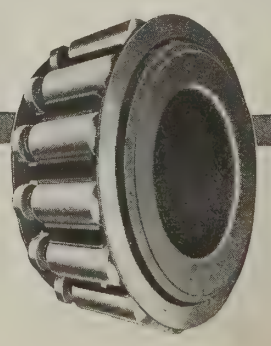
But even this did not completely satisfy Timken standards.

In order to make this control of quality include the actual production of raw material the Timken Steel Mill has been built, and equipped with Heroult Electric Furnaces—the most modern and efficient method of making Timken quality steel—a steel of extraordinary refinement.

Timken Bearings have always been known for their finer mettle—and now the use of a finer metal has added a still greater perfection.

In view of the long life and mileage expected of motor-cars today this standard of quality, even though it does cost more, must be considered as the one dependable assurance of efficient motor-car service.

THE TIMKEN ROLLER BEARING COMPANY
Canton, Ohio



(Continued from Page 45)

It was for Maw all right. Then quite uddenly the words came clear through the dur:

IRS. JERE HAYNES,
Stony Brook, New York.

Dear Madam: We regret to inform you hat the official *communiqué* for September ixth contains the tidings that the writer of he inclosed letter, Nathanial Haynes, of tony Brook, New York, U. S. A., was illed while on duty as an ambulance driver n the Sector of Verdun, and has been buried n that region. Further details will follow.

The American Ambulance, Paris.

Even when she realized, Maw never ried out. She sat wetting her lips oddly, ooking at the words that had come like vil birds across the wide spaces of earth. t was Luke who remembered the other etter:

"*My dear kind folks—Father Mother and Brothers:* I guess I dare call you that when get far enough away from you. Perhaps ou won't mind when I tell you my news.

"Well we came over from England last Thursday and struck into our contract ere. Things was going pretty good; but ou might guess yours truly couldn't stand he dead end of things. I bet Maw's uessed already. Well sir it's that roving treak in me I guess. Never could stick to othing steady. It got me bad when I got ere anyhow.

"To cut it short I throwed up my job with he firm yesterday and have volunteered as n Ambulance driver. Nothing but glory; ut I'm going to like it fine! They're short-anded anyhow and a fellow likes to help hat he can. Wish I could send a little oney; but it took all I had to outfit me. Had o cough up eight bucks for a suit of under-lothes. What do you know about that?

"You can write me in care of the Ambu-ance Paris.

"Now Maw don't worry! I'm not going o fight. I did try to get into the Foreign egion but had no chance. I'm all right. Think of me as a nice little Red Cross boy nd the Wise Willie on the gas wagon. And on't I have the hot stuff to make old uke's eyes pop out! Hope Paw's legs are etter. And Maw have a kiss on me. Iebby you folks think I don't apreciate ou. If I was any good at writing I'd tell ou different.

"Your Son and Brother
"NAT HAYNES."

The worst of it all was about Maw's not rying—just sitting there staring at the re, or where the fire had been when the ood had died out of neglect. It's not in eason that a woman shouldn't cry, Luke elt. He tried some words of comfort:

"He's safe, anyhow, Maw—'member hat! That's a whole lot too. Didn't always now that, times he was rollin' round so ver here. You worried a whole lot about im, you know."

But Maw didn't answer. She seldom poke at all—moved about as little as possi-le. When she had put out food for him nd Tom she always went back to her cor-er and stared into the fire. Luke had to ring a plate to her and coax her to eat. ven the day Uncle Clem and Aunt Mollie ame up she did not notice them. Only nce she spoke of Nat to Luke.

"You loved him the most, didn't ye, Maw?" he asked timidly one dreary eve-ing.

She answered in a sort of dull surprise.

"Why, lad, he was my first!" she said; nd after a bit, as though to herself: "His ead was that round and shiny when he as a little fellow it was like to a little ound apple. I mind, before he ever come, bought me a cap fur him over to Rock-lle, with a blue bow onto it. He looked wful smart an' pretty in it."

Sometimes in the night Luke, sleeping and thinking long, lay and listened for ossible sounds from Maw's room. Perhaps he cried in the nights. If she only would—would help break the tension for them l. But he never heard anything but the in—steadily, miserably beating on the dden shingles overhead.

It was only Luke who watched the mail ox now. One morning his journey to it ore fruit. No sting any longer; no fear in e thick foreign letter he carried.

"It'll tell ye all's to it, I bet!" he said gerly.

Maw seemed scarcely interested. It was Luke who broke the seal and read it aloud.

It was written from the Ambulance Headquarters, in Paris—written by a man of rare insight, of fine and delicate perception. All that Nat's family might have wished to learn he sought to tell them. He had himself investigated Nat's story and he gave of it all fully and freely. He spoke in praise of Nat; of his friendly associations with the Ambulance men; of his good nature and cheerful spirits; his popularity and ready willingness to serve. People, one felt, had loved Nat over there.

He wrote of the preliminary duties in Paris, the preparations—of Nat's final going to join one of the three sections working round Verdun. It wasn't easy work that waited for Nat there. It was a stiff contract guiding the little ambulance over the shell-rutted roads, with deftness and precision, to those distant dressing stations where the hurt soldiers waited for him. It was a picture that thrilled Luke and made his pulses tingle—the blackness of the nights; the rumble of moving artillery and troops; the flash of starlights; the distant crackling of rifle fire; the steady thunder of heavy guns.

And the shells! It was mighty close they swept to a fellow, whistling, shrieking, low overhead; falling to tear out great gouges in the earth. It was enough to wreck one's nerve utterly; but the fellows that drove were all nerve. Just part of the day's work to them! And that was Nat too. Nat hadn't known what fear was—he'd eaten it alive. The adventurer in him had gone out to meet it joyously.

Nat was only on his third trip when tragedy had come to him. He and a companion were seeking a dressing station in the cellar of a little ruined house in an obscure French village, when a shell had burst right at their feet, so to speak. That was all. Simple as that. Nat was dead instantly and his companion—oh, Nat was really the lucky one. . . .

Luke had to stop for a little. One couldn't go on at once before a thing like that. . . . When he did, it was to leave behind the darkness, the shell-torn houses, the bruised earth, the racked and mutilated humans. . . . Reading on, it was like emerging from Hades into a great Peace.

"I wish it were possible to convey to you, my dear Mrs. Haynes, some impression of the moving and beautiful ceremony with which your son was laid to rest on the morning of September ninth, in the little village of Aucourt. Imagine a warm, sunny, late-summer day, and a village street sloping up a hillside, filled with soldiers in faded, dusty blue, and American Ambulance drivers in khaki.

"In the open door of one of the houses, the front of which was covered with the tricolor of France, the coffin was placed, wrapped in a great French flag, and covered with flowers and wreaths sent by the various American sections. At the head a small American flag was placed, on which was pinned the *Croix de Guerre*—a gold star on a red-and-green ribbon—a tribute from the army general to the boy who gave his life for France.

"A priest, with six soldier attendants, led the procession from the courtyard. Six more soldiers bore the coffin, the Americans and representatives of the army branches following, bearing wreaths. After these came the General of the Army Corps, with a group of officers, and a detachment of soldiers with arms reversed. At the foot of the hill a second detachment fell in and joined them. . . .

"The scene was unforgetable, beautiful and impressive. In the little church a choir of soldiers sang and a soldier-priest played the organ, while the Chaplain of the Army Division held the burial service. The chaplain's sermon I have asked to have reproduced and sent to you, together with other effects of your son's. . . .

"The chaplain spoke most beautifully and at length, telling very tenderly what it meant to the French people that an American should give his life while trying to help them in the hour of their extremity. The name of this chaplain is Henri Deligny, *Aumônier Militaire,* Ambulance 16-27, Sector 112; and he was assisted by the permanent curé of the little church, Abbé Blondelle, who wishes me to assure you that he will guard most reverently your son's grave, and be there to receive you when the day may come that you shall wish to visit it.

"After leaving the church the procession marched to the military cemetery, where your son's body was laid beside the hundreds of others who have died for France. Both the lieutenant and general here paid tributes of appreciation, which I will have sent to you. The general, various officers of the army and ambulance assisted in the last rites. . . .

"I have brought back and will send you the *Croix de Guerre.* . . ."

Oh, but you couldn't read any farther—for the great lump of pride in your throat, the thick mist of tears in your eyes. A sob escaped the boy. He looked over at Maw and saw the miraculous. Maw was awake at last and crying—a new-fledged pulsating Maw emerged from the brown chrysalis of her sorrows.

"Oh, Maw! . . . Our Nat! . . . All that—that—funeral! . . . Some funeral, Maw!" The boy choked.

"My Nat!" Maw was saying. "Buried like a king! . . . Like a King o' France!" She clasped her hands tightly.

It was like some beautiful fantasy. A Haynes—the despised and rejected of earth—borne to his last home with such pomp and ceremony!

"They never was nothin' like it heard of round here, Maw. . . . If folks could only know ——"

She lifted her head as at a challenge.

"Why, they're goin' to know, Luke—for I'm goin' to tell 'em. Folks that have talked behind Nat's back—folks that have pitied us—when they see this—like a King o' France!" she repeated softly. "I'm goin' down to town to-day, Luke."

v

IT WAS dusk when Maw came back: dusk of a clear day, with a rosy sunset off behind the hills. Luke opened the door for her and he saw that she had brought some of the sun along in with her—its colors in her worn face; its peace in her eyes. She was the same, yet someone new. Even the tilt of her crazy old bonnet could not detract from a strange new dignity that clothed her.

She did not speak at once, going over to warm her gloveless hands at the stove, and staring up at the Grampaw Peel plate; then:

"When it comes—my Nat's medal—it's goin' to set right up here, 'stead o' this old thing—an' the letters and sermons in my shell box I got on my weddin' trip. . . . Lawyer Ritchie told me to-day what it means, the name o' that medal—Cross o' War! It's a decoration fur soldiers and earned by bravery."

She paused; then broke out suddenly:

"I b'en a fool, settin' here grievin'. My Nat was a hero, an' I never knew it! . . . A hero's folks hadn't ought to cry. It's a thing too big for that. Come here, you little Luke! Maw hain't b'en real good to you an' Tommy lately. You're gittin' all white an' peaked. Too much frettin' 'bout Nat. You an' me's got to stop it, I tell you. Folks round here ain't goin' to let us fret——"

"Folks! Maw!" The words burst from the boy's heart. "Did they find out? . . . You showed it to 'em? Uncle Clem ——"

Maw sniffed.

"Clem! Oh, he was real took aback; but he don't count in on this—not big enough." Then triumph hastened her story: "It's the big ones that's mixin' into this, Lukey. Seems like they'd heard somethin' a spell back in one o' the county papers, an' we didn't know. . . . Anyhow, when I first got into town I met Judge Geer. He had me right into his office in Masonic Hall, 'fore I could git my breath almost—had me settin' in his private room, an' sent his stenugifer out fur a cup o' cawfee fur me. He had me give him the letter to read, an' asked dare he make some copies. The stenugifer took 'em like lightnin', right there.

"The judge had a hard time of it, coughin' an' blowin' over that letter. He's goin' to send some copies to the New York papers right off. He took me acrost the hall and interduced me to Lawyer Ritchie. Lawyer Ritchie, he read the letter too. 'A hero!' they called Nat; an' me 'A hero's mother!'

"'We ain't goin' to forgit this, Mis' Haynes,' Lawyer Ritchie said. 'This here whole town's proud o' your Nat.' . . . My land! I couldn't sense it all! . . . Me, Delia Haynes, gettin' her hand wrung, 'count o' anything Nat'd b'en doin', by the big bugs round town! Judge Geer, he fetched 'em all out o' their offices—Slade, the supervisor, and Fuller Brothers, and

48 Years of Good Service

In 1869 Yale Products were being made by thirty employees; in 1917 six thousand employees are engaged in the American plant alone.

Appreciation of Yale quality and service is the cause of this growth, an appreciation which for nearly half a century has been expressed by the demand for Yale Products.

The name "Yale" is accepted in every civilized country as a reliable guarantee of perfect and enduring service.

Sturdy Supports of Traffic

Tires must be all that—to do their duty to the limit.

For traffic—satisfactory traffic—demands getting from somewhere to elsewhere with definite consistency.

Tires—the sort *you* want at least—must be built to bear the full burden of motor passenger traffic—must be dependable, durable, effective.

And that—just that, plus—is what we can honestly say of *United States Tires*.

They are dependable, durable, effective.

So completely dependable, so utterly durable, so thoroughly effective, that they—all of the Five—fully deserve to be called the *sturdy supports of traffic*.

Whatever of build, of raw material, of "know-how" and "do," is needed to produce *your* kind of dependability, durability, and effectiveness in tires, is put and packed tight into *United States Tires*.

Purpose and performance are not wanting in any of the Five—not even an iota.

Not our word alone on this—but the word of every motorist who has used *United States Tires*.

And what that word *is* may be determined by sales—by the persistency with which more and more motorists spend, and continue to spend, their carefully considered money on *United States Tires*.

Dwell on this big fact:

—the sales increases of United States Tires during the last year greatly exceeded the increase in the number of automobiles for the same time.

That is the important signpost pointing the way.

It points the way for *you* who want dependable, durable, effective, tire service.

The five types

old Sumner Pratt—an' all! An' Ben Watson asked could he have a copy to put in the Biweekly. It's goin' to take the whole front page, with an editor'al inside. He said the Rockville Center News'd most likely copy it too.

"I was like in a dream! . . . All I'd aimed to do was to let some o' them folks know that those people acrost the ocean had thought well of our Nat, an' here they was breakin' their necks to git in on it too! . . . Goin' down the street they was more of it. Lu Shiffer run right out o' the hardware store an' left the nails he was weighin' to shake hands with me; and Jem Brand came; and Lan'lord Peters come out o' the Valley House an' spoke to me. . . . I felt awful public. An' Jim Beckonridge come out of the Emporium to shake too.

"'I ain't seen you down in town fur quite a spell,' he sez. 'How are you all up there to the farm? . . . Want to say I'm real proud o' Nat—a boy from round here!' he sez. . . . Old Beckonridge, that was always wantin' to arrest Nat fur takin' his chestnuts or foolin' down in the store!

"I just let 'em drift—seein' they had it all fixed fur me. All along the street they come an' spoke to me. Mame Parmlee, that ain't b'en able to see me fur three years, left off sweepin' her porch an' come down an' shook my hand, an' cried about it; an' that stylish Mis' Willowby, that's president o' the Civil Club, followed me all over the Square and asked dare she read a copy o' the letter an' tell about Nat to the schoolhouse next Wednesday.

"It seems Judge Geer had gone out an' spread it broadcast that I was in town, for they followed me everywhere. Next thing I run into Reverend Kearns and Reverend Higby, huntin' me hard. They both had one idee.

"'We wanted to have a memor'al service to the churches 'bout Nat,' they sez; 'then it come over us that it was the town's affair really. So, Mis' Haynes,' they sez, 'we want you should share this thing with us. You mustn't be selfish. You gotta give us a little part in it too. Are you willin'?'

"It knocked me dumb—me givin' anybody anything! Well, to finish, they's to be a big public service in the Town Hall on Friday. They'll have it all flags—French ones, an' our'n too. An' the ministers'll preach; an' Judge Geer'll tell Nat's story an' speak about him; an' the Ladies' Guild'll serve a big hot supper, because they'll probably be hunderds out; an' they'll read the letters an' have prayers for our Nat!" She faltered a moment. "An' we'll be there too—you an' me an' Tom—settin' in the seat o' honor, right up front! . . . It'll be the greatest funeral service this town's ever seen, Luke."

Maw's face was crimson with emotion.

"An' Uncle Clem an' Aunt Mollie ——"

"Oh—them!" Maw came back to earth and smiled tolerantly. "They was real sharp to be in it too. Mollie took me into the parlor an' fetched a glass o' wine to stren'then me up." Maw mused a moment; then spoke with a touch of patronage: "I'm goin' to knit Clem some new socks this winter. He says he can't git none like the oldtime wool ones; an' the market floors are cold. Clem's done what he could, an' I'll be real glad to help him out. . . . Oh, I asked 'em to come an' set with us at the service—S'norta too. I allowed we could manage to spare 'em the room."

She dreamed again, launched on a sea of glory; then roused to her final triumph:

"But that's only part, Luke. The best's comin'. Jim Beckonridge wants you to go down an' see him. 'That lame boy o' yours,' he sez, 'was in here a spell ago with some notion about raisin' bees an' buckwheat together, an' gittin' a city market fur buckwheat honey. Slipped my mind,' he sez, 'till I heard what Nat'd done; an' then it all come back. City party this summer had the same notion an' was lookin' out for a likely place to invest some cash in. You send that boy down an' we'll talk it over. Shouldn't wonder if he'd get some backin'. I calculate I might help him, myself,' he sez; 'I b'en thinkin' of it too.' . . . Don't seem like it could hardly be true."

"Oh, Maw!" Luke's pulses were leaping wildly. Buckwheat honey was the dear dream of many a long hour's wistful meditation. "If we could—I could study up about it an' send away fur printed books. We could make some money ——"

But Maw had not yet finished.

"An' they's some about Tom, too, Luke! That young Doctor Wells down there—he's on'y b'en there a year—he come right up an' spoke to me, in the midst of several. 'I want to talk about your boy,' he sez. 'I've wanted to fur some time, but didn't like to make bold; but now seem's as good a time as any.' 'They're all talkin' of him,' I sez. 'Well,' he sez, 'I don't mean the dead, but the livin' boy—the one folks calls Big Tom. I've heard his story, an' I got a good look over him down here in the store a while ago. Woman'—he sez it jest like that—'if that big boy o' your'n had a little operation he'd be as good as any.'

"I answered him patient, an' told him what ailed Tom an' why he couldn't be no different—jest what old Doc Andrews told us—that they was a little piece o' bone druv deep into his skull that time he fell. He spoke real vi'lent then. 'But—my Lord!—woman,' he sez, 'that's what I'm talkin' about. If we jack up that bone'—trepannin', he called it too—'his brains'd git to be like anybody else's.' Told me he wants fur us to let him look after it. Won't cost anything unless we want. They's a hospital to Rockville would tend to it, an' glad to—when we git ready. . . . My poor Tommy! . . . Don't seem's if it could be true."

Her face softened, and she broke up suddenly.

"I got good boys all round," she wept. "I always said it; an' now folks know."

Luke lay on the old settle, thinking. In the air-tight stove the hickory fagots crackled, with jeweled color-play. On the other side Tom sat whittling silently—Tom, who would presently whittle no more, but rise to be a man.

It was incredible! Incredible that the old place might some day shake off its shackles of poverty and be organized for a decent struggle with life! Incredible that Maw—stepping briskly about getting the supper—should be singing!

Already the room seemed filled and warmed with the odors of prosperity and self-respect. Maw had put a red geranium on the table; there was the crispy fragrance of frying salt pork and soda biscuit in the air.

These the Hayneses! These people, with hope and self-esteem once more in their hearts! These people, with a new, a unique place in the community's respect! It was all like a beautiful miracle; and, thinking of its maker, Luke choked suddenly and gulped.

There was a moist spot on the old Mexican hairless right under his eyes; but it had been made by tears of pride, not sorrow. Maw was right! A hero's folks hadn't ought to cry. And he wouldn't. Nat was better off than ever—safe and honored. He had trod the path of glory. A line out of the boy's old Reader sprang to his mind: "The paths of glory lead but to the grave." Oh, but it wasn't true! Nat's path led to life—to hope; to help for all of them, for Nat's own. In his death, if not in his life, he had rehabilitated them. And Nat—who loved them—would look down and call it good.

In spite of himself the boy sobbed, visioning his brother's face.

"Oh, Nat!" he whispered. "I knew you'd do it! I always said you'd do somethin' big fur us all."

BUG HUNTERS OF INDUSTRY

(Continued from Page 20)

his telephone was out of order; and the engineers examined it, but were unable to find out what was wrong. While they were investigating, in walked a regular repair man from their own organization; and he had the instrument working in two minutes.

"Now I wonder why those gentlemen couldn't do that," speculated the restaurant keeper. "They're engineers, you know."

"Aw, they're t'eorists—t'eorists!" was the repair man's dry comment.

The trouble shooter's work brings him in contact with the human equation so often that he learns to study it for a key to his technical difficulties. While he is apparently investigating the apparatus his attention may be on the customer.

A certain signal drop in a telephone exchange got into the way of falling without visible cause, for when the operator answered she would find nobody at the other end of the line. A trouble man was sent to

'Ever-Ready' $1
with 12 Radio Blades

We frankly admit that the 'Ever-Ready' outfit at $1.00 with its twelve marvelous "Radio" Blades is the best Safety Razor at any price. Over five million enthusiastic users prove it.

Buy an 'Ever-Ready' today. Try it. If you do not agree that it is the best razor you ever used, the dealer will cheerfully refund your dollar.

Stores everywhere sell the Ever-Ready complete with 12 Radio Blades for $1.00

Extra "Radio" Blades 6 for 30c.

BUY FOR SERVICE

HIGH prices are teaching people the meaning of value. A few years ago it wasn't so serious a matter if you did buy household rubber goods that soon gave out.

Today it is decidedly worth while to choose rubber goods that will give the longest possible service—

Miller Standard
RUBBER GOODS

A hot water bottle is a necessity in every home. The Miller Hot Water Bottle is seamless, one solid piece of rubber, with the exclusive patented C-Kure-Nek in which the metal thimble is imbedded in the solid rubber before vulcanizing. Most hot water bottles eventually leak at the neck—a Miller bottle cannot leak.

Keep your hands free from the roughness and stains of housework—wear Miller Household Gloves—the kind that really last.

If there is a baby in your home you need Miller Sanitate Diapers both for baby's comfort and for mother's convenience.

Miller Nursing Nipples are non-collapsible. The flow of milk is never too much nor too little. Miller Nipples prevent colic and other feeding troubles.

All Miller Standard Rubber Goods are sold by Miller authorized agencies which display the Miller Agency Sign. Look for the sign and ask for Miller goods by name.

THE MILLER RUBBER COMPANY
AKRON, OHIO, U. S. A.

THE EASY WAY TO
GET RID OF CORNS

A Few Drops of FREEZONE Loosen Corns or Calluses So They Lift Off.

HERE is a mighty simple and easy way to get rid of your corns and calluses. Apply a few drops of Freezone directly upon a tender aching corn or a callus. It dries immediately. The corn-pain is relieved. The corn or callus then begins to dry up and shortly it can be peeled off with fingers.

FREEZONE

doesn't irritate or inflame the surrounding skin or flesh. You feel no pain or soreness while applying Freezone or afterwards. You'll like it immensely. Women who wear high-heeled footwear will appreciate Freezone. Keep a tiny bottle on your dresser and never let your corns ache twice.

GENUINE Freezone is only sold in these small bottles with glass rod applier. Each bottle is packed in a round wood case bearing the name

Price 35 cents per bottle

the subscriber's house to find out what was wrong. The subscriber seemed a thrifty sort of man, and a little quiet investigation disclosed that he had hit on the scheme of connecting his doorbell to the telephone batteries to use free current. Every time the doorbell was rung the signal drop fell at Central!

For a good many years the trouble shooter was regarded as a bright mechanic, to be sent out when anything in the shape of apparatus broke down or acted up—a fellow who could be depended upon to get things going again. But now, happily, the public-service corporations have come to see that he has a much wider field of usefulness, both in the mass and individually.

In the mass they are organizing him for quick mobilization to meet general emergencies.

When a city burns down, like Baltimore or San Francisco, or a sleet storm snaps off half the poles between New York and Philadelphia, the way men must be massed for reconstruction calls for fine organization. Nobody knows what will happen next in this line, or how many men must be brought together, or where they will be sent, or how long they will stay.

Three days after the Baltimore fire a trouble chief in one Eastern city was told to go down and see what he could do to help the boys rebuild the plant. He took a clean shirt and a couple of collars in a package, expecting to stay a couple of nights—and stayed a year!

Preparation for Emergencies

Not long ago a large electric-light company had an emergency assembly test of its trouble forces, comprising more than a hundred construction men, chauffeurs, foremen and officials. An alarm was sent out at midnight, without warning—"Serious trouble at the main plant!"

When the men arrived they found a lunch waiting, instead of broken-down equipment. But close records were kept of the distance each man traveled, the time he took, the difficulties of reaching him at unearthly hours, his facilities for getting from his home to the trouble.

Numerous little faults of organization were disclosed by this study. One of the most important men had no telephone in his house, and a telephone was installed by the company. A dozen employees had moved lately, and the company did not have their new addresses. It was found that many of the men could be picked up by company automobiles, but that time was lost in finding street numbers; so each man on the crew was told to install a porch light at his house, and switch it on when called for an emergency, so that company chauffeurs could spot him easily in a dark street and bring him out with the horn. It was also found that emergency men could be grouped according to the localities where they lived, each group being under a foreman who would help get them together.

In organizing the emergency man individually, corporations now seek to develop his possibilities as a creator of good will. Originally he was regarded as a mechanical fixer, a fellow who could maintain service; but to-day they realize that he can be an explainer and a maker of favorable public opinion.

One of the customers of a public-service company had difficulty with a certain piece of apparatus that had been installed for him. Emergency men were sent to make repairs several times, but somehow never cleared up the trouble satisfactorily. A hurry call came from this customer one morning when every man in the repair department was away. The only chap who could be sent was Dick, an apprentice.

"You hurry down there, Dick," said the manager, "and look wise; and keep that customer satisfied until Jim can get back from Allenville. Unscrew some of the oil cups or strip down the bearings—appear to be doing something, you know. Just keep him happy until we can get a man on the job."

Dick did more than he was told. He took the machine down completely, and went over it bit by bit with the fresh, curious eye of the learner. And he found not only one thing that was wrong, but half a dozen. No one in itself amounted to much; but all together they threw the machine out. Dick smoothed one piece down with a file and adjusted another with a screwdriver. Then he put everything together; and the thing ran, and kept on running.

Now for several weeks the company's salesmen had been after that customer for a big contract. Competitors were after it too; and this unhappy experience with the apparatus already installed had raised serious obstacles. Dick's success in clearing the trouble pleased the customer so much that he promised to place his new contract with the company if Dick could profit in some way; and on that basis the order was landed.

If the company looks upon the trouble man simply as a mechanic, to set technical matters right when they go wrong, he will regard himself in that light, too, make his repairs, depart with his tool kit and leave behind him all sorts of potentialities for more trouble. When he is raised to the rank of an investigator and explainer, however, he can become very useful in forestalling trouble and building confidence.

What looks like a trivial repair job may, when studied intelligently, with due regard for the human factors, show up serious errors in the company's methods.

A large motor was sold for use in a factory power plant. Several days after it had gone into service it burned out. The repair man sent to get it going again found that it was wired wrong. After he had got the confidence of the engineer at the factory, the latter opened up and told him a significant story.

When the motor came, he said, he had asked the company for a blueprint showing how it was wired. This had been refused. The company said that was "confidential information." So he had experimented with the wiring and damaged the motor. Such blueprints were not confidential information at all. Somebody in the company with an overdeveloped bump of caution in the matter of business secrets had succeeded in locking up that sort of information with things that were really confidential.

The Big End of His Job

The trouble man's investigation and report led to blueprints' being furnished with every piece of machinery sold, and thus most of the chances for trouble were eliminated and customers were given greater satisfaction all round.

Another persistent and elusive kind of trouble is that caused by carelessness and ignorance on the part of employees of concerns for which equipment is installed.

Present-day elevators, in office buildings, hotels, and so on, have most of their equipment overhead. Elevator men get into the careless habit of trusting to the automatic safety stop to check the car at the top floor, instead of using the controller in the car. If this stop fails the car bangs into the overhead motors and damage is done.

The trouble man called out for that kind of repair work has a thoroughly human job on his hands, involving better organization of the elevator force, better instruction of operators, better supervision of equipment, and so on. He can repair the actual damage and, if need be, catch the careless elevator man; but only a general improvement through technical instruction gives a real remedy.

Year by year the world adds to the complexity of equipment placed where it must run with little direct supervision, and where it is likely to be monkeyed with and misunderstood.

The trouble shooter keeps this equipment in service. He started as a mechanical fixer when things went wrong. This led him to take the human equation into his reckoning and become a great deductive sleuth. And now he is growing into an explainer and teacher; for prevention, not cure, is the really big end of his job.

Editor's Note—This is the second of two articles by Mr. Collins.

The statements in this advertisement referring to performances of Hudson Super-Sixes in certified trials and in competition are approved as to facts.
Richard Kennerdell
Chairman Contest Board American Automobile Association.

The Long-Life Record
HUDSON SUPER-SIX

Will Hold First Place Forever We Believe

One year of the Super-Six seems to mark it the permanent leading type. Many other sensations had their day and departed. But the Super-Six gains prestige every month. And it comes too close to a perfect motor to ever be far excelled.

For your own sake, don't get a wrong conception of the Hudson Super-Six.

It is a Six, but not like other Sixes. This basic invention, controlled by our patents, added 80 per cent to our six-type efficiency.

It does, in a better, simpler way, what we attempted in our Eights and Twelves. For we built those types for testing, as did others, when the seeming trend was that way.

This Problem Solved

The Super-Six gets its wondrous power, speed and endurance by minimizing friction.

That's what every type attempted. That's why men once thought that V-types would supersede the Six. Vibration causes friction, and friction causes wear. And the type which brings vibration lowest will hold first place forever, just as now.

The Super-Six is that type. Every block test proves it. And a hundred road records confirm it. It now holds every worth-while record of endurance and speed for a stock car.

Another Possible Error

Some men still tell Hudson dealers that our records show qualities not wanted. They cannot use such speed, such power. "And other cars are good-enough hill-climbers."

But you must presume we know that.

We have not increased our motor size. We are using a small, light Six—exactly the size we used before this invention. And a size now very common.

The Super-Six principle gets from that size all of this extra efficiency. It does it by saving friction. Would you have less speed, less power in a motor, because of more friction and wear?

To Double Endurance

The Super-Six was invented to double endurance. That it makes the car a record-breaker is simply incidental.

The records we value most are long distance records. Under sanction of the Contest Board of the American Automobile Association the Super-Six broke the 24-hour stock chassis record by 328 miles. And in the famous non-stock Pike's Peak Hill Climb, sanctioned by the Contest Board of the American Automobile Association, a Super-Six Special made the best time through endurance.

A Super-Six Touring Car twice broke the Transcontinental record in one continuous 7,000-mile round trip. All Super-Six speed records have been made because of endurance.

It Offers You This

It offers you a car which, by a hundred records, is the most capable car in the world.

It offers you endurance, far beyond any previous attainment.

It offers you pride of ownership—the feeling that you rule the road. The knowledge that yours is the greatest car in performance that's built.

It offers you beauty and luxury which make the car look its supremacy.

It offers you, in our latest models, a wonderful gasoline saver.

Will you want a car which offers less when you buy a car to keep?

"I have found your paste, Senreco to be an invaluable agent in the treatment of bleeding gums."

One tube of Senreco tightens the teeth and improves the color of the gums—a patient's experience (name on request).

"My teeth were in a very bad condition when I started to use Senreco. Now, I notice that they have tightened and the gums are almost their natural color again, and I have only used one tube."

Look first at your gums—not your teeth

The most important dental discovery in a century

MORE teeth are lost through loosening of the tissues that hold the teeth in place, than through decay.

This dental discovery is important *to you.*

Dentists say, the reason for this condition is that most people look for decay of their teeth and never notice the condition of their gums.

Your gums should be firm and hard. They should be a healthy pink. If they are red or dark and discolored, if they are soft, if they form loose, ragged pockets for the teeth, *show them to your dentist.* If your gums bleed when you brush them, if they are sensitive, *these are danger signals.*

Why dentists prescribe Senreco

Dentists will tell you that after they have treated your gums, you yourself must continue to treat them at home. That is why Senreco Tooth Paste was formulated.

Senreco is a dentist's formula. It is more than a cleanser. It is a tooth paste that dentists prescribe for toning up the condition of the gums. It contains precisely the remedial and preventive agents that dentists themselves use at the chair, for soft, spongy, bleeding gums.

Twice a day, at the same time that you cleanse your teeth, you will, in using Senreco, be applying medicinal agents to your gums. *Within a few days*, you will notice the improvement in your gums.

Senreco gives a wholesome, cleanly feeling

Senreco is a wonderful cleanser. Once the tartar has been removed from your teeth, Senreco will keep your teeth free from tartar. This is because Senreco directly attacks the film that causes tartar. You will enjoy the cleanly feeling Senreco gives to the mouth.

Senreco costs only 25c the large tube, although it is probably the most expensive tooth paste prepared. Get a tube at your druggist's or toilet counter today. If your dealer cannot supply you, send 25c direct to "Senreco," Cincinnati, Ohio. Enjoy the healthy, cleanly feeling Senreco gives to the teeth and gums. Notice how brilliantly white Senreco makes your teeth.

Send 6c for a liberal sample

For six cents we will send you a sample tube of Senreco; enough to provide you with treatments twice daily for one week. Simply fill in your name and address on the card below, and mail it to us with six cents in stamps or coin. Address Senreco, 1402 Masonic Temple, Cincinnati, Ohio.

Experimental Laboratory, Covington, Ky.

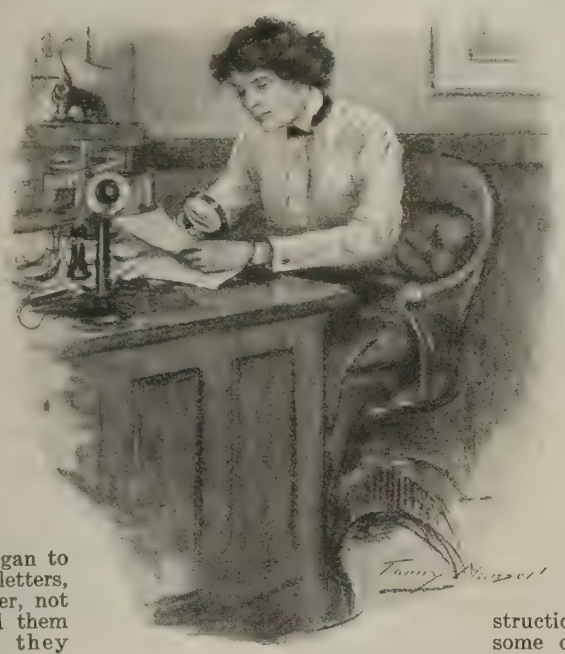
Making Business Men

By ANNE SHANNON MONROE

III

ILLUSTRATED BY FANNY MUNSELL

I FOUND my desk on Monday morning literally covered with letters of inquiry for the Fifty Principles. I never loved a little key number as I did the one we had used on these advertisements. I sank into my chair and stared, afraid to believe, afraid I was under some horrible delusion. Then suddenly I could not stand the suspense and began to tear open the letters, one after another, not waiting to read them through. Yes, they were requests for the Fifty Principles catalogue; and they were on good commercial stationery, and bore the signatures of managers, secretaries, vice-presidents and presidents. They were on the letterheads of merchants and important business men.



I Was Convinced That He Was Right

I could have screamed for joy. Tears of relief began to roll down my face, and between letters I mopped them off with the back of my hand. I could scarcely see to read, but I could tell that the letters came from the men we wanted—ambitious, responsible, serious-minded business men. I cried and I laughed till William came, wondering.

"Close the doors, William; close them quick and come help me. They'll think I'm crazy out there, and it's just good news."

William closed the doors and took up the task.

We worked on, my fingers trembling from excitement, William as steady as a coal heaver. When we had opened the last letter I counted the envelopes—there were three hundred and ninety-seven. I wrapped them in a sheet torn from the morning paper.

"Keep an eye on the office, William," I said. "I'll be back in an hour, I think; and if any advertising men come, tell them to wait."

I went out, hailed a taxicab, and ordered the driver to put on all speed. At St. Mark's the nurse, who was accustomed to my daily visits, nodded as I asked whether I might go at once to Mr. Bittner's room.

"He was rational this morning," she said.

I prayed that he might still be so. I wasn't in the least sure that doctors and nurses would approve of what I was about to do, but I believed I was right and I meant to go ahead.

Good News for Bittner

"You're a long time showin' up," was his peevish greeting. It was the first time he had known me since the day he had summoned me to him and given his orders.

"It's the Fifty Principles," I said breathlessly, for I couldn't know how long he would be rational. "Inquiries are coming in so fast that I can't get a moment. See here, this is just one mail! And I must run right back, for it takes us all every minute." I opened the package and let the envelopes fall about him on the bed. He tried to sit up.

"Please, Mr. Bittner, don't move," I cried, pushing him back. "You must get well quick! I can manage for a while, but I need you the worst way. And please do whatever the nurse says, and keep very still. I'll bring you news every day."

On the way out I whispered to the nurse: "Let him have the envelopes about him; it'll do him more good than anything else—it's the thing that's on his mind."

She nodded assent and I left.

Every additional mail brought more inquiries. The peculiar thing had happened that does happen once in a great while with a new commodity: the thing we were offering was queer. It wasn't what Bittner & Binks had stood for. Also men were not accustomed to being instructed in business principles in the first place, and our method of instruction by mail lacked some of the qualities necessary to appeal to conservative men. It had required three full doses to inoculate them. With the appearance of the May magazines still carrying the serious advertisement of a curious commodity, they had been convinced that it was worth looking into and had written. The newspaper story of the convention, which of course was widely copied, may have prompted the immediate avalanches.

Money Begins to Come In

Had we advertised to teach some one particular business with a *bona-fide* promise of a position at the end, every easy-going man wanting a snap who read the advertisement would have written us at once. If you advertise a job or a prize—something that appears to be a guaranty of definite results—you are almost sure of a crop of lazy-minded inquirers who are opposed to exerting themselves overmuch; and a great proportion of such inquirers never go further—they merely waste a firm's stamps and literature. We offered no guaranty; we appealed solely to the judgment of the thinking man who was willing to bear part of the responsibility of his own making, and we got that type. It is a type, I am happy to say, that follows an inquiry with an order if the firm's literature is as convincing as its printed announcement.

I was now in red-hot haste to get the Fifty Principles advertisements into the June magazines. I was afraid many of them had closed, but I began at once to wire the Eastern publications. As it turned out nearly all of them were able to make the change and they acted generously in the matter; but I had to wire the copy and instructions. It was costly work, but I felt we must have the advertising at any price. One thing in our favor was that the advertisements were already written.

Our form letters were ready and I put two of the best typists to work that afternoon getting them out. William addressed catalogues. The next day there was an increase in the number of inquiries received and there were also several subscriptions. The fifty-dollar checks certainly looked good to me. That afternoon I carried the accumulated envelopes to Mr. Bittner, but he was in a heavy stupor. The nurse told me that his greatest danger now was from weakness. He might slip out of life at any moment. I spoke to her again about the envelopes, and she consented to leave them near his bed where he could see them whenever he opened his eyes. I believed they would hold him to life if anything could.

And now my duties piled so high that I took Mr. Dumble off the revision work and set him to correcting problems and sending out new work to the subscribers. It required a day for him to adjust himself to the change of occupation. I soon saw that he would not be able to manage the work

"Your 'Bicycles,' Sir"

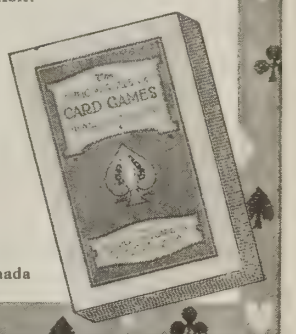
At the club, on the train, in the home, wherever men seek recreation from business cares in a friendly game of cards, Bicycle Cards have the call. For a man to think of cards is for him to think of "Bicycles." When he asks for a deck of cards, he expects

BICYCLE PLAYING CARDS

All the qualities of a playing card that help make card-playing a pleasure are Bicycle qualities. Bicycle Cards have the feel, the finish and, above all, the all-round excellence of manufacture that makes them as good on the last deal of an evening's play as on the first. For general, every day, any day use, more satisfactory cards cannot be made or bought, yet the regular price of Bicycles is very reasonable. Ivory or Air-Cushion Finish. Club Indexes. Sold everywhere.

Congress Cards—The de luxe brand for social play. Art backs of famous paintings in full color. Gold Edges. Air-Cushion Finish.

Paine's Card Trays—For all duplicate games. Ingeniously designed. Beautifully finished. Every purchaser is entitled to a free correspondence course in Whist. If your dealer cannot supply you, we will. Satisfaction guaranteed. Write for illustrated, descriptive circular.



You Need This Book—New revised edition of "The Official Rules of Card Games." Over 300 games. 250 pages. Substantially bound. Mailed postpaid for 15 cents in stamps.

Make money in your spare time

A. S. Quint, a Boston florist, made $18.65 the first week he sold Fuller Brushes, $21.40 the second and $25.15 the third. Soon he gave practically all his time to Fuller Brushes. Now he is averaging $35 a week—has an independent, growing business, his own hours—and is his own boss.

Fuller Sanitary Brushes

are sold exclusively through our special salesmen. We help you sell them—first by an introductory free brush offer which gains a ready reception in every home; second by our advertising. Fuller Brushes are splendid sellers. They look better, clean better and last longer than ordinary brushes. There is one for every cleaning purpose. Every household needs several. There is a good profit in every sale.

We want you now

to take care of our business in your vicinity. Your initial investment is $5 for samples. We'll pay it back if you don't succeed. Try it in your spare time. You'll soon devote all your time to it, like hundreds of others are doing. Write us **at once** for full particulars.

Fuller Brush Co.
Sales Department, Hartford, Conn.

A shower for everybody

A brush and shower combined for $3.25. Fits any faucet—a shower for every bath tub. Sells fast—good profits. This is only one of several big profit-earners.

This trade mark on the handle of every Fuller Brush is our money-back guarantee of satisfaction. It helps you sell brushes. We pay you should you have to return anybody's money.

Fuller HARTFORD

alone, as he had little mental agility. His English was excellent and he did the lesson work thoroughly and accurately, but he was inherently lazy and he was not resourceful. He seemed totally incapable of sorting the lessons swiftly as they came in, getting out the most urgent ones first and otherwise managing the department so that everything ran smoothly. All he knew was to begin at the beginning and plod right through. I worked with him every moment I could spare, but on Saturday there was still a stack of lessons to go out, and some of the uncorrected problems had been in the office several days. I must have more help.

About this time my attention was attracted to Blanche Booth's unhappy face. She seemed to live in a state of fear. Miss Lutkins' hard, flat "What?" and blunt orders came down on the inexperienced young girl like a lash. Blanche was surely as good as the average. Miss Lutkins was making the young girl's life in our office almost unendurable.

I suddenly made up my mind. Blanche wrote legibly and she was a high-school graduate. I needed personal assistance. I would take her into my department. She received but six dollars a week; if she did well I would raise her. At least I would give the girl a chance.

"Miss Lutkins," I said Monday morning before Blanche arrived, "will you go into the reception room and choose an assistant? I advertised for girls. I'm taking Blanche into my office."

Miss Lutkins blurted out a "What?"

"You don't find Blanche especially necessary to you, do you?"

"Can't see she's necessary anywhere."

"That is for me to say," I replied quickly. "Please send Blanche to me when she comes."

Miss Lutkins returned a few minutes later towing in a plain, little red-headed girl with a turned-up nose. I smiled to myself over her choice, for I believed that she could hold her own with two Miss Lutkinses.

Blanche was charmed with the change. Her fair face flushed with pleasure.

"To be in the private office!" she said. "How lovely!"

I saw Mr. Dumble watching her from eyes that peered up over his work. He had a way of lifting his eyes without troubling to lift his head—he certainly was a lazy man. I suddenly wondered whether I had been a fool—I looked regretfully back toward the cage. Miss Lutkins, militant to her swelling nostrils, was eying the two. So that was it!

Here was another problem. I couldn't dismiss Mr. Dumble; I couldn't dismiss Blanche; and there was no other place to put her, as she did not type. Well, Miss Lutkins would have to mother her own romance. But why, oh why had I ever introduced a man to upset our perfectly good bookkeeper? And such a man! Miss Lutkins was worth ten of him.

A Step Up for Blanche

"Blanche," I said, "I want you to be my personal assistant and help on the lesson work whenever there is a rush." Then I showed her about sorting the mail, separating lessons from orders, inquiries and complaints, turning over the orders to Miss Lutkins, the lessons to Mr. Dumble, the inquiries and complaints to me.

"I'll teach you to handle the complaints too," I said. "If you do well I may give you the complaint department. You must learn to dictate letters."

Blanche was enchanted.

I thought I had taken care of the help problem; but not only did the inquiries increase with every mail, but there were new subscribers to be enrolled daily. This necessitated in each case making a record of the work sent out, the letters written and other details concerning the subscriber, so that any time a complication should arise we could lay our hands on all our correspondence with him. All this required a great deal of care and consumed much time, and I needed more assistance at once.

It was an undertaking to get suitable people for the Fifty Principles department—very different from securing a good stenographer. A stenographer was educated for her work, and if she were competent she could be useful from the moment she entered the office. She knew her business. But we had to teach the Fifty Principles instructors the work they were to do; they would not be of real value under a week.

I next engaged two women, both over thirty, who had been in business of one kind or another almost all their lives. I thought their varied experience might make them suitable material, for they were accustomed to varied duties. Neither would prove a dangerous rival to Miss Lutkins. Miss Waters was a dressy, much-touched-up person. Her hair was burnished, her cheek tinted, and she affected golden browns. She made me think of a fading autumn leaf—age and weather graying recently brilliant colors. Miss Tappin was small and dark and quick, with a caustic tongue, much given to white powder and dead-black pendants. The latter hung from her ears, about her neck, and in a long chain with which her thin nervous fingers constantly played. It might seem strange that I would engage two such women, but they were a product of a life spent in business and I hoped for versatility.

I gave them desks in the corner of the operating room, now becoming known as the Fifty Principles department, and asked Mr. Dumble to explain the work. They had forms to use, and as there was not a wide range of possible mistakes—nearly all the subscribers made the same ones—the corrections could readily be written in the margin, a new problem inclosed and the whole entered on the subscriber's record sheet. Thus I had only to glance at the work and dictate a short personal letter to be inclosed. It seems simple enough, but you will observe that there were a good many processes requiring several pairs of hands. The new women learned quickly and I felt fairly well satisfied, but I wished they were more genteel in appearance.

A Chance for College Women

About this time I began to notice that Blanche had a way of flitting about the office and in and out of the operating room unnecessarily. Instead of sorting a large mail and distributing once in the forenoon she would sort a dozen or so letters, jump up and carry them to their destination. She didn't seem to hover about Mr. Dumble's desk, however, and I believed she would get her work better in hand with time. She had been hectored over so constantly when with Miss Lutkins that I wanted her to feel a free rein for a while. I began to show her about handling complaints, and had her dictate some letters. Of course at first she found it very hard. She couldn't think—no one can without practice—and express herself with that conciseness desirable in a business letter. But I knew she would learn with time, and I continued to help her make herself into a correspondent. She was a bright girl and I liked to have her about me. I hoped she would soon be another Miss Carrel.

The mail continued to pile up. I was constantly interrupted by salesmen and solicitors of one kind or another, which made it impossible for me to do much of the lesson work. Miss Waters and Miss Tappin were soon outdoing Mr. Dumble in speed, and I decided not to hire any more men. Dumble was a sticker, but he was too slow, and the man element in an office full of women and girls was not desirable. On the other hand, he worked overtime with less fussing than the two women—they invariably had a theater engagement on the very night that the mail had been extra heavy—and he was less obtrusively present. Also he was goodnaturedly falling into Miss Lutkins' plan for him—the two went out to luncheon together almost daily—and the other girls had just about given him up. But things might be different with another man. I would stick to women, I decided, at least till Mr. Bittner got back.

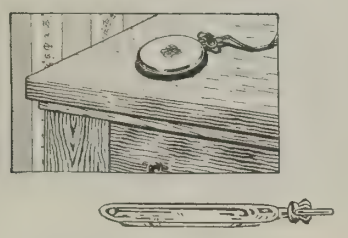
But where was I to get just the right kind of women? I couldn't contemplate with any degree of pleasure the prospect of filling up the office with the Waters-Tappin type. I finally decided to try college women. They would have been through the mental drill that makes for a logical mind, and their brains would be stimulated by study. Also they would have ideals and ambition. After working till ten o'clock Saturday night trying to get the mail all out, I telephoned an advertisement to a Sunday paper and went home feeling hopeful.

Sunday I called up the hospital and found that Mr. Bittner was a little better. I was too tired to go to see him.

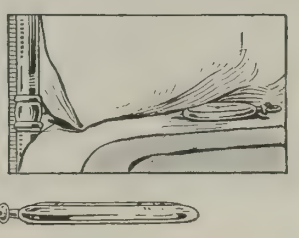
Monday I got down to the office early. Miss Krog was back, thank goodness, and a number of women were in the reception room. I took one glance at my desk—it was heaped high with letters—and asked Miss Krog to meet the applicants and select

(Continued on Page 57)

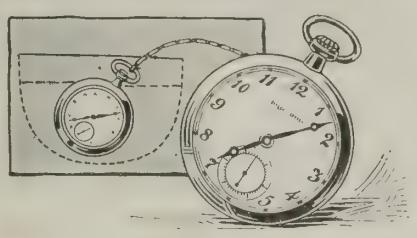
For the first time in the history of watches a high-grade 19-jewel watch at $27.50 that is accurately adjusted to four positions:



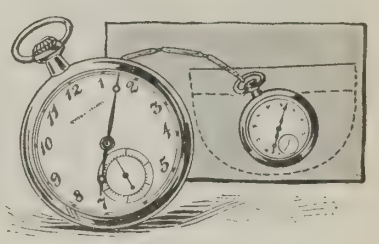
1—As it lies flat, with dial DOWN, as for example on your dresser at night.



2—As it lies flat, dial UP, as for example under your pillow.



3—As it hangs pendant, to the right, as when carried in your LEFT-hand pocket.



4—As it hangs pendant, to the left, as when carried in RIGHT-hand pocket.

NEVER before in the history of watches has there been a more notable achievement. At $27.50 a watch—a FINE watch—adjusted to temperature and FOUR POSITIONS—and fitted with NINETEEN jewels. To any man who knows watches, this bare statement of fact is astonishing. For watches possessing these requirements for great accuracy have always sold for many dollars more than $27.50.

* * *

STUDY the diagram at the top of this advertisement showing the four positions to which this watch is adjusted. These are the positions your watch assumes in actual service.

To every one of these positions these new 19-jewel South Bend Watches are accurately adjusted by experts. They must keep time accurately in every position before they can pass our rigid inspection system. In addition to these adjustments, these watches undergo a very rigid *final rating* after being cased.

This expert adjustment to many positions is one of the features that makes the difference in cost and performance between the highest priced watches of great accuracy and watches that are not so dependable.

* * *

WATCHES that sell at $50.00 and upward are usually adjusted to temperature and five positions. And this new watch at $27.50 is adjusted to temperature and four positions—the four positions that experience has shown meet all requirements for the average man.

Another feature of this new watch is its NINETEEN jewels—all carefully selected, polished and set in raised settings.
Jewels are used to reduce the friction of the mechanism just as bearings are used in a motor car. Properly selected, polished and set as they are in this model, they become a great factor in its accuracy. All jewels used as bearings in this watch are high-grade Rubies or Sapphires.
Some of the finest watches in America have but 21 jewels, yet this watch at $27.50 has nineteen.

* * *

NEITHER has any other feature necessary to accurate timekeeping been sacrificed.

This new watch has:—

The most modern type of micrometric regulator, one-tenth turn of which causes a variation of one second in 24 hours.

Imported Jurgensen mainspring. Jewelers will tell you that this is absolutely the best power plant that can be put into a watch. It is exactly the same spring that goes into our $125 watches.

High-grade steel escape wheel.

Very high grade compensating balance and highest grade Breguet hairspring.

Bridge model construction—the product of most modern designing. Pendant setting device.

IN OTHER words, this watch has built into it every feature of the highest priced watch that has been proven indispensable to greatest accuracy.

We do not believe it possible to make a greater service watch for average conditions—no matter what the price.

Never before were all these features combined in a watch to sell at anywhere near the price.

* * *

HOW can it be done, you say? Popularity is the answer. Popularity that has built up demand to a point where we have been able to specialize on this model, standardize our factory operations and cut costs to the minimum.

In the little more than a year that this watch has been on the market, users and jewelers alike have been equally enthusiastic over it.

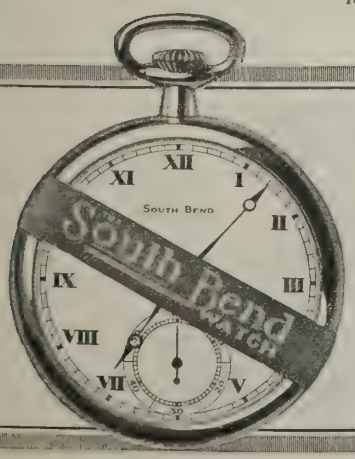
Many thousands have been sold and these have given such remarkable service we now feel justified in extensively increasing our manufacturing facilities to enable us to produce this new model on a large scale.

* * *

AND this is your opportunity to own a fine watch at a remarkably low price. See it at your jeweler's—the watch that gives $100 accuracy for $27.50.

Send for free booklet, "The Making of a Marvelous Mechanism."

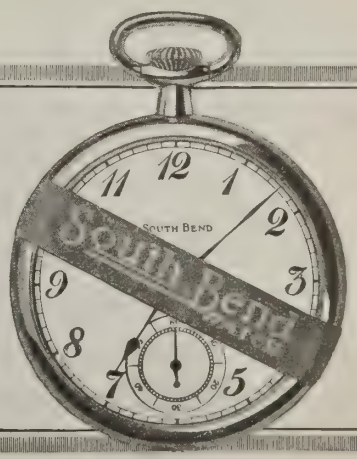
Made in two models—the 12 size, Extra-Thin watch which is illustrated here; and the 16 size, which has the same construction features but is a slightly larger and sturdier watch. Cased at the factory in high-grade gold filled cases guaranteed to wear for 20 years. Both models are open face, bridge models, with 19 jewels and adjusted to temperature and four positions; with imported Jurgensen mainspring, high-grade balance and hairspring, latest type of micrometric regulator and every other desirable feature of a high-grade and high-priced watch.

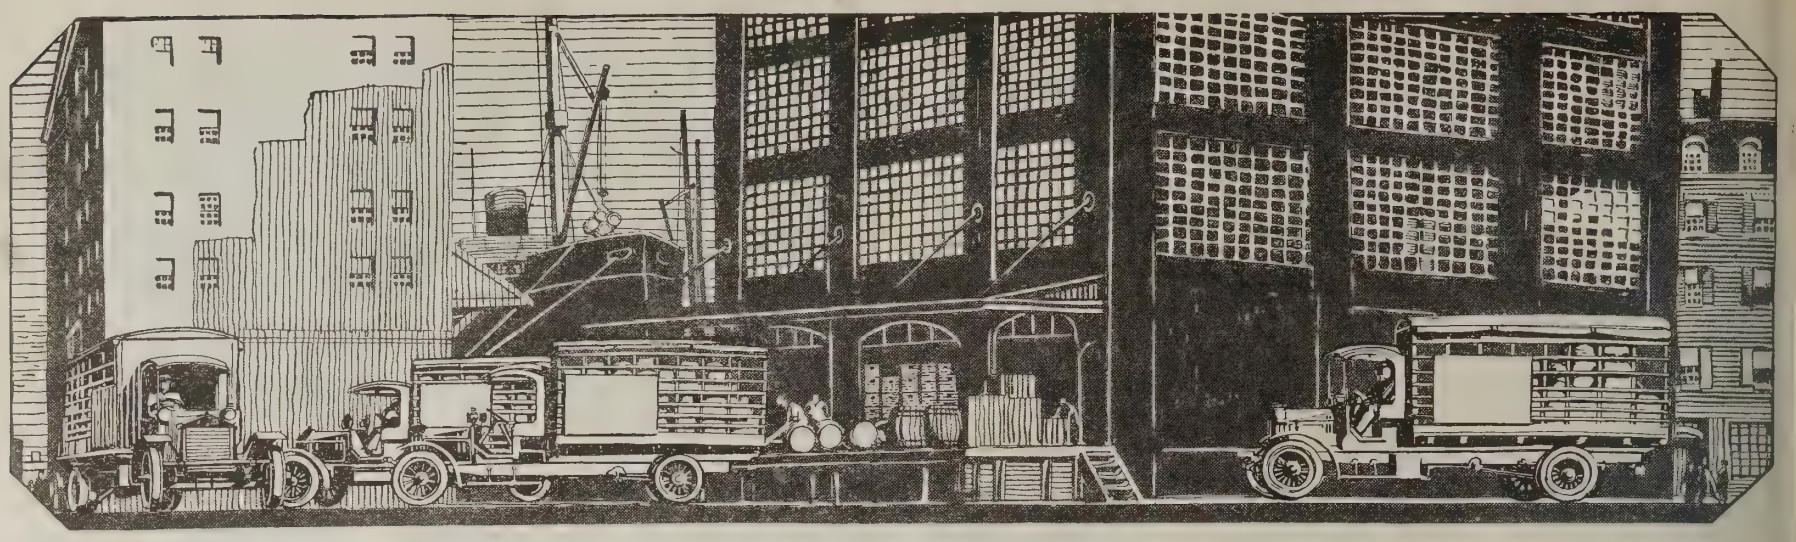


South Bend Watches

Known by their Purple Ribbons

SOUTH BEND WATCH COMPANY
13 STUDEBAKER STREET SOUTH BEND, INDIANA





The Truck That Began Right

NO Pierce-Arrow truck has ever worn out. No Pierce-Arrow truck has become obsolete. Mileages as high as 150,000 are reported. Trucks that have seen six years' service are still in satisfactory operation. There is a good reason for this record. Five years of test and experiment preceded the sale of the first

PIERCE-ARROW

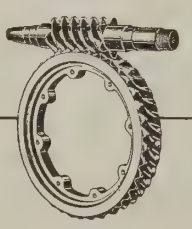
Motor Trucks

During that time many experimental models were built and scrapped. Chain-driven models were tried and found wanting. Worm-gear models were developed and improved. Flexible frame and many other structural betterments were patiently worked out.

The result was that the first Pierce-Arrow truck went to its purchaser a perfect mechanism. No radical change in design or construction has been necessary in the thousands of Pierce-Arrow trucks built since.

The indisputable logic of mechanical superiority has compelled other manufacturers to adopt the worm-gear drive they so bitterly attacked when the first Pierce-Arrow truck appeared. More and more nearly the trend of modern motor truck construction has approached the lines of the first Pierce-Arrow. Set the pioneer 1911 Pierce-Arrow beside a 1917 Pierce-Arrow truck, and the difference is barely discernible. In those same six years other motor trucks have changed fundamentally in design and construction.

It is because the first Pierce-Arrow trucks were built on fact, not theory, that they are all in satisfactory operation today.



The Worm-Gear

All Pierce-Arrow Trucks are equipped with the worm-gear drive, which is a positive guarantee of effective service under the most difficult conditions.

Specific data are available covering the cost of operation of Pierce-Arrow Motor Trucks in many different lines of business, such as Transport, Grocery, Contracting, Coal, Brewery, Textile, Oil, Dry Goods, Chemicals, etc.

THE PIERCE-ARROW MOTOR CAR COMPANY
BUFFALO, N. Y.

(Continued from Page 54)

some one whose penmanship was similar to my own and who seemed alert and capable. I thought perhaps after all Miss Krog was a better judge of good material than I. Also I was glad of an opportunity to show her that she was needed and I was in no way usurping her prerogatives. I could now turn the inquiries and the book business over to her, and this would give me more time for the actual work of the Fifty Principles department. I had had to leave that altogether too much to others to feel entirely comfortable about it.

Miss Abbot, the young woman Miss Krog selected, was trim, slender and good-looking; she stood well and had a fine carriage. I recognized the college gymnasium and the swimming pool in her every movement. This was her first position and she seemed eager to learn, though rather disappointed to start in such an ugly office. I could see that she had hoped—and dressed—for mahogany and leather-upholstered chairs. My plan was to make her my personal assistant, as I had Miss Carrel and later Blanche. I found Blanche a little too young for some of the responsible duties that my assistant would be required to do. She must, in short, be my understudy, be equal to anything I might be too busy to attend to. I was searching for a young woman who had qualities that fitted her for a responsible and a well-paid position. I hoped I had found her. I allowed Blanche to occupy one side of Mr. Bittner's desk and I put Miss Abbot on the other. Blanche was handling the complaint department and helping on lesson work. This gave me a chance to look after the proofreading and the subscribers' record sheets.

These were tasks I had kept strictly within my own hands, but the necessity of getting up new copy and additional folders made it imperative that some one else should have these posts.

Blanche Puts on Airs

Miss Krog had come back from her vacation in a very good humor, her sense of justice having been satisfied. It was a relief to see her going about among the girls again, keeping them up to their work. Miss Krog was certainly a presence; but I began to wonder whether much of this was not due to a certain wooden indifference to the girls and to excellent dressing. Her clothes formed a barrier between her and all the rest. Almost every one respects clothes, I find. Whatever did it, I was thankful for Miss Krog and turned my attention to Miss Abbot. I had her first read the entire Fifty Principles course. The plan I had back in my head was to have every member of the Fifty Principles department thoroughly familiar with the course of study, so that at any time the mail banked up on us all hands could pitch in and clear it out. And then I wanted them to have the Bittner viewpoint on business. It would make them work far more intelligently than if they merely knew one little cog of the office machinery.

I liked everything about Miss Abbot at first, and made up my mind eventually to have an office force composed entirely of college women.

"It is all so interesting, Miss Gale," she said that first day; "and just to think of being treated as a man is! I don't want any concessions in business because I am a woman."

That was certainly the right spirit.

When I showed her where she would work, opposite Blanche at the president's desk, she sat down and looked about her curiously.

"What is your college, Miss Gale?" she asked pleasantly.

"None."

"Oh, I beg your pardon!"

It was as though she had inadvertently stumbled on a family skeleton. I smiled. She would get over that. I gave her instructions and went on to my mail opening. Blanche was to help me, and Mr. Dumble was to answer any questions Miss Abbot might wish to ask.

I had been so occupied of late that I had paid very little attention to Blanche. But now that Miss Krog was back I had more time for observation. A few days after Miss Abbot's arrival I looked up from my work in time to catch several turned-up noses as Blanche tripped to her desk from the operating room. I thought the typists were jealous of her. She might appear to be a sort of pet, as she worked with me so constantly. I blamed the girls. But that noon, coming back from luncheon unexpectedly early, I discovered her in the act of ordering a group of the typists out of the private office. There had been a collision on the Elevated just outside our windows and the girls had rushed in to see it.

"We don't want you girls in the private office," I heard Blanche say with decided bossiness. The little lady was giving herself airs. I meant to have a talk with her.

But before I got round to it her airs reached their limit. My stenographer failed to show up one morning and I had a stack of letters that must be answered at once.

"Blanche," I called, "send me your stenographer right away, please."

She didn't answer. I looked up quickly, thinking she had not heard me, and found her face clouded.

"I don't know that I can spare her," she said loftily.

Bittner Looked as Though the Heavens Had Fallen

"Nonsense!" I exclaimed hotly. "Tell Miss Farnsworth to come here at once."

Her face reddened. She slowly got up and with the air of an injured princess went to the operating room. Miss Farnsworth came, almost running. All the stenographers looked forward to doing my special work. There seemed to be a charm about the private office, and then of course the workers there were better paid than the mass of typists. Blanche did not return till an hour later, when I had finished the dictation. She came from the cloakroom.

"A bad time to loaf, Blanche," I said.

"I couldn't dictate without my stenographer."

Oh, the pride of a young business woman when she can speak of "my stenographer"!

"You could have sorted that mail," I said, pointing to a huge stack that I had placed on her desk. "And you could have read and signed all those letters that are to go out at noon. Besides, Mr. Dumble always needs help."

She pouted like some willful child, and began to pick at the edges of the letters, not daring to refuse and not willing to submit.

I turned back to my own work. I had let her have her way too long. Responsibility had gone to her head. I must find time to have a plain talk with her.

But a day or so later—I still had not found time for the plain talk—a letter that she had dictated came to my attention. It was returned by the recipient asking for an explanation. Blanche had told him that it was too much trouble to forward his work to different addresses—he was a traveling salesman—and that he must have some one at his home do it for him. The man complained that we had agreed to do this. I called Blanche to my desk.

"Don't you know that we always take that trouble for traveling salesmen?" I asked.

"It's no way to do. It makes a lot of bother and he might as well let his folks do it."

"Blanche, many men take this course who do not want their families or their business houses to know about it. They have their own reasons—that is their business; we agreed to do the forwarding—that is ours."

"A bad agreement's better broken!"

I sat still, dumfounded. I had refrained from speaking on each of the other occasions when she had needed it, and she had apparently interpreted my silence as admission of her indispensability. I wished all at once for Bittner and his cold brutality of manner. I did need Blanche. She was a capable girl with a good brain and she was growing more useful every day. Some day, if she didn't marry, she would be a fine business woman. At present her petty personal vanity got between her and success.

I continued to gaze at her and at last she glanced up hurriedly in Mr. Dumble's direction. The little minx had evidently played a high hand with him. As my assistant she considered herself over him, and now her pride would not permit her to acknowledge her mistake in his hearing. I needed Blanche, but I could not have insubordination.

"Blanche," I said quietly, "you had better take a long vacation from this office. Get your pay Saturday and use my name for reference in finding another position. When you are older and have been buffeted about a little, you will have more sense."

It was her turn to be dumfounded. It hadn't occurred to her that I could get along without her. I had frequently told her that I couldn't, in that semi-serious tone in which we speak to people who are helpful to us in an intimate, personal way; and she had taken me literally. The truth is that there never lived a person who could not be dispensed with in business or anywhere else. We are basically too much alike, we humans, to be indispensable.

I began to break in Miss Abbot on Blanche's duties, and decided to try to get along for a while without hiring anyone else. I was growing dissatisfied with Miss Waters and Miss Tappin as people to have round, and I had not yet proved my college girl. I would wait and watch before employing anyone else.

I was a little anxious about the signing of the letters to subscribers. The force of this work, as of everything connected with the company, was Mr. Bittner's personality. The letters must carry his signature. I took a bunch of the dictated letters to the hospital and asked Mr. Bittner's nurse if she thought it would injure him to talk business. She assured me that it would not, unless there was something to be discussed that would worry him. I told her the matter I had in mind could not possibly upset him. Then I went on to his room. He was awake.

"Mr. Bittner," I said, "let me read these letters to you. I want to be sure this is just what you would say."

Wagner the Spy

His eyes lighted up and his thin white hands groped for the letters. I put them on the bed before him, and picking them up one by one read them aloud. He made a few minor suggestions, but seemed to consider them in the main all right.

He wanted to know how things were going generally. He seemed to have no idea of the passage of time and was surprised at the date on the letters and that we had got so far ahead with the course of study.

"Two talks a week," he said. "Don't send them faster."

"Few go faster," I said.

"Do any?"

"Yes, one man—Wagner, you remember him—our first subscriber? He's a persistent sort of chap, who hardly receives a problem before he is back with his answer and wanting another, or asking a million questions about everything."

I was merely talking to entertain him, but instantly a fierce light shot into his eyes.

"That's Borrige & Kemp!" he exclaimed. "Slow up on that fellow!"

"What do you mean, Mr. Bittner?"

"He's their tool; they're gettin' next. He's rushin' the course to get the whole thing as soon as possible so's they can copy it. Don't you remember the man that wanted to buy outright?" he demanded, half rising in bed, his eyes flashing.

"Yes."

"You look up his correspondence and compare it with this fellow's under a magnifyin' glass, and see if it ain't the same or if one ain't twisted unnaturally."

"Mr. Bittner, I never thought of that! But what shall I do—discontinue his work?"

"No, we ain't got any proofs, and anyway we gotta cater to him same's anybody else. You can't refuse to sell to a man, even to your worst enemy. No, we gotta get him on other lines."

His fingers twiched and his face worked nervously.

"Please, Mr. Bittner, don't think about it," I begged, alarmed at the change in him. "Don't make me afraid to come to you."

"Don't you worry," he said, attempting to sit up. "You bring me everything that looks suspicious. I'm layin' low now, but just you wait till I'm out of this—just give me time—and I'll have their offices!"

It sounded wild. Thoroughly frightened at what I had done, I turned to the nurse, who came in at that moment. But she passed me abruptly with a low "Now see

(Continued on Page 60)

Is this your family, having the time of their lives in one of those beautiful Overlands—something to look forward to every day of the year?

This is the life—

There are two ways to live nowadays.

One way is the life that is daily chock full of healthy activity, wholesome fun and lots of fresh air.

This way is shown above.

This manner of living gives your family every modern opportunity to better health, better sport, a broader mentality and a more highly developed point of view.

To enjoy life on this basis—to get all there is to be had and all that you should have; to look forward to each day with a keener interest and anticipation; to miss nothing—get an Overland.

For there is a quality car in the Overland line for every class of buyer.

And each car is bigger value because it has shared proportionately in the greater economies of our larger production.

The tremendous factories and facilities of the great Overland industry permit us to offer cars of unusual efficiency, style, comfort and power at remarkably reasonable prices.

There is an Overland for you and yours. Pick it out today—and tomorrow introduce your family to the new order of things—the bigger life made possible by the economical Overland.

The Willys-O

Manufacturers of a

Or is this your family, limited to long rides in stuffy, hot trolley cars and listless conversation? How about getting an Overland?

—this is not

Here is the other side of the story—the other way some live—the wrong way.

This pictures the more narrow and cramped life, with trolley car outings for the big event of the week.

It's wrong. It's not fair to your children—your wife—or yourself.

Get a car—an Overland—and over night all this is changed. It will add years to your life and rejuvenate your family.

The Overland is everyone's car today. Some one of the beautiful models you can easily afford. It's not an expense. It's a downright economy.

One executive organization—*one* factory management—*one* purchasing unit—*one* sales management—*one* dealer organization produce and sell the entire line. Each model shares the enormous economies thus effected.

The new Overland models are beauties.

Easy to handle—anyone in your family can learn to drive in no time. They have abundant power; beautiful lines; lots of room, comfort and style and are backed by the greatest motor car institution in America.

See the nearest Overland dealer and take a look today.

Stop living the wrong way.

what you've done!" and went on to his side. I gathered up the letters and hurried out. I did not consult Mr. Bittner again about the letters, but continued to sign his name, for it was all his original idea; and what mattered it whether or not he had read and approved the exact wording.

I used the magnifying glass on the two signatures and was convinced that he was right. There was a certain similarity. Also there was the same tone of insistence in both sets of correspondence; and both had sent money-orders instead of bank checks. Then I recalled the invitation to speak before the convention and Wagner's smirking face as he sat in the audience. He had undoubtedly inspired the invitation, meaning either to smoke Bittner out and compel his presence in a situation where he would make a poor impression—Bittner could not do himself justice before an audience—or to gain additional evidence that he did not personally handle the Fifty Principles work.

While I was thinking this out Wagner appeared. He came at once into the private office and would have seen the two sets of correspondence on my desk had I not seen him first and gone across the room to meet him. He asked for Mr. Bittner, as on the former occasion, and again I suggested that he leave his question in writing. He went away without doing so.

The call gave me an idea, and finding over the phone that Mr. Bittner, strange to say, was better since our talk of the day before, I went again to the hospital. I now believed that his brain needed some such stimulus as I had given him wholly unintentionally. He needed to be roused, and I made up my mind to consult him daily if possible on minor matters. I believed that if he could be kept from too much excitement news of the progress of business would really help him. So I told him about the necessity for greater privacy, now that our business was of a more personal nature, and suggested changing the partitions so as to create a public reception room. It had always bothered me, having callers come right into our private office, but now I had a good business reason for insisting upon a change. Mr. Bittner instantly saw the wisdom of shutting out visitors. It would be better business to make it impossible for them to examine the linings of the coat.

"And while the carpenters are changing the partitions, Mr. Bittner, why not make a rest and lunch room for the girls? It won't cost over one hundred dollars and it will be worth a thousand times that."

"It'll encourage loafing."

"It will encourage neatness," I came back. I couldn't argue with a sick man, but I might be able to give him another impression that would supplant his own. "If the girls had a room where they could eat their lunches—not many bring lunches, you know, so it won't need to be large—the operating room would be neater and mice would be discouraged. William found a package of letters gnawed into to-day in spite of his new traps. Besides, if the girls could wash their hands without losing the time required to go clear out to the public washroom it would be an actual saving."

"Go ahead," he said peevishly, "but keep the expense as low as possible."

An Irritating Habit

I knew he was worried about money, but still I could not bring myself to tell him that I had sold my ranch and invested the proceeds in advertising. It was a difficult thing, some way, to tell.

The girls were delighted with their rest room, where there was a couch and paraphernalia for making tea and coffee, and a reading table with current magazines. My only requirement was that they keep the place neat.

All the confusion from rebuilding was over in a few days, for the carpenters got extra men and rushed the work through. The comfort secured more than paid for the temporary upheaval.

In the mean time Hart had utterly slipped my mind. He wrote in, thoroughly angry over the failure of my promise for the June advertisements—I had told him that the business books would have full pages throughout the summer and had forgotten to explain the change of plan. I wrote, promising him an early visit from Mr. Bittner, when everything would be made right.

All this time I had been studying Miss Abbot, and had discovered that she had one very irritating habit—that of making people repeat their remarks. The reason for this, I concluded, was inattention. The American business man not only g thing the first time it is said to him generally catches it halfway. Pe this is the reason he is the cleverest ness man in the world today. I had known Mr. Bittner to fail to catc full import on a first utterance, or Krog, or William. If there was one Mr. Bittner would not tolerate it wa of alertness. His people must be ready. I believe the thing that first his favor, so far as I was concerned my eagerness to hear every word. I re that I didn't know a thing about bu and I wasn't willing to say anything would expose my dense ignorance. Be it had always annoyed me to have w interrupt my narrative with a cont peppering of "Yes?" "Yes?" "Yes?" other similar ejaculations that are posed to show an interest. Men as a have not this annoying habit. They l without interrupting. I had early c this habit which I admired in men, a believe this was one of the reasons Bi had found me valuable to him. His were never checked or lost through i ruption. His talking to me was a so thinking aloud while I took it all d Women everywhere chatter too much listen altogether too little. Even they appear to listen, half the time it pose—they are just thinking up somet to say when their chance comes. Soc they have been responsible for the cor sation, and when they go into business are apt to carry this habit along. become a source of confusion to emplo who would otherwise find their value develop them from working girls business women.

Bittner's Snappy Letters

After Blanche left I had Miss Al work more directly with me so that could get an all-round idea of the busi I felt sure that there was value in the and I made up my mind to bring it One day I handed her a number of car copies of letters that I expected to ad our ready-made letter books. I asked to revise them, making them as ters possible without losing their spirit. had had occasion to read our letters knew the Bittner style.

When she handed me her work tow closing time I found that she had tra lated our business language into c stilted, dignified English, eliminating ev ordinary expression, every meaty phr I went over the letters with her, explain her mistake.

"But Miss Gale, how disrespectful! 'J salt that down,' for instance. How m better to say: 'Kindly put that awa some safe place where it will not forgotten.'"

"The former is more graphic and m Bittnerish," I said. "This company built up on Mr. Bittner's personality."

"Beg pardon?"

I repeated.

She sat thinking for some moments:

"Then he is what is known as a self-m man?"

The idea seemed to trouble her; but quickly brightened. "He will be an int esting study. I never knew one—that intimately." I could not help smiling the thought of her and Bittner know each other intimately.

Still I held to my original belief t the girl had ability if only she could acqu a business viewpoint, and as she seemed want very much to make good I decid to try her on some other kind of work. T next morning I called her to my desk.

"Miss Abbot," I began.

"Beg pardon?"

"I was about to suggest," I went deadening my irritation, "that you ma some business calls. I know you are rea ambitious to become a good busin woman."

"Indeed I am."

"I want you to call on several boo sellers to see if they can't move our bu ness books. We are overstocked and I mu turn them into money."

I handed her a list of addresses. "The three firms have handled our books in t past, but see if they won't push them o low cut price."

Miss Abbot blushed and I was sorry f her. This sort of thing had been so ha for me at first.

"I'll try, Miss Gale, but it seems to perfectly impossible."

She returned a couple of hours later. "It wasn't at all bad," she said in a surprised tone. "The men were all lovely."

"Make any deals?"

"Beg pardon?"

"Did you accomplish anything—get any business?"

"Well, not exactly. You see they didn't seem much interested, but they were all just as nice as they could be."

"You mean they were polite and pleasant to you personally? That isn't business, Miss Abbot."

"What could I do?"

"You should have remembered every second that you were there as a representative of a commodity. Unless you made that commodity more vital to those men than your own personality as an attractive young woman, you utterly failed in your mission. The small concessions made on account of your charm will never mount up large enough to make you a successful business woman. I give business to the men who convince me by cold facts that they have what I want. And you must get business in the same way. You will always be treated politely, because you are a well-bred, charming person; but you will never be a business woman till you make the thing you represent loom larger than yourself. You must sink yourself in business, die personally for your business' sake. It's just like setting up an advertisement with an attractive border and beautiful illustrations that fairly bury the commodity. The space may attract attention, but not to the right thing."

"I suppose I wasted the forenoon," she said, crestfallen.

"No, for you have learned a thing or two."

The next morning I remembered that I had not sent my copy to a big daily.

"Miss Abbot," I said, "will you please hustle this copy over to the Evening Mail and see if they can give us the top of the column next to reading matter today, and if not, to-morrow?"

"Beg pardon?"

It seemed almost too much to have to say all that over again. Impatiently I repeated my commission.

She seemed very much surprised. "Where is William?" she asked.

"Covell's."

"Beg pardon?"

"He has gone to Covell's."

Her eyes turned to Mr. Dumble.

"He is editing letters," I said.

"Beg pardon?"

"Mr. Dumble is editing letters," I screamed. "Miss Abbot, is it possible that you are a little deaf?"

"Deaf! How absurd!" She got that. "Why can't I edit letters?"

"Because you don't know business English; you only know college English. They are your letters that he is editing. Hurry, please. This advertisement must go in to-night if possible."

She got up, stiffly reluctant.

"How do I find the advertising manager?"

"Inquire."

"Beg pardon?"

"Inquire at the newspaper office," I repeated.

An hour later she returned and put the copy on my desk.

"He wasn't there," she said shortly, and started to her own desk.

A Hopeless Case

"Wasn't there? Why didn't you find out where he was and go to him, or find some one else that would do?"

"I beg your pardon?"

I repeated, feeling tired and cross.

"Miss Gale," she said sweetly, "really I can't see why I should do an office boy's work. I sent in my card and asked to see the advertising manager. When he didn't come I returned to the office. I think I have done all that could be expected under the circumstances."

"Miss Abbot," I said firmly, "you have never done all that is expected until you have done the thing you set out to do. There is no financial value in attempts. Achievement alone goes down on the ledger."

"I don't quite understand your asking me to do a humiliating thing," she said in a beautifully intoned voice. I thought of lame little Miss Carrel and how she would have jumped at the chance.

"The one vital thing in this office this morning was to get that copy in an afternoon paper," I answered. "It wasn't of the least importance what you thought or felt about it. You should have landed that copy—that is, if you are sincere in wanting to be a business woman—had you been obliged to climb a dozen stairways and interview as many smudged printers. To a business woman nothing should have mattered except getting that copy in. Now I shall go myself."

When I returned Miss Abbot seemed to have thought it all out, and she had her theory ready. She was dreamily thoughtful and wholly complacent.

"Miss Gale," she said with sweet, forgiving patience, "don't you think our viewpoints are decided by our family, position and all that sort of thing? Now you see you've been a working girl. What would be second nature to you would be a menial act to me."

"Yes," I answered, "while you have been learning how, I've been doing it."

"Beg pardon?"

"I mean," I began as calmly as I could, "while you have been studying at college how to meet life I have been meeting it. This makes us unequally equipped."

"Exactly!" she agreed with satisfaction.

I turned to my letters. Presently I looked up to see what Miss Abbot was doing. Her fine brow was drawn. She seemed to have got something more out of our talk that was unpleasant to her. She was not a dull young person, but her college training was terribly in her way. When she should coördinate theory with practice and lose herself in her work she would do first-rate.

A Pair of Parasites

But all this would take time, and I needed immediately more pliable help. Did it exist? Yes, always there had been Miss Carrel; but such material as she would not remain an under-employee long. I had meant to advertise for more college girls, but I gave it up. They brought no background of business knowledge to their work and they had troublesome theories. The most ordinary man, the most commonplace office girl brought more of immediate value. But then again these people had no ambition and they were unpleasant to have about.

All the girls had gone to lunch and I sat wondering what type of woman I had best try next. College women, judged by Miss Abbot, were a doubtful quantity; business women, judged by Miss Waters and Miss Tappin, were the best after all. Little as I liked these women, they had proved themselves resourceful. They had that blessed quality handed down from generations of women who rocked the baby's cradle with their toes while they knitted their husbands' socks and kept an eye on the bread in the oven.

They did a great deal, it seemed to me, in minus time, where poor Mr. Dumble made an event of each act on the program. I had about decided that I would be compelled to get some more of the Waters-Tappin type, when the two came into the operating room together.. They had become great chums. I heard the rattling of a newspaper.

"Grandest thing I ever heard of," Miss Waters exclaimed, reading from the paper. "A stenographer marries her millionaire employer of eighty; she's only nineteen—her first job too. No such pick-ups in this office."

"There's Mr. Dumble," facetiously put in Miss Tappin.

"Him! Rats! He'll never make the price of a maid. Besides, look whose claws are in him."

"Guess Bittner's lined with gold all right, all right, and he's a bachelor."

"Umph! It's plain enough who's got him landed. Bet she took him away from Krog too. There isn't any love lost there. I'm for pulling out of here." I slipped quickly out by the private-office door. No, these were not business women; they were business parasites, looking for men to marry and support them. I could not stand any more of their class. In some way I must find real women.

I lingered a long time over lunch, thinking out the entire help problem. At last I squarely faced the fact that our business had been undergoing a metamorphosis since the beginning of the Fifty Principles success, and I had been too much engrossed in the details of my own work to view the thing as a whole. The better class of trade that we were now getting did not call for so

(Continued on Page 65)

This Tube Keeps Pressure Up

Too many motorists consider the inner tube in the light of negative virtues.

If a tube doesn't actually "go flat" on the road, or put them to the pump at inconvenient times, they think it adequate, and are satisfied.

Their point of view costs them money.

For a tube, to serve at full utility, must do more than merely contain air temporarily—it must *hold* that air, day in and day out, against shock or blow, or whatever the road has to offer.

It must have the positive virtue of enforcing the last mile of service of which the casing is capable, and it lacks this virtue if it permits underinflation at any time.

We advise all motorists to buy *Goodyear* Tubes if they are at all concerned with the economical upkeep of their tires.

We build Goodyear Tubes to *hold* air—make them up from many paper-thin sheets of fine rubber, laid one upon another and vulcanized together into a perfect air-retaining unit.

We vulcanize even the valve-patch *in*—not stick it *on*—and here eliminate one of the commonest causes of tube trouble.

We make them *thicker*—that they may last longer.

For sustained and severe service we recommend the Heavy Tourist type. It is especially thick, rugged and vigorous, slightly higher-priced than other tubes—and *better*.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

ITS QUALITIES ARE IN HARMONY

Obviously, the bitterest foe to the tire's long life is the battering of the road.

And the ordinary tire's commonest failure has been in its inability to escape this punishment.

Built up of numerous plies of stout canvas, its activity was strangled in the grip of tight cross-weave, and it depended for survival upon resistance.

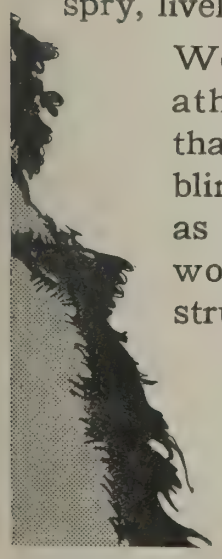
It suffered every shock of travel in unaverted collision, took issue with every impact, passed on, or gave to ruin.

Its strength was an invaluable adjunct to generous tire service; its stiffness a grave handicap.

Its qualities were in conflict.

Back in 1904, we realized the limitations of the then popular type of tire construction, and strove to evolve the remedy.

We sought to perfect a tire combining activity and strength in extreme measure —one at once stalwart and spry, lively and enduring.



We wanted a tire so athletic and vigorous, that instead of thudding blindly into obstruction as did the old type, it would meet such obstruction adroitly, absorbing the shock into its own resilience.

We wanted a tire that sprang, rather than bumped; that exercised, rather than toiled; that served, rather than suffered.

We found it easy to develop a resilient tire at the sacrifice of strength, and easy to develop a strong tire at the sacrifice of resilience.

Our difficulty lay in combining the two at the sacrifice of neither—in retaining the strength of hardy fabric, freed of the binding action of cross-weave.

Season after season we experimented, tested, improved and tested again, until we arrived at that perfected construction which is today's Goodyear Cord Tire.

Its qualities are in harmony.

Its peculiar construction has for a basis thousands of light, pliant cords, tightly-twisted and densely strong, established side by side in the tire-structure layer upon layer, *without interweave.*

Each cord and each layer is insulated and upholstered with a springy cushion of pure rubber—each cord and each layer is free to exercise, flex and recover, independently of the rest, without contact, without friction.

Thus to the multiplied stoutness of the thousands of cords is joined the unhampered elasticity of quick rubber—making a tire-body almost invulnerably strong, yet spry, active and fast as a tempered spring.

Over so sound and efficient a structure finally is treaded a fine-grained, wear-resisting, amazingly vigorous stock—generously laid on, in both the big-blocked All-Weather and easy-steering Ribbed tread designs.

The result is a completed Goodyear Cord Tire—easy-gaited as a coyote, possessing the stamina of a bulldog—costing more, in materials and make-up, to build and to buy, and worth it.

A tire that will quicken your car, encourage its motor, deliver you more miles from every gallon of gasoline, protect your satisfaction, and engage your good-will.

A tire competent in all ways to carry you farther, last you longer, serve you truer.

A tire whose quality makes it higher-priced—and *better.*

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

CORD TIRES

An old-time advertisement of WALTHAM WATCHES

Reproduction of a remarkable old engraving printed more than fifty years ago as an advertisement by the Waltham Watch Company, Waltham, Mass. This was the beginning of national watch advertising in this country.

This quaint advertisement was entitled: "THE QUIPS AND JESTS OF TIME." Below the illustration appeared the line: "Time is the stuff that life is made of and our little life is guided by a watch."

As this whimsical old engraving indicates, your watch is with you by day and by night. How important, then, that the watch should be a good watch! In a quite intimate association it presides silently and unobtrusively over your goings and comings. If it be a faithful and enduring time-piece, it travels with you all the length of the way and tells the Truth throughout the journey.

It is this companionship and this loyal service which have made the Waltham Watch a prized possession for three quarters of a century. In every part of the globe it has done its duty unswervingly and won universal good report, until now at Waltham stands the largest watch factory in all the world, proud in tradition and unrivaled in scientific and artistic resources.

It is no cause for wonder that practically every improvement in the watch-making industry during the past half century has originated at Waltham. The lead taken in the days of the old advertisement has been steadily maintained. Today the Waltham Watch Company produces the only complete variety of jeweled watches and the leading watch in each grade.

Measured by the tests of History, Art, Science, and actual Use by millions of people, the Waltham is the premier watch of the world—*the* watch for your pocket!

WALTHAM WATCH COMPANY

"Borrige & Kemp Will Follow Me Up Till One of Us is Ditched"

(Continued from Page 61)

many follow-up letters. Most of our business came from the number-one and number-two letters, where formerly it had come from numbers four and five. The type of men who had become interested in the Fifty Principles knew at once whether or not they wanted a thing, and if they had been sufficiently interested to send in an inquiry they generally subscribed. They didn't have to be begged, and cajoled, and made club offers, and given premiums, and so on. This was the beauty of appealing to high-grade men in a high-grade manner. Consequently we needed fewer follow-up girls of the cheaper class and more good stenographers and instructors of an intelligent class. The tail of the business, in other words, was shortening while the head was expanding. From an ordinary mail-order house with its never-ending follow-ups and reminders, we were becoming a highly specialized concern. This change was bringing the employees more directly under my management and lessening Miss Krog's responsibility and authority.

Places for Two

I foresaw trouble ahead. Miss Krog would not readily yield her reins. And yet, though she was the ideal forewoman to drive a lot of unintelligent, half-baked workers through an enormous amount of routine work, she was not equipped for handling women of a higher order, whose interest must be enlisted. The typists under her care were a careless, indifferent, giggling, gum-chewing set of young animals, full of youthful nonsense and without ambition. Miss Krog got them at bargain rates, and like all bargains they had serious flaws. They were poor spellers, knew little of punctuation and did nothing to improve themselves. Miss Krog had had no business experience except what she had got with the firm of Bittner & Binks, and she had early been trained by Binks in close economy. She could not see that an inefficient girl was expensive at any price.

On their reading table I had been careful to place a number of business magazines along with the popular ones, but these gathered dust from day to day. Since Miss Carrel's departure not one had been opened. The girls' talk, whenever I chanced to overhear it at noon, was of their "friends," their dresses, a dance or some other purely personal matter. Frequently they speculated on the probability of a raise and discussed other firms that paid better. And all the time I was watching for girls that I could make into efficient business women, girls who were worth a raise.

I took a pencil and paper and figured the thing out by actual mathematics. An ordinary six-dollar-a-week girl could do twenty pages of plain copying or forty letters from dictation in one day. I must dictate slowly, frequently redictate later in the day when the whole thing had gone from my mind, and confine my language to the typist's understanding. A twelve-dollar-a-week girl did forty pages of copying a day, or sixty letters from dictation, required less than half as much of my time and very seldom any assistance with her notes. My time, which ranked as the most valuable in the office, was being wasted to save a few paltry dollars.

I saw a most disagreeable task ahead of me. I must make Miss Krog see this question of cheap help as I saw it. She prided herself on running the place economically. She would obey an order from Mr. Bittner without question, but I wondered how she would treat one from me? Was this to be my Waterloo, this revolution I had in mind on the help problem?

Well, it had to be done at any cost. I could run the office without Miss Krog, if I must—I had proved that during her vacation; and the business could not suffer to save the feelings of even the oldest employee. But the immediate problem was that of better help for the Fifty Principles department. Where could I find serious-minded, ambitious, womanly women who would respect their work and my orders and become permanent with us? All at once I remembered my own serious attitude toward business when I began with Bittner & Binks at four dollars a week. I had clung to my job because it had meant my actual bread and butter; I had shivered at every symptom of disfavor. I decided then and there to get rid of Miss Waters and Miss Tappin and employ others to whom a job meant life or death; women situated as men usually are, with some one depending on them, women who felt the seriousness of living, women who must earn. I got up at once, went back to my office and wrote an advertisement something like this:

"I have a place for two women of education and common sense who write legibly; but they must have others dependent on them for support. Preference given to desperate women."

It was a blind advertisement.

Saturday I let Miss Waters and Miss Tappin go, and sent my advertisement to a Sunday paper. Late Sunday afternoon I called at the newspaper office, for I knew that desperate women would answer at once. I received forty-nine answers. It made my heart sick. How well I remembered the old, long, terrible trail of the educated but untrained woman looking for work! I believed that a great deal of excellent material went to waste because of the unwillingness of employers to take on inexperienced help. The inexperienced woman often brings other things to business that equal if they do not exceed in value the experience so generally demanded.

If only I had forty-nine places to fill! I carried the letters home and carefully read and sorted them. Two especially appealed to me as good material. These women wrote legibly and concisely, whereas most of them wrote long, rambling stories of their woes. They stated their case, but with dignified reserve, almost a flinching from the revealment. There was no apparent effort to appeal to my sympathies. One said that her husband had acquired the cocaine habit from severe illness and that she now had to support him and their baby girl of three years. She wasn't sure that there was anything that she could do in business, but if trying had any value she could recommend herself. The letter was terse, crisp and spirited. The woman signed herself Mary Coontz.

The other was a widow with a son whom she was trying to keep in school. The boy had lost a leg in a street-car accident while selling papers, and now as he would never be able to do active work she was trying to give him a chance to develop a talent he seemed to have for modeling. She believed the child had genius. She had been sewing in the dressmaking department of a large suit house, but could not make enough to pay expenses. She had tramped the streets looking for work, but her lack of experience was against her—she could not get a hearing anywhere. She confessed that there was really nothing she could think of that she could do in a business way. She had been educated in a convent, and on leaving school had married. Her husband had been dead two years. She signed herself Mrs. Winifred Gray with the "Mrs." in brackets.

To each of these two women I sent a special-delivery letter asking them to report at our office at eight o'clock on Monday morning. Then I put the forty-seven other letters away for future use.

Both women were there when I got down—I knew they would be—and I was favorably impressed. Mrs. Coontz was a thin, pale woman with very bright black eyes and a nervous manner. She was as quick as a steel trap. On second glance I decided that her plainness arose from lack of time to dress carefully, and she had lost two front teeth which made an ugly gap in her mouth. Her hands were pitifully hardened and lined and cracked. They suggested lifting, washing, scrubbing, cooking, mending.

Desperate Women at Work

Mrs. Gray was a totally different type. She was even-featured and womanly, and had not lost her natural daintiness in the struggle. Her shabby black dress—a semblance of mourning—had evidently been dyed and many times turned and her neat lace collar, spotlessly white, was much darned. She had a wistful pretty mouth and soft appealing hazel eyes in which rested the shadow of much suffering.

I employed them both, and as they entered the operating room after me a suppressed snicker arose from the young typists. I looked up quickly and the noise died away. It is strange that young women can be so thoughtless as to be unkind to shabby members of their own sex, but they are as a rule, even as men are. They don't see the pity of it—not till they see inside and know the personal history. Bittner would lay it to lack of imagination. I doubt if any male employer in the city would have seen value that Monday morning in those two sadly depressed women with haunted eyes. The general run would have seen only the poor clothes, the work-hardened hands, and a job of scrubbing would have rounded out their idea for them.

I talked over my idea in hiring these women with Miss Krog and solicited her coöperation. I did not want them to suffer from the forewoman's prejudice as well as from their own inexperience.

William moved two tables into the private office, so that I could oversee the work of my new assistants. Also this removed them from the prying eyes of the perky young typists. Then I carefully explained their tasks and put the Fifty Principles course into their hands to read. I counted on their trouble-matured brains grasping the whole plan and seeing its significance. These women had married men who had struggled and gone down.

They knew failure in all its starkness and barrenness. It had eaten into their souls. I believed the Fifty Principles would grip them, and I wanted them gripped. I wanted them to respect the work and put themselves wholly into it.

At closing time Mrs. Gray looked up from her reading with shining eyes. "May I take these talks home to read to Harold?" she asked eagerly.

"I am sorry," I said, "but we can't let anything pertaining to the Fifty Principles go out of the office. Maybe after awhile I can arrange for him to take the course."

That was the first point of gain. She regarded the work seriously; there was nothing flippant in her attitude. It meant something—something big—to make business men. And to be able to do the work I had outlined would mean an end to the long, weary, heartrending search for a position. Mrs. Coontz showed equal interest in her own way.

Knowing nothing of business, having no previous ideas on the subject and realizing their own lacks, they respected every order, they took no liberties.

By the end of the week I was so well satisfied with my two assistants that I believed no further problems remained in my immediate department. I went to see Mr. Bittner and found him sitting up. He said he would be at the office in a few days. I was glad, but not nearly so glad as I should have been some weeks earlier. Thrown on my own resources, I had carried the thing through, and now I did not feel especially burdened.

The day Bittner returned to the office Miss Krog uttered one "Oh," then looked at me reproachfully. He was a shadow of his former self. She suddenly understood but she said nothing. He went about the office, noted the changes, then came back and sat down by my desk. He gazed disapprovingly at the two desks of my assistants. Mrs. Coontz was busy but Mrs. Gray's chair was vacant. I saw that this close proximity of others bothered him.

"They can move into the operating room now that you are back," I said, assuming the initiative through recent habit. "It does crowd us too much."

"Everything goin' all right?" he asked.

"Splendidly! There is not one thing to worry about now, Mr. Bittner. It's just clear sailing on smooth seas."

He smiled a slow, amused smile.

"You can just as well take that Great Lakes trip as not." The doctor had advised this and I knew he ought to follow the advice. "All the bad places are passed. Please go!"

Quiet little Mrs. Gray came to us, bearing a cup of tea. She had evidently gone to the rest room to make it. "It will do you good," she said in a low sweet voice. "It helped my husband through the business day after he'd been ill."

Bittner looked as though the heavens had fallen, but thank goodness he accepted the cup. Mrs. Gray went back to her work and he stared after her. Then he turned to me: "I thought you kept things dark."

"I did, Mr. Bittner. It's you who give it away—you look ill. You won't be any

"A Stenographer Marries Her Millionaire Employer. No Such Pick-Ups in This Office"

This is REAL

How Fisk Service Will Benefit YOU

THOUSANDS of car owners have acquired the habit of going to a Fisk Branch on a certain day in the week, almost on the identical hour, month after month throughout the year, to have tires tested for air pressure.

They know from experience that regular and frequent inspection by Fisk Service Men is actually giving them from 1500 to 2000 additional tire mileage.

They have learned how important is the need for uniform air pressure. They understand that to let tires vary a few pounds in pressure from day to day is to invite trouble and unnecessary expense.

They know that their tires are more uniformly efficient, and that the upkeep costs are lower when they are given the right kind of attention. And so they have learned to depend upon Fisk Free Tire Service because it is thoroughly reliable and ***makes those added miles possible at no added expense.***

Air testing is only a part of Fisk Free Service—only one of the reasons why these thousands of car owners have the "Fisk Habit"—only one of the many kinds of help and advice found in Fisk Free Service that makes possible the utmost enjoyment and satisfaction in the use of tires, without the expenditure of a single penny. ***This is real tire service.***

Tire Service

The Fisk Service policy is as definite, as uniform, and as firmly established as is the policy for the production, distribution and sale of Fisk Tires.

It reduces tire costs and increases mileage. It is free at every Fisk Branch, to everyone who drives a car.

Anyone, regardless of the tires used, may enjoy this Free Service at any Fisk Branch, without charge and with no sense of obligation—**this is the Fisk policy and it is unique in the industry.** Take advantage of it.

advantage to the office looking like that; better take the lake trip and get toned up a bit."

"Where'd you find that woman?"

I smiled. The ministering mother-woman in an office certainly was an anomaly, and in the Bittner & Binks office at that! Poor innocent soul, she hadn't known any better than to be humanly kind to the president of the company!

"Advertised—the way we find all good things," I answered lightly. He turned and looked at her, but her head was bent in close attention to her work. Then he drank the tea. I happened to know that he loathed tea.

"I'll take that lake trip," he said, screwing up his face and pulling out his knife; my heart leaped—it was the old Bittner, "because it's such a smooth sea here. As smooth," he went on, "as any other black, snaky sea just before a storm. I'll take the trip just to be good and ready. There's goin' to be a fight—a fight to the finish this time. There ain't goin' to be any dividin' this field!"

He began to hack at his pencil. The perspiration broke out all over his face and his hands trembled. He laid down the pencil and knife.

"Just keep on holdin' things level," he said, rising. "I'll be back in ten days."

He had spoken no word of praise or commendation, but I knew the way of the man and I did not need it. He would probably never say that the changes I had made in the office were of value, but on the other hand he expected the people he associated with himself to use their brains, and if they failed to do so they didn't travel far in his boat, that was all. Possibly few of those who were dropped from time to time knew just why.

Back From a Holiday

The course of study was booming along evenly and regularly, with new subscribers coming in every day, and the department was now running as on oiled wheels. As I thought over Bittner's words I made myself believe that he was imagining trouble ahead; that his fight was an impression left over from his long illness.

Already we were getting tremendous appreciation. A merchant in Iowa wrote that one talk alone that had especially covered his case was worth the price of the whole set. A man in Georgia said he wished he had had them ten years earlier, but he believed they were gingery enough to knock off ten years. A traveling salesman said they occupied the time he had generally given to poker between towns, and the amazing thing about them was that they were just as interesting.

I opened a new file for notes of appreciation. In each case I wrote the subscriber asking whether he would object to our quoting him. As a rule the permission was granted. In a few cases, where subscribers were in important positions, they felt that they could not afford to have their names so used. I never urged the matter or filed a letter for use without the owner's permission.

Bittner returned, tanned, filled out and in pretty fair health. My two assistants had moved into the general operating room. He sat down by my desk, and immediately by some magic we were back on the old footing. I began at the beginning and gave him a detailed history of everything of importance that had occurred since his incarceration in the hospital.

"And now," he began, without comment on my recital, "the thing is the fall advertisin'. Borrige & Kemp have got nearly our whole set of talks, problems and letters; they've just about got it all in their office and their own course ready to spring. They've taken space beginning with September in all the magazines we cover and a lot besides, and ——"

"But, Mr. Bittner, you don't mean to tell me that they are actually stealing the Fifty Principles outright like that?"

He looked at me pityingly.

"They've been stealin' since the day our first Fifty Principles advertisement appeared. Been gettin' ready; they maybe didn't do nothin' expensive till those June advertisements, but ——"

"Why then?"

"Couldn't a blind man see that they were thought of late and in a hurry with all that telegraphin' to change the copy? And wouldn't an idiot know that nothin' could have inspired a sudden change of tactics but an inrush of inquiries, which meant that the thing had caught on? Of course they got next. Too many talkers in the business to keep a thing like that bottled."

"Oh, Mr. Bittner, then I did wrong to go in the June issues!"

"No, you didn't. It just brought the thing to a head faster, that's all; and it might as well come to a head first as last. If you'd stayed out they'd have dropped it for the time bein', thinkin' the scheme had failed; but you'd have lost the value of continuous advertising—lost the good, healthy start that can be got only by plowin' straight ahead. The loss of confidence engendered by stayin' out would have been worse for us than havin' Borrige & Kemp on our backs. For we gotta have 'em till we get 'em under our feet, till we're settin' in their offices!"

Then he had not been delirious that other time. I began to wonder more and more about these determined rivals.

"It looks to me personal," I said at last. "Why should they follow you up so closely! Why not some other firm? It looks personal."

He gazed at me steadily for a long time, his eyes narrowed to a squint.

"If you keep on thinkin'," he said at last, "you're goin' to be real wide awake yet."

I felt humiliated. "If I have made any mistakes by taking the initiative the past ten weeks," I said stiffly, "I am prepared to pay the costs." Then I told him about selling my ranch for sixty thousand dollars and using it to pay the advertising bills, thus getting the benefit of the discount for cash. It had saved a good deal of money—as well as the immediate situation.

He stared at me in amazement, then turned his narrowed eyes to Mrs. Gray, where they rested a moment on her bent head; then back to me.

"Well, I'll be durned!" he said. "Women are unexpected sort o' critters!"

"They are worth knowing, Mr. Bittner," I said hotly. "Few men have gone that far in their study of human nature. It limits them dreadfully."

He smiled a peculiarly maddening, superior sort of a smile. It angered me.

"You think of them just as detailists, you men," I said, "just in business to do your bidding, and carry out your ideas, and do the work you plan—and hate to do. But if you only knew it they bring a lot besides to business. They bring heart and sympathy and loyalty. When they see a business in danger they stick all the closer, and they care and they try to help carry it. What does a man do? He sees the business tottering, and he lights out and finds a job with a solid house. The very mother-nature in women makes them stick and work and try all the harder at the first sign of weakness. And besides heart and sympathy and loyalty, they've got a kind of judgment that you men lack. They get hold of the work and they go steadily ahead with it; they get interested."

The Fighting Spirit

"Look at Mrs. Gray over there. She doesn't know she is working—she's having a good time. She enjoys every one of those problems. It's just like helping her little boy at night over his slate. Watch her face. It lights up with each envelope she opens, and she smiles or frowns or looks troubled or pleased as she finds the answers satisfactory or otherwise. She's human about it all. She's flesh and blood. She doesn't make as good time as Mrs. Coontz does, but she is just as valuable, for she enters into the subscriber's needs and is so very earnest, so very sympathetic. This office is now running like a good home, Mr. Bittner, just because we've got some good home women in it—and some mothers of men! And you and other men would toss it all off with a phrase—'good detailists.'"

I stopped, breathless. I had not meant to say so much, but once in a while Mr. Bittner succeeded in arousing my indignation past the point of control.

His eyes were still narrowed down to a slant and he seemed looking away toward a far horizon.

"I don't know much about homes," he said slowly at last, "but from all I hear, I gather that the house machinery runs smooth when the enemies on the outside are taken care of right. It's enemies everywhere: With nations it's other nations; with business it's rivals; it's fight all through and in every quarter. Women ain't naturally got the fightin' spirit."

"Haven't they?" I challenged, looking him evenly in the eyes.

"They'll maybe fight for a man, or with a man or because of a man or their children or somethin' like that, but they won't just plain fight for the sake o' fightin'."

"Of course not; it's not nice!"

"That's just the point. They think it's not nice! They don't put a high value on a good fightin' spirit."

"And you men don't put a high value on a good peaceful spirit," I retorted. "You take it for granted when it's really a great achievement. Women have always made it their business to work for social harmony, and they've achieved a high degree of efficiency as socializers. But you just call it—oh, well, we'll say a woman's way. But I want to tell you it means just as much in the business scheme as to be good fighters. Men don't understand the value in women. They think women are trying to usurp their place and take their job away, when they are not and never will. When women are really valuable it's when they bring to business qualities left out of men; when they supplement men."

Advertising Plans

Bittner smiled broadly and looked toward Dumble: "A fine lecture to give a fellow with an office full of women and just one man in his employ."

"That's just it. You've felt your way blindly to a truth, but you haven't recognized it. It's the recognition that I want."

He picked up a large red apple that William had placed on my desk. William and I were great friends. Then he took out his knife, and with infinite care laid it across the perfect apple and cut through the core. The two halves fell apart.

"It's like that, is it?" he asked. "Just two halves?"

"You've got it," I returned, laughing at his extreme care to halve the apple evenly.

"Then we'll get back to Borrige & Kemp," he said mildly. "They've no doubt got their plan ready, as I said, and they'll spring it in September. We gotta have September advertisements that'll knock the punch out of anything they may say or claim. It's gotta be evident at the first glance at the two advertisements that they're copyin' us. First off you put that history of the business on record at the historical society, and get their receipt. We'll have a half-tone made of it to reproduce."

"Oh, Mr. Bittner," I exclaimed, suddenly remembering, "there's the convention that I forgot all about. You've got your M. B. P. degree—your tag." I pulled open a drawer, found a copy of the paper with the write-up and spread it before him.

He took in the headlines, glanced through the body, then looked up and eyed me queerly.

"You're sure some woman!" he said. This was the first verbal praise I had had from him.

"It will take up a lot of space to use both," I replied, quickly getting down to business.

"We gotta use two pages and ——"

"Then it's true that Borrige & Kemp have ordered two pages?" Several representatives had reported to this effect some days earlier.

"It may and it may not be true; but we gotta come in full and strong and get photographed on the public eye as the originators of the idea of making business men. In the same publications Borrige & Kemp will come out with handsome copy, but it'll be their first issue on their new scheme. We gotta make it plain that we've been in the business some time—it'll be all o' six months, thanks to their tool, Wagner—and we've already got a list o' subscribers that'll stand as proof of our soundness. We gotta advertise from September on as if we were an old-established firm in the business o' making business men. We can't say so in so many words, but make the talks sound like history. Stir it thick with references to successful men who have subscribed, with stories of achievement, with suggestions of accomplishment—what has already been done. Make the advertisement sound like those of a strongly established, assured institution alongside one of these little mushroom copycat affairs. Give it age, solidity, strength, conservatism. Don't get any smack of newness in it. Make it a vivid contrast to every new, untried claim. Take our first advertisements with the suggestion all through of what we will be able to do for the business man, and offset 'em

(Concluded on Page 71)

Symbols of Security

When the motoring world wants freedom from every form of tire trouble it looks with confidence to the Firestone Non-Skid Tire, the Colossus of Roads.

There is confidence in its safe, sure hold on any road, in any season. There is confidence in the resilient strength and mileage values in every Firestone Tire.

Above all, there is confidence in the quality on which the organization was built and in the Firestone name behind it, a symbol of security the world over.

with what we have done; only don't make any misstatements. Give the impression but watch your words."

"Mr. Bittner, if you don't mind telling me, how are you so sure that Borrige & Kemp are planning all this as you say?"

"It's in line with their work."

"Is that all you're going on?"

He eyed me queerly. "What more would you want to go on? If there was a thief round, and you left your diamond tiara out handy, what result would you expect?"

"But suppose in this one case you are all wrong. Suppose Borrige & Kemp should not have noticed our advertisements. Then won't our fall advertising be all out of key? In that case wouldn't it be better to have it harmonize with our original advertising?"

"There won't be no such case."

"How do you know?"

"Borrige & Kemp will follow me up till one of us is ditched."

"But why?"

"Why? Do you mean to tell me that it ain't never occurred to you —— Oh, you woman, I guess I gotta use language!"

He came nearer and whispered two words.

"Mr. Bittner!" I exclaimed, too astonished to say another thing.

"Fightin' maybe ain't nice, as you was a sayin' a while back," he went on mildly, "but I guess you see now it's to the last ditch all right."

Binks Comes to Life

After the first shock of the news that Binks, Bittner's old-time partner whom he had frozen out of the Bittner & Binks business after discovering Binks' plan to freeze him out, was the motive power back of the Borrige & Kemp Company, I asked myself why this had never occurred to me before.

With the passing of Binks out of our office on that stormy afternoon four years earlier he had, to my mind, passed off the planet. His exit had seemed a final one. His reappearance in the thick of our lives was shockingly incongruous. It was as if in a play a villain who had been killed in the first act should come on in the third to upset the whole tenor of the piece. Not that I regarded Binks altogether as a villain, even though on a plain statement of the facts he might be proved one. I had been too close to the fight and had understood too perfectly the fierce antagonism that existed between the men to have all my sympathies on one side. They were of such different timber that each was totally incapable of doing the other justice.

Binks had been the office drudge, attending personally to such duties as were now mine. Bittner, then as now, had been the man on the outside, generally absent from the office, picking up ideas and working out schemes the value of which Binks was unable to estimate correctly. From Binks' point of view, Bittner shared in the profits of a business to which he contributed virtually no labor. From Bittner's point of view, Binks was a slow-witted, obstinate, unimaginative plodder who held the business back. Their separation was inevitable, as each was tenacious of his own ideas.

The fact that Binks had precipitated the disruption by a conspiracy to close Bittner out, and that the latter, by his swiftness of action, had turned the tables on him, would naturally intensify the hatred with which Binks regarded his former partner. He had been seized in Bittner's quick, sure grasp, thrown out and the door closed upon him; and then he had been forgotten. But he had not forgotten. He had assembled a mightier force than ours and returned to crush us. It wasn't then merely the case of two rivals, each seeking the lion's share of the public's money, but of two men influenced by natural antagonism and personal animosity, each fighting to win at the price of the other's ruin.

Poor Mr. Binks! He had not been able to save even his name from the catastrophe—Bittner got that too. I could see how it must gall him every time he saw it in print, and that was pretty often, as it was in every publication of importance.

As I thought over the situation I realized clearly our peril. Binks had in an unusual degree the ability to absorb and give out another's ideas. Supply him with a text, and he could write pages on it, never getting away from the original thought. He was uneducated, illiterate, but he had the gift of language. Words would flow and sentences round out, and he could hold forth on a suggestion he had just caught from another with a warmth and fervor that made the thing appear to be his own. He had so completely absorbed Bittner's ideas when the two men were in business together that he had actually come to consider himself their originator.

Bittner gave me the details of Binks' business experience since leaving us. It seemed that he had been able to interest capital and had become the working partner in an old, well-established publishing house that had lost ground of late years. The men who had built up the business had died, and the principal inheritor, David Kemp, suffered from rheumatism and spent most of his time at European health resorts. Binks had made good on the new departure, the publishing of business books, and the management was now left wholly to him. The fact that the firm was located in New York was an advantage, as so many people look to New York as the natural book center. Binks had been wise in associating with himself eminent college professors with many letters after their names, who had written books to which he had given high-sounding titles. Combined with this he brought to the New York concern the practical experience of the practical business man—and Binks was a good business man of his kind, there was no question about that. He had used the personal human quality in his correspondence, had made his office, in fact, a copy of the old-time Bittner & Binks office, and he had won out.

I went to work at once from the vantage ground of my new knowledge. I collected Borrige & Kemp advertisements for a year back and studied their appeal. Then I settled down to our fall advertising in a spirit of dogged determination. We must win. I must have ideas and language and pith and point. I prayed for ideas—gingery selling ideas.

Bittner never had been so critical of his advertising as he was that summer. I would work on an advertisement until I was dizzy, getting in the points, the levers that must pry loose any foothold a Borrige & Kemp advertisement might have secured. It was not just copy to advertise the Fifty Principles that I was writing, it was copy to undermine our rivals, and the public must not realize the attack. We imagined every argument Binks might put forth and we met the arguments in advance. Then all this mass of points, proofs and facts had to be condensed into hammer blows, got into strong, terse language that would drive in, and boiled down to fill only two pages when it needed a dozen! We had the September copy set up to be sure that the pages would not appear crowded, made a few elisions, tried it again, and at last sent it off. Then we took a long breath and went to work on October copy.

Bittner came in with new ideas daily. His eyes were intense and his whole being seemed focused on one point. The big fight of his life was on. He was still young—thirty-four—but he had been fighting always—fighting conditions—and he had reached his fighting prime.

How Mrs. Gray Got On

The Fifty Principles work went ahead without important difficulties. The two women continued interested and efficient. They came early and worked late and never asked for a raise or a holiday. Mrs. Coontz had had her teeth put in, and both women were now dressing better. They were getting twelve dollars a week, not a large salary, but then they were untrained women, and so had no ranking, nothing on which to base a claim for higher pay. I hoped we could raise them substantially by September, but I realized that we must keep expenses down to the lowest notch. Mrs. Gray had discovered Mr. Bittner's preference for coffee, and now each day she made him a fresh cup and brought it to his desk when he arrived at the office in the middle of the afternoon. I hadn't the heart to remind her that this cut fifteen minutes or so out of her day; besides, I saw that Mr. Bittner had begun to watch for his coffee. Mrs. Gray was a gentlewoman through and through, but also she was making good. She was doing capital work, and this is a much more creditable achievement than just to be a gentlewoman. Still there was something pathetically brave about it all. It rested me just to look up from my work and see her sitting there; quiet, poised, dignified. It was a happy contrast with the slangy, gum-chewing, indifferent typists who were forever talking of their dances and giggling about their gentlemen friends. Youth must have its dash at life, even cramped youth in a big dingy office, but the sweet gentle presence of this refined woman in business was like a bowl of violets on one's desk.

Mrs. Coontz was growing into a typical business woman; and she was just the material for it. Active, eager, exact, methodical, she worked hard and looked forward to a raise. She had learned to dictate letters with a crisp, quick sort of fluency that was in keeping with the Bittner style. Miss Krog preferred her to Mrs. Gray. When I looked upon these two, I wondered that employers the world over had failed to see business value in older, life-experienced women. I wondered how they could go on year after year hiring raw, green girls in the grip of youth and fancy, when this mature, serious-minded material was in the world. But business men are the most conservative people on earth. When they break away from the beaten path they are not business men, they are business geniuses.

Bittner Becomes Gracious

I seemed destined always to rub Miss Krog the wrong way, though there was no one with whom I tried harder to be tactful. One evening after the stenographers had gone Mr. Bittner discovered a letter on his desk that should be answered immediately. He looked helplessly about for a stenographer.

"Will you get this letter out for me, Miss Krog?" he asked, ambling over toward her desk, where she sat pinning on her hat most carefully before a small mirror.

"Me?" she questioned. It might have come from royalty.

"Let me do it," I exclaimed. "Dictate to me on the machine." I ran out to the operating room and opened one of the machines. He ambled over and dictated his letter. Miss Krog looked on in amazement; then pinning on her handsome hat she went majestically out of the office. Poor Miss Krog! She kept constant guard on her dignity. She had been a six-dollar-a-week typist once; but now she was the forewoman, and far be it from her to recognize so publicly her lowly origin.

One day Mr. Bittner stopped by my desk and said, nodding toward the two assistants: "Got any way of gettin' more like them?"

"Oh, yes," I answered; "there must be more."

"Better see about gettin' 'em. We'll need more in September."

Then I broached the matter of a raise.

"Both of 'em?" he asked, frowning.

"Certainly. They came in together and are equally efficient."

"Mrs. Gray now, she oughta get more; but I don't know about Mrs. Coontz."

"Why, Mr. Bittner, Mrs. Coontz is excellent! I was going to suggest that you make her the head of the Fifty Principles department. She works like chained lightning and she is so orderly. She will look after the record-sheets—and, by the way, that work needs a girl of its own, it is getting so cumbersome. I would suggest that you make Mrs. Coontz the head. Miss Krog likes her and they work well together."

"What about Mrs. Gray?"

I looked up surprised, and then a light dawned. I started to smile, checked myself, and drew my face into stolid composure.

"Yes, what about Mrs. Gray?" I repeated presently. We both turned and looked toward her. The sunlight streamed through the window and across her desk as she sat writing, lighting her hair to a ruddy gold. Bittner ambled over to her desk.

"If I was a poet," he said, "I'd make poetry about the woman with gold in her hair."

Mrs. Gray looked up, not quite comprehending. There was a surprised, questioning expression in her soft hazel eyes.

"Don't you want that blind lowered?" he asked, and went over to the window to lower it. She thanked him sweetly and bent again to her work.

I dropped back into my chair and stared hard at the inkwell. For the first time in all the years I had known him I had heard Bittner say a gracious thing, had seen him do a gracious act. All the rest of us had taken Mr. Bittner as we found him and tuned our manners to his key. We had returned curtness for curtness. Mrs. Gray had remained the kind, well-bred, courteous lady, and he had lowered her blind. He had seen gold in her hair and told her about it!

Editor's Note—This is the third article in a series of four by Anne Shannon Monroe. The fourth will appear in an early issue.

A smart top coat in a wide variety of colors and patterns.

"Warm-an-lite"

A New "R&W" overcoat made of a knit fabric that is warm, light and soft.

Ask your dealer to show you this stylish overcoat.

Look for the label.

Makers of good overcoats, raincoats, trousers, fancy and dress waistcoats, smoking jackets, bathrobes, summer clothing, golf and automobile apparel.

Rosenwald & Weil

Clothing Specialties

CHICAGO

Your home is not complete without these modern building necessities. Designed to protect the good looks of your home and grounds from the careless coal man—to provide for the most sanitary method of garbage disposal and for the safest and cleanest delivery of milk, etc.

Majestic Coal Chute

Garbage Receiver—Package Receiver

These Majestic Specialties not only make every home complete, but they save work and steps for every housewife, making up for their small cost in a very short time.

The Coal Chute keeps your house, lawns and shrubs clean because every piece of coal falls into the bin without damaging your house. Absolutely burglar-proof.

The Garbage Receiver is sanitary, water-tight and fly-proof. Emits no odors and keeps the contents safe from dogs and vermin.

The Package Receiver placed in the kitchen wall, insures milk bottles and packages against theft and keeps them clean.

Write for Catalog Today

which describes these and many other Majestic Specialties.

George Westinghouse—the Man

Most Americans know that George Westinghouse invented the air-brake, the most important railway safety device ever known.

Few, however, realize how great were his other contributions to our present civilization.

He stands a dominant figure at the parting of the ways between the age of steam and the greater age of electricity.

He, more than any other man, viewed the coming era as a whole and not merely in part. Therefore his life-work, more than that of any other one man, helped to solve the three great problems in the electrification of a world.

First, the economical generation of electric energy.

Second, its far transmission and wide distribution.

Third, its efficient and economical application to use.

He considered its every aspect in relation to power plants, central stations, railway and steamship lines, manufacturing industry and household convenience.

Thus, it was he also who first harnessed the power of Niagara.

It was he who effected safe and economic distribution of natural gas.

It was he who developed and made practical the Parsons steam turbine for electric generation and who also perfected reduction gears by which its terrific velocity can be safely yoked to the propeller shafts of vessels.

He developed the transformer patents by which the alternating current came into general use to effect wider and more economical distribution of electric energy.

He encouraged and aided Nikola Tesla in perfecting the induction motor which today does such a large share of the world's work.

He greatly advanced the electrification of steam railways, increased the safety and improved the operation of street and interurban lines, perfected the remarkable automatic coupling system on the New York Subway and designed complete electric switch and signal systems.

Whoever you are and wherever you live, you experience every day some civilizing influence that flows from his labors.

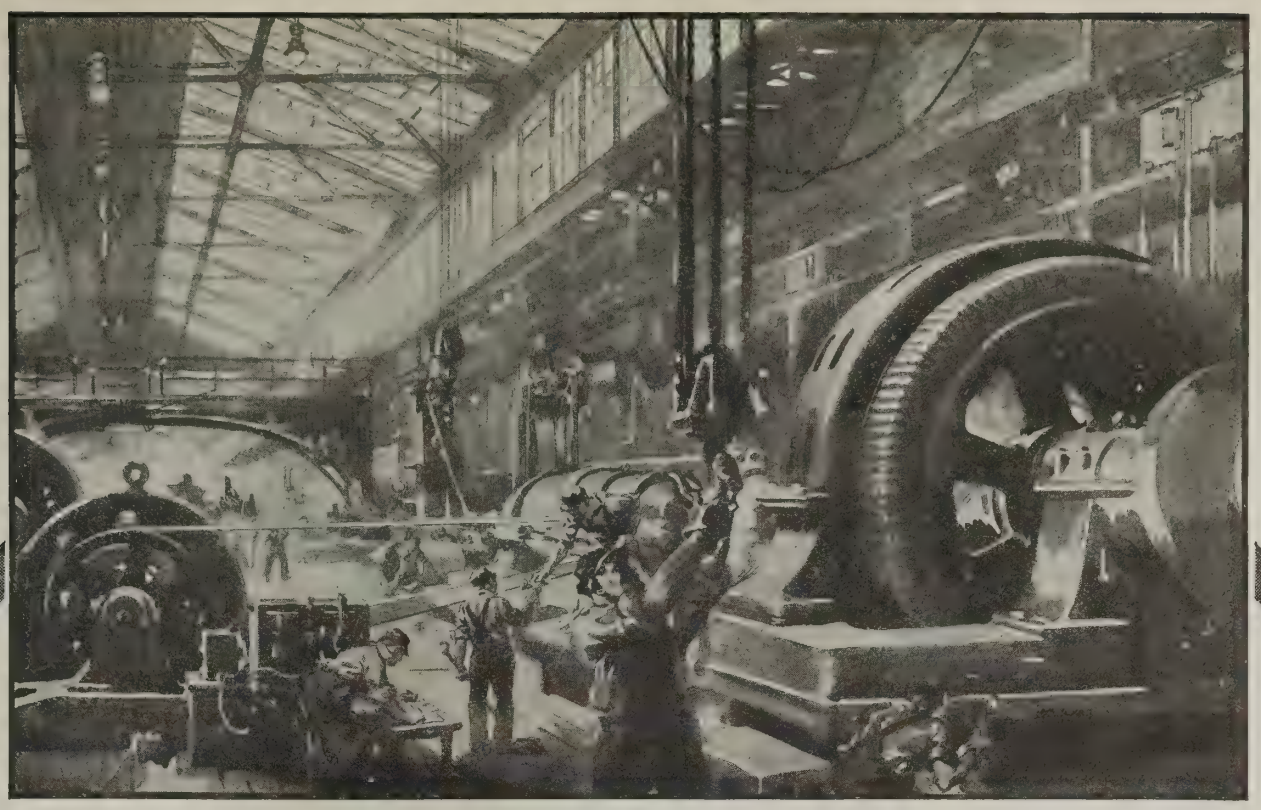
Westinghouse



Westinghouse—the Institution

Of all the achievements of George Westinghouse there was none in which he took greater pride than in this institution which bears his name.

He started without any capital save his ability; he lived to be the head of an organization employing $200,000,000 of capital and 50,000 men and women.

He defended and maintained this institution against the most bitter, determined and persistent attempts to crush it. And to the lasting benefit of his countrymen he was successful.

The work he began continues. The organization he founded is firmly and permanently established as an international institution.

Westinghouse engineering ability, Westinghouse invention and research, Westinghouse thorough workmanship are even greater factors in the electrical world than when he lived.

Westinghouse products are, of course, subject to the limitations of all devices constructed by men out of material elements. They are subject to continuous development, improvement and variation.

But they have built into them, something of the ideals and principles of the institution, and those are—

To keep always in advance of electrical development.

To devise and build any and every kind of apparatus that will reduce the cost of generating and distributing current for the people's use.

To build other types of electrical apparatus that make efficient and economic use of current in every possible application to human activity.

To surround these products with every manufacturing safeguard of good quality and durability, to follow them in use with expert service.

These principles have built up a world-wide business which designs, manufactures and distributes over 300,000 separate items, including everything from electric locomotives, gigantic generators and motors to the electric ware that makes home life less laborious and the myriad small supplies and parts used by the practical electrician.

THE IDEAL OF HIS DREAMS

By IDA M. EVANS

ILLUSTRATED BY W. B. KING

ALL his life George Williamson had dreamed of her—the fair girl whom sometime he would love and wed. Even before he was twelve years old while sulkily, hoe in small, tanned, tough hand, he pecked day-long at potato hills, he visioned her. And the vision grew and waxed stronger when, older, he guided the old white horse and the plow up and down his father's corn rows.

And often the hoe handle slipped idly from his lax fingers, and often the plow cut wabbly furrows instead of straight as his large, earnest brown eyes went dreamily over potato field, over long, tender green corn spears, past the stretch of scrub oak adjoining his father's farm, beyond the distant tawny strip of dunes guarding Lake Michigan, ten miles west of the farm—away beyond, into the distant hope-gilded, hope-guarded future.

She filled his future—this dream girl. How his heart yearned to her and for her! All desirable she continually appeared to his earnest young eyes. His fancy invested her with a thousand glowing charms.

Sometimes he pictured her with eyes the lovely eager blue of early violets. Sometimes her irises were dusky, like ebon clouds. Sometimes her pretty hair was pale gold; sometimes as brilliant as dawn; sometimes her tresses were somberly beautiful and dark, like a winter moonless midnight. Sometimes he saw her a slim young thing; sometimes, petitely plump; sometimes, stately and Junoesque. Sometimes he did not definitely visualize her, but saw her vaguely—just a girl or woman with an aura of ——

Blonde, brunette or fifty-fifty, as the hour's greater or less fertility of his imagination dictated, there was one item never lacking from the vision of her whom he made the ideal of his dreams; there was one feature that he never failed to visualize. And that feature was the lovely flutter of the leaves of a check book, either in her small white hand—or large hand, as the case might be—or somewhere very near her. And the aura he always created about the girl or woman whom sometime he would love and wed was—the aura of greenbacks.

For George Williamson was a logical and thoughtful youth as well as dreamy. He early learned to like the looks of money. Cash is so lovely a calcimine for the crude walls of existence. But he did not at all incline lovingly to the toil and difficulties of earning a lot of money. In a way, he was a modest young man. In his heart he doubted his ability ever to corner much of the world's treasure-trove. It seemed to him that it would be far easier to marry a lot of it than to make a lot of it. He knew that plenty of men were doing it—every day. Would it not be as easy to love the daughter of a rich man as the daughter of a poor man? George logically and reasonably held that it would be far easier for him.

And so perhaps it is more exact to state that the actual ideal of George Williamson's dreams was a coupon-cutting, bond-burdened, check-book-cluttered father-in-law. For it is a fact that his young heart at times swelled almost to bursting in its yearning to meet that oft-dreamed-of future relative, while his large brown eyes searched the years to come so earnestly and so wistfully for the elderly gentleman that by the time George was nineteen they protruded slightly; though this was hardly noticeable because of the countering effect of a large, broad forehead, prominent cheek bones and a heavy chin.

When George was nineteen years old he left home.

Even when a mere child he had never cared greatly about hoeing potatoes. The older he grew, the more he disliked that work. Also, he heartily disliked to weed, plow, prune, milk, harrow and haul hay. Finally his soul absolutely revolted and he sullenly told his father that he'd be d——d if he'd work like a nigger on the farm any longer.

James Williamson, a weary old fellow whose shoulders were rounded like a bowlder and whose face was furrowed like one of his own tilled-out fields, mildly said that was all right; he could suit himself. But, he added, in that case George needn't hang round home any longer; for George had a baker's dozen of brothers and sisters, and

He Added, in That Case George Needn't Hang Round Home Any Longer

the farm, though one hundred and sixty acres large, was a tired, sandy old place, harrowed almost out of fertility and hard-pressed to feed even those who helped coax crops from it. It was not fair to expect it to feed one who would not help in the coaxing.

George listened stolidly to his father's mild statement of the facts; then silently donned his Sunday suit and packed in a valise his three white collars, four pairs of balbriggan socks, five neckties, some shirts and underwear, a paper-backed copy of St. Elmo, and a cat-stitched chambray laundry bag given him by his sisters, Rose and Amelia, the preceding Christmas.

Twenty minutes later he set the valise down in a rear upstairs bedroom of Mrs. Melissa Hanna's city boarding house, the leading and only hostelry of Middleburg, a town of seven hundred and twenty people, one corner of which adjoined one corner of his father's farm.

The next morning, at seven-thirty, he was standing behind a counter of A. B. Searcer's Emporium, the leading and only dry-goods store of Middleburg; a position that, unbeknownst to his parents, he had asked for and obtained a week before when he took a wagonload of garden truck into town.

George was not the kind of young man to leave home recklessly, with no place the next night to lay his large, sleek brown head. He was instinctively a believer in preparedness; one of those who do not burn any bridge until a neat, provisioned raft is built and tied under the willows at the bank. Had George participated in that well-known Boston Tea Party, no tea would have been poured until he had in his hip pocket a written statement from the British Government absolving him from complicity.

He worked at the Emporium nearly ten months. Abe Searcer paid him eight dollars a week. For room and board he paid Mrs. Hanna four dollars a week. That left for clothes, doctor's bills and recreation, four dollars—minus ten cents weekly, which he tipped Frieda, waitress at the city house. Do not get any impression, however, that George Williamson willingly and cheerily swelled the great American evil. He gave the tip grouchily. But it was, in a way, enforced. It was almost blackmail. If he didn't tip her Frieda had an ugly habit of giving him ice-cold soggy potatoes instead of warm soggy ones; also the fattest slab of side meat she could find in the pan. The food furnished at the city house was none too tempting at its best; which may have been a reason why George punctiliously kept the promise made to his mother, at leaving, to come out home every Sunday for dinner.

His mother's meat pies had the flakiness that is a melting kiss to the palate. Mrs. Hanna's pies were flaky in mineral style; they chunked down the throat like pieces of granite.

Walking out home and back again to town, those dusty or rainy Sundays, or when it was snowing, George renewed his vow sometime to have a home of his own that would be indeed a home.

Out of his weekly eight dollars, during the ten months at Searcer's, George paid his board and a rather large dentist's bill, bought two thirty-dollar suits, with shoes, ties, derby and linen to accompany, went to all the entertainments and dances of the surrounding county, and, besides, saved about three and a half dollars each week.

With the modesty that ever was characteristic of him, he never boasted of what he saved. However, Abe Searcer finally guessed.

"But I don't dare accuse him," he fumed to his wife. "I ain't got a grain of proof. He's been too slick. And he'd sue me for damages like a shot."

But that Saturday night he grimly told George that he need not be on hand for work the coming Monday morning. Abe's gray eyes, under heavy gray brows, raged their knowledge; but George, unperturbed and imperturbable, unconcernedly got his hat and pleasantly called good night to Hattie Doebling, the bookkeeper, a tall lank girl with whitish yellow hair, long bony arms, and sallow bulging cheek bones.

Hattie, who was four years older than George, turned her pale-blue eyes toward Abe Searcer reproachfully.

Then for a while George worked at the Middleburg basket factory, a small concern; then at the depot lunch room; then in the office of the coal yards; then at a canning factory in an adjoining village. Meeting Hattie Doebling at a country schoolhouse dance, he was told by her that the larger of Middleburg's two grocery stores, owned by her brother-in-law and his father, needed a man; so he drifted back to the home burg and, by repressing some of his innate propensity to save, managed to hand out groceries for two years, at ten dollars a week.

During these two years he found a new way to augment his legitimate income. Back of Jud Pilson's drug and ice-cream store was a small dingy room in which nightly gathered the most restless element of Middleburg. Poker was the chief attraction—this in spite of the continual protest of the Ladies' Aid Society and the tearful pleas of the Wednesday Uplift-Our-City Club. Awkward at first, in time George Williamson's long, strong fingers, whiter than when they left the farm, acquired such uncanny skill in shuffling ace or deuce or queen to such part of the deck as was most advantageous for George's pile of chips that various citizens of Middleburg and various commercial travelers making the town came to regard George churlishly.

Unperturbed and imperturbable, he merely grinned, twiddled his thumbs, abandoned the grocery store for the lighter work of chalking at the pool room, began to pay forty-five dollars for his suits instead of thirty, and began to take short pleasure trips to Grand Rapids, Detroit and Milwaukee.

Meantime his dreams stayed with him. But he began to doubt that he would ever find his dream girl—or woman—round Middleburg.

In the whole county—except old Widow Swanson, who had forty thousand dollars out at interest, but was seventy-six years old and bedridden with rheumatism half the time, and a few farmers' daughters whose beefy cheeks did not appeal to George—there were only five women who possessed, or ever would possess, over fifteen hundred dollars.

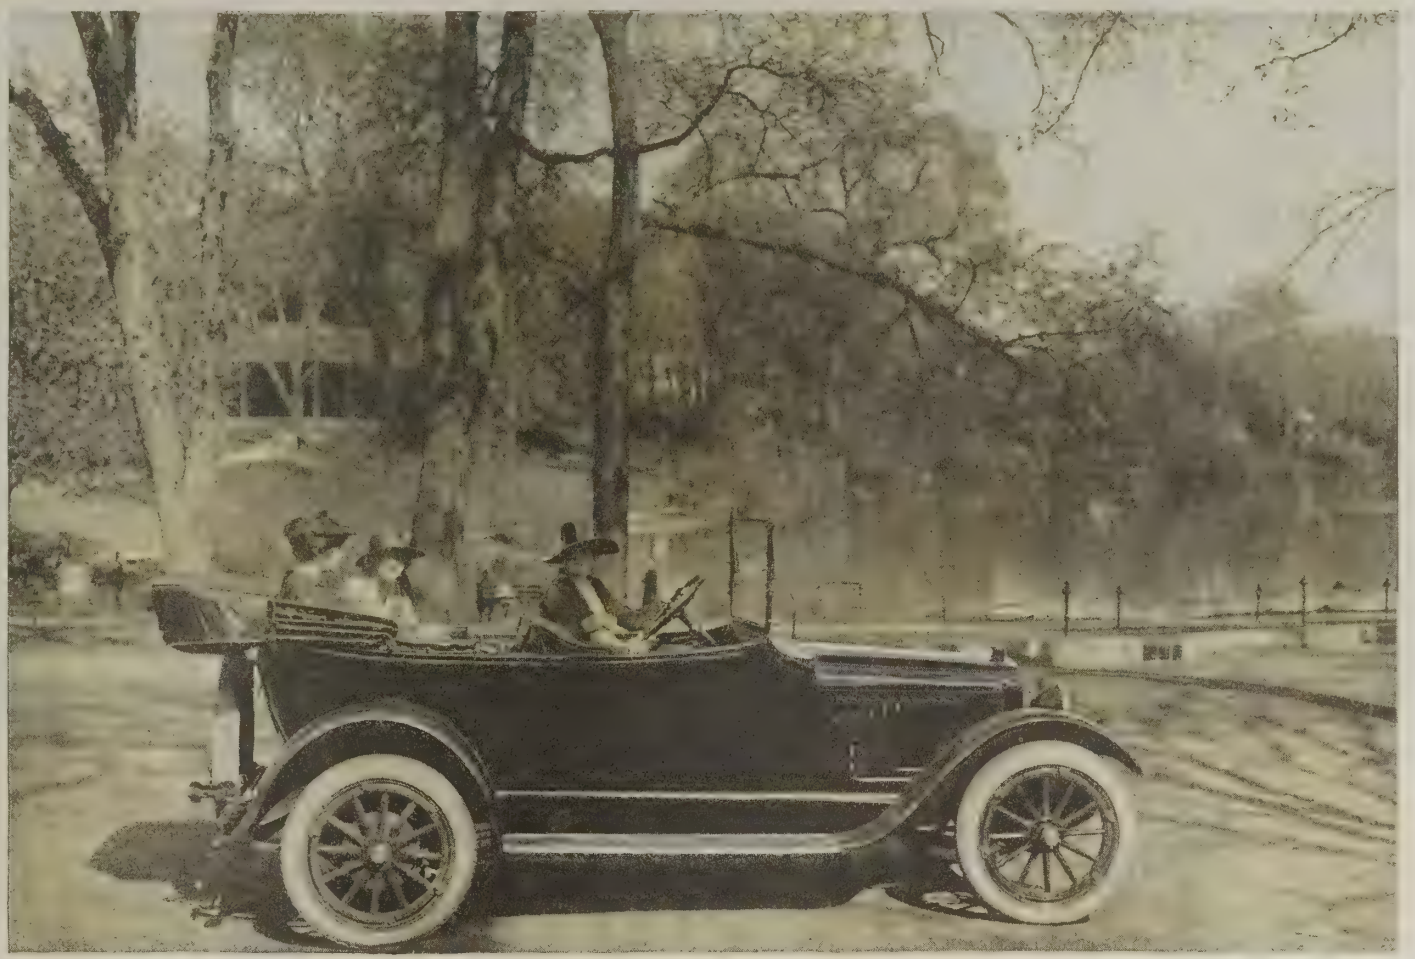
Sarah Gould, thirty-six years old, principal of the town schools, had ten thousand dollars in bank—a legacy. But Sarah was graying-haired and had two old, ailing, ill-tempered parents. George could not fit her into any dream of his. Besides, Sarah once had said loud on Main Street that if she had her way she'd ride out of town on a rail every man who patronized that back room of Jud Pilson's.

Elsie Corder, twenty-six years old, would sometime inherit the Middleburg State Bank from her father. Elsie was nearly handsome, but four years at college had given her a very good opinion of herself and a rather slighting opinion of Middleburgites. She was reported to be engaged to an Eastern lawyer. She was seldom in Middleburg.

Leila Herbert, a serious girl of twenty-two, only niece of Josiah Anderson, who had accumulated about one hundred thousand dollars' worth of first mortgages on property in and adjoining Middleburg—including the Williamson farm—was engaged to the Baptist preacher, a widower with six children whom Leila honestly desired to mother.

The two Halber sisters, whose widowed mother was reputed to be extraordinarily well fixed, were heavy-shouldered, heavy-voiced, inclined toward socialism, devoted

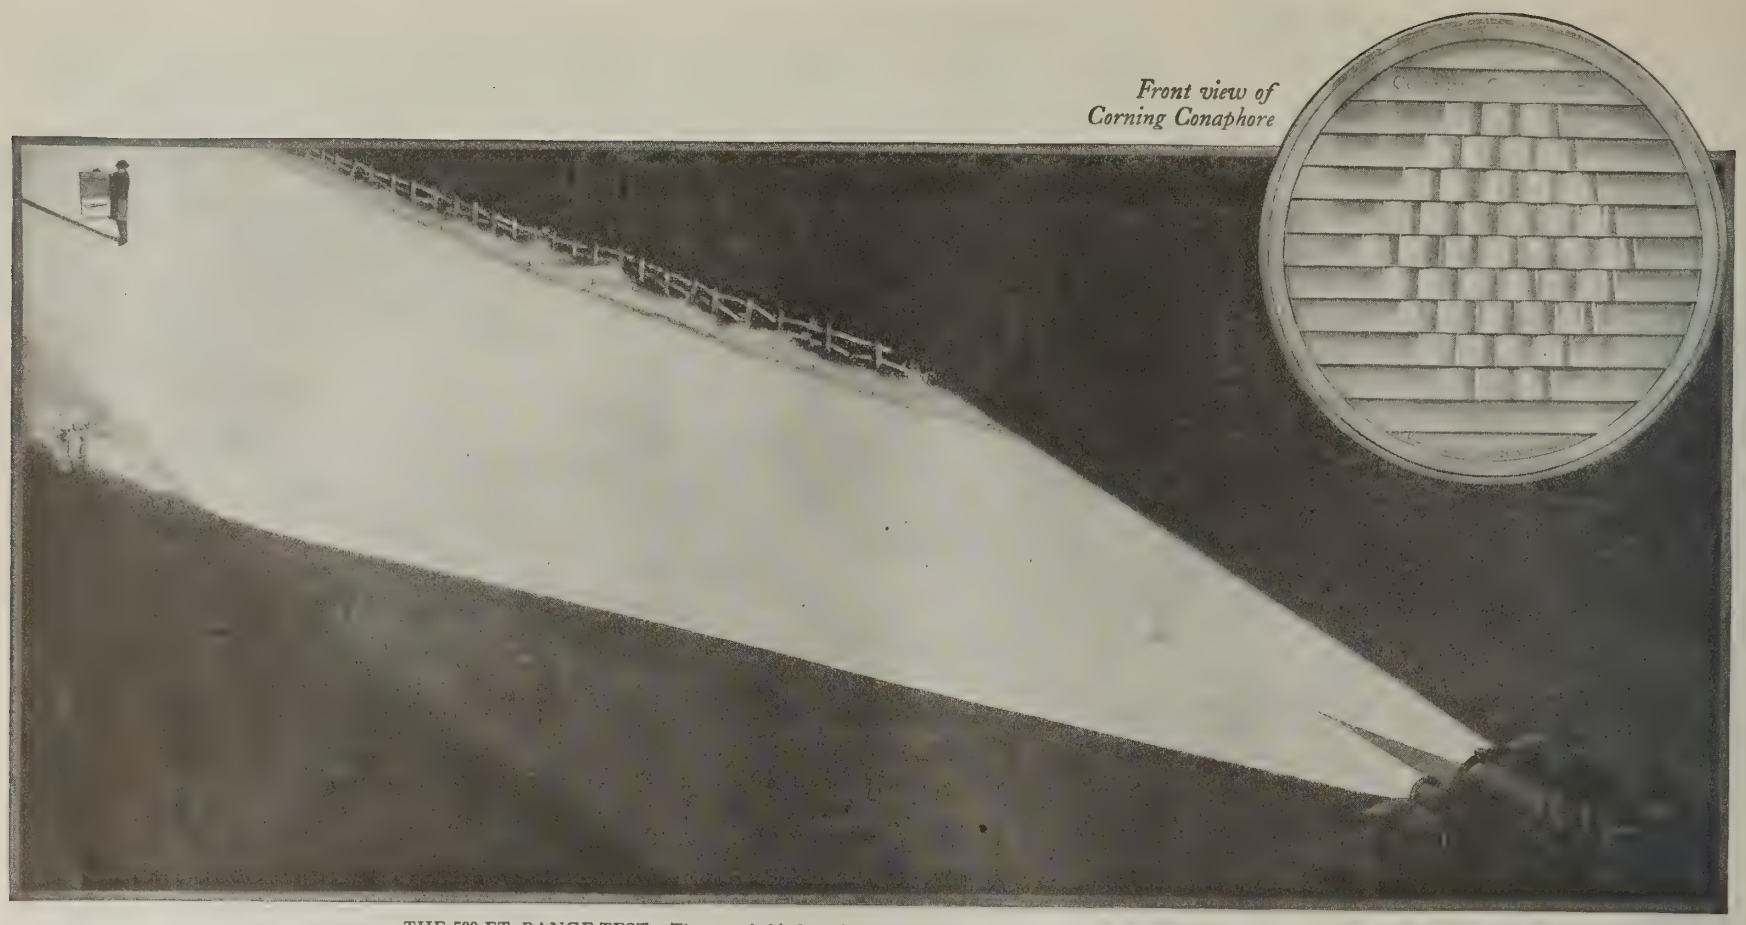
(Continued on Page 77)



For every good article there is a sensible price. A sensible price for a suit of clothes, a pair of gloves, a hat, a cigar, an automobile. The sensible price for a high grade 6-cylinder automobile is well established. It is, for a 5-passenger touring car, $1250; for a 7-passenger car, $1350. That amount of money buys good lines. Buoyant springs. Soft cushions. A roomy body. A high degree of comfort. A motor with plenty of power. Sound reliable construction. The best labor. The Chalmers six is a sensible automobile sensibly priced. To pay less than the Chalmers price is likely to prove poor economy. To pay more is unnecessary. The question of price is not perplexing. Simply pay the sensible price for a sound and sensible car.

Five-passenger	Touring	$1250	Seven-passenger	Sedan	$1850
Seven "	Touring	1350	Seven "	Limousine	2550
Two "	Roadster	1250	Seven "	Town-car	2550

(All prices f.o.b. Detroit)



THE 500-FT. RANGE TEST. The man behind a pair of Corning Conaphores can read a sign 500 ft. from his car, if it is held in the beam of light. Notice ample side-light. 500 ft. range means safety no matter how fast you drive.

RANGE 500 FEET
Without Glare

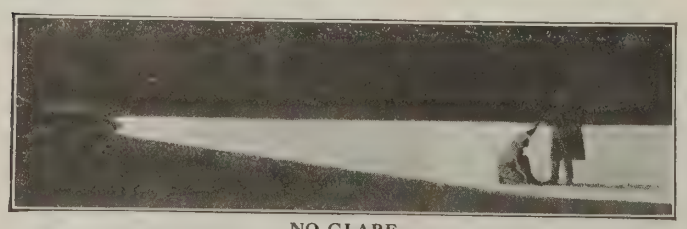
Every automobile owner wants a headlight glass that gives long range.

Long range means safe night driving. If your headlights shoot a beam 500 feet down the road, there isn't much chance you'll crash into an unlighted wagon, run off the road at a sharp turn, or hit a pedestrian. You can see ahead—and so you can stop or turn out in time to avoid accidents.

But while you want long range, you do not want glare. Glaring headlights blind other motorists and pedestrians. Accidents result.

The Glass that Gives Range Without Glare

The trouble with most devices for cutting out glare is that they reduce the range and so are absolutely unsatisfactory.



NO GLARE
Light from Corning Conaphores is never more than 42 inches above road.

Dimmers, caps, tilting the headlights downward, smearing soap or paint on the glass—all these schemes have been tried and have failed because they do not give the range motorists want.

Tilting headlights down may decrease glare, but it also decreases range. Tilting wastes your light.

The photograph shown here proves that the Corning Conaphore gives your headlights a range of at least 500 feet. *All the light is utilized.*

The Corning Conaphore is the headlight glass that gives long range, and yet has no glare.

Scientific Design

The Corning Conaphore is made by the Corning Glass Works, largest manufacturers of technical glass in the world. This company makes most of the signal glass used on American railroads.

In design the Conaphore is scientific, yet simple. The patented horizontal corrugations and cylinders bend down the light rays, spread them out, and shoot them along the road. The Noviol Glass, of which the Conaphores are made, causes the light to pierce fog and dust. No other headlight glass can use this patented, golden-tint glass.

Made in Two Kinds of Glass

Corning Conaphores are made of clear glass as well as Noviol Glass. Clear glass Conaphores are equally efficient in giving long range and eliminating glare, but lack the added advantages possessed by the Noviol Glass of eliminating back-glare and penetrating fog or dust. We strongly recommend the Noviol.

Easy to Install

You will find the Corning Conaphore easy to install. Simply take out the glass now in your headlight and put the Conaphore in its place. Sizes are made to fit all cars. In ordering give name, model and year of your car, and diameter of your present headlight glass. All progressive dealers now sell Corning Conaphores. Put a pair on your car today.

Price List

Noviol Glass	Per Pair	Clear Glass	Per Pair
3 to 4⅞ inches inclusive	$1.30	3 to 4⅞ inches inclusive	$0.80
5 to 6⅞ inches inclusive	2.40	5 to 6⅞ inches inclusive	1.60
7 to 8½ inches inclusive	3.50	7 to 8½ inches inclusive	2.50
8⅝ to 10 inches inclusive	4.50	8⅝ to 10 inches inclusive	3.00
10⅛ to 11½ inches inclusive	6.00	10⅛ to 11½ inches inclusive	4.00

Prices 25 cents more per pair west of Rocky Mts.
Sizes vary by steps of ⅛ inch.

CORNING CONAPHORE

(Continued from Page 74)

to suffragism and interested in eugenics. Once they had taken it upon themselves to remonstrate unpleasantly with George Williamson because their young brother spent too much time playing pool. George was of the opinion, ever since, that any man who married them for their money would earn all he got. And he knew very well that if he should propose marriage to either, she would call the sheriff and have him locked up as a drunk and disorderly. Not only prophets are without honor in their own home town.

As time went on, George, however unwisely, acquired a little too much skill in shuffling a deck of cards. Finally Jud Pilson uglily told him that the other fellows would be just as well satisfied if he stayed out of the game—or played differently. For a while George was stubborn and hung on. But many of the men began to refuse to play with him, and some were not so taciturn as Abe Searcer had been.

At last everybody interested seconded the motion that George be barred from future card games in Middleburg. George grinned. He could afford to; several of his boon companions growled.

But after that summary action time began to drag for him. Middleburg palled. The days in the pool room were dull. The nights monotonous. He decided that it was high time he was getting up and out of the town into a bigger place, where there was some chance of making dreams come true.

At this time George Williamson was twenty-nine years old. He looked slightly older, though he was, in a heavy, stolid way, rather good-looking. "Awfully good-looking," said Hattie Doebling. His brown eyes had a steady, straight stare—perhaps from much dreaming—that smacked of innate honesty. He was muscularly built. He wore about the best clothes seen in Middleburg. Not everyone has to go clear to a college to get an education. In his various lines of toil George had picked up a diversified heap of knowledge that more important men might have envied him. He had plowed long enough to get a hard, healthy physique. He had played pool enough to get a surprising dexterity of movement. In Jud Pilson's back room he had learned manual celerity and perfect facial control. Such learning had well taken the place of other and better physical and mental gymnastics.

So he bought a ticket—not round-trip—to Chicago, one hundred and sixty miles away.

When he left his native place he took one large well-filled twenty-eight-dollar wardrobe trunk—which proves that accomplishment is not wholly a matter of environment; one steely determination to realize a dream; a smiling but resentful contempt for his fellow townsmen and gamesters, and a viciously hearty resolve to ride in front of them some day in his own seven-thousand-dollar limousine; an excellent knack at finding a royal flush where most canny dealers could find only three aces; a well-thumbed copy of the New York Telegraph—left at the depot lunch room by a cross-continent commercial traveler; and a pale-blue cretonne shoe bag, presented to him at leaving by Hattie Doebling.

Hattie's own fingers had embroidered the shoe bag in light-green floss with the kindly words: Good Luck! and Good Soles! When presenting it Hattie half-averted her lank, light-yellow head, as though expecting warm embarrassing thanks.

Accepting it, George half-averted his head. He was no Joseph, and once or twice in the past his lips had known Hattie's in lieu of choicer; but, now that he was permanently shaking the dust of Middleburg from his broad tan oxfords, he saw no reason for giving unprepossessing Hattie the boresome kiss of thanks she seemed to expect. Hattie's lips, he knew by experience, were usually a trifle unpleasantly moist from the lemon drops she had in her mouth much of the time.

Arrived in Chicago, he roamed round the Loop until he located Tod Slate, once manager of the Middleburg pool room, now scurrying for news items for a Chicago daily. Tod was mindful of home-town ties. He steered George to a small, fairly clean room on Dearborn Avenue, that Mecca of flat and tight purses, gave him a pass to a failing musical show, and later pointed out to him many sights and celebrities of the Windy City: A Pink Room, a Gold Room, a Blue Room, a senator, the mayor, the Art Institute, the stockyards, an indicted chief of police, a famous dancer, an infamous dancer, a notorious bookmaker, an unknown bookmaker whom it was safe to patronize, a noted newsboy aged sixty-two, a pickpocketess with a pull, a city editor without a pull, a respected reformer, a disrespected reformer, some millionaires after whom warrants had been named, some theatrical folks after whom perfumes had been named; and, at a *thé dansant* Adelaide—nicknamed Laidy—Heidemann, only child of the late Stephen—better known as Old Steve—Heidemann, of the Steel Works.

II

LAIDY HEIDEMANN! Three minutes after his steady brown eyes saw her, George Williamson knew that she fitted into his dreams like a yolk into an egg.

She was twenty and a half years old and five feet high. She had a pair of cool blue eyes—the same blue as certain lovely old bowls beloved of our great-grandmothers—George's mother cherished a cracked one from her mother's mother.

Laidy Heidemann had a frivolous mop of kinky gold hair, which, disheveled at the moment from fast foxtrotting, perked impudently from under her close-fitting ermine toque. She had a small, red, weak, handsome mouth, which had a trick of turning up in a smile and up in a pout all in the same minute.

When Tod Slate pointed her out the tea room's band was plucking its banjos furiously; and in the arms of a tall, lean, solemn, critical-appearing young man, whom Tod named Stanley Gibbard, one of Chicago's rich young wheat gamblers, she was whirling about the amber-electroliered room so swiftly that her sable-bordered, petunia-hued chiffon skirts, cut very full and so daringly short as to show the tops of her fifteen-inch-high white doeskin boots, fluttered like a racing butterfly's wings. Her eyes were star-bright; her young cheeks were a hot velvet red, like the heart of an American Beauty; and her lips were parted in breathlessness.

"She was born with a dented pewter spoon in her mouth," said Tod Slate dryly; "but her dad gold-plated it and studded it with pearls while she was growing up. Then he died suddenly, two years ago, without making a will or naming a guardian or trustees for her. And—jiminy! but she's making his five millions fly!"

"Five millions!" ejaculated George Williamson in awe. "Good Lord!" He gazed hungrily after the whirling young form.

"Five! Think of it!" sighed Tod, excusing himself to get back to his office. George stayed at the tea room.

Thereafter he saw Laidy often. You could see that young lady, did you desire, nearly every afternoon at some *thé dansant* or other. And he heard much about her. Habitués and employees of *thés dansants* discussed Laidy a great deal. Dancers, waiters, managers, maids of the check and retiring rooms, bus boys and orchestras were very, very familiar with Laidy's small kinky gold head, big gold vanity bag, and tiny, swift, graceful, silken ankles. Bus boys knew that the dark-blue wheels of her sleek gray limousine chugged: "We-cost-twelve-thousand-dollars!" Waiters—silent, deferential—knew that a certain diamond-and-platinum dinner ring on her small white finger cost four thousand dollars. Orchestras, thrumming fast, silvery notes, exchanged whispered comments on the probable cost of the triple string of white-pink pearls that she carelessly wore about her pretty pink-white neck. (Continued on Page 80)

As He Drew a Fourth Yellow Bill He Laid a Heavy Wager With Himself That Sometime Lovely, Careless Laidy Should Pay Him Well for This Extravagance

GRINNELLS put out the fires of war!

IN THE little village of St. Dié, in France, stands the large cotton-mill of Jules Marchal & Co. Everywhere about it are burned and gutted ruins, the prey of the invaders. But the Marchal Mill still stands intact, saved from the fires of war, a triumph to the science of peace!

Thrice the trained incendiary squads of the invading army tried to burn it, and thrice they failed.

At one attempt 125 bales of cotton were opened, soaked with kerosene, and the torch applied. But the mill did not burn. It stood as though some magic wand protected it from fire. It was the magic of science—of Grinnells.

The Grinnell Automatic Sprinkler System worked as it always works. Quickly and surely the fusible heads melted, snapped open and sprayed torrents of water upon the onrushing flames. The fire hissed, died and went out!

German war efficiency thus failed before the mechanical efficiency that an American, Frederick Grinnell, applied to fire-fighting—failed before the kind of protection that American business men use to safeguard industrial enterprises worth thousands of millions of dollars.

Other buildings nearby, owned by the same French firm, did not have Grinnells. They were burned to the ground.

Of their Grinnell-protected factory, the owners say:

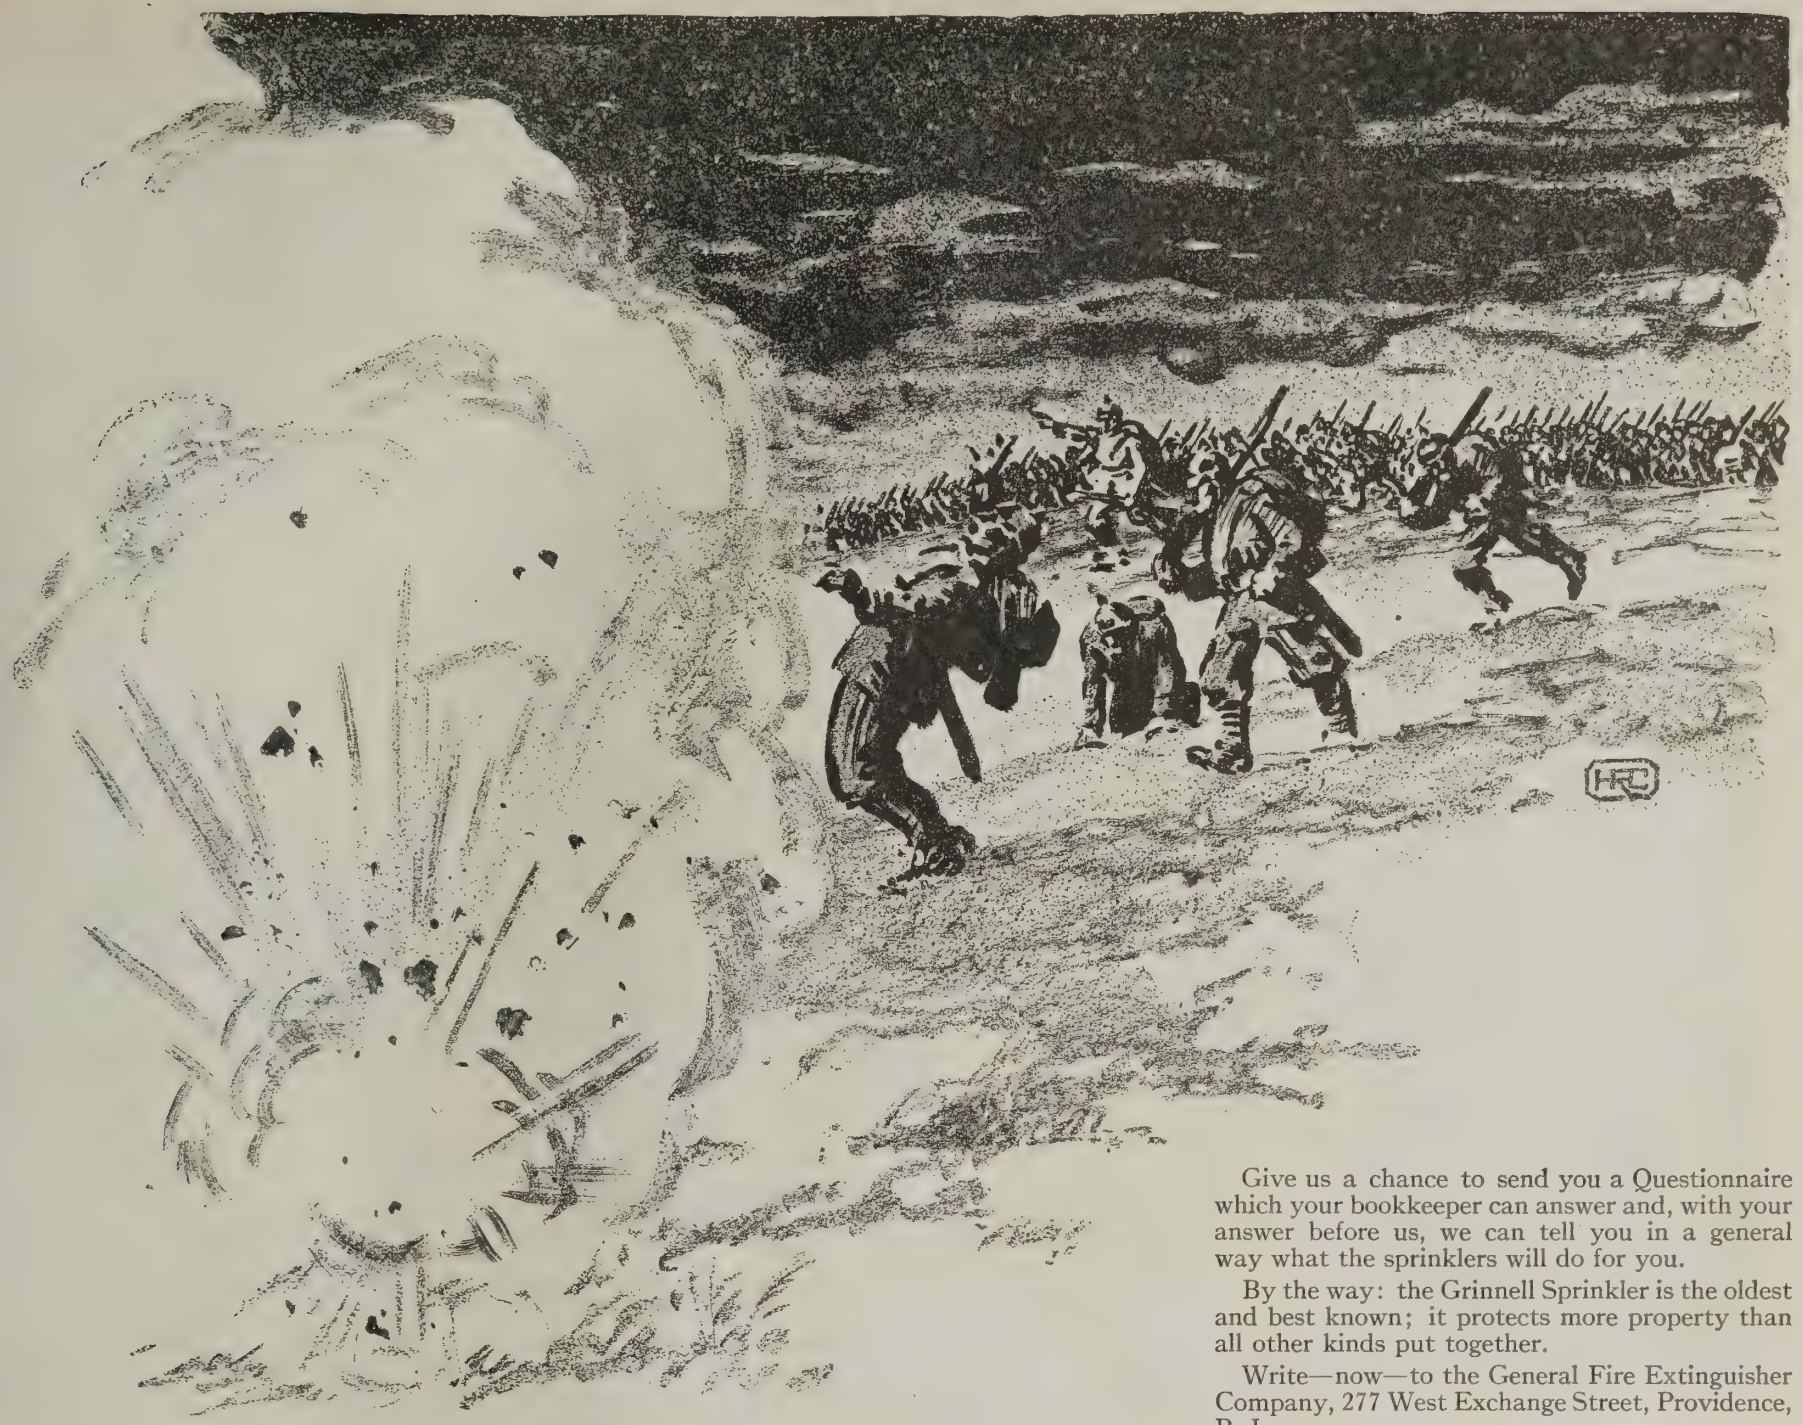
"Our works have been preserved, thanks to the extinguishers which functioned perfectly. It is certain that without your equipment our works would have been completely destroyed."

MAY 3, 1915, in Capetown and Johannesburg, South Africa, English rioters were firing building after building owned by Germans. The police were powerless; the fire brigades were helpless, their hose was cut; scores of fires were blazing; incendiarism ran riot.

The hardware store of Koch & Dixie on Burg Street, Capetown, was fired at seven different points. In a twinkling twenty-one Grinnell Sprinklers opened and seven fires were out.

At Port Elizabeth six fires were kindled in a sawmill. Fifteen Grinnells opened and six fires were out.

In Johannesburg, in Frenkel & Company's building, the rioters built up five stacks of inflammable material, poured kerosene over them and simultaneously applied the torch. Five fires started to



burn fiercely. But five Grinnells, one to each fire, opened, and Frenkel & Company were saved.

And so in far-off South Africa, as well as in France, stand monuments of preparedness amidst the ruins of unpreparedness.

Out of a great cataclysm emerges a principle—this fundamental principle: *Fire will put itself out automatically.*

From the technical standpoint there is nothing remarkable in any of these facts. Grinnell Sprinklers have balked incendiaries many times right here in the United States, confining the damage to an insignificant amount, and at the same time giving notice of the danger by ringing the alarm-bell.

How to Measure Your Fire-Danger

A fire-bug is to be feared much less than a hundred and one innocent-looking fire-starters to be found in any building. He is less dangerous, for instance, than an electric wire or a suit of greasy working clothes in a closet.

Experts who catalog fire-dangers find they literally number in the hundreds. A business man cannot size up his fire-danger for himself, but in his insurance *rate* he has a perfect measurement of how great the danger is.

There is only one way known at present to go after fire-danger on a wholesale basis, and bring down the insurance rate immediately in a wholesale way. Over the whole ruin-breeding lot put a system of Grinnell Automatic Sprinklers, the untiring mechanical watchmen.

Your rate will drop from 40% to 90% as soon as Grinnells are installed. The premium saving will, of course, go far toward paying for the equipment. Frequently the protection pays for itself in a few years.

Protection Plus Cheap Insurance

Are you looking only for cheap insurance, or are you seeking above everything else to avoid interruption to your thriving business?

If unprotected by automatic sprinklers you chance a big fire. You may think your losses will be covered by insurance. But will they? With the insurance money you collect you will be able to have the ruins cleared away, buy building materials, buy new machines, buy new raw materials with which to reëstablish your business; but you will have no insurance money to repay the very serious losses caused by the *interruption* of your business, losses such as orders unfilled, important customers gone elsewhere, idle time of a sales force, to say nothing of the nerves and worry and troubles involved.

When your turn comes to have a big fire, are you likely to pay dividends that year?

The function of Grinnell Sprinklers is to "Keep Your Going Business Going." Fires can start under sprinklers, but they can't spread. In the course of ten years your fire-alarm will ring just as often. If your industry is metal-working, for example, the average loss per fire will be $334 instead of $34,000, which is the average for unsprinklered metal-workers.

Give us a chance to send you a Questionnaire which your bookkeeper can answer and, with your answer before us, we can tell you in a general way what the sprinklers will do for you.

By the way: the Grinnell Sprinkler is the oldest and best known; it protects more property than all other kinds put together.

Write—now—to the General Fire Extinguisher Company, 277 West Exchange Street, Providence, R. I.

The wonderful story of the war fires briefly sketched above, together with illustrations, is told in "The Sprinkler Bulletin," published in London. We have a limited number of copies and will furnish them gratis to business men applying on their business letterheads only.

The above-mentioned bulletin does not contain the letter from Jules Marchal & Co., from which we obtained the information about the fires in their cotton-mill. We are therefore reproducing it just as it came to us.

Lettre de Messieurs Jules Marchal & Cie,
Filatures de St-Dié (Vosges)

Lors de l'invasion, le 29 août 1914, les allemands ont mis le feu à notre filature de la Bolle à plusieurs reprises, et chaque fois les Grinnells ont très bien fonctionné et l'incendie a été arrêté dès le début.

La première fois, les allemands avaient arrosé avec de l'essence les mélanges de coton et mis le feu, il y a eu de suite un brasier intense, tous les appareils du local ont fonctionné et le feu a immédiatement été étouffé (il y avait environ 125 balles de coton ouvertes); nous avons remis de nouvelles têtes aux Grinnells qui ont refonctionné à une deuxième tentative, et il en a été de même chaque fois.

En résumé, nos magasins, qui n'étaient pas munis d'extincteurs GRINNELL, ont été brûlés par les allemands; nos usines ont été préservées grâce aux extincteurs qui ont fonctionné d'une façon parfaite. Il est certain que, sans vos appareils, nos usines auraient été complètement détruites.

Agréez, Messieurs, nos sincères salutations.

Signé: JULES MARCHAL & CIE.

St-Dié (Vosges), le 10 Février, 1916.

Rider Agents Wanted

Your choice of 44 styles, colors and sizes in the famous line of "RANGER" bicycles, shown in full color in the big new Free Catalog. We pay all the freight charges from Chicago to your town.

30 Days Free Trial allowed on the bicycle you select, actual riding test in your own town for a full month. Do not buy until you get our *great new trial offer* and low Factory-Direct-to-Rider terms and prices.

TIRES LAMPS, HORNS, pedals, single wheels and repair parts for all makes of bicycles at half usual prices. No one else can offer such values and such terms. SEND NO MONEY but write today for the big new Catalog. It's free.

MEAD CYCLE COMPANY Dept. R-55 Chicago

(Continued from Page 77)

Managers, twirling their swallowtails obsequiously whenever they found themselves in her vicinity, surreptitiously appraised her chic svelte boots, guessing that the price of each would have paid some families' rent for a month. Maids hung fawningly about her in dressing rooms, not so much on account of the tips she flung about with the speed of one who has had the best opportunity to master the technic of spendthriftism, but because they knew that the Prima Donna perfume, which emanated from her kinky gold hair like the scent of a far-off Mayflower field, cost twenty-seven dollars an ounce. Such knowledge induced more deference than a mere tip, though as heavy as the clothes hamper known merrily to the Wives of Windsor could ever call for.

George collected all these items, and more. Not through, at first, any definite hope or plan, but simply from uncontrollable interest.

He was as much surprised as elated when, ten days after he first saw her, he procured an introduction to her—through a fellow introduced to him by a chap introduced by a man introduced by Tod.

But George's star was in the ascendant. It is easier now to procure an introduction to many folks than it used to be. Between the fumes of the *thé* and the trot of the *dansant* many conventional props of our social life have weakly disappeared.

And besides, there was small conventionality about pretty Laidy Heidemann. She was carelessly willing to be introduced to almost anybody!

For this too careless willingness there was a reason, of course.

Poor Old Steve Heidemann! He had been a brainy man; brainy enough to rise from overalls and three dollars a day in the Steel Works to part ownership and the head of the directors' table. But he hadn't been brainy enough to insure content for his only girl, though he spent all his life for that purpose and died fatuously sure that it was accomplished. He must have turned over in anguish in his silver-handled coffin if he knew how all his plans for his loved kinky-gold-haired baby were miscarrying.

When Laidy was born the Heidemanns lived in a small frame shack. When she was seventeen years old her father shamefully neglected his business for several months, while she was away at boarding school, to oversee the erection of a grand home for her when she came back.

When this home was finished he was mightily proud of it. It was a gorgeous and composite structure. Its front reminded you of an English castle; a florist had a hurry-up call for ivy to cover the tall gray tower. On the east side it looked like an Italian villa; Steve hugely admired the chic little pergola the architect stuck on at a corner. On the west it was Colonial in effect, and at the rear it was frankly American, with an up-to-date kitchen and system of pantries white-enameled from ceiling to floor.

It was situated on the Lake Shore Drive, and Steve looked with satisfaction at the neighboring homes. This was the place for Laidy to live! Here she would mingle with the best! He saw no breakers ahead. He saw only her pretty kinky head brightening the crest of the highest wave of the big town's society. She had the qualifications for any position—beauty and money. He knew that he had enough connections with moneyed men to insure her being petted by those men's wives. Wouldn't she have a good time until she married—his pretty baby! He held her on his knee while he bragged to her of her future. Such a rosy future! And after a while—not too soon, he hoped, but sometime—she would marry a clean, clever, altogether desirable young man with money, family and integrity. Well, perhaps Steve Heidemann had excuse for being optimistic. Starting with nothing, he had so far got about all he wanted. Naturally he was bound to believe that he would go right on getting what he wanted.

Foolish, brainy old Steve! He never thought of dying. But he died—almost while Laidy was sitting on his knee, listening to his bragging and showing off to him the graces she had learned at the fashionable boarding school.

Happy are the dead, perhaps, in that they cannot return. Had Steve Heidemann lived, doubtless he would have accomplished all that he planned and hoped for Laidy. When he died the moneyed men with whom he had business connections forgot him almost as soon as they got through sending flowers and condolences to his family. And they never thought of mentioning Laidy to their busy wives. If Steve had not neglected to make a will and name trustees and guardians who in looking after the estate would incidentally have looked after his girl ——

As it was, Laidy and her mother, a stout, dowdy, old-fashioned woman, drove home from the funeral to find themselves standing

"George, One of Ma's Uncles Left Me Nine Hundred Dollars! Ain't That Grand?"

in Society's front yard; but the front door of Society's house was grimly closed, and they were seeing gravely a sign that read: No Trespassing on This Lawn!

Laidy's mother did not mind. She did not really know. She could not read English very well anyway. And she was preoccupied in getting more blossoms to take out to that fresh-made mound. She and Steve had loved each other well when they were young. Of late years she had meekly mourned in secret that business and brains had separated him from her; she disliked his board meetings, clubs, telegrams, bank and directors' conferences. Carrying out flowers and crying over his grave daily, she seemed in closer touch with him than when he was alive.

Besides, the servants and the ultramodern kitchen, with its big, satisfying enameled walls, took up a great deal of her attention. Also the parlor curtains. Having known what it was scarcely to afford dollar-and-sixty-nine-cents-a-pair lace curtains, it was absorbing to realize that now she could pay, did she choose, a thousand and sixty-nine dollars a pair.

And for a while Laidy did not pay much attention to the sign either. She was busy grieving for her loved old father.

But presently time softened her grief, and she looked round and discovered that she was a very lonesome young woman. She was not interested in a kitchen, no matter how ultramodern and beautifully white-enameled its systems of pans and pantries. And she did not care much for parlor curtains. Curtains can't talk to you.

She sat down and wrote to several girls with whom she had chummed at the boarding school. They promptly accepted her invitation to come and visit her.

But after they had been at her gorgeous home a week or so their round eyes wanted to know why no one else came there! No callers; no dinner guests; no reception flocks; no musicale crowds! Laidy, stupid for a while, finally guessed what their round eyes asked and she blushed with mortification. Then they went home; and she hurriedly tore up invitations written to one or two others.

Then Laidy sat solitarily on her English-castle front veranda a while and dolefully watched two tall, critical-appearing girls who lived across the street in a straight, high, stone exclusive place. Sometimes she drove her sleek gray limousine right alongside their sleek emerald-toned one as they motored downtown mornings. But they never seemed to see her. Their name was Gibbard. She read their name in the Society Columns.

Then—then Laidy followed a precedent set a long time ago. With a hurt look in her blue eyes and a haughty resentful curl to her small pretty nose, she went out into the highways and the byways, known in modern swagger parlance as *thé dansants*, and she gathered up plenty of friends and guests. Any kind of friends! Any guests!

Presently she had a horde of friends—men and women. They flocked to the big house; they ate dinner there; they rode in Laidy's cars; they paid her compliments; they made engagements with her and for her. And some weren't altogether undesirable; but some were. Laidy accepted them all at their face value. They liked her and they were willing to accept her hospitality. These were their credentials. Presently she was a friend-surrounded girl.

Her mother did not really like many of the flock of Laidy's friends who overran the house, fluttering into it like homing pigeons, not disguising that they liked its architecture, its cuisine, its sideboard and its open door. Nor did she really approve of Laidy's scandalously late hours or cigarettes.

But she knew, of course, that these fast, undesirable people and ways were the undesirable, fast ways and people of the Society into which Steve had planned that his little Laidy should go. Didn't you read all about Society's ways in the Sunday Supplement? The poor woman tried to be as broad-minded as Steve would have been had he lived, and she prided herself on stoutly realizing that in Rome one must do as the Romans do.

She wondered once or twice why the two tall girls in the big stone house across the way never joined the fluttering horde of guests. She knew they were the Gibbard girls, often mentioned in the newspapers.

"Your pa used to admire a young Gibbard real well," she remembered. "Do you know him?"

"I've danced with him two or three times," said Laidy shortly. "I—I don't care for his sisters—or him."

Her mother was counting the best spoons—Laidy had had a big and late party the night before—and she did not notice that the pretty face had hardened and the pretty lips had curled.

But she did note how very deferential to Laidy were milliners, corsetières, manicurists, hairdressers, waiters and crossing policemen. These last had a habit of giving the kinky gold head and big, sleek gray car right of way against all traffic regulations. Laidy had a habit of smiling at crossing policemen exactly as she used to smile at Old Steve.

A trifle more formal was the little smile with which she said that she was engaged—so sorry!—when, after being introduced to her, George Williamson at once asked for a dance. But it was a nice, courteous little smile.

George Williamson was patient and persistent. Following a plow you learn to be both. A few days later he asked again. And again.

The fifth time he asked, the patient appeal in his large, serious, direct brown eyes affected Laidy's good nature. So she put off another man—an ex-chorus man who posed as a broker—and danced four minutes with George. Laidy would dance with almost anyone once. Future dances depended upon how you managed your feet the first time.

Valspar Makes Another Record!

It withstands 36 hours of live steam

HUMAN ingenuity never devised a more severe and conclusive varnish test, but it all happened accidentally in the office of one of the largest public service corporations in New York City.

A cold snap came one Saturday. At noon orders were given to turn on the steam heat. This was complied with, but one little detail was overlooked—*to close an open valve on a radiator.*

So all through Saturday night, all day Sunday, and until business time on Monday morning, *live steam filled the room.*

When Monday morning arrived the doors had swelled so much that only with difficulty was an entrance forced.

A Scene of Wreckage

When the steam was finally turned off and the clerks entered the room, a scene of wreckage met their eyes.

The varnish on the doors and woodwork was literally boiled away. The wall-paper was hanging off in sheets. In fact, everything at first sight seemed utterly ruined.

One startling fact soon became evident—namely, that *the furniture was absolutely unharmed.*

VALENTINE'S
VALSPAR
The Varnish That Won't Turn White

An investigation developed that the reason for this phenomenon was, the desks and furniture had all been varnished with Valspar.

The Inspector's Letter

The Inspector of Equipment for this corporation wrote us an enthusiastic letter, from which we quote.

"The steam destroyed the paper on the walls, the varnish on the woodwork, and swelled the doors so that it was impossible to close them after they had been forced open. But the furniture, which was finished with Valspar, came through the 36 hours steaming without a spot, nor did it warp or swell in the slightest degree.

"I am having all of our special furniture, such as counters, tables, etc., finished with Valspar, as I believe that this is absolutely the best varnish made."

This test demonstrates again that Valspar is absolutely waterproof. It won't turn white in water, and it is adapted for every varnish purpose in homes, offices and industrial buildings of all kinds.

Valspar, for instance, is best—

For your front door or piazza—rain and snow don't spot it.

For your front hall—wet feet and dripping umbrellas won't harm it at all.

For your kitchen and pantry—so you can wash it freely and sterilize the places where your food is prepared.

For all your furniture—because Valspar is spotproof as well as waterproof and resists hot dishes and spilled liquids of all kinds.

For your bathroom—making a finish as waterproof as tile and far less costly.

For all your floors—because you can freely wash them and you'll never need to wax or polish them.

Special Offer

Test Valspar in your home, in your own way, under the severest conditions you can devise. To make it easy, we will supply a sample can for 20c. in stamps, enough to make a real test. Fill in this coupon. Send today.

VALENTINE & COMPANY, 458 Fourth Ave., N.Y.
Please send me 4-ounce can of Valspar, for which I enclose 20c in stamps.

(Continued from Page 80)

Like many heavy men, George was light on his feet and a fairly good dancer. He had been considered about the best round Middleburg. But, to forestall her possible criticism, and also—oh, shrewd George!—to differentiate himself from the flock of city men round her constantly, he told her, as soon as they whirled off, that he was just a rube. Nothing in common with Vernon Castle. She must be merciful. He had spent most of his life plowing.

Laidy looked up at this broad-shouldered, serious-appearing young man with a trifling increase of interest. Twice, when a little girl with her parents, she had visited an aunt in a small town. At the times she had enjoyed the visits where there were calves, kittens, gophers and other objects of interest to youth. Now she recollected only the hot little frame house, the fly-buzzing lean-to kitchen, wheezy wood pump and tin washbasin. She was altruistically glad that this young man had got away from such and come to the abode of plumbers, taxis, white-marble-foyered hotels and *thés dansants*.

A few days later she gave him another dance. And a few days later another.

III

NOTHING in this world is quite equal to persistence. George Williamson had great capacity for persistence, even when the stakes were small. Now that the stakes were extraordinarily large he was extraordinarily persistent.

It would not be true to say that from the first he planned and expected to marry Laidy Heidemann. With all his ambition, he had hardly that much presumption—at the first. But he dreamed of doing so; dreamed longingly and heartily—and steadily. And, driven by his dreams, he so persistently connected himself with her flock of followers that presently that careless, sociable young woman unconsciously began to believe that she knew this friendly young man far better and longer than was at all the case.

Whenever he danced with her or talked to her he contrived to throw a great but unobtrusive friendliness and liking for her into his serious, honest-appearing brown eyes.

This was not hard for George. He could throw most any sort of expression into his eyes. Often, back in Middleburg, he had been wont suddenly to throw a blue funk into them, thereby causing various commercial travelers making the town to telegraph their firms, first thing the next morning, for more expense money.

Unconsciously Laidy yielded to that persistently kindly expression, and in return gave a measure of careless but cordial friendliness.

He called on her at her home—and felt at home, and wondered how it would feel to call it home. He met her mother. He even ate a few dinners in the big dining room. Above the sideboard was a life-sized oil portrait of Stephen Heidemann. George looked up at it with unaffected affection. What an ideal father-in-law! Affection almost impelled him to take a wreath out to the old gentleman's grave in Graceland; he was so grateful to Stephen for being conveniently out in Graceland.

But he restrained himself from yielding to this affectionate, grateful impulse.

You can't get much of a wreath, you know, for less than three dollars; and his dollars brought from Middleburg were dwindling in spite of his care—and no man could be more careful with them—far faster than he liked to see. He cursed silently to himself often at certain *thé-dansant* waiters who snapped at quarters and half dollars like turtles at fish bait, and then stuck out greedy eyes and impudent hands for more.

It irritated him, at times, to reflect that his entire capital would scarcely purchase one of the many Airedales which stretched their lazy lengths in the broad Heidemann halls.

Presently he began to realize that, after getting so far in Laidy's regard, he seemed to be getting no farther. To her he did not seem to stand out exceptionally in the mob of men who, also, were mightily friendly to her. She gave him dances. She invited him to dinner once in a while. But she did not save him dances. And there were usually twenty or more others at the dinners.

Moreover, Clara Fraser, a tall, handsome divorcée, who classed herself as one of Laidy's dearest friends, began to look at him with amused, mocking, understanding eyes.

"You think she's about the sweetest thing on earth, don't you?" she drawled.

George admirably kept his pose.

"I sure do!" he said seriously. "And she's been mighty good to a nobody from a small town like me."

Clara laughed softly.

It was the next day that George dropped in to see Laidy's mother—this, though he knew Laidy was at a matinée. Mrs. Heidemann, in a gingham house dress, was going over the month's bills. She could not, though she tried heroically, join in Laidy's royal disregard for dollar details, and mail a check to everyone requesting one.

George stayed all afternoon and helped her add and subtract. While he helped her he talked lightly about himself. He was perfectly truthful and candid. He told her that, after spending his young life behind a monotonous plow, he had come to the city in search of greater opportunity. Gayly he confided that he intended to track opportunity to its lair and despoil the lair.

It was quite accidental that, as he said this last, his eyes dropped enviously to the high heap of accounts—grocer, butcher, modiste, florist, wine dealer and caterer. Mrs. Heidemann smiled friendlily and encouragingly over her spectacles. She liked to hear a young man talk in that strain. It reminded her of the way Steve used to talk—the young, ambitious Steve of long ago. And some tears came into her eyes and rolled down her cheeks, and she had to wipe them away. Then she insisted that George stay for dinner. There was to be no one there but herself and Laidy. Later she told Laidy:

"He seems such a nice young man. Sort of different from a lot of 'em that keep coming here. For your money, I can't help suspecting, dearie, sometimes."

"He's nice," agreed Laidy carelessly, listlessly.

"Ain't you running round too much, dearie?" begged her mother. "Your voice sounds tired, and you look ——"

"I'm cross over my dress," said Laidy. "She used cloth-of-silver instead of silver tulle ——"

"I thought it was lovely," objected her mother. "I seen one like it going into the house across the way this afternoon." She glanced through the window as she spoke and across the way to a high, straight stone house, from whose doors an awning passage ran to the curb. "I guess them Gibbard girls had a reception."

"Did they?" yawned Laidy.

"Ain't you ever met them any place yet?" asked her mother. "It seems sort of funny ——"

"No," said Laidy curtly.

"Didn't I once hear you mention that you know their brother?" asked her mother meditatively. "It seems funny ——"

"I've danced with him—twice," said Laidy.

"There was a young Gibbard your pa used to admire," said her mother reminiscently.

"I'm tired, mother," said Laidy, yawning suddenly. "I'm going to bed."

There were times when Laidy's blue eyes were not the soft blue of certain old bowls beloved of our grandmothers, but a hard agate blue.

"She's dancing too much, I believe," worried her mother to herself. "She's fagged out, I know."

Frequently after that George Williamson dropped in to see Laidy's mother. And presently he noted, with satisfaction, that in Laidy's regard he was fast getting to a point of intimacy. Merely fraternal, friendly intimacy; but that was good. Given a choice, George always took three queens in preference to fragments of a flush.

He came to know the Airedales by name; also, the food fads of Bizzy, Laidy's tiny terrier. He helped Mrs. Heidemann so often with her monthly bills that he knew almost to a cent what the Heidemann régime cost a month.

This knowledge irritated him and elated him; elated—because it was glorious to dream that some day he might be in a position to pay such outrageous bills; irritated—because, though Laidy paid ninety dollars in two weeks for shoes, and the Heidemann servants had their fill of peaches out of season, he himself was compelled to haunt twenty-cent table-d'hôte restaurants and counter lunch rooms in order to make his few hundred dollars last as long as possible.

Sometimes he really disliked Laidy for her careless use of money. She never seemed to reflect that it was precious. She tossed it about as a baby tosses toys. She played with it; she threw it away.

There was one night when she ordered wine—George had lost, some time back, the small-town stuff of calling it by its Christian name, champagne, and had fallen into the use of Chicago's classier appellation—with a freedom that made him furious. It was at the amber-electroliered tea room where he had first seen her. He had danced with her several times—more than any other man that evening. So the other men seemed to think that it was his privilege to pay for the bottle after bottle she ordered, sipped at, then carelessly allowed a waiter to carry away and bring another.

Always secretly George had raged at the *thé-dansant* waiter's brisk, frisky way of carting off a half-quaffed glass to make way for another. As he drew a fourth yellow bill—and by this time his yellow bills were getting few—he laid a heavy wager with himself that sometime lovely, careless Laidy should pay him well for this exhibition of carelessness and extravagance at his expense. But, catching Clara Fraser's mocking, understanding glance, he hastily changed his facial expression. He gently admonished Laidy:

"You shouldn't drink this stuff. I've wanted to tell you for a long time ——"

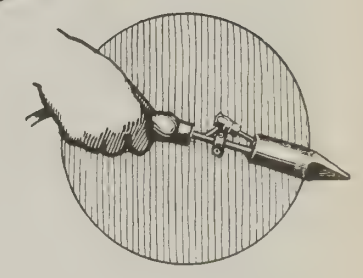
"The Gas of a Thousand Uses"

Prest-O-Lite

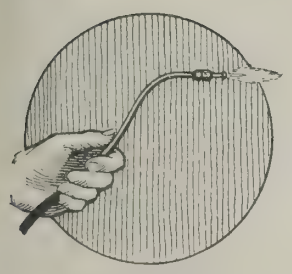
Dissolved Acetylene

(Ready-Made Carbide Gas)



Prest-O-Soldering Iron
Price $4.00 (Canada $5.00)

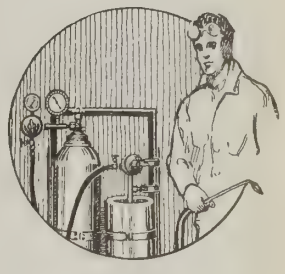
Your Prest-O-Lite has more uses, more value, than you realize



Prest-O-Torch, Style "A"
Price 75c (Canada 85c)

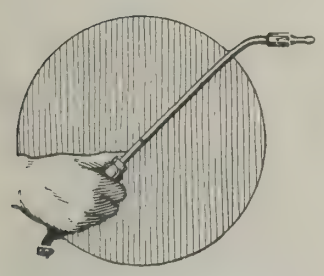
There are over two million Prest-O-Lites in service, a surprising number being used for commercial purposes — yet many people think of Prest-O-Lite only as an "automobile light."

Hundreds of thousands of factories, railroad shops, shipyards, mines, telegraph, telephone, gas, oil and construction companies, blacksmiths, garages, repair shops, dentists, jewelers, electricians and others are using Prest-O-Lite for welding, soldering, brazing, lead-burning or other purposes.

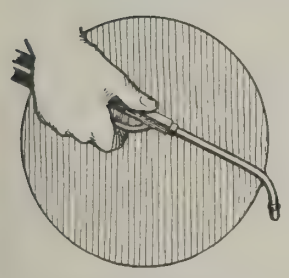


Oxy-Acetylene Welding Apparatus

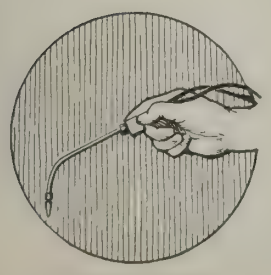
If you have a Prest-O-Lite (gas tank), the appliances shown here point out a few of many ways to use it profitably.



Prest-O-Torch, Style "C"
Price $2.25 (Canada $2.75)



Prest-O-Torch, Style "D"
Price $3.25 (Canada $4.45)



Lead Burning Outfit
Type "L"

Acetylene Blow-Torches

Quicker, cheaper and better than gasoline for soldering, brazing and heating

For all classes of soldering, brazing and heating, usually handled by the ordinary gasoline blow-torch, there is a Prest-O-Lite acetylene blow-torch which instantly provides an intense heat in a concentrated flame that does the work easily, quickly and surely. Easily turned on and off as needed.

Prest-O-Torch, Style "A"

Will braze up to 3/8-in. steel rods, 75 cents (Canada, 85 cents).

Prest-O-Torch, Style "C"

Will braze up to 2-in. solid steel bars, $2.25 (Canada, $2.75).

Prest-O-Torch, Style "D"

For dentists and jewelers

Using acetylene with or without compressed air, produces two distinct kinds of flame—a non-carbonizing *brush* flame suitable for a wide range of soldering, brazing and heating operations, or a *needle* flame suitable for infusions and casting gold, etc. The user supplies air from foot bellows, small drum or compressor. Price $3.25 (Canada, $4.45). Special Style "D" Prest-O-Torch with air trigger for quick changes from brush to needle flame, price $4.25 (Canada, $5.75).

Lead-Burning Outfit, Type "L"

Oxy-acetylene lead burning is more efficient and more economical than any other process. Operates on two gases universally obtainable—Prest-O-Lite gas and compressed oxygen. Provides a gentle needle flame ideal for lead burning; automatic pressure regulators for acetylene and oxygen cylinders, two 6-ft. lengths of hose and necessary sundries. Price, $21.00 (Canada, $30.00).

Prest-O-Soldering Iron

An easily lighted acetylene heating flame inside a copper head, saves all the trouble and inconvenience of the troublesome gasoline blow-torch and charcoal brazier for soldering on light and medium "repeat" work or the occasional small job. Simply connect to a Prest-O-Lite, turn on the gas and light. Nothing to generate, nothing to overturn, portable and economical. Price, $4.00 (Canada, $5.00).

Oxy-Acetylene Welding Apparatus

This high-grade portable welding equipment provides necessary apparatus for handling the widest range of light or heavy welding in manufacturing construction and repair work. Uses Prest-O-Lite Dissolved Acetylene and Compressed Oxygen, in convenient cylinders, ready to use.

Welding apparatus consists of an equal pressure blow-pipe, automatic regulators and gauges for acetylene and oxygen cylinders and the necessary sundries. Price, $75.00 (Canada, $100.00). Truck for carrying acetylene and oxygen cylinders and special apparatus for metal cutting furnished at extra cost. Our Instruction Book enables any workman who understands metals to learn welding quickly.

Prest-O-Lite Dissolved Acetylene, the purest form of carbide gas for welding, is furnished in large special cylinders on acetylene service agreement.

Acetylene Bunsen Burner

The high flame temperature of acetylene gas makes it speedy in action, and by no means an expensive fuel for Bunsen burner use in laboratories. Nothing to clean out or get out of order. Price, $1.75 (Canada, $2.25); with vessel holder, $2.00 (Canada, $2.50).

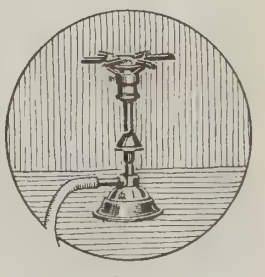
Prest-O-Lite Stem and Burner

A handy light for hundreds of purposes

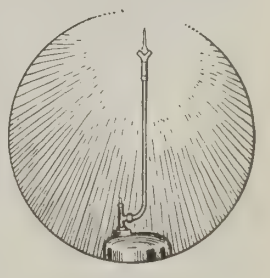
Attach to any Prest-O-Lite cylinder. Turn on the gas and light it. Instantly you have a handy portable light which may be used for hundreds of indoor or outdoor lighting purposes. Specify whether motorcycle or automobile size Prest-O-Lite is to be used. Price, ready to connect to cylinder, 65 cents (Canada, 75 cents).

Portable Flare Lamp

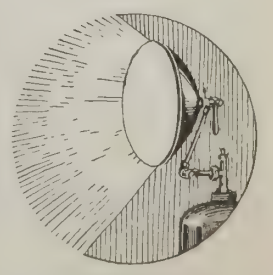
An economical light of high candlepower. May be used with a carrier for "MC" Prest-O-Lite and swung over the arm. Outfit stands 18 inches high, weighs 18 lbs. Price complete, with gas cylinder, $25.00 (Canada, $30.00). Ten-inch aluminum reflector and burner only, as shown, with arm for attaching to automobile style Prest-O-Lites. Price, $12.00 (Canada, $16.50).



Acetylene Bunsen Burner
Price $2.00 (Canada $2.50)



Stem and Burner
Price 65c (Canada 75c)



Portable Flare Lamp

Each of the pieces of apparatus shown has hundreds of profitable uses, described in full in special literature. Ask us for complete details on any use you may have in mind.

WORLD'S LARGEST MAKERS OF DISSOLVED ACETYLENE

Stewart Products

Checks Car Costs

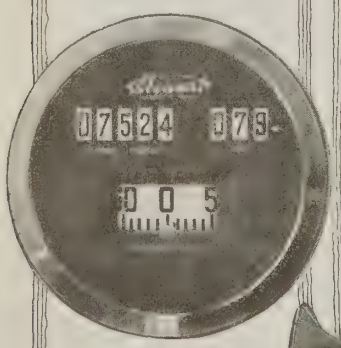
The only way to cut down the cost of running your car is to know exactly what those costs are.

With the Stewart Speedometer you can accurately gauge your gasoline and oil consumption.

It helps you keep a record of your tire mileage—enables you to get equitable tire adjustments.

The Stewart Speedometer is doing this highly important service on over 2,000,000 cars. It is on 95% of all equipped cars built.

Look for it on the car you buy. If it isn't there ask why. Insist.



Stewart Speedometer $25

A Big Loud Note

The pokiest pedestrian doesn't linger long in front of a Stewart Warning Signal.

That big, loud, penetrating note guarantees the right of way.

It lets them know you're coming—helps get out of the way.

It means safety for you and safety for them. And it means that the car ahead or the car at the crossroads knows you are getting close.

Stewart Warning Signals make mighty good accident insurance.

No signals could be better built or more perfect in design, and no others are so generally used.

The Stewart dealer has them in stock. Now is the time to get yours.

Stewart Warning Signals $3.50 to $6

In Any Position It Delivers—

an even, positive flow of gas under all conditions.

Run your car on any grade or angle and the Stewart Vacuum System keeps your gas supply continually above the carburetor.

Over 70% of all car makers have already adopted it as standard equipment.

In nearly every instance it has replaced gravity and pressure feed systems.

Any car to be up to date must have the Stewart Vacuum System.

Less than 30% still use these old-fashioned troublesome systems.

The sweeping success of the Stewart Vacuum System will doubtless attract swarms of imitators as all Stewart Products always have and always will. Imitations always follow any great success.

But they will only be experiments—unrecognized and unused.

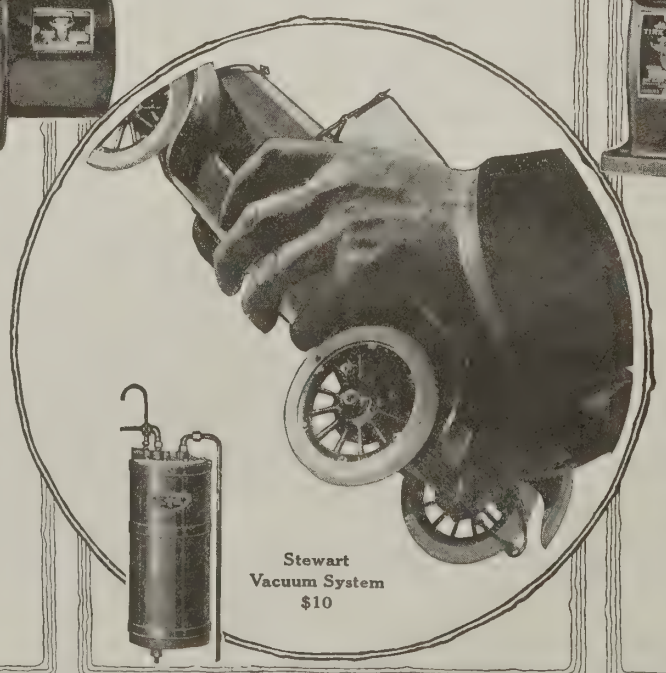
Insist upon having the Stewart Vacuum System on your new car.

Or, bring your old car up-to-date by installing it.

We have every reason to believe that within a very short time the Stewart Vacuum System will be on every make of car. Put it on yours now.

Stewart-Warner Speedometer Corporation

Chicago, U. S. A.



Stewart Vacuum System $10

You Need a Pump

You hate to pump tires.

It exhausts your patience, your vocabulary and your back.

So why not get a Stewart Tire Pump?

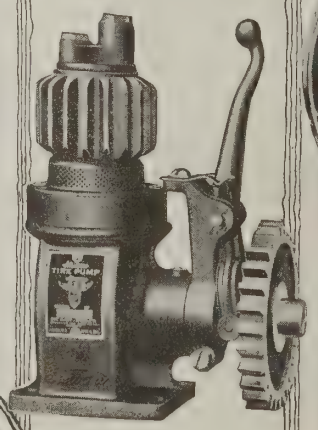
Then all you have to do is to sit around and smoke your cigar while your motor does the work.

We sell hundreds of Stewart Tire Pumps every day to motorists who prefer using horse power to hand power.

The Stewart Tire Pump only costs $12. And it quickly saves that in the extra mileage it gives your tires.

To say nothing of the way it saves your back and your temper!

Order your Stewart Tire Pump today.



Stewart Tire Pump $12

To Ford Owners

Every Ford should be equipped with a Stewart Speedometer.

It insures protection.

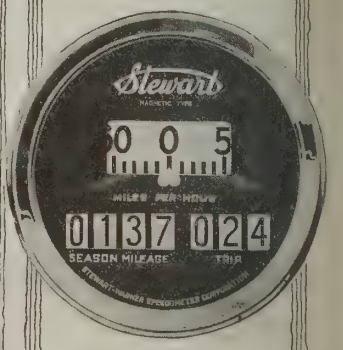
It warns you the instant you go too fast.

It saves you from the annoyance, the humiliation, the loss of time and money caused by arrest.

It enables you to check up on gas and oil consumption.

You can get the Stewart Speedometer for Fords for $10—or mounted in a handsome enameled instrument board, for $11.25.

There's a Stewart dealer in your town. Better get in touch with him today.



Stewart Speedometer for Fords $10

Be sure to look for Stewart Products on the car you buy. They are the best index of its quality.

Stewart Products are backed by a nation-wide chain of service stations perfectly equipped.

Remember—no car is better than its accessories. Insist upon having Stewart Products on yours.

Stewart Products are for sale by leading garages, accessory dealers and jobbers—everywhere.

(Continued from Page 82)

Laidy's eyes snapped like offended stars. hey were darker than usual.

"I like it!"—perversely; and she drank full glass.

As she drank she looked across the room. eorge followed her glance. A tall, lean, ritical-appearing young man and two girls, ho resembled him so much that one guessed ey were his sisters, were standing there, lly watching the dancers. George half-emembered that once Tod had named the oung man to him.

Afterward he decided that he need not rudge those yellow bills, even though they ere nearly his last; for Laidy presently ound that she couldn't quite keep her foot-g on the polished floor. She giggled ather foolishly, and then asked George to all her car and take her home.

A hundred feet of the crisp night air put er right again, and she was ashamed of erself and laughed nervously. But George as silent as they rode. He was thinking: few more glasses and, if a fellow whom ie liked happened to have the marriage cense right in his pocket, before she could hange her reckless mind ——

And there was only one reason why he id not immediately carry out this little lan. When he got back to his room on Dearborn Avenue and counted his money e found that it was lower than he had elieved. He wanted to swear aloud. But was too late, and the other roomers were sleep; so he swore under his breath, long nd fluently. He was nearly out of money!

He wrote to his sister Amelia, who aught a country school and usually had xty or seventy dollars saved. And then, hile he was waiting for her reply, he im-ulsively told Laidy, one afternoon in her g, sleek gray car, that he loved her. No ie would ever love her half so well, though e knew it was not likely that she could are for him ——

"Though—could you?" he asked.

Laidy did not answer for a moment. here was a congestion of traffic at that orner, and her car was held up alongside a ng, sleek emerald-hued motor. The tall, an man with the two girls in it bowed care-ssly to her. The girls did not.

George Williamson's eyes apparently did ot take in this other car and its occupants; ut, in Middleburg, Abe Searcer and Jud ilson and several others would have said oldly that you never could tell what eorge Williamson knew and was planning. e repeated, eyes wistfully fixed on Laidy's mall, pretty face:

"I love you, Laidy! No one else in the orld would love you so well ——"

Laidy nodded coldly at the tall, lean oung man in the other car. Then her yes, blue as an old delft bowl, turned to eorge's face.

"Do you?" she asked plaintively. "I—I believe you do. And—and ——"

"I couldn't tell you how much!" swore George yearningly.

"Do you, really?" questioned Laidy gravely—almost gratefully.

But she was not looking at him then. She was looking after the emerald-hued motor, which had taken advantage of an opening in the congestion to dart ahead.

"Really I do!" said George earnestly, his heart beginning to beat with hope. Since she was not refusing him outright ——

"I—I believe you do," repeated Laidy gravely. "I—I believe you do!" Not a strong emphasis on the pronoun; but a faint, eloquent, wistful emphasis. And she was watching the emerald motor, now a block ahead.

"And—you?" queried George, afraid to say a word too much.

"I like you," she admitted soberly.

"Well enough ——"

"Yes, I—I guess so; as long as—as you love me"—plaintively.

George Williamson's brown eyes for a fleeting second turned from Laidy's grave, wistful, lovely little face. They gazed ahead. Were they looking at the emerald car, now half hidden by a line of motors?

"Dear little Laidy!" he murmured. "I'll spend my life making you happy."

"Will you?"—gently.

"And —— Will you marry me soon?"

"Yes," sighed Laidy.

"I—I never dreamed that I'd come to this town and find—you!" he told her huskily.

"Am I worth finding?" queried Laidy. "I'm—I'm glad someone thinks so."

"Are you?"

George Williamson drew a long, hard breath. Laidy slipped her hand into his.

That night, in his room on Dearborn Avenue, George Williamson pinched himself hard—on arms and legs. Then he got a large pin and stuck it far into a bare calf. No, he was not dreaming.

Before he went to bed he wrote again to Amelia, begging her to send him all the money she possibly could. He promised repayment, a hundredfold, within six months. He added a postscript to Rose. They were the only ones of the family to whom it was worth his while to appeal.

Next day he hunted up Tod Slate, whom he had not troubled to hunt for several weeks past, and told him. Tod was skeptical.

"Joke?" he yawned. "Say, you can't pull small-town stuff here!" Daily contact with a city editor had made Tod distrustful.

"Come along this afternoon and I'll introduce you to my future mother-in-law," said George, nettled.

Tod went. His eyes popped. Then he rapidly set down his second cup of tea,

DRAWN BY N. C. WYETH

Another Advantage

ROYAL BAKING POWDER

Saves Eggs

Use a small additional quantity of ROYAL in place of each egg omitted

The following recipes illustrate the rule, but the modification may be applied to nearly all baked foods, and will produce healthful and satisfactory home-made cakes at a considerable saving in cost.

Sponge Cake

1 cup sugar
½ cup water
3 eggs
2 teaspoons Royal Baking Powder
1 cup flour
1 teaspoon salt
⅛ cup cold water
1 teaspoon flavoring

The old method called for 6 eggs and no baking powder

DIRECTIONS:—Boil sugar and water until it spins a thread and add to the stiffly beaten whites of eggs, beating until the mixture is cold. Sift together three times, the flour, salt and baking powder, and add alternately to the white mixture with the yolks of eggs beaten stiff. Add ⅛ cup cold water and flavoring. Mix lightly and bake in moderate oven about one hour.

Corn Bread

1¾ cups corn meal
¼ cup flour
3 teaspoons Royal Baking Powder
1 teaspoon salt
1 tablespoon sugar (if desired)
2 tablespoons melted shortening
1½ cups sweet milk

The old method called for two eggs

DIRECTIONS:—Sift the dry ingredients into bowl; add milk and melted shortening, beat well, and pour into well greased pan or muffin tins and bake in hot oven about 25 minutes.

Booklet of practical recipes which economize in eggs and other expensive ingredients mailed free on request. Address ROYAL BAKING POWDER CO., 104 Fulton St., New York.

Royal Baking Powder

Made from Cream of Tartar, derived from Grapes, which has no substitute for making a baking powder of the highest quality

No Alum No Phosphate

Johns-Manville Speedometer for FORD cars $11.25

Complete with Instrument board

THIS board and speedometer combination is easily attached with a wrench and screw driver to any open Ford body. Get it from your dealer—all complete ready to apply.

The Speedometer—A special J-M Model. Centrifugal principle. Rugged and accurate always. Finished in black and nickel.

You can mount other accessories on the Board easily and readily—because it is wood—selected wood, finished in ebony black.

TO THE TRADE

You will appreciate the selling power of this instrument board and speedometer combination; it is easy to handle because it comes to you ready to install and your customer can attach it himself.

It will be sold strictly on a jobber-dealer basis. So that every recognized dealer will have the fairest possible chance at the big Ford Market now opening up—your jobber will supply you.

Patent Applied For

The Adjustable Bracket—a distinctive feature

No rigid or one-piece cowl board will fit all Ford bodies. The J-M adjustable bracket (Pat. applied for) provides for all these differences in open Ford models.

Slots are provided in each end of the wood board that permit the lengthening and shortening of the device to span the full width of the body.

The lower steel lugs on each end of the bracket are adjustable to attach to the bolts at the lower end of the windshield brace casting.

Don't fail to see it at your dealer's.

dropping a piece of lemon on the Oriental-rugged floor, and rushed down to his editor with the news. George, watching him go, smiled happily. And Laidy, looking at George, smiled gently and not unhappily. And Laidy's mother, looking at Laidy, sighed with relief—as though she had been worried in the past—and asked George what he'd like for dinner.

Two days later George sighed with relief. Amelia's money order for ninety-two dollars arrived; also Rose's, for twenty-four. Now he had room rent, at least for a while. Good girls! He resolved to let them visit him and Laidy a week or two every year.

In the same mail came a letter from Hattie Doebling, inclosing her picture—a small one, watch size. George grinned over the stilted epistle, which hoped that he was doing well and would not forget his Middleburg friends. But he chuckled over the picture—though it was not unprepossessing.

Like many colorless people, Hattie photographed excellently. Her whitish-yellow hair—which suggested unsalted butter—came merely a soft blond on cardboard. Her bulging cheek bones did not show at pictured front view. But George saw Hattie only as she actually was—lank, melancholy-eyed Hattie, with her long bony arms—and in comparison with kinky-gold-haired Laidy, with her lovely blue eyes and her millions! Why, it was laughable! And George laughed.

During the weeks that followed it is no exaggeration to say that George Williamson literally walked on clouds. There were times when he felt dizzy at his good fortune. Mrs. Heidemann treated him like a long-looked-for and welcome son. Laidy was not demonstrative, but frequently her small hand slipped into his as though seeking protection and affection. Laidy's chauffeur touched a servile cap to him. Tod Slate gaped at him—simply gaped, as though he were a five-legged calf. Certain *thé-dansant* waiters hung about him fulsomely.

Laidy agreed to marry him soon. Winter was dragging along, and the lake was a cold place to live beside. Her mother had always had a desire to see the Grand Cañon, beyond which lies Pasadena. There was nothing unpleasant in all his world—except a temporary lack of funds. Ninety-two dollars added to twenty-four had to be handled dexterously to encompass several weeks' room rent, necessary food—he could not eat all three meals at the Heidemann home—minor expenses and—the minister's fee.

So, one night at the amber-electroliered tea room, where he had first beheld her, he asked Laidy to make that soon sooner. Why wait? He couldn't wait, he added tenderly.

"Why—very well," agreed Laidy indifferently. "I suppose there isn't much use in waiting."

Pleased? He certainly was pleased! It was because of the anomaly of human nature that, at the same time, he was irritated. He had an idea that it would have been more becoming in Laidy if she had shown more emotion when agreeing, instead of assenting in that maddeningly indifferent fashion. Soon or sooner? Why, she didn't seem to care! It touched his vanity—a vanity that had lately swollen somewhat.

Impulsively he wondered whether she would care if —— He yielded to the impulse. It would require only a minute or so between dances. And presently, while she was indifferently sipping a claret cocktail, he took the small picture of Hattie Doebling from the pocket of his coat, into which he had idly slipped it days before, and showed it to Laidy.

"The girl I used to have back home!"

"What!"

Laidy set her glass down hastily, and George smiled to himself. He guessed she did care, for her lovely blue eyes had darkened troubledly. And she took the picture quickly and stared down at the thin, melancholy face as though the sight troubled her.

"She—she has a sweet face."

"Um-m!" assented George in a careful voice.

He was amused. Certainly she cared! For the first time he saw dismay on Laidy's pretty face.

"And—and did you care for her until you met me?" asked Laidy.

"Yes," he said, suppressing a smile.

"Oh!" said Laidy, as though something hurt her. "Oh! I'm sorry! I didn't know! I never dreamed ——"

"I don't care for her now," comforted George. "Not at all!"

"Oh, I'm so sorry!" repeated Laidy disconsolately. Suddenly tears welled up in her blue eyes. "If I'd known ——"

"It's all past," urged George, half-wishing that he had kept still. "I don't ——"

"I—I can't marry you now," said Laidy dully. "I couldn't—I ——"

"What?" demanded George. "Why, Laidy, don't be foolish!"

"But I can't," she repeated; and now there was a small whimper in her voice, as well as tears in her eyes. She looked down at the picture. "No; I never could, George! I'm a wicked girl sometimes, and I do lots of things I shouldn't. I waste money that I ought to give to the poor, and often I'm impatient with my mother. And I've got a bad temper; and—and—sometimes I swear! But I couldn't take a man away from another woman who loved him!"

"Laidy!" cried George frantically. "I tell you ——"

"I can see by her sad eyes that she loves you," tremulously went on Laidy. "And—and I'd be unhappy all my life—I'd never forget her face. Oh, I wish you hadn't shown it to me!"

"My God! So do I!"

"I was so sure that everything was going to be nice and happy!" And by this time Laidy was wadding a small wet handkerchief into two drenched eyes. "I felt so comfortable, knowing that you liked me; you've been with me so much all these weeks! And you're so kind always—and I felt that I could always depend on you. And now it's all spoiled!"

"It's not spoiled! It's just the same! Let me tell you ——"

"No." Laidy looked down tearfully at the face of Hattie Doebling. "No, George." Though her voice was a mere whimper, and her pretty eyes, blue like certain old bowls cherished by our grandmothers, were wet and woeful, and her breath came like a small unhappy sob, her small, weak, red, handsome mouth was set in a tremulous but very straight and—honorable line. "I couldn't do anything like that, George. I—I'd always be thinking of her—of how I had robbed her. I—I couldn't forget her eyes! They'd haunt me; I can see in them ——"

What she saw in them George Williamson did not give her a chance to tell. And he was too excited to stop to reflect that perhaps Laidy couldn't see so much in another woman's wistful eyes if her own eyes had not been sharpened by something. He begged; he pleaded; he tried to explain; he swore by all that was sacred ——

"No; I know what dad would say if he was alive," said Laidy gently. "Dad told me once that he'd never done anything really to be ashamed of. He said it didn't pay."

And just then it happened that Laidy looked across the amber-electroliered room to where a tall, lean, critical-appearing young man was standing, idly watching. He did not come often to tea rooms—this man. In the past he had danced twice with Laidy Heidemann; but her kinky gold head had seemed to him a very frivolous head indeed, and her blue eyes had seemed a trifle shallow—like old low bowls.

Now their expression startled him, even across the room. Why, they were not shallow; they were deep—immeasurably deep, and of the most wonderful blue! As though jerked by an invisible cord, he crossed the room and asked her to dance with him.

And George had not given up hope of patching the matter up even an hour later when, sulkily trailing after Laidy, who was gentle and very kind and depressed, he heard Stanley Gibbard say earnestly: "I'll bring my sisters over."

Laidy's eyes were opalescent—and in all the earth there was nothing quite so blue, unless it was the big bowl of sky from which summer storm clouds have scurried.

Later Tod Slate hunted up George and reproached him: "What—and why did you spring that yarn? Say, you can't pull small-town stuff here!"

George did not explain. His money had given quite out; he was tired of clerking in the basement of a department store, and he was going home to visit the folks for a spell.

At the Middleburg depot Hattie Doebling met him. She was wearing her best dress—dark blue batiste, trimmed with white. Almost immediately she told him:

"George, one of ma's uncles died and left me nine hundred dollars! Ain't that grand?"

"Grand!" said George interestedly.

Prepared with Respect

DO you remember how you used to watch mother when she was preparing the favorite dish for the family? How *careful* she was! How *clean* everything had to be! How *good* everything must be before she would use it! How exact and precise she was—how watchful! No wonder people wove into their everyday talk the phrase "Like mother used to make."

You knew beforehand that whatever mother prepared would be good. And its goodness was increased for you because you knew that mother was thinking of you. She was thinking of your enjoyment, of your health, of your good living.

That is our principle in preparing all Wilson food products. That is why we say they are "prepared with *respect.*"

Wilson's Majestic Ham, for example, represents the most critical selection to begin with, and then the most expert preparation for your use.

We believe that when you are asked to buy and eat a product you are entitled to the knowledge that it has been handled, prepared and packed with the *respect* it would receive were it prepared in your own home.

CAREFULNESS, cleanliness, thoughtfulness, patience—these are *rules* with us. If you are one of those who think that the dominant idea in this big meat food institution is *volume*, that there is a constant rush to "get the goods on the market," you should change your opinion.

That is why every step in the curing and smoking is inspected and safe-guarded, so that when Wilson's Majestic label is finally placed on the package it will *guarantee* to you the cleanest, choicest kind of a product, with the "deliciously-different" old-time taste and unequalled cooking quality.

So exacting are our standards that an average of only *four out of ten* hams meet the Majestic requirements.

Wilson's Majestic Bacon, too, is really the *heart* of choicest pork sides.

Be *particular,* ask for Wilson's Majestic Hams, Bacon, Lard, Wilson's Certified Oleomargarine, Wilson's Clear Brook Eggs, and other high-grade food products.

Champion Toledo

Dependable Spark Plugs

All Overland and Willys-Knight cars are factory equipped with Champion Dependable Spark Plugs.

For no other plug meets the needs of these motors so efficiently—so unfailingly.

Champions are most carefully and scientifically built. Their construction is guided by the most exhaustive laboratory tests.

Champion porcelains are protected against the constant hammering of the cylinder explosions by patented asbestos cushioned copper gaskets. The extremes of heat and cold do not weaken or crack them.

The name "CHAMPION" is on the porcelain. Look for it.

BRIGGLES "GOES WEST"

(Continued from Page 19)

"Really? I thought you'd stay in—in our new house!"

"I'm not saying that if the 'ouse was in rance, I'd not open a horspital." Briggles aved his hands generously. "But seeing 's On-the-'Udson, I've no wish for it."

"Blister!" said Sheila suddenly.

"Miss, do you feel that tender toward e?" asked Briggles.

"Yes—because you are so splendid—oh, ou won't let him get shot, will you—romise me?" She took hold of his dumpy houlders and gave him a jolly shake.

He felt strangely exhilarated, after the shion of having demolished rum punch.

"Not if I dress 'im as a babe in arms," he romised.

"Somehow I know you're both coming ack—to Mr. Stoker," she said. "I can't hink of it's ending any other way. I know ou'll bring him back and he'll start gain—and you'll sell the house to him nd—and have a glorious time of adventure r yourself!"

"I 'ope Mr. Stoker will remember 'im," emarked Briggles pensively, folding in ath slippers.

"Briggles, you packed his boxes when he ent to school, didn't you?"

"I did," admitted Briggles grimly, "and hen he went to jail!"

"Briggles!"

"I don't believe in a man's deceiving any angel. I shan't let it 'appen in me own ouse! Miss Sheila, I did pack a box of ecent wearing apparel for 'im. 'E went to Bohemian ball masquerade and drank apanese champagne, so 'e tried telling me fterward, and went tootling down the reet at four A.M., clad in the garbage of a onk! I thought I should faint when they ang me up for bail. If 'is father 'ad seen m, Miss Sheila, 'e'd 'ave sent 'im west for ire!"

Sheila was tucking in a blue pincushion. he recognized it as one she gave Truesdale r a valentine joke. She did not answer.

"It mustn't prejudice you too much," rged Briggles; "it's more to put you on our guard, so to speak—always be ready ith a little spare change—'e's apt to need !"

Still she did not answer. Briggles dropped ie case of brushes. She was crying!

"What 'ave I done?" he asked dramatically of Mr. Stoker. "I've set a hangel eeping!"

Mr. Stoker went after another on the ank, in mundane unconcern. Briggles put is hands on Sheila's shoulders to return he little shake.

"Miss Sheila, I'll bring him back to you—lad in the garbage of a gentleman." There as a quaver in his funny voice that rang rue. "Listen!" He bent over until the umpy, carroty-topped head and the red-old braids almost touched each other. I ain't going to charge no interest—for uying back the place. I don't want the ouse—now I come to think of it! What hould I do? Sit in the parlor and talk to he walls—marry some tidy cook and 'ave r stray to the kitchen from force of 'abit! No, I want adventure, Miss Sheila. I ant to wander about—to go west, as they ay. What's more rousing than polishing ff old Fritzie—and Mr. Truesdale's boots! Don't you 'elp a lot if you 'ave a gentle-an's findings all laid out in style, so's he in't homesick and can work a jolly deal tiffer? That's my idea. If 'e can't buy his place—why, damme, 'e can stay on as aretaker until I pop off. I've made a will as includes 'im most liberal! The 'ouse on't run away, and 'e won't be shot, and ou won't run away, nor Mr. Stoker." Here Briggles invented a neat, cheering giggle.

Sheila sobbed in response.

"All at once it came to me that I did are," she said, "cared so much that noth-ng else mattered. I'm willing to be a rutch for him, I'm willing to marry a ripple."

"A cripple?" Briggles' eyes grew dark, angerous looking. "Miss Sheila, if I may ake so bold, Master Martin is nothing hort of Adonis in the morning tub."

Sheila began to laugh and cry all in one.

"Yes, of course, I didn't mean just that—nly, I know he's going to hate me when he ees the war nurses, women who care only or service; he'll see the difference and hate e. I know it—I know it—I know it!" she nded with a defiant little hysteria.

"Oh!" Briggles scratched his head per-lexedly. "Seven year I kept the Intrepid Fox Tavern, Mr. Stoker, and never such trouble as this."

"Promise you'll never tell"—Sheila looked straight at him—"just promise me that, Briggles. I could never bear it if I thought you even hinted ——"

"Strike me pink if I ever make a peep!"

Sheila kissed him.

The alcove curtains parted abruptly. Truesdale was standing there.

"I'm immensely interested," he remarked.

Briggles darted into an adjoining clothes room. But Mr. Stoker and Sheila held to their guns.

Truesdale put his arms round her with an air of ownership.

"You do care, don't you?" he asked. "And you know I do. I shan't think anything about war nurses; very likely I shan't see any. I shall do the best work I'm capable of, because I must have a worthy though brief record to offer my wife. I won't get shot, although I shall refuse to adopt an infant's frock, as Briggles suggested. I won't drink Japanese champagne or go tootling about, as he so kindly told you."

Here Truesdale raised his voice in the direction of the clothes room. "I'll work, Sheila, and buy my house again—and love you. May I?"

"What—what were you doing there?" She was startled out of sentiment. "Did you hear everything?"

"Even Briggles' kiss. I never would have got the truth from you or you from me, if Briggles hadn't tried his blessed, nervy, wonderful interfering. I came home unexpectedly, because of Mr. Stoker. I'd been looking all over Long Island to find a boarding kennel for him. I can't take him along; I'll be gone a year or longer, maybe. Just now I know I'll have hard work to stay a year, but I must. It takes a year for a shame inoculation to work off, Lady Handicap. And suddenly, because I couldn't think of the little beady-eyed whisker howling for me and getting like a shadow, I made up my mind to finish him. I thought while Briggles was packing I could get it by without his knowing. I'd just explain it to the old dog and let him go to sleep; then I'd know he was out of it! You and Mr. Stoker were hustling up the drive, I was behind you. I slipped in the back way, then you asked for Briggles. I ran up the backstairs and heard you talking. So I went down again and climbed the lattice, like a friendly burglar. I pushed the window open and came in here. I used to row with Briggles about the way he kept the curtains drawn—he ought to be made a Knight of the Carpet for it! I listened and heard you cry for me! Sheila, if you've done caressing Briggles, do you think you could be induced to ——"

She drew his dark head down to hers.

"Go west," she whispered, "but come back home!"

Briggles' wild tenor was ringing out so as to allow them all the leeway in the world, the one song in which he had trained himself not to behead the two *h*'s:

"The bells of hell go ting-a-ling-a-ling
For you but not for me.
For me the angels sing-a-ling-a-ling,
They've got the goods for me.
Oh, death, where is thy sting-a-ling-a-ling,
Oh, grave, thy victoree-ee?
The bells of hell go ting-a-ling-a-ling
For you but not for me!"

Briggles waited in the motor, slightly flushed and excited, while Truesdale said good-by. There had been nine consecutive and constantly lengthening good-bys that Briggles knew of. This must, by force of the steamer's sailing, be the last. Briggles was not deceived by the previous nine, because Truesdale had not relinquished his ownership of Mr. Stoker. As long as the small square dog heeled him about, the finale was not yet over. For Sheila was to take charge of Mr. Stoker.

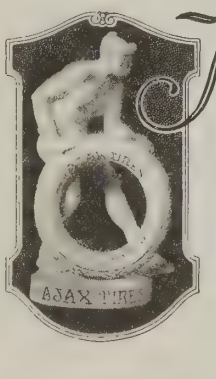
"I believe it's keeping 'er up remarkable," Briggles told Truesdale; "she's walked with a little 'op ever since we said Mr. Stoker would stop with 'er."

Truesdale, with a happy sadness—if such emotions may be blended—patted Mr. Stoker with envy. But just now Truesdale had led Mr. Stoker inside—Sheila said she could not go to the boat. The house which they jointly owned was boarded up and deserted—but only for a little, Truesdale had promised Sheila.

AJAX TIRES

GUARANTEED IN WRITING 5000 MILES

Now REGISTERED *to You*
As Bonds are Registered



AT one stroke Ajax takes tire service out of the realm of uncertainty and guesswork. It still more definitely fixes the responsibility of the *maker* and protects the *buyer*.

Every Ajax Tire is now REGISTERED at the home office, by serial number, in the individual tire-owner's name. Ajax is registered from the first motion of manufacture, through every step of selling—to the *last mile of bonded service*.

This even more positively *insures* the guarantee in writing—5000 miles—of which Ajax is the originator. While others are claiming Quality, we are *guaranteeing* it.

Ajax Tires always have differed, because of a different manufacturing *determination*. And because, building for long future, our standards of materials, our ideals of workmanship, our requirements of inspection always have been just a *little higher* than seemed necessary.

What is more, we know Ajax to be the most *economical* tire. Its 5000-mile guarantee represents an actual excess of 43% over the anticipated mileage of many standard makes—a proportionate saving per tire.

Ajax *alone* is registered. It is because of Ajax in-built quality, and because Ajax has valiantly upheld its guarantee through all these years that we *dare* inaugurate this registration plan. It crystallizes *our* highest ideals of Ajax service. Think what it means to *you!* Equip your car with Ajax Registered Tires.

Ask your Ajax dealer for a copy of "The Story of Ajax Tires," by Horace De Lisser, Chairman of the Board, Ajax Rubber Company, Inc. It tells an unusual business story, with illuminating sidelights on Ajax ideals and principles.

Briggles drew out a handkerchief and touched off each eye as Mr. Stoker disappeared. He felt it was expected of him. Besides, there never could be but one Mr. Stoker—it was no irreverence to say it—any more than there could ever be but one Truesdale or one Sheila Morgan. Besides, Mr. Stoker's uncle was in the royal kennels.

As Briggles sat there gazing at the dull autumn haze Truesdale came out, a little white and unnaturally jolly, but with a clear-visioned look in his eyes.

"I say, Brig, go on in; she wants to tell you good-by. No, I'll not go back—a bit thick, you know."

Reluctant but brave, Briggles dragged himself up the walk and into the drawing room. Must he confront Mr. Stoker again, pat him with mere friendly interest? Truly, it was a bit thick!

Sheila's family were wandering pensively about. Sheila, in a dull-silver gown, was holding Mr. Stoker in her lap. She held out her hand cordially. But she was not crying. There was the same clear-visioned look in her eyes that he had seen in Truesdale's. It braced Briggles wonderfully. Mr. Stoker, with wilting whiskers, gazed in silent pleading. Oh, for one of their old evenings ——

"Briggles, I want to thank you," she said; "you've done everything for us. And you'll bring him back"—just a tiny catch in her voice—"you know you promised ——"

"I'll bring him back," repeated Briggles as if he were taking vows.

"I wanted to see you again and tell you how I do thank you. It's going to be wonderful for him, isn't it—and—and he'll come back," she ended lamely. The repetition was starting a chain of romantic sentiment in Briggles' brain.

"Good-by, Miss Sheila." He reached over Mr. Stoker's square grizzled head and took her hand. Mr. Stoker was very quiet.

"Briggles, you'll write and tell me ju how he is, won't you?"

"By every steamer."

"And you'll be really frank, won't you

"As frank as can be!" Briggles stru a military pose.

"Thank you! Isn't there anything I c do for you, Briggles?" she asked. "I keeping the little dog for him—it helps do things. Isn't there something you'd li tended to while you are—west? Anythi Briggles!"

Briggles looked at Mr. Stoker with indulgent eye.

No pastime was too lavish to make up f the parting.

"There is," he said, coughing apologe cally, "if you'd like to keep the little da 'appy—I've an idea. It would oblige m too. Some dreary day, just take the gre icicle off your century plant and put ' down in the middle of the 'all—and lea the rest to Mr. Stoker!"

TALES FROM A SAFE-DEPOSIT BOX

(Continued from Page 11)

war for that and still have money left. And naturally it has made quite a lot of fuss and fireworks in the papers—these people and politicians trying to find out who got away with it. But that doesn't interest me."

"Why not?" I asked, leaning over, waiting.

"Because it doesn't. In the first place, they won't find out, anyhow. They never do. But it doesn't interest me, anyway. What interests me is where they got it from."

"Where did they?" I asked, and thought again of the hugeness of it, and of the other folks besides us who had lost it.

"In there!" John Snaith answered, motioning with his thumb.

"In there!" I said after him.

"Let's look at it for a minute," he said to me. "Where would it come from? It wasn't lost in speculation—that's one sure thing. Nor by the kind of folks that speculate. It wasn't hardly sold upon the Stock Exchange."

"No."

"Money can't be lost there, anyhow, can it? On the Stock Exchange? All that it does is change owners."

"I suppose so."

"And it isn't likely that they'll find they've stolen the actual cars or tracks or engines—and carried them off home. Not up to a hundred and seventy-five million dollars, anyhow."

"Not much!" I said.

"No," said John Snaith reflectively. "There's just one place. There's where it comes from. There's where they got it from—out there!" And he pointed back again. "Those still, safe places—like that out there. There's where the great bulk of that hundred and seventy-five million dollars came from—from the little safe-deposit boxes of New England. All—the biggest share of it—from common, average folks, who would suffer most in losing it."

"The dirty robbers!" I said hotly, thinking of the men they said had done it. "Hanging would be too good for them."

"No; not that, either," said John Snaith slowly. "You can't blame them, exactly."

"Can't blame them!" I came back.

"Blame them—no," said he. "How can you? 'God made dogs to steal their living,' my grandmother used to say. You can't blame them. The trouble is with the folks who leave it round for them to steal!

"You can't blame them—these men who handle it. No. There's the place, and there're the people," he said again, jerking his head back toward the door, "who're to blame for losing it—for leaving it round where it could be taken."

"Leaving it round?" said I, and looked behind me.

There we sat, locked in—steel walls and bars and guards all round us. And through the doorway—the door was an inch or two ajar—I caught sight of a slice of the wall of the silent steel-lined safe-deposit room.

"Leaving it round—yes," John Snaith replied. "Out there! There's the easiest place in the world to lose money from.

"I mean it," he stated when I looked at him. "Certainly!" And I saw that he really did. "Figures prove it!" he said.

"Easiest place—out there!" I said to myself, watching him. "Leaving it round out there—to be stolen! What does he mean by that? What kind of a figure of speech is he using?"

For he still sat there, hard-faced and sober as ever. You could see with half an eye that he meant it seriously—whatever he intended to say—exactly.

"It's a queer thing to see," said John Snaith finally. "I wouldn't believe it myself—I wouldn't believe it could be done if I hadn't watched it for thirty years and seen how perfectly simple and natural it is—the way it happens. And always just about the same!

"First, one of them will come in here—very cautious and conservative, like your father was—and hire one of these steel pocketbooks of ours, out there in the wall. They aren't taking any chances about what they've got or where they put it. They'll hire a safe-deposit box and put in it just old conservative securities that everybody speaks well of—like this, for example," said John Snaith, drawing over that stock certificate which my father had. "Take this thing: Here was the original pattern—the stuff folks started lining safe-deposit boxes with round this part of the country when they first began to have them. Fine stuff! The old-reliable family safe-deposit-box stock in this section—handed down from one generation to another, like the family furniture. Something you could lay away and forget about. So they did—just that.

"What happens?" inquired John Snaith, fingering the certificate. "What did happen with this? For fifteen years—and more, to my knowledge—the whole world's been talking about this thing; first stage-whispering, then talking openly, and then yelling up and down the street. Everywhere—here, all round them in their own place! Every newspaper, every annual report—if they'd only stopped to read it! Every rusty engine wheezing up the grade in back of town yelled: 'Trouble! Trouble! Trouble!' Waked them up nights yelling it. Did they hear it? Did they read it?" asked the old man, pointing back of him again—"those fellows in back there? Could you get them to read it? Not a word! There's something sleepy in the air back there that won't let them, apparently.

"No. There it was, back in there—all safe and sound and protected—in those armored pocketbooks of theirs, where nobody could touch it. Where you could lay it aside and forget about it, and know that it was there safe—forever!

"Yes, there it was; and there it stays! The whole world's been crying it down and ringing the fire alarm over it for a dozen years, anyhow. And now, in the end, when all is said and done, who's got the stuff? Where is it? Right out there where it always was—in the hands of the safe, sound, conservative investor; in the same old family safe-deposit box!

"No," said John Snaith, "you can't make them hear. I don't believe it. I wonder sometimes what I ought to do about it to wake them up.

"I wish somebody'd come along and tell me. I've thought sometimes I'd go back in that room out there and put up an electric sign—the biggest I can get in there: 'Danger in here! Thieves! Robbers! Watch your pocketbook!'

"But that wouldn't do the slightest good—not the slightest! They'd read it and smile once, maybe; and then go off and forget it. And the same old thing would go right on in there."

I smiled to myself—my mind off my ov trouble for the minute—thinking about sign like that in that safe-deposit room; se ing how different the man was from what took him for at first; watching his cigar, as moved—the only thing about him, appa ently, except his eyes—with his emotio "He gestures with it, almost!" The thoug came over me and I almost grinned open

"And yet," he said, his face as still a serious as ever, "it's all absolute God facts—what I tell you; and anybody c find it out for themselves. There's mo real money lost out of there than any oth place I know."

He stopped a minute, staring at t stock certificate.

"A strange thing," he went on, "a stranger still when you think about t people that lose it! Good, sensible, i dustrious people, most of them—mental 'way above the average. They wouldn come in here with their money if th weren't. They'd be spending it or specula ing with it—or losing it somehow.

"Safe, steady, sensible people, most them—past their first crazy boyhood, an how. Salaried men or professional men working for somebody else, as nine out ten of us do nowadays in the city. They found out that most of us have got to sa something to start our children with, a pass out of life self-respecting. They passed by their little speculations and bu ing gold bricks. They've learned not back notes for first cousins and sons-in-law he said; and he flicked my father's old no from his friend with his stiff forefinge "They've made a little money and save it. They invest it, and then bring it a lay it away in here—half of them—to lo it or have it taken away from them.

"I've watched it now for twice yo lifetime," said John Snaith—"this inves ing by the average man. And I sometim think it's about like it was in that old Pi grim's Progress they made us read when were boys—the farther on you go, the wor the devils get round you. Just when yo think you're safe, then down you go.

"It's just that way, sometimes, I thin with those people," he said with anoth jerk of his head—"out there!"

"What happens to them? What ge into them?" I asked.

I had turned toward him, listening. looked out past him at the slice of the wa of the still safe-deposit room.

"There's nothing mysterious about it, said John Snaith, his cigar twitching. "It the same in all business and money ma ters—and always was. You'll see it whe ever you go. The safer you think you ar the more danger you're in—always! Th time when any man gets to thinking tha he's absolutely safe in money business just about the time he's lost.

"No," said the banker, sitting up a littl "I'm sorry for these people, always. You' think they'd have more sense. But in th long run they fail and lose what they' got for just the same reason that everybod else does: because they've never ye learned the very first principle of investin money—in anything."

"What's that?" I asked quickly.

"I'll tell you," he said, directing hi cigar and his eyes toward me. "I'll te you, gratis. But you'll not remember it an more than your father did—or any of th

(Concluded on Page 93)

Why are sportsmen so keen on these Shotguns and Shells?

CONSIDER what Remington U M C Shotguns and Shot Shells are doing in a *practical* way for the sport of shooting.

Think of the Pump Gun—*the first hammerless solid breech repeating shotgun!*

And the Autoloading Shotgun, with its locked breech—also the first *hammerless* arm of its kind!

No sportsman needs to be told what such *practical betterments* mean to him—the hammerless feature: the solid breech, protecting his face: the simplicity, the easy operation, the *results,* so characteristic of Remington U M C Arms.

Consider the "Speed Shells" *(smokeless)*—the *Arrow* and *Nitro Club,* the first shells to make the *steel lining* practical! No side expansion, and all the drive of the powder kept back of the shot.

And the "New Club" *(black powder)*—for fifty years the "old reliable yellow shells"!

Your typical American sportsman is the keen man of affairs. His quick response to the *practical* in arms and ammunition is giving the lead to the dealer who displays the *Red Ball Mark of Remington U M C*—the sign of Sportsmen's Headquarters in every town.

rest of them. Yet it's certainly simple enough."

"What is it?" I asked again.

"There's no such thing as a safe investment on earth," said John Snaith—"that's the first idea to go by in handling money, whatever it is you buy." He started putting back the papers into my father's box. "Whatever it is you buy," he said—"whether it's this," he said, handling the exploded mining stock, "or this." And he put away the safe old standard railroad stock—that was.

"Not one!" said I.

"Not one that you can go off and leave for a year or ten years—in there, and come back and find just exactly where you left it. How could you expect it?

"Look here," said John Snaith: "Suppose ten years ago you'd taken gold dollars and locked them up in one of these safes—and left them there. What would you have now when you opened it up?"

"The same gold dollars that were put in there, I suppose," I answered, wondering what he was after now.

"No, you wouldn't—not by any means! Not half—not much more than half what you put in there," stated John Snaith. "Not if you count what they'd be really worth now and then—what they'd buy for you. Not much more than half if you took account of value—what you'd get for them. And I suppose that's what money is for."

"I suppose so."

"That's a well-known fact—to anybody who looks under the surface. And it's about the same reason why your interest is so low now from your savings banks. Only, instead of buying gold dollars, they bought these low-interest-bearing bonds ten years ago—that's all.

"No. There's nothing sure and stationary about money, anyhow—that's certain! Why should you expect it?" asked John Snaith, regarding me. "Do you know of anything else you'd think you could run off and leave, for one year or ten years, and forget all about, and come back and find it exactly where it was—in the same condition?"

"No," I had to answer.

"No. There's just one thing on earth, as I figure it, that you can count on always—change! Change, change, change—always something new and different! And yet these folks in there go on always, year after year, as if money and investments were the only exceptions.

"Exceptions! The only difference I know of," said he, looking at me from under his eyebrows, "is that money is the slipperiest thing on earth, and the deadliest to you—when you've had it once and it gets away from you." He stopped and looked down, thinking.

"If you could only get that idea into their heads once," he roused himself to say—"if you could get the average man to see it in the first place—the rest would be simple enough. How much time do you suppose it would take the average man to know something about what he's got his money in—or can put it in? Not much more at the end of the year than he spends in brushing his teeth or his clothes.

"But you can't. That's out of the question," he said, and stopped again. "They won't do it."

He stopped a while, looking down; then drew my father's safe-deposit box toward him. He didn't speak for some little time; sat there studying it, motionless—his eyes on the box, his cigar still in the corner of his mouth.

"I hate to open them," he said abruptly. I looked up at him, surprised at the new tone in his voice. "I hate to open them. I always did. I hate to see what's in them. What they've done with what they've had—like your father. It isn't the money only I mean now. They pay so dear for it in every way.

"They pay so dear for it," he went on again after a few seconds. "They go away and leave it; leave it and forget it—except to think all the time they've got something back in here that's going to support them in their old age and start their children going. And then some day—when something happens; when it's too late—they wake up and come back in here, to this safe, still place, and open up their steel pocketbooks here and look in. And about all they've got there is a paper entitling them to go away and worry themselves to death, and leave their womenfolks to starve or keep a boarding house. They've paid the natural penalty for what they've been doing."

"It's a hard penalty," I said.

"I don't care so much about the young ones," John Snaith said harshly.

"Why not?"

"They ought to be able to take care of themselves. If they can't they aren't much good. It's the old ones that worry me—like your mother and your father."

"My father!" I said, thinking suddenly of what my mother said when she was so excited. "You don't believe that killed him, as my mother thought?"

"It didn't hold him back much, I expect, from dying—these last few months," said John Snaith, looking up at me, and looking down again at the brown metal box beneath his fingers.

I stopped, watching the thing myself, remembering, repentant, unable for the minute to say more—thinking of my father.

"You favor him a little, I think," said John Snaith, clearing his throat—"the way he looked when he was younger."

"You and my father knew each other quite well once, didn't you?" I asked him—glad to say something.

"I shouldn't be here now, young man," he said, looking up again, "if we hadn't. Yes, I did," he said; "I knew your father pretty well when we were younger. We went out in the first three-month regiments—in the same company together.

"Yes; I hate to open them," said John Snaith then—snapping down the cover of my father's safe-deposit box—"especially when I knew the men who owned them."

He stopped. He looked older in some way—his whole sturdy figure. His clothes sagged; his shoulders hunched down a little.

"But that's the way it is, anyhow," said John Snaith—"almost always. You go to open up a man's pocketbook and you find his life inside it."

His cigar tilted up again; he moved his feet.

"Let's go," he said abruptly, and got up and walked out with my father's box to the hole where it belonged, in the wall of the safe-deposit room.

We went on out, without talking, past the bars and the steel doors, and the high steel safe outside. The guard at the steel gate let us out and the gate clacked after us.

"Brace up, boy!" said John Snaith. "Keep a stiff upper lip. Don't let a little thing like this worry you. You young fellows aren't hurt so easy. You young folks jump up pretty quick when you've had a tumble. It's we old ones that can't get patched up again when we get smashed up once. But it's good for you—if you've got any stuff inside you."

He laid his dry square-fingered hand upon my shoulder. His cigar was back into the horizontal once more—straight out before him.

"You come round again and let me see you—say, three days from now. I may know of something somewhere by that time maybe you might like to do for your living," he said.

He turned and left me while I was thanking him.

I went out of his old bank—sore, repentant, worried; but older, more courageous in a way—a different thing from what I was when I went in, two hours before. I went out, trying to place myself, to sort out my emotions. I was confident, in a way. I even felt a little buoyant. I found that I could still smile, anyway.

As I passed out the door I put my hand in my pocket and touched again my three dollars and fifty-seven cents in cash.

"It'll be some time," I thought, and grinned—for the minute—"before I'm making mistakes in my own investing. But I've got my lesson, anyhow—that's something."

But then, when I stepped into the darkening street—out of there—my spirits did start falling. I started thinking of everything I had lost that day, and never should get back again probably—my education—everything!

"Heavens!" said Barbara Harris from our old family carriage at the curbstone. "I thought you never were coming! Get in here."

"I didn't think ——" I started to say, not daring to meet her eye—remembering how changed it all was between us.

"Get in here!" said Barbara.

I suppose I should never have proposed to her—not for years after that, anyway—if we hadn't both been so excited about the thing—the change in everything that day! Nor would she have accepted me. She always says so, anyway.

Improve your looks

It Pays!

In business or society, your personal appearance is a precious asset. Cultivate it!

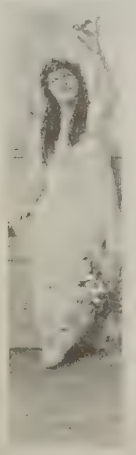
Let Pompeian MASSAGE Cream cleanse your pores of unseen grime, rejuvenate your skin, bring healthy glow to your cheeks. Simply rub in, rub out. 50c, 75c, $1 everywhere.

Pompeian NIGHT Cream

Dry, tender, chapped skins are soothed and softened by this popular, snow-white cream. Women apply it nightly to the face and hands. Men use it after a close shave. Motorists' tubes, 25c. Jars: 35c, 75c, at the stores.

Pompeian HAIR Massage

does remove Dandruff. Pleasant to use, too. A liquid, not a cream. Both men and women say "it works wonders." Applications and bottles at the better barber shops. Bottles at the stores, 25c, 50c and $1.



Mary Pickford

Art Panel and trial jar of Pompeian MASSAGE Cream sent for 10c. Panel in beautiful colors. Size 28 by 7¼ inches. Clip the coupon now.

Switched to Girards!

The sensible thing for every man to do—switch to Girards.

Why tamper with your health, why gamble with your efficiency, when you can switch to Girards?

Rich aroma—full flavor—real Havana—Girard brings 'em all! All the satisfaction and all the pleasure of smoking, yes! But never a comeback on your health or your efficiency.

No speeding pulse, no shaky hand, no foggy wits, no thumping heart, no ragged nerves—no, not on your life. Not from Girards!

The "Broker" actual size 10c

The Girard Cigar

Never gets on your nerves

A remarkable cigar, this. You can smoke more and feel better. Every puff's a pleasure and you can puff-puff all you want and never feel a flicker.

Thousands of smokers the country over are Girard "regulars." It's "the national cigar." Girard dealers are everywhere. Any of them will tell you that the Girard represents the high-tide of smoke value. If your own dealer doesn't handle Girards he can get them for you with little trouble and no financial risk.

14 sizes 10c and up

Thirty minutes of solace in every Girard. Draw on the supply today.

Dealers—a word with you

If you are not handling the Girard let us prove to you that there is a *big business for you* in this unusual cigar. Write for our "Dealers' Safety-first Proposition." Write today.

BRINGING OUT BARBARA

(Continued from Page 23)

froufrou hair, brought down over their ears, to sharply pointed, shiny finger nails; from coy glances to fixed smiles, displaying regular teeth or dimples or pretty lips, whichever they happened to be endowed with—extremely disconcerting to me, since I had not acquired it. Their talk was of the races, the polo—that I had missed—and current "shows."

One boy had been to the Broadway Follies seventeen times, as he took pains to tell me twice, being a simple soul in spite of his coattails, hair plastered back from his forehead, and the gardenia in his buttonhole. When I went home I saw him driving himself off in a huge red automobile, with a nice-looking man in a gray ulster—probably a tutor—at his side. What could a tutor teach a boy brought up like that?

The hot, dusty days in town; the hurry of dressing; the heavy food, which I bolted out of sheer nervousness; the strain of meeting new people—disturbed my nights and made me toss about for hours. I invariably woke with a dull feeling in my temples, and was only too glad to have my breakfast brought to me in bed. Provided the hour at which I rang for it was late enough, I could thus be reasonably sure of a good cup of coffee. I got to depend upon this more and more, and took it blacker and blacker. Exercise was not included in the plan of campaign and I felt the lack of it sharply.

One day we came out from town early, as mother was going to Mrs. Barton Winslow's for tea.

"I think I'll take you with me," she said as we turned in at the driveway.

"In this gown?" I protested, having on only my second best. "Do you think I look well enough?"

Mother smiled approval.

"You wouldn't have thought of that a week ago," she commended. "You're learning. It won't matter here. Mrs. Winslow has a gift of making everyone feel at home."

This time she spoke the truth.

Mrs. Winslow was a very charming woman, graceful in appearance and in speech. I lost my heart to her on the spot.

"Come and meet my daughter," she invited; and, holding me by the hand, she led me over to the tea table.

With a man seated on each side and two standing against the wall behind, Ruth Alvord was pouring the tea. She had a certain sort of good looks, but not a trace of her mother's breeding. How had she missed it? I wondered. It was my first encounter with the effect produced by the total detachment of interests among people of our sort.

In humbler circumstances a daughter begins to drink in her mother's ideas with her mother's milk. We, poor things, miss even this, being generally bottle-fed; and by the time we are eighteen separation is complete, especially if some relative—a father, perhaps, as in this case—before making his exit from the stage, is considerate enough to insure us independence of every good influence by providing us with a fortune in our own right.

The interruption of my advent caused Miss Alvord obvious annoyance; and, upon her mother's introduction, she gave me an impertinent stare. Mrs. Winslow had not time to observe this. Almost before the seated swains had sprung to their feet she had turned to receive other guests.

"Woo, how do you do?" the daughter drawled in a high, thin voice, artificially pitched. "Tea? No? Oh! Sit down again, Monty. You too, Jim."

As I hastily withdrew I saw her smile at Monty in a fashion I found later to be much in vogue among young women down here; it is done by drawing the upper lip back over the teeth.

Looking about for mother I espied two very slim girls, with cups in their hands, standing in the embrasure of a French window. They were talking with a man whose back was toward the room. I knew that back. It was John Randall's.

As I recognized it the blood receded from my heart and then came pumping back again. Presently that overtaxed organ began pounding joyously. Who would ever have thought of coming upon John Randall in a Long Island drawing-room?

It was my lucky star that had caused this untoward phenomenon; thrust him under my eyes; willed me to find him again in the only way I should have been willing to find him—out in the open, in plain sight of anybody who was interested enough to look.

I could hardly walk properly as I hastened toward him; my steps wanted to break into the most idiotic little skips, just as my face had already broken into radiant smiles.

"Hello!" I cried breathlessly.

The girls looked up in surprise; he turned—and did not smile at me. He merely bowed with a slight flush. The repulse of that look was like a blow in the face. It staggered me.

"This is an unexpected pleasure, Miss West," he said stiffly. "I'm down here just for a few days to start—er—a—to start a portrait of Mrs. Winslow. I made the preliminary sketch this morning."

"Oh!" I said, more stiffly than he. "How very nice! I wish you success."

With that I wheeled abruptly and walked away. Behind me I could hear the girls resume their giggling; could picture the silly things undulating up to him again, their cups shaking to the shaking of their shoulders.

Why didn't he shove them aside and come running after me to tell me it wasn't true, as I thought, that he had taken offense at my letter? That he had merely been so surprised at seeing me his mind hadn't worked? I should have accepted any excuse, no matter how lame.

But he didn't come. He didn't come because it was true. He had let that letter spoil it all. He was a sapless creature—a poor thing without imagination enough to read mother between the lines. Why, I had never for one moment thought of his attributing that letter to me! Any fool could see that it was her letter; she jumped right out at you from the paper.

I had thought him so peculiarly endowed with fine and delicate perceptions; and now I found him literal to the last degree. It was infuriating of him to step down from the pedestal upon which I had placed him and mingle with the throng, sharing its qualities of littleness—suspicion, egotism, false pride. Tears of vexation rose to my eyes, so that the whole room became a blur and I could not see where I was going.

Of course I promptly collided with somebody, winked away the tears in short order, looked up to ascertain who it was to whom I was murmuring an apology—and found myself face to face with Allan Denning. I expected some bantering retort; but, to my surprise, his eyes were looking straight into mine with an expression of anxious solicitude.

Curious that I had not noticed before how supremely blue they were—as blue as the shadows on snow when the sun is shining! His ruddy cheeks glowed with a suggestion of the open country; they made me forget the dense atmosphere of this tea party and think of frosty mornings; of sleigh bells; of crackling camp fires. I could imagine him walking through the autumn woods, gun in hand, or casting his flies over the still pools of trout streams. Why didn't he realize that that—not this—was his natural element?

"Something's the matter!" he said, leaning quite close.

"No!" I protested. "Nothing's the matter—nothing at all. I'm just hot, that's all—hot and bored."

He smiled irrelevantly and took out his handkerchief.

"Look!" he said, indicating the lace on my dress.

I looked; and there, amid its folds, hung a telltale tear.

"Caught!" I admitted, as he brushed it away with the irresistible tenderness of a very big thing for a very little one.

"Now come out of this," he ordered, "and tell me all about it!"

It was pleasant to obey. As I passed mother I saw her looking at me, paused just long enough to read in that look acquiescence—commendation even—and went on. I was so tired and it was so easy to follow the line of least resistance. To be approved of by mother was a new sensation. And now to be taken care of, to be soothed—that was new too.

"Out with it!" Allan Denning commanded when we were seated on the terrace in two light-green iron chairs, with a cool

(Continued on Page 97)

Why This Roof Has National Preference

All over this country—on the fashionable boulevards and on the cross-road corners—you'll now find homes roofed with Neponset Twin Shingles. They became nationally popular—for they are a tried and proven success.

If you are planning to build or repair, you should know more about Neponset Twin Shingles; *why* they are the nation's preference, and *why* they have earned the title of "The Roofing Development of the Twentieth Century." Read carefully the condensed paragraphs below.

Looks The colors, form, size and slate surface of Neponset Twin Shingles make as handsome a roof as it is possible to find. They have the look of slate, laid in substantial looking large slabs. Their soft green and red colors harmonize with any surroundings or architectural plan. You can be sure of eye-satisfaction.

Fire-resistance On a Neponset Twin Shingle roof sparks and flying embers burn out harmless. Most conflagrations spread from roof to roof. These shingles are a very great protection. They are approved by the National Board of Fire Underwriters.

NEPONSET TWIN SHINGLES

(Patent applied for)

Wear Tough felt, saturated with the best waterproofing material known (everlasting asphalt), then coated and recoated with crushed rock and asphalt, pressed and jammed into one solid, thick sheet. Similar materials in our famous Paroid Roofing are still giving good service on roofs laid 18 years ago when Paroid was new.

Cost Notwithstanding their great beauty and durability, Neponset Twin Shingles belong in the class of economical roofings. Their uniform shape and double width halve cost of laying, because two shingles are really laid at a time; and also lessen cracks and nail holes.

Five layers, six processes build up Neponset Twin Shingles into one thick, solid, inseparable mass, impervious to rain, sun, frost—undecaying and not affected by sparks or embers. Always remember "five layers, six processes."

There are three types of Neponset Shingles, meeting every requirement and pocket-book.

For factories, warehouses, barns, etc., similar material is furnished in rolls. It is Neponset PAROID Roofing—a roofing that for service has been unchallenged for 18 years. There are three types of Neponset Roofing, meeting every requirement and pocket-book.

See the Neponset Dealer in your town. He can supply you with just the product you need—made and guaranteed by us.

Send for FREE Booklet, "Repairing and Building"

It tells about Neponset Twin Shingles and the other Neponset Building Products—

NEPONSET Built-up Roof for Industrial plants.

NEPONSET Waterproof Building Papers.

NEPONSET Wall Board for cottages, attics and ceilings in place of laths and plaster.

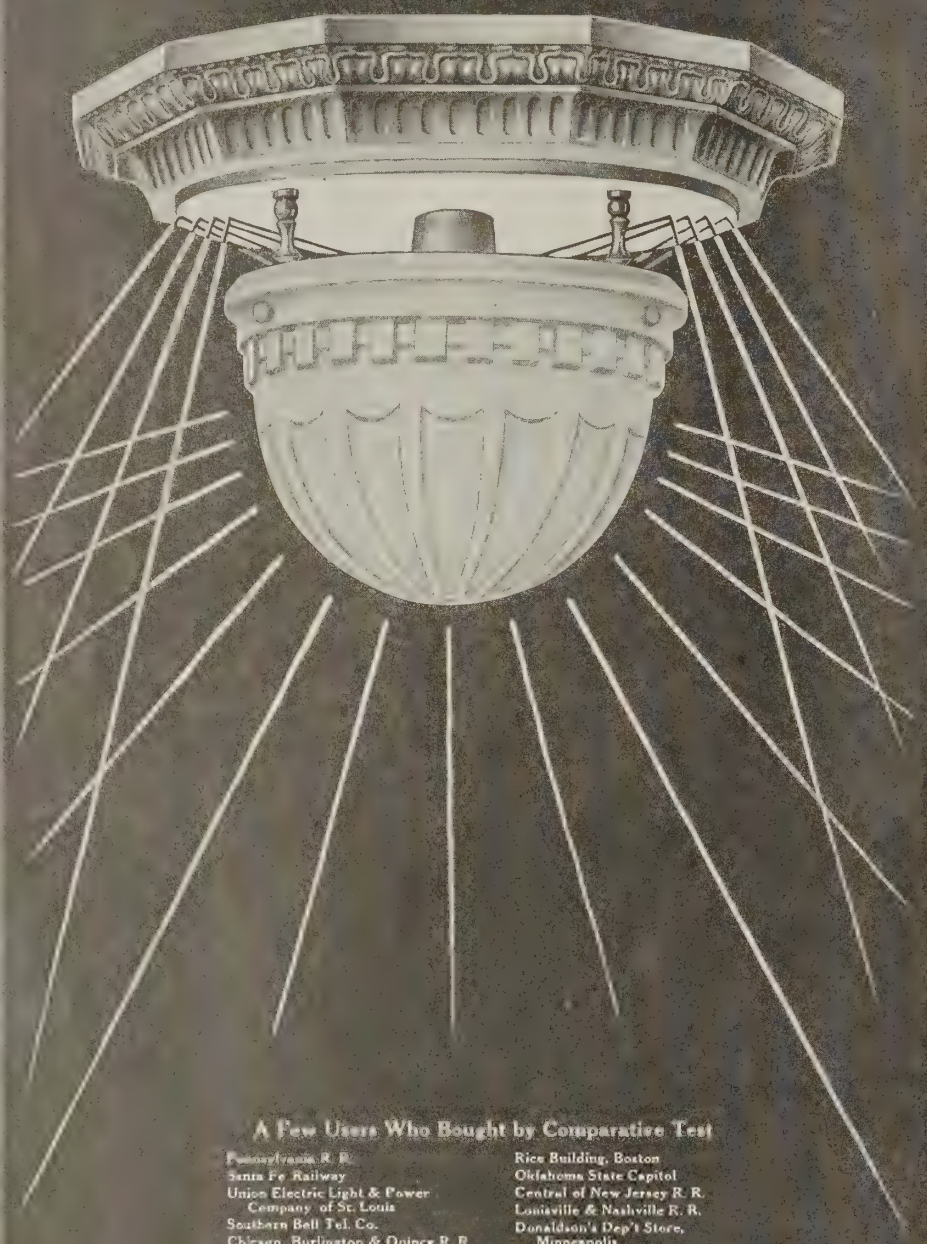
Adopted wherever a comparative test is made



IT is significant of Brascolite efficiency that among the largest users of Brascolites are those concerns that maintain big engineering departments in connection with their own business and those others whose fixture investments were so big and whose lighting demands were so exacting that they bought only after comparative tests. Not content with claims, they simply turned the whole matter of illumination over to their engineers, saying: "Here are Brascolite claims. Can this fixture live up to its promises?"

Better illumination — lower current expense — a pure, white light, best suited to the eye — no glare — lower cost of maintenance — lamps last longer — bulbs blacken less readily.

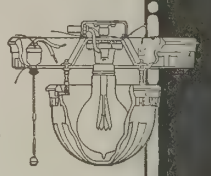
These engineers—engineers, mind you, not people who buy sight unseen or merely by appearances and promises, but men who think in figures and efficiency and judge by results based on scientific test—these engineers put the Brascolite through its scientific paces—measured its efficiency. They made it compete with all other known fixtures and systems.

When this is done, Brascolites go in

When any user buys his fixtures by the efficiency test and for the purpose of getting maximum results at a minimum cost, Brascolites are bound to win. The other test comes in use.

We give herewith a few of the Brascolite users who bought after test and who have found since installation that the system lives up to all promises and bears out all tests. From the nature of these big businesses you can judge what competent and exacting engineers Brascolite had to satisfy in the first test and what service needs it has had to satisfy since installation. No wonder over 305,000 Brascolites are now in use.

Look at the cross-section and you'll see why it is always satisfactory. Note the simple, substantial construction. So designed that there is small opportunity for collection of dust. And here note the hooks, making cleaning the work of but a moment. Designed further to give proper ventilation, which prevents the lamp from overheating. It is this overheating that burns out lamps so quickly. Also, in the very beginning of the lamp's life, overheating blackens the bulb. A blackened bulb means a big drop in efficiency.



Ask any fixture dealer—write us for portfolio, containing photographic reproductions of many kinds of installations, explaining the Brascolite principle and illustrating the infinite variety of designs.

vista of green lawn in front, and the movement and color of the "tea" delightfully distant, behind the long, open windows.

"That Alvord girl," I said, "was snippy to me; and then—a friend of mine disappointed me. That's all that happened. Honest, it is!"

"It's enough!" he returned quickly, and his eyes flashed. "That you," he added in a low tone, "should be subjected to the rudeness of a girl like that!"

His scorn of Miss Alvord was the subtlest flattery to myself. I sat silent, drinking it in.

"What about the friend?" he resumed presently.

I shrank back.

"Don't ask me about that," I answered, my face suffused. "I'd rather not talk about that."

"I beg your pardon," he said at once. "You spoke of it first, you know. What have you been doing with yourself all these days?"

At his making it so easy for me to keep my own counsel my gratitude went out to him afresh.

"Thousands of things!" I replied. "Horrid things! Things I hate—shopping, lunching, going to teas, dining out, having people in. When I used to read about it in the Social Notes it sounded so gay. But now that I'm living it, it doesn't seem gay a bit."

"It isn't gay," he replied. "Putting certain people in juxtaposition doesn't constitute gayety. The only people who are gay down here are the ones that go about together because they want to, not because they have anything to gain by it."

"Where are those?" I asked hopefully. "Why haven't I met them?"

"Because they're busy with one another," he affirmed. "You won't meet them, except by accident."

"I shouldn't think it would be necessary to live in big houses on Long Island to have that sort of fun," I commented.

"It isn't," he answered. "The same sort is obtainable in Lowell, Massachusetts. All you need is a gang of kindred spirits."

"Who are the kindred spirits here?" I asked.

"Well," he replied, "there are the Spencers, and the Glendennings, and the Winty Athertons, and the Boltons, and ——"

"I don't see any of their entertainments mentioned in the papers," I interrupted.

"They don't give any," he enlightened me. "People give functions only when they have something to get by doing it. What's the use of being bothered if the world is your oyster to begin with?"

"It's a relief," I said thoughtfully, "to learn that there's anybody here, however narrow and selfish, who doesn't plot and scheme."

"The plotting and scheming," he returned, "is all done by those who are not in the inner circle, but who wish to appear to be in it."

"Thank you," I said with lurking mischief in my eyes. "You've placed my family for me in Who's Who on Long Island."

"Turn over the page and you'll find my name," he replied with an answering gleam. "I'm a plotter and schemer too. I tap the inner circle at some points; but I'm not satisfied with that."

At that moment mother, appearing in the window, beckoned, smiled and waved a blithe parasol.

"May I come and see you to-morrow?" asked Allan Denning as we got up, holding my hand a moment longer than was necessary.

"Do!" I cried. "Where are you staying?"

A shade of embarrassment flickered across the self-satisfaction of his demeanor.

"I'm staying here," he replied.

"Staying here?" I repeated. "And yet you spoke so contemptuously of the Alvord girl! You were not sincere in what you said to me. You like her. You wouldn't be here if you didn't."

He paused before he answered.

"I despise her," he then said deliberately. "I stay here because—because," he ended bitterly, "that's the kind of thing we plotters and schemers do. If I'd come in contact—years ago—with a few girls like you I'd have been out of that class long ago. Won't you help me to get out of it now?"

Once more his flattery went to my head. I was confident that I could even now revolutionize his standards, having been so charmingly invited to place my finger in the pie. Returning the pressure of his fingers I whispered eagerly "I'll try."

He came the next day, and the next. On the fourth day he moved over from Mrs. Winslow's house to ours, bag and baggage—motor, valet, golf clubs, tennis rackets and such countless other necessaries as form the equipment of the professional week-ender.

He went back to town on Monday, and upon the Friday following, mother and father having accepted an invitation to Hyde Park for over Sunday, I was left, for the first time since my arrival, free to breathe.

I was going to spend my Saturday in sketching in oils or in picking field flowers; I hadn't decided which. My intention was to motor as far from civilization as I could, be dropped somewhere, and left until called for. The weather was discouraging to my enterprise, being densely foggy; but I set out, nevertheless.

At noon I found a heavenly turn in a road, with a high, crumbly wall made of brick; and, having sent the car away, I scaled the wall and began to sketch from the top of it a deserted farmhouse, surrounded by three trees.

A faint yellow thing like an orange was coming through the fog. Every instant it grew brighter, until it began to blaze gloriously and became the sun. Segments of mist, transfigured, floated about, filaments of unbelievable delicacy. Finally they melted and the whole world was crystal clear.

The colors were so much more beautiful than any I could mix that I sat, paintbrush in hand, on my perch, ears attuned to the stillness. Suddenly it was broken by a too familiar sound—the roar of a motor driven at top speed.

Closer and closer came the car, swerving perilously as it rounded the corner, its wheel in the nonchalant hold of a gray-coated young man.

Bang! A terrific report. A front tire had blown out. The machine gave a drunken lurch, jumped the road and landed in a ditch, just grazing the wall directly under me.

The young man, somewhat dazed by the jar, was amusingly unaware of my presence.

"Whew!" I said. "What a disturbance! No harm done, I guess. What are you doing in this unpopulated place, Mr. Denning?"

Speechless with surprise, he looked up. My appearance evidently did not lessen his amazement. Left to myself, I had assembled my costume to suit my own fancy. I had on a linen hat, purchased from a caddy, and a dress of lustrous dark-blue crêpe de Chine, trimmed with lace. It was open at the throat—and upon the part exposed the fierce rays of the sun had burnt an angry purple V. I had exaltation in my eye, and in my hand a paintbrush. Denning vaulted from his machine.

"Why, Miss West!" he cried, face upturned. "What are you doing on top of that wall? You—ow!"

"What's the matter?" I queried.

"You're dripping paint on me," he grumbled, rubbing his eye. "Green paint!" he amplified aggrievedly.

"I'm sorry!" I apologized absently. "I'm afraid I'll have to call a halt on this picture. I can't seem to get anywhere with it. Yet you'd think anyone could make a picture of a nice old farmhouse, surrounded by three trees."

"There's not enough action in it to keep your attention," he laughed. "Now why don't you paint me? Young man at the wheel, hair blowing, and all that sort of thing—eh, what?"

To his evident amusement he felt my downward glance at him freeze into a fixed stare. So might a wild cat stare out of a tree at the prey that it had stalked.

"I will," I said solemnly. "You shall pose for me. What luck that I've got another canvas stretched!"

I clapped my hands. I had to drop the brush, of course, to do it. He picked up my property, cleaned it with leaves, and gave it back politely by the handle.

"I've got to get back to luncheon at the Glendennings'," he demurred. "I must get to work and put on a tire. Besides, you can't paint really, can you?"

I tossed my head.

"I'll show you whether I can or not," I muttered. "You're too late now to lunch with the inner circle. You have no choice. There's some chocolate in my bag. We'll eat that later. As for the car, I'll help you get it out." I gave a pull at my skirt with my free hand, preparatory to jumping down.

"This is an afternoon dress," I explained. "I wore it to Mrs. Winslow's tea that day. But I thought, as mother was away,

Three miles of Concrete on the Lincoln Highway, in Elkhart, Indiana. Built by the Northern Construction Company, of Elkhart, Indiana, under the supervision of Albert Reith, County Supervisor.

Durable Roads Are Obtainable—the Motorist Should Act

Motor clubs and associations everywhere are joining the movement for good roads. The motorist knows better than anyone else how serious is the road problem of today. Next to the farmer, he is the most vitally concerned. It is motor car traffic which is tearing our highways to pieces, making them unfit for travel and piling up maintenance costs which no community can afford. *These are very likely to be recovered by the community in higher taxes.* The only remedy is the quick and systematic building of permanent highways.

> The three million motor car owners in this country are a power if they all pull together and urge, each in his own community, a sufficient mileage of permanent roads. They are property owners and tax payers, entitled to be heard.

The point is to be definite about it, to settle upon a system of permanent roads in county or state, and then raise enough money by a bond issue to build the most enduring type.

For the following reasons, this should be concrete:

1. Concrete makes a hard, even road surface, unaffected by weather.

2. It is easy to build in any locality; the materials are nearly always to be found in the immediate neighborhood.

3. The concrete surface is just right for motor car traction. It is even without being slippery. The gritty surface gives tires the grip needed.

4. Concrete is safe and comfortable to drive on. Every motorist knows how it feels to swing upon a clean, even stretch of it, after jolting over ruts, holes and mud.

5. Its universal use in great engineering works is evidence of its solidity and strength.

6. The upkeep is negligible.

7. It costs less to build than any other permanent road.

WHY BUILD ROADS NOT DESIGNED FOR MOTOR CAR TRAVEL JUST BECAUSE THEY COST LESS TO CONSTRUCT? This is a question for the motorist to answer by organized, definite action.

It takes a lifetime to build a system of permanent roads by laying scattered stretches with current road funds. You want your roads good while you are still alive to enjoy them.

> Road officials are glad to build permanent roads of concrete, if the tax payers want them. Bring the matter to their attention in your community, after acquainting yourself with the facts. Write for Bulletin No. 136.

CONCRETE FOR PERMANENCE

Tramp, tramp, tramp

Up and down stone stairways; tramp, tramp, tramp across cobbled streets and cement walks; tramp, tramp, tramp along brick and granolithic sidewalks.

Even *stone* wears away under the feet of marching millions—shoe-leather *cannot* stand it. Leather is not solid enough, not tough enough, not flexible enough.

Leather is an animal product—dependent upon the tanning process for its resistance to decay.

When you have worn through the outer, tanned layer, you expose the soft, spongy interior to the direct friction of brick and stone.

Rinex Soles

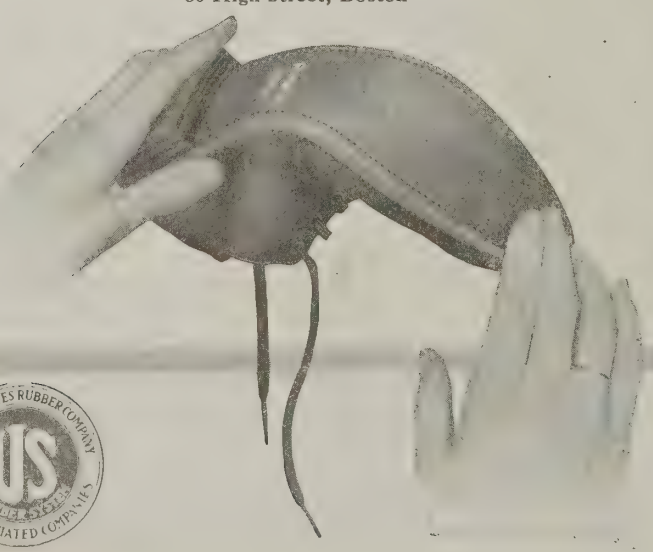
are not leather, not rubber; but a *new* composition, specially made for shoe-soles. They are *not* built in layers, but are uniformly tough all the way through. They wear down evenly and slowly. They are more flexible than leather, yet tougher.

Ask for Rinex Soles by name the next pair of shoes you buy. Look for the name on the soles. Have your old shoes resoled with Rinex, too. In black, white and tan, for everybody—everywhere.

United States Rubber Company

Sole and Heel Dept., 1790 Broadway, New York

60 High Street, Boston



UNITED STATES RUBBER COMPANY AND ASSOCIATED COMPANIES US

I might as well use it to paint in. Bloomers would be better," I ended, giving the skirt a kick.

"Oh, it would be delicious to wear bloomers! Here goes!"

I jumped.

Down in the ditch, knees braced, foreheads throbbing, our four arms shoved with all their ferocious strength. The ditch was not deep and at the sixth attempt the car consented to move.

"Whew!" I exclaimed when it was squarely on the road again, looking for a handkerchief, not finding it, and using a corner of my skirt to mop my face. "Now get in and let me have a look at you."

Head on one side, I made a careful scrutiny.

"Don't sit up so straight," I ordered. "Slump as though you had no backbone. There, that's better. You can't have backbone and ease both. How heavenly that your coat is gray! It brings out the wonderful blue of your eyes. Gray car too! Gray figure, gray machine—one a part of the other. Of course I can only give your general effect on this small canvas if I want to get the car in. But it's an effect that's worth giving."

I spoke dreamily with caressing inflections. From his quizzical expression I knew I had been saying foolish, extravagant things. When the painting impulse was on me I never could curb my speech. It was a very intoxication.

"Push your hair farther back from your forehead," I commanded. "I want to get all the strength of it; all the dignity."

"White," I continued my soliloquy, for that was what it was. So far as he personally was concerned, he might just as well not have been there at all. "With blue veinings," I went on. "What a pity I've got to leave those delicate veinings out and just catch an impression of you with a dab of paint."

"Am I slumped enough?" he asked, to divert me.

But I was not to be diverted.

"Never mind that just now," I admonished. "I'm not thinking of anything at this moment but your head. I want to get the outline—that broken line of your hair. It's radiant, with the sun on it, all tossed up into little gold-brown waves. Some curly hair's effeminate, but yours is too crisp for that; too decided. It's heavenly hair to paint."

Five hours later I was laying on the finishing strokes. The sun was low in the west, yet my model had not relinquished his pose. There had been intervals, of course, intervals of stalk chewing and chocolate munching; but these had been, on the whole, of brief duration.

"It's finished!" I cried suddenly. "Don't look yet."

"Now may I?" he asked after an interval.

"No," I prohibited sharply. "Yes—no—wait! Oh, I'm afraid to have you look!"

He looked, of course.

"By George!" he said quickly. "You can paint! Why didn't you tell me?"

"I don't tell anybody," I said. "I care—so awfully. You don't honestly think it's a good sketch?"

My bravado had deserted me and I hung on his scrutiny.

"It's corking!" he cried. "Just look at the action in it! Why, that's a regular fellow; and he's on the move too! You must get some painter to give you an opinion on this. How about asking that Randall chap?"

"Oh, no," I protested hastily. "Not Mr. Randall. I wouldn't have him see it for the world! I don't think I have talent. I only do it to express something that's bottled up inside. Aren't you going to put on your tire?"

"Yes," he said. "And then may I take you home?"

"I'd love that!" I cried gratefully. "Our second chauffeur is coming for me in the car; he's on his way now. We'll have to wait until he gets here; then we'll send him back. Meantime I'll help you with the tire; I've put them on lots of times. It's the least I can do after spoiling your whole afternoon."

"You haven't spoiled it," he answered in a significant tone.

While we were working over the tire, backs bent like the backs of friendly cats, he tried again to stir me to the personal note. But I was far too excited over my achievement.

When the car had arrived, and we were preceding it into the sunset, he said, eyes front:

"I mustn't forget to express my gratitude for the—um-m—extremely complimentary things you've been saying to me this afternoon."

"I haven't!" I contradicted in indignation, adding anxiously: "What things do you mean?"

"About my veined, strong forehead," he replied tersely; "my wonderful, blue eyes; my crisp ——"

My laughter stopped him.

"I always rattle on like that when I'm painting," I explained. "I've done it since I was a small child. It's idiotic, isn't it? But it doesn't mean anything at all. It's a sort of hypnotic state I get into. When I come to I don't even remember what I've said."

"The question is," he demanded, "who gets the sketch?"

"May I keep it?" I asked.

"If you want it," he said as we turned in at our gate.

"Will you come in?" I asked.

"Not to-day," he answered. "But if you'll let me I'll come to-morrow afternoon."

He came on Sunday, and on Monday he sent a token—rather, a token multiplied by twelve. The roses arrived in a striped box of tremendous proportions; but, even so, it had been necessary to cut away one end to allow the powerful, thorny stalks to protrude. Seen through glazed paper, the bright color was tempered to an exquisite delicacy of hue. Pillowed upon this loveliness lay a small white envelope, neatly addressed. No one had ever sent me flowers before.

I drew away the paper and peered into the box fearfully, as though gazing at an infant that slept. Then I read the card and arranged the roses in a vase. I had not thought I was interested in him. How we had frivoled—only yesterday! But now I was in another mood.

For long moments I remained hovering over the table where the bold beauties stood, drinking in their fragrance with nostrils, lips and eyes.

Suddenly I was in a mysterious garden, dew-besparkled, laden with myriad sweet odors, filled with vivid flowers on swaying stalks, the opalescent wings of insects and the seductive song of birds. In the midst of this garden I walked with one other. I panted with the bliss of it. I was swaying with the stalks.

Something hard pricked my palm. In a trice the garden had vanished. I lifted my hand and found that I had been crushing in it the envelope which held the card. There were some red marks on the flesh.

"I believe I'm falling in love!" I said with a weak little laugh. "How convenient! I'm falling in love with someone inside the walls!"

(TO BE CONTINUED)

The AMPICO Reproducing Piano

AS ENDURING
as the
MARBLE *of the* SCULPTOR

THE tragedy of the interpretive artist has always been the ephemeral nature of his art. Jenny Lind, Paganini, Ole Bull, Rubinstein, Liszt—as interpretive artists these are mere names to us now. Only the legend of their triumphs survives.

But for the pianist at least, a new era has dawned. The Ampico Reproducing Piano enables the premier pianists of this generation to play not merely for the audiences of their day but for the music lovers of all time. The master-roll which the artist makes for the Ampico is as enduring a record of his art as the marble of the sculptor.

These artists themselves have been the first to recognize the significance of this invention and are eager to record their best interpretations for the Ampico. Even more impressive is the willingness of premier artists such as Godowsky, Ornstein, Brockway and Volavy, to appear in the joint "comparison concerts" which are being staged in every important musical center in the country. At these demonstrations the Ampico encores the artist's interpretations, reproducing touch, tone color, phrasing—exactly as if the artist himself were seated at the piano.

The Ampico may be had in the world's oldest and best pianos: the Knabe (1837), Haines Bros. (1853), Marshall and Wendell (1836) and the renowned Chickering (1823). Let us send you our catalogue and tell you more about the Ampico.

Wagner Quality

Another Wagner Achievement!

The Wagner Company has added still another contribution to the development of applied electricity.

The Directed Draft Motor

The motor that cools and cleans itself

With but one means of entrance and one of escape, a strong draft of air is forced, by suction fans, through *directed* channels. This perfectly cools the motor, and, at the same time blows out the dust and dirt.

Not only is the cooling system far in advance of all others, but, because of it, the motor is able to take care of itself in dust or dirt laden air.

This Directed Draft Motor has been in successful use for several years, but announcement of it has been deferred until the improvement could be incorporated in all types of Wagner Motors.

Deliveries of these Directed Draft Motors are now being made as rapidly as the unusual demand will permit.

Wagner Electric Manufacturing Co., St. Louis, Missouri, U. S. A.

Factory Branches and Service Stations: Boston, Springfield, Mass., New York, Montreal, Philadelphia, Syracuse, Buffalo, Toronto, Pittsburgh, Cleveland, Toledo, Cincinnati, Detroit, Indianapolis, Chicago, Milwaukee, St. Louis, St. Paul, Minneapolis, Kansas City, Denver, Los Angeles, Seattle, San Francisco

CABBAGES AND OTHER LUXURIES

(Continued from Page 16)

He is trying to play the rôle of shock absorber and relieve the consumer's nerves of the jolt incident to the greatest combination of crop shortages ever known in this country or the world, and export demand unprecedented in the history of this country, and a home consumption of foodstuffs never before equaled.

"That is a man's job, and no mistake! It approaches dangerously near philanthropy instead of business. Holding the bag for a combination of this sort is what I would call heroic sport—only it isn't inspired by heroism, but by fear instead. There are cases—and this is one—where the most courageous thing a man can do is to pass the buck—and pass it quick. In these days you can spot a good retail merchant every time on one test: If he has passed the raise of price on to the consumer he's a merchant; if he is selling a lot of goods at retail for less than he can buy them at wholesale, then he is simply a storekeeper. You will find a dozen who are doing the latter to one who has had the grit to hand the irresistible advance right straight across the counter.

"Of course the theory upon which these storekeepers are proceeding is that, in some mysterious way, keeping back a piece of bad news for a little while is going to soften the jolt when it does come. These storekeepers seem to have hypnotized themselves into believing that the longer they keep their bad news from their customers, the more it is going to shrink; and that perhaps it will finally shrivel and disappear into thin air.

"Instead of shriveling, it is going to swell. In short, the storekeeper cannot shove off the evil day by any such childish and short-sighted tactics. The longer he delays handing the swollen price list on to his customers, the harder the jolt will be to them when it comes. And come it surely will; for there is a big list of food articles in popular demand that the retail grocer must buy at current market prices in order to carry over to the next crop, for which he must pay prices decidedly in advance of those at which he is now passing these articles into the hands of his customers—simply because he was fortunate enough to place quite a heavy order at the old low price before the scarcity of the supply developed.

"Of course some of these retailers think that by so doing they are making a masterly appeal to the gratitude and appreciation of the consumer. This would be all right if human nature were ideal instead of just what it is. The man who bases his bogy on the ideal instead of on a score that is practically obtainable under average conditions is bound to have a rough awakening. This is precisely what is coming to the retail grocers who are banking heavily on the gratitude of consumers for having spared them a normal price advance due to natural and irresistible causes, from which there is no escape."

Profits Sharply Cut

"The cold truth is that the personal gratitude isn't going to enter into the mind of the consumer—to any appreciable extent at least. The essence of the whole thing is that it is much easier on the consumer to receive a gradual advance than to get a jump of a hundred or two hundred per cent, for example, all at one shot.

"There are many food items in the luxury list, as well as among the necessities, that are immensely higher now than when these storekeepers placed their future orders; and that, by the same token, are going to keep right on jumping until a new crop comes in or the European war stops. The longer the retailer delays in passing the price increase on these goods to his customers, the more shattering will be the shock to them and to him when it comes.

"There is a day of reckoning ahead for every retailer who does not have the grit to maintain a normal and reasonable margin of profit and hand the price advance to his customers.

"As I see it, a very large share of the retail grocers are doing business to-day on a margin of net profit not far from one-half of what they get in a normal year. This sacrifice of legitimate profit on the order of commercial timidity is one of the greatest business blunders that could possibly be made. At the same time it is almost inadvertent. There are precious few retail grocers in this country whose profit margins have not been depressed at least to the extent of twenty per cent. Probably the average consumer will be inclined to take this statement with a grain of salt; but the fact is that it needs no discount whatever. No one understands better than the traveling salesman that the average retail grocer does not make a large profit, even under the most favorable circumstances. With few exceptions, his profits are not only smaller than his customers suppose but smaller than he himself believes them to be.

"The consumer who holds the idea that this is the richest harvest-time that his retail grocer has ever seen is entitled to another guess. Instead, it is a time of peculiar anxiety and strain for very many of them. This is a period so far out of ordinary human experience that we have few precedents which will serve as dependable guideposts. For this reason a whole lot of business mistakes are being made; and one of the most common and conspicuous is failure of the retail grocer to pass price advances on to the consumer promptly and courageously.

"If the present high prices were the result of manipulation, rather than of natural causes that must be as apparent to anyone who will look into them as darkness or daylight, then the determination of the retail grocers to serve as shock absorbers might have been of some use; but under the actual conditions that prevail to-day this effort of the retailer to hold the bag is a piece of pitiful folly."

Not Greedy, but Competitive

This may be rather strong meat for some retailers to swallow, for very few men enjoy being told that their business methods are decidedly poor; and, of course, it must be remembered that this expression is from the viewpoint of one whose interest is in the prosperity of the retail grocer rather than in the economies of the consumer. However, it must be admitted that the views of this traveling salesman are sustained and corroborated by both wholesalers and retailers; in fact, not one retail grocer with whom I have talked has made any denial of the fact that he is operating on a much narrower average margin of profit on turnover than ever before.

As a general rule, these retail grocers have been unable to speak with any great degree of certainty as to the percentage their profit margin has been cut; but the lowest guess has been fifteen per cent and the highest fifty. In one instance a successful retailer in a small country town started out with the statement that his margins were fifteen per cent under normal; then, as he took up one item after another and compared his present profit on them with that which they yielded in 1913–14, his estimate of profit shrinkage continued to increase until it finally stood at sixty per cent. He concluded with the statement that if all the members of his family were not working in the store he would come mighty near doing business for fun instead of profit.

A very able and observant grocery jobber in the East, whose trade is confined to a rather small territory—a circumstance calculated to give him an uncommonly intimate acquaintance with his customers—declares that about forty years of continuous experience in the trade has convinced him the average retail grocer "is not a greedy individual at all; but he is acutely competitive." This expert also expresses the opinion, under the protection of a promise that his name should not be disclosed, that the average retail grocer is considerably short of being a good business man, of understanding the fundamental principles of good business practice, and of having the courage and firmness to put into practice, in a sustained and systematic way, those principles which he does understand.

In the opinion of this seasoned observer the statement that a very large proportion of retail grocers are "competition crazy" is by no means putting the situation too harshly. As he sees it, the average retail grocer's idea of merchandising is price cutting; and that the ability to take a fall out of a competitor and prevent him from realizing a profit is almost, if not entirely, as sweet and satisfying to him as making a profit himself.

This jobber places emphasis on the fact that this "competitive attitude" of the retailer with regard to competition goes a long way in accounting for his failure, in the

BRUNSWICK
HOME BILLIARD TABLES

"Baby Grand" Brunswick—favorite home table with complete Playing Outfit *free* and patented Interchangeable Cushions for all 33 Carom and Pocket Billiard games.

The Family Playground
Is the Billiard Table
And a Few Cents a Day Will Buy It

CAROM and Pocket Billiards are today the reigning sport in American homes. Parents now praise billiards for its magic charm in making *home* the favorite haunt of boys and girls. One father writes us, "We've a full house all the time!"

Install a Brunswick—there's a size to fit your home. Some styles can be folded away in any spare space between games.

When the day's work is over and the mind craves relaxation, renew the vigor of youth at Carom or Pocket Billiards. In these rollicking contests of wit and skill, meet with your guests and young folks, *man to man!*

Low Prices—Balls, Etc., FREE

Get a Brunswick at once—then pay while you play. This is a plan that any home can afford. There are no heavy after-costs. Complete high class Playing Equipment is included *FREE*—Balls, Cues, Markers, Rack, Cue-Clamps, Tips, Chalk, expert book of 33 games.

Beautiful Woods—Scientific Accuracy

Fast Monarch rubber cushions, scientific accuracy, life, speed and action make Brunswick tables the choice of experts.

Beautiful oak and mahogany woods and masterful cabinet work make them an adornment worthy of the finest home.

Accept This Trial Offer

First see these tables in our handsome color-book and catalog, "Billiards—The Home Magnet." It tells how we let you try any Brunswick for 30 days in your home.

present situation, to maintain consistently a reasonable margin of profit and pass the advance in prices promptly across the counter to his customers.

"It works out in this way," explains the wholesaler: "We sold Maine corn to our customers for one dollar and twelve and a half cents a dozen. The corn packers with whom we contracted delivered about forty-five per cent to us; but, as we sold very conservatively, we were able to deliver one hundred per cent to those who had bought from us. Meantime the wholesale price had risen to one dollar and sixty and a half cents a dozen.

"A personal business matter took me into a little town near New York where I had an old customer who had bought from us for years. Of course I stopped to glance at this man's show window, and I was not greatly surprised to see that he was making a drive on Maine corn at fifteen cents a can. Now when you can find a retailer who can do business for less than sixteen per cent you have found an uncommonly intelligent, careful and businesslike merchant; and this observation applies to normal times, not to periods like the present, when almost every item of expense, with the possible exception of interest, is greatly expanded.

"This storekeeper had been able to secure from me only a very limited quantity of this corn, and I have good reason to believe he bought his whole supply from us. When I saw that he was parting with it at a price of about fifteen cents a can I stepped inside and asked him, in a casual sort of way, whether he didn't think he was heading for trouble a little later on, so far as canned corn was concerned. His reply was that he thought his competitor across the street, who hadn't a can of corn bought at the old price left on his shelves, was the one who was having the trouble.

"'I am going to show him,' was his comment, 'that he's got real competition.' This merchant actually thought he was doing a very bright and businesslike thing. His own stock of corn will last him only a little while, and then he will have to pay somewhere from a dollar and sixty cents to two dollars a dozen; for the price is moving up right straight along while we sleep. No retail grocer can get along without a little canned corn and keep his trade satisfied. That means that this storekeeper will have to buy at the current market price, which will be something above thirteen cents, and probably a good way above. To the market price he must add freight, cartage and all his store expenses.

"What is he going to do when conditions force him to go out and get more canned corn? The chances are that he will sell the stuff at a direct loss. Possibly, however, he will pass it along even-handed, without a profit. Certainly he is going to be up against a stiff proposition if he attempts to make his customers take the stuff at a price that will give him a profit over the new cost."

Buying by Habit

"This is a very moderate example of what is happening in thousands of retail grocery stores throughout the country. I know that great quantities of tomatoes have been delivered to families at ten and eleven cents a can when the wholesale price for that quality was a dollar and forty cents a dozen. This isn't good merchandising; it is decidedly bad business—but it is being done in connection with a wide range of articles in almost every community, on the mistaken notion that somehow it is good competitive tactics.

"This consideration and the timidity that the average retailer naturally feels toward his trade—especially at a time when everybody is complaining about high food prices—are to my notion the main reasons why the storekeeper has attempted to absorb the increase in price on many of the items he handles, instead of handing it along to the consumer. Of course there are still many articles in his stock on which he makes a normal profit. Most of these, however, are luxuries.

"To my notion, it would be a poor piece of business for the consumer if the retail grocer was not permitted to make something approaching a living profit. No community can afford to have any class of its business done for nothing. Only straight-out philanthropy should be conducted on that basis."

But to return to the problem of luxuries: A traveling salesman who represented one of the biggest wholesale grocers in America for more than fifteen years makes this shrewd observation:

"We are all creatures of habit when it comes to buying for our tables. Because we have been accustomed to think that certain articles of food are absolute necessities, and must make the main part of our diet, when we strike a time like the present, with those familiar fundamentals at unbelievable prices, the situation looks decidedly dark; and we are inclined to feel that there is no way of escape open by which the family food budget may be kept anywhere within reason. In this predicament it doesn't occur to the average family provider to scan the list of luxuries, or semi-luxuries, to see whether good substitutes may not be found for the necessities that have reached almost prohibitive prices.

"You have already, in a previous article, alluded to rice as a cheap and satisfactory substitute for potatoes. You made no mistake there. Rolled oats, which can be bought in bulk from almost any retail grocer in the country, are entitled to rank right along with rice. There has been very little increase in the price of this article since the beginning of the European war, and the retail price is now about five cents a pound here in the Middle West. The food value of this article is high."

Cheap, Delicious Fruits

"Another item in the luxury list that is being altogether too generally overlooked by the consumer who is trying to cut down the cost of his food without inflicting a hardship on his family is dried fruit. Take dried peaches, for example. California had a splendid peach crop, and fancy peeled dried peaches that will make your mouth water on sight are now selling for eighteen cents at retail. I have never known them to sell for less than twenty cents. Apricots, equally delicious, are now selling at eighteen and a half cents a pound, which is perhaps just a shade under the average for the last five years.

"Now consider the prune. The crop now being consumed is exceptionally large and fine, and there is hardly an item of food in the whole list that is more wholesome or delicious than prunes. In the days when the prune made its boarding-house reputation it was not the scrupulously prepared delicacy that it is to-day. Then it was long on grit and short on friends. But the prune packers have learned a lot of things since then, and one of them is that proper handling has lifted their product into the class of real table luxuries.

"The consequence is that prunes now come to us in fine shape and make one of the richest and most delicious dishes a careful hostess can set before a guest. When you can go into a retail store and buy really fancy prunes at a cost of anywhere from ten to twenty cents a pound, depending upon their size, and do not do so, you are neglecting one of the best and most reasonable articles of food obtainable, and one that is as cheap now as before the war—or at least practically as cheap. Their present price is just about an average price.

"Commercially speaking, the dried apple is not a favorite; but the fact remains that one might do worse than buy an occasional pound or two of evaporated apples, prepared in the strictly sanitary modern way. But I wish to place the emphasis of my argument on the whole family of dried fruits—prunes, peaches, apricots, apples and raisins. Compared with most other food items that we are accustomed to consider table necessities, they are high in food value and low in price.

"When Nature gave us an abundant crop of prunes, peaches and apricots in 1916, she certainly did the consumer a friendly turn. These semi-luxuries are entirely capable of doing splendid substitute service for meat and vegetables that have moved up to the head of the class, so far as prices are concerned.

"It is also interesting to note that these dried fruits do altogether better teamwork with rice as the main vegetable than with potatoes.

"There is still another family of substitutes for the old-line necessities that have now been promoted to the luxury class through shortage of supply, unprecedented export demands and increased home consumption, by reason of the wageworkers' expanded pay envelope. I refer to fruit butters and jams. If the real food merits of this little group of luxuries were fully appreciated by the general public the sale of these goods would be immensely increased. They are rich, delicious and wholesome; and, because of abundant crops of the fruits from which they are made, their prices are on the old level."

Not the least in the list of valuable foods that have suddenly leaped to positions of social and financial eminence must be mentioned cheese—plain cheese, of the old-fashioned Cheddar type, which once languished in its wire-screened prison upon the counter of the retailer, waiting for laborers and school children to take it at about ten cents a pound. To-day the rating of this product of the cheese press is from thirty to thirty-eight cents a pound, according to the locality and the store in which it is bought. Evidently somebody has made a most effective raid upon Uncle Sam's cheese cupboard to send its price up more than three hundred per cent!

There is no difficulty in locating the marauder. One of the keenest observers of the American cheese market made this remark to me in the closing days of 1916:

"Since May first our cheese exports to Europe have been at least one hundred and fifty thousand boxes, of an average weight of fifty pounds. That means seven million five hundred thousand pounds. In the last two years we have sent to the fighting nations across the water more than half a million of these boxes. The fact is, the boys in the trenches want cheese, and lots of it. They like it, and it is a very rich and nourishing food.

"In addition to this it is a very convenient food to serve in the trenches. If the war continues the prices of American cheese are bound to go still higher, for the simple reason that we are burning our cheese candle at both ends. Our receipts this year are lighter than last, and the amount in warehouses is also a great deal less than at this time last year.

"For many years past the demand for milk in the big centers of population has been exerting a steady and increasing pressure against cheese production—pushing it back from zone to zone, until its manufacture is now mainly confined to territories too remote from large cities to be profitably tapped for whole milk, and to certain localities peculiarly adapted to the production of the finest grades of American cheese. Of course milk for family consumption always has first call from available territory and commands the top price."

Good Cheese Everywhere

"The tremendous increase in the consumption of ice cream has made an amazing levy upon the milk supply. It is said that the American public consumes more milk in ice cream than in butter and cheese together. I cannot vouch for the accuracy of this statement, but it seems very plausible. Again, the export demand for condensed, evaporated and powdered milk for army use is immense and practically insatiable.

"What is the result of all this? Some milk canners out in the Middle West are paying two dollars and sixty-five cents a hundred pounds for milk, and cannot get the quantity they desire, even at that price. I know of a farmer near Fort Atkinson, Wisconsin, who receives two dollars and ten cents a hundred pounds for milk the year round; and he does not have to haul it either.

"There is still another important element to be considered. This is the increased domestic consumption of cheese. To-day it is impossible to sell the miserable stuff that was once put out under the name of cheese.

"The cheese factories, the dealers, the wholesale grocers and the retail grocers were compelled to realize this, and the result was an immense and almost universal improvement in the quality of the product.

"Every agricultural college in the dairying states has for years been turning out scientifically trained cheese makers. Consequently it is unheard-of to go into an average grocery store to-day and buy a piece of American cheese that is not delicious and wholesome to anyone who likes cheese at all. This has greatly stimulated the consumption of American cheese.

"Then, too, the big increase in the wageworker's budget since the war began has made it possible for him to indulge his taste for good things to eat to a degree not before possible.

"In view of all these elements, the wonder is that American cheese is not now much higher in price."

Among the luxuries that now look down from lofty altitudes upon the consumer's dollar are imported cheeses of every sort

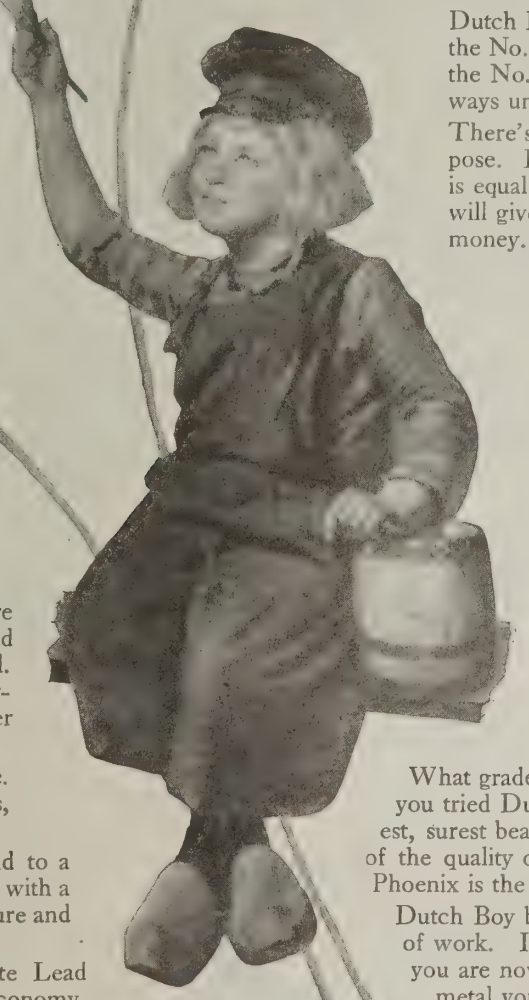
Dutch Boy Products



What Has Lead To Do With Paint?

Nearly all paints contain some white lead. The more white lead, the better the paint. Pure white lead (thinned with pure linseed oil) is the best paint of all. It will not scale nor crack. It affords true weather-proof protection for your house, barn, fence or other property.

White lead is corroded metallic lead—nothing else. Any adulteration, any mixing in of other pigments, lessens its painting value.

Dutch Boy White Lead is pure white lead ground to a convenient paste form in pure linseed oil. Thinned with a further quantity of linseed oil, it becomes paint, pure and simple, and can be colored to any shade or tint.

Skilled painters will tell you a Dutch Boy White Lead job looks best and lasts longest. That's paint economy.

For Handsome Inside Decoration

On the inside walls of your home or office, use Dutch Boy White Lead thinned with a good flatting oil. It will give a soft, rich, velvety effect without any painty gloss, and will insure durability and *washability* that can be obtained in no other way.

Dutch Boy Linseed Oil

Only the purest linseed oil will give proper painting results. So, for your protection, we market linseed oil under the Dutch Boy trade mark, thus making it possible for you to get linseed oil that you know is pure.

Paint Protection for Metal

For protection against rust, paint with Dutch Boy Red Lead—pure red lead ground to paste form in linseed oil. It is as unequalled for metal painting as Dutch Boy White Lead is for other painting.

Get Paint Facts No. 142

before you have any more painting done. With this data you will have information for doing or directing your painting knowingly—whether painting woodwork or iron, inside or out-of-doors. It is a code of tactics in your fight against destructive time and weather. It is helping armies of property holders. Let it help you, too.

Are You Always Sure of Your Solder?

Dutch Boy solders never vary. From the No. 111 (the finest you can buy) to the No. 888, wiping grade, they are always uniform.

There's a Dutch Boy solder for every purpose. Let us tell you which particular variety is equal to the solder you now use or which will give you equal or better satisfaction for less money. Buy that solder by number. It never varies a hair's breadth in its composition. Good results with it now insure good results always.

We believe a trial of Dutch Boy solder will also show you a distinct money-saving.

When Is Babbitt Metal Not Babbitt?

True Babbitt metal is an alloy of tin and other metals, invented by Isaac Babbitt many years ago—just that one formula, nothing else. But the factory world has come to refer to all bearing metals as "babbitts"—especially the high-grade ones—although technically incorrect. There are some bearing metals which are higher grade even than the original "babbitt."

What grade of bearing metal ("babbitt") do you use? Have you tried Dutch Boy Phoenix metal? It is the strongest, toughest, surest bearing metal that can be made. If you want to be sure of the quality of your bearings for rapid, heavy work, Dutch Boy Phoenix is the metal to use.

Dutch Boy bearing metals are made in all grades—for all kinds of work. It is probable that you can buy, for less money than you are now paying, a Dutch Boy bearing metal equal to the metal you are using; or probably you can buy a better metal for the same price—if you look for the Dutch Boy on the ingot.

Whether you buy babbitt, solder or paint materials, the Dutch Boy is an absolute assurance of uniformity, reliability and maximum value per dollar.

Particular Men Prefer Everwear

The hosiery having *all* desirable qualities demanded by men and women of discriminating taste is EVERWEAR. A certain distinction and individuality is typical of Everwear because of its beauty of appearance, style and smooth conformation to foot and ankle.

Unusual durability is assured in Everwear Hosiery by reason of our painstaking selection of materials, and the Everwear process of knitting.

No other hosiery, at any price, can offer more in satisfaction, comfort and appearance. A trial invariably leads to the regular purchase of this universally preferred hosiery.

FOR MEN, WOMEN AND CHILDREN

Made in medium and light weights; in black, white and all popular shades; in pure thread silk, lisle and cotton.

Buy It By The Box

The better stores will be glad to serve you. If your haberdasher or department store does not sell Everwear, write us and we will see that you are supplied.

and kind. Roquefort—that aristocrat of the whole cheese race, with a family line that runs back to Bible times—is now from seventy-five to ninety cents a pound, at retail, for the real imported article. This racy luxury was available for the American table at about forty-five cents before the era of war prices. This is not because the caves of Roquefort have been made to shelter soldiers instead of cheese—they are still undisturbed and the flocks of sheep are milked in peace on the slopes of the famous French mountain—but because of the high cost of steamer space, the consistent effort of the French Government to discourage luxuries, and the acute European demand for everything in the form of food.

The same causes account for the extreme price of every kind of imported cheese. If the American insists upon having these delicacies he must pay a price for them in these warring days that will yield a heavy toll to the country from which they are imported.

The fighting nation that spares a cheesemaker or a shepherd from the trenches or the munitions shop must make the sacrifice bring in a generous toll.

This is the principle that governs the production of every luxury we import from any country engaged in the great conflict; and it applies in a measure to all other European countries and the luxuries they send us when the fighters are knocking so insistently upon their shop doors.

We are taking Roquefort at eighty-five cents; Stilton, from the English dairies, at one dollar; Italian Gorgonzola at eighty cents; and Swiss at eighty-five cents.

"A year ago," said the manager of a large and fashionable retail grocery in Chicago, "I became convinced that imported luxuries were going up fast; so I went to the New York importers and bought liberally. In the purchase were many things demanded only by the fancy trade, like truffles, pâté de foie gras, cockscombs, and the finest sardines. I was very fortunate in getting hold of a lot of this line of goods that had just been unloaded from an incoming steamer.

"These articles came right along through to Chicago in good time; but when they arrived the market price on them had advanced almost twenty-five per cent. I know, because I checked up the advance carefully. Some of the items in that shipment are now almost unobtainable. Take the imported peeled and boneless sardines, for example. War conditions did not permit them to be packed in 1916, and as soon as the small stocks are exhausted they will be extinct, so far as the American table is concerned."

No Time to Hunt Truffles

"You can hardly place too much stress on the fact that the warring countries have determined, from stern economic necessity, to drive out the production of luxuries. They have too much imperative work to be done there now, and too many unproductive mouths to feed, to expend productive energy on anything save necessities. Consequently they tax the luxury coming and going, over there. They assess the making, the exporting and the buying of luxuries to an extent that would make anybody but an American throw up his hands and quit.

"If the present pace keeps up there will be quite a distinguished little list of extra-fancy imported luxuries that will be missing from our midst; and the tables of the rich will mourn their absence."

The tasty truffle is likely to be conspicuous by its absence, for example. This strange growth, which does not disclose its presence by branch or leaf, is located underground by trained hogs and dogs. Truffle hunting and canning take time and work; and the French peasant of the district that yields this odd delicacy is too busy burrowing in trenches at the Front to chase this aromatic trifle for American epicures.

The peeled and boned sardine has already sung its swan song, and it seems highly probable that the fluted cockscomb from France is about to crow its last on the American table—at least until the bloody business of war is over and France can again resume her normal occupation of tickling the palates of the world's gourmets. These epicurean specialties will, no doubt, have plenty of company on the list of the missing.

Among the costly table luxuries already passed into memory must be mentioned the corncob decorated with pearl-like kernels and bottled in Germany in its infancy, and relished by Americans whose tastes are apparently inspired by import labels. Many fancy imported pickles, which have always been distinguished in price if not in flavor, will join the select circle of foodstuffs that will not play the American circuit in 1917.

Every now and then the firm hand of military necessity shuts off the supply of some titbit and makes us remember that even an unlimited purse cannot always get us what we demand. A good example of this is the olive-oil situation. Italy and France have, so the wholesale grocers say, levied upon one-half of the olive oil made in those countries. Rumor says it has been discovered that the heavier grades of this oil make ideal lubricant for flying machines and for arms.

However, all we know or need to know is that military necessity has levied upon one-half of the available oil in those countries, thus making the salad-eating American look with increased respect upon his bottle of imported olive oil and regard it as a genuine luxury. The cost of glass has greatly increased everywhere; and labor is, of course, unprecedentedly scarce in the olive-pressing countries.

The Rifts in the Clouds

In addition to the levy, the Italian and French Governments have placed a high export duty on olive oil. All these influences make it fairly certain that olive oil from across the water will be higher than at present. An expert in this line declares that prices for this popular delicacy will probably soar to rather sensational heights—at least so far as the finest French and Italian oils are concerned.

Green olives, which come largely from Spain, are a little more luxurious than usual; but not much more so. They must, of course, carry the extreme cost of ocean travel under submarine conditions, otherwise their price would probably be normal. California contributes our supply of ripe olives, and the advance in this luxury, which is rapidly growing in popularity, is about enough to cover the increase in the cost of glass, labels and labor.

Of course all kinds of spices have advanced, at least enough to keep in fashion. But if the advance were a hundred per cent it would hardly be felt by the average American family, for the reason that the quantity consumed is so small.

There are several distinct rifts in the clouds, which should not pass unnoted by the troubled eye of the perplexed family provider. One of the most important items on the family budget has been untouched by the great groundswell of prices. Though it is a luxury in the sense that it can be cut from the family menu without subtracting anything from the net of household nourishment, at the same time it is so prized in millions of homes that it is regarded as being quite as much a necessary as meat or potatoes—of course I refer to coffee, which is possibly even a trifle cheaper than normal.

Berlin, the great central coffee market of the world, is closed to commerce, and the great coffee-growing country of the world is, in consequence of this condition, shipping its coffee to the United States. Coffee is one of those apparently perverse and contrary articles of commerce, so far as this country is concerned, which is cheap now when nearly everything else is dear, but which may bound to the top of the list as soon as peace is declared. What a call for coffee will come from Berlin and the whole coffee-loving German nation the instant war ends!

Tea is another cherished luxury that is little if any higher than in ordinary years. To a large extent tea is now sold in small packages, suitable for family consumption. This is better than bulk handling for both the merchant and the consumer, as it saves much waste and helps the tea to retain its strength and aroma for the cup.

There is some consolation in the reflection that, when it comes to real foods necessary to the nourishment of man, the United States could get along very nicely without any contribution from Europe.

Because Uncle Sam has so many greedy customers from out-of-town his prices are admittedly a little high, at the moment, to his own folks. But if they would learn to throw over a few artificial and highly cultivated tastes for fancy European knickknacks which are poor eating when compared with things that are plentiful at home, they would go a long way toward beating that persistent bugaboo—the H. C. of L.

for Automobile Starting-Lighting Systems

Submarines of five great nations are propelled under water by Gould Storage Batteries. The safety of their crews depends absolutely on the unfailing performance of the batteries.

You can equip your car with a Gould Starting-Lighting Battery of the same rugged quality. It puts a power back of your starting system that you can rely on. With ordinary care, a Gould Battery gives lasting, loyal service, and to insure that care, over 1000 Gould Service Stations are ready and equipped to render competent battery service.

In choosing a battery, disregard "talking-points" based on minor details of construction. The important factor is in the quality of the plates. For nearly ten years Gould Super-Hard Plates have been unapproached for sustained capacity and stubborn resistance to wear. The result is a battery of **in-built quality** that gives maximum service on the car while requiring the least care.

Gould Super-Hard Plates are also used in batteries for

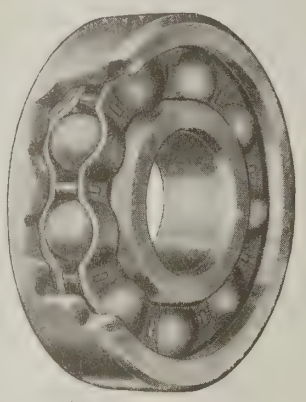
New Departure Ball Bearings



New Departure Single Row
Made in dimensions internationally standardized. Interchangeable with bearings of the same type of whatever manufacture.

In the motorwheel hubs, transmission, differential, in the electrical equipment,—wherever friction must be conquered,—there is a guaranteed New Departure Ball Bearing of design and strength to meet the need.

Friction, with its resulting noise, wear and rapid depreciation of rotating parts, is no longer present in the modern motor car.

That New Departure Ball Bearings have played a prominent part in the accomplishment of this result is a fact beyond dispute.

Their use in a large majority of the American Made Models of today has inevitably become a matter of national pride and congratulation.

SPY STORIES

(Concluded from Page 25)

Carlsbad, and once, during the festival, at Nice. You do not have the excuse of a Frenchwoman for what you have undertaken to do, and you ought to receive no consideration from us. But I am not a Prussian."

He moved a little nearer to her in the thin fog:

"I shall trust you to say nothing of this night's adventure and to go at once to America."

Then he turned abruptly and marched away in the fog with his men.

For a long time in the darkness she could hear the shoes of the soldiers striking the metal of the road in the military goose step. An hour later her brother took her up and carried her back into the French lines. But she persistently refused to tell him anything, returned to Paris, and took the next transatlantic liner to New York.

One wishes to believe every detail of this story; to believe that the iron wings of the war furies have not beaten into pieces everything fine and noble.

When the German invasion began to flow toward Paris, France summoned everything to her defense. Even the Foreign Legion was brought up from Africa.

A great deal of imaginary romance has been written about this legion. At any rate, it is the only division of the French Army into which unknown adventurers may enter. It does unquestionably contain a number of extraordinary persons: broken men, drifted in from the four corners of the earth. They are of all nationalities.

It happened, at a certain period of the war, that a portion of this legion occupied an advance trench in an active sector. At this point the advance trenches of the two armies were only a short distance apart. It was at one of the periods when the French Army was taking the initiative. The officers observed that, though they were able to surprise the enemy in their raids along other parts of the line, at this point every advance seemed to be adequately anticipated.

They were convinced that some signal was given from their advance trenches.

They set about a searching surveillance. Finally they discovered that one of the private soldiers of the Foreign Legion, when he was alone on guard at a certain point along the trench, would put his hand up, with the palm toward the German lines.

They watched and finally seized him in the act.

Whereupon they discovered that he was signaling to the enemy by the simple device of making a letter, with the charcoal of a burnt stick, on the palm of his hand. He would extend his hand above the trench so that the letter could be read with a field glass from the German lines. See Figure V.

It was easy to spell out a message by this simple method.

The Meaning of Marie's Letter

The French authorities interested themselves to investigate this device. They presently discovered that it had been known a long time in the French Army. Marie Henri Beyle knew it in the time of Napoleon, and made use of it in the Chartreuse of Parma.

The soldier using it to signal the German lines was not a person of any conspicuous intelligence. The authorities were never able to determine whether he had hit upon the device by accident or had heard of it somewhere. It may be presumed that not a great deal of time was taken to inquire of him about it.

The censorship system of Europe too often proves a cumbersome device. It catches only the harmless indiscretions of the people. It fails utterly to prevent the secret communications of foreign agents.

Secret ciphers have developed. The ancient methods have been wholly abandoned. No foreign spy endeavoring to send information out of a belligerent country would think of using any of the old-fashioned codes.

The first requisite of the modern secret cipher is that it shall have no appearance of being a cipher.

On its face it must be a harmless communication. It must resemble the thousands of letters, telegrams, and the like, that are constantly passing out of the country in the course of human affairs. If there is anything in the secret communication to distinguish it from the common run of communications of the same character, it is an unsuccessful cipher and cannot be used.

A recent cipher message that the German spies in Paris sent out of France into Switzerland is a good illustration. It was a letter from a little modiste to her sister, a governess in the family of a notary in Lausanne:

Dear Lizette: Our brothers, fighting for France, are well. I have prayed the good God a million times to keep them safe; all men are in His hand. There is heavy snow now, but the winter is advancing toward spring—how we long for it! Uncle Jules, at Soissons, is dead.

I embrace you. MARIE.

Here is a letter precisely like a thousand letters written every day in France. There is nothing to distinguish it in the flood of similar personal communications everywhere going through the post office. There is nothing in it for the censor to blot out, and no reason why he should give it a moment's consideration.

Nevertheless, it carried a message of appalling import into Switzerland, to the German authorities.

The message is read by means of a stencil. This stencil is a metal plate having openings cut at certain places. When the metal plate is put down over the letter certain words only of the letter are to be seen, the other portions being covered by the plate. Figure VI shows the letter as sent. Figure VII shows the same letter covered by the stencil. Whereupon the following message appears:

A million men are advancing toward Soissons.

Safe and Easy Ciphers

The spies using this cipher have each a duplicate stencil. They agree that the letter shall be written on a sheet of paper of a determined size. It is not even necessary to have a metal stencil. It may be made of paper, or anything. It is more likely that the German spies in Paris have no actual stencil at all. It is much safer to merely memorize the dimensions of the stencil, so that one may cut it out of a piece of paper when one happens to need it.

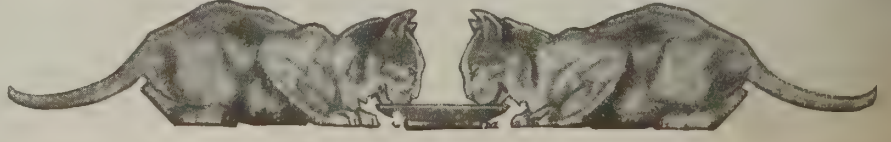
The authorities are on the lookout for metal stencils. It is certain that only the memorized dimensions are relied upon by the German agents.

The authorities used to believe that they could discover a stencil cipher because the important words would be crowded or the composition of the letter would have a strained and arbitrary construction. But such clews are wholly useless for the purpose of detecting a modern stencil cipher. Almost anybody could write the cipher message into a commonplace letter without disturbing the ease or naturalness of the composition. And after the letter has once been written to fit the stencil it is a simple matter to rewrite it so there is no difference in the appearance of the words.

It is certain that the ingenuity of the secret agents in the present war exceeds anything that has ever been hitherto imagined.

Every device used in the great struggle has been developed and amazingly perfected. We cannot, of course, verify any spy story that comes to us. No Secret Service gives out any authentic case. We must take what drifts over, for the values of ingenuity and adventure it intrinsically contains, as we take a structure in creative fiction.

But we may depend upon it that if this flotsam seems wonderful the recorded cases must be amazing beyond belief.



UNION PACIFIC

ONCE there was no Union Pacific. Beyond the Mississippi was a trackless waste—known only to buffaloes and Indians.

Then came the shifting overland trail.

Pioneers followed it toward the sunset, a long and tedious journey by prairie schooner—often dangerous.

Cumbersome freighters took a snail's pace. The Government spent $1,000,000 a year to transport supplies to a few Coast military posts.

Then brave men, encouraged by Lincoln, built the Union Pacific.

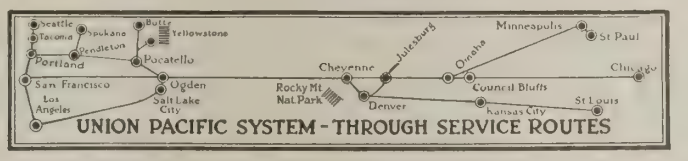
The "giant's task," as General Sherman called it, was completed in 1869. To commemorate this great deed a golden spike was driven. It has since become a symbol of civilization and prosperity.

The Union Pacific is truly a national institution—a worthy monument to early Americans.

Today, over a boulevard of steel, speed splendid passenger trains. And an almost endless procession of freight trains.

Safety, Speed and Service have taken the place of savages, slowness and stages.

Now, over this scenic highway, it is a fast, pleasant journey from Chicago to the Coast. And a joyous, unforgetable adventure into the *once* "Wild West."



For information write to Gerrit Fort, Passenger Traffic Manager, Union Pacific System, Chicago

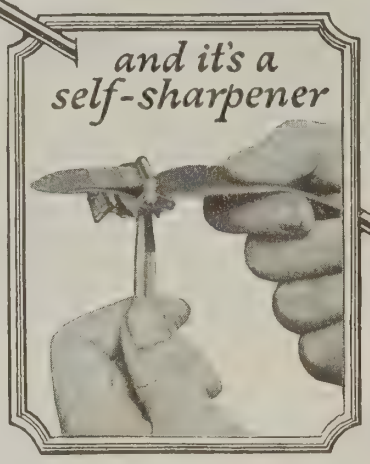
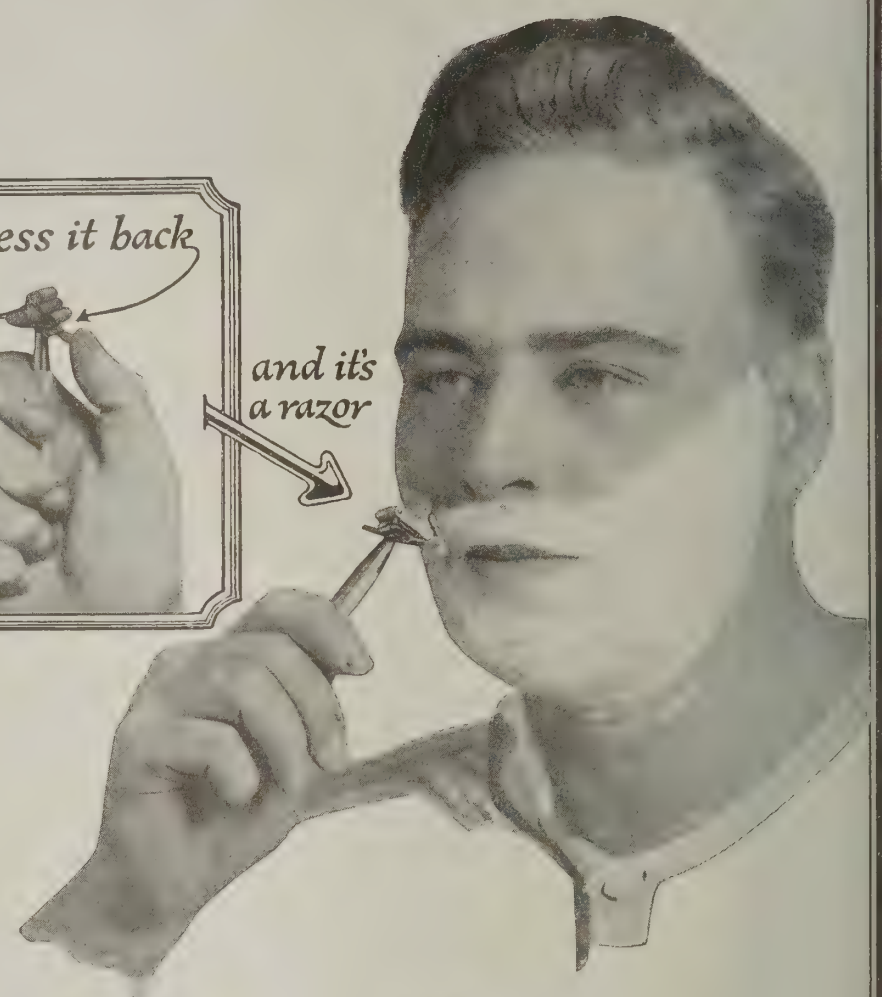
This is all you have to do





There is no Razor like the AutoStrop Razor and no offer like this offer to you

AutoStrop Safety Razor

The Razor

The AutoStrop Razor has advantages which will be instantly appreciated by every razor user.

Instead of a blade that grows duller with every shave, the AutoStrop Razor blade grows sharper. Instead of continuous blade buying, the AutoStrop Razor effects a wonderful blade saving.

Instead of the trouble of taking apart after using, the AutoStrop Razor is cleaned and dried without removing a single part—not even the blade.

Yet it is as safe, as simple and as durable as any razor made.

The Offer

Any man would gladly buy a safety razor with these practical, desirable advantages. Are they real? Do they exist in the AutoStrop Razor? We know they do, but we prefer to let you prove them to your own satisfaction. Go to any razor dealer and *borrow* an AutoStrop Razor. He will require no payment whatever. Take the razor home and use it for thirty days. If you like the razor keep it and pay the dealer its price, $5.00. Otherwise return it.

If your dealer cannot accommodate you, write direct to us.

AutoStrop Safety Razor Co., 345 Fifth Avenue, New York

This offer is also good in Canada. 83 Duke Street, *Toronto*

THE GUNMAN

(Continued from Page 14)

father's house to the limousine. The driver followed, started the engine and took his place at the wheel. A careful scrutiny of the street showed nothing that would interfere with their plans. The signal was given, the door opened again; then Sicilian Sam leisurely walked down the steps and entered the car. Thirty seconds later and the lawless three had turned the nearest corner. Paul was in a fair way to be married.

Or was he?

IV

AS HAS been stated, Sam had quickly seen that Paul was a spineless opportunist who could be led by the nose. He had given him all the uglier and more dangerous part of the program. He had offered to sell him out to Monaca. He had all but openly sneered at him.

He had gone much farther than that: he had definitely arranged for an abduction of his own. His idea was that if he had possession of the girl he could play off Monaca against Paul for a substantial ransom. Paul need never suspect his hand in the matter; he himself would not appear. To Monaca he would enact the rôle of rescuer. If Monaca offered more money than Paul back Vita would go to her father; if Paul offered more, back she would go to him. Perhaps he could even collect from both, through the use of carefully chosen agents. In that case Monaca would get her. He was a Sicilian and the more to be feared. The first thing to be done, however, was to collect the remainder of his original fee.

Paul led the way into the bedroom, where he propped Vita, still wrapped in blankets, against the pillows on the bed. She watched him with eyes which showed anger rather than distress. Or so he felt. Sam remained near the door.

"There she is," said Sam. "How about my money?"

"Small thanks to you!"

"Didn't I do all I agreed to do?"

"You stood round and looked on, if that's what you mean. However ——"

Paul had already made the money into a roll. This he now drew without further protest from his pocket, counting it over bill by bill upon the bed.

"I paid you two hundred last night. This hundred and fifty makes up the money coming to you. You didn't earn it, but that was my fault."

"Sure it was your fault."

Sam gathered up the bills and thrust them into his pocket. Had Paul learned his lesson even now he might have noticed that his late assistant's eyes were restlessly roaming over the geography of the rooms even while accepting his fee. He might have noticed also that he seemed in haste to leave, and that he slipped back the catch upon the outside door as he passed through.

Paul now turned to Vita.

"Let me make you more comfortable."

He loosened the handkerchief from over her mouth.

"This is your new home. As soon as you become reasonable we will go to a judge and be married. Until then I shall stand guard over you."

"Unloosen my hands," said Vita.

"Not yet."

"And my ankles. The bindings hurt me."

"If you'll promise not to take advantage of me I'll remove all the bindings."

"Are you afraid?"

He was more afraid than she dreamed, but not of what she thought.

"I'll untie them, and then if you're not good I'll put them back on again. Perhaps even worse. Nansen says that when the Eskimos capture their wives they sometimes keep them at home by scratching the soles of their feet until they are so sore they can't walk on them."

He removed the bonds as he spoke. A firmer man would not have done so. Vita rubbed her wrists without saying more.

"Do you think you can be good?" he asked.

"I hate you!"

"Naturally. But you'll have to get used to me."

He stood looking down at her, a great tenderness in his eyes.

"I'm sorry I had to treat you so, Vita. But what could I do? Now that I have you here I want you to listen to me. I love you. I am going to marry you. This is your home. Everything in this flat is yours. It's all new and all paid for. If there's anything you don't like you can change it. If there's anything else you want you can buy it."

Vita made no reply. He walked round the bed to the clothes closet and threw open the door.

"I bought some clothes for you also. See! This dress, and this dress, and this one, and these others. If you don't like them you can take them back and exchange them. You'll find more clothes in the dresser. They'll all fit you, but anything you don't like you can return. These other things, too, I bought. I hope you'll like them. I bought them for you because I love you and want to make you happy."

He allowed the door to stand partly open.

"If you'd like to dress, you may. I will leave you alone if you'll promise to be good and not try to raise an alarm or smash things. You'll find soap and towels in the bathroom, and running water. If you'll not promise I'll have to remain near you."

She did not reply, and Paul returned to the front of the bed. As far as he could see her eyes were no softer than they had been. What he had done seemed not to interest her.

"Suit yourself, Vita."

As he stood looking down at her, wondering what to do or say next, he suddenly became aware of a change in her expression. She seemed to be looking out past him at something—not into space now, but at something material. He wondered idly what had caught her fancy, and was about to turn his head and see when the explanation arrived.

"Now smile!" said a voice behind him.

Sam's man Friday had not wasted any time in carrying out his master's instructions. He had entered from behind through the dining room, and now stood in the doorway with Sam's pistol in his hand. His name was Finley; during his odd moments he was a prize fighter and wrestler. He also acted as janitor in the Larrabee Hotel. Although no weakling, Paul was no match for him physically.

"Quick! Stick 'em up!"

Paul put up his hands as ordered.

"Stand that way while I fish for your gun."

The big janitor advanced until his weapon pressed against Paul's body. Reaching into his pocket he removed Paul's pistol, which he then placed in his own pocket for safe keeping.

"You're only an amateur gunman. Thanks." He glanced at the girl propped up on the bed. "I've come to rescue you," he explained. "Feet free? I see the softy's untied the wrist handkerchief. Throw something round you and get into the car downstairs while I take care of this girl-grabber."

His mind for the moment was upon Vita, and he missed the flush that came into Paul's face. Even had he seen it he would not have understood it. The flush was a flush of shame—his easy trustfulness again! For Paul had remembered an important fact. If this man came from Monaca, how did he know that there were any handkerchiefs to be taken off? Monaca, standing round the corner in his parlor with his face to the wall, couldn't possibly have seen him leave with Vita. Besides, Vita was wrapped in blankets. The only one besides himself to know of the bindings was Sam.

An amateur gunman? He had been a simpleton, an idiot, spineless, easy, blind, a trusting, weak-minded fool.

Janitor Finley felt that he had an interested audience in Vita and began following up his advantage.

"Did you think you was a guide-book brigand in Sicily, like you read about? Didn't you know this is Chicago? Didn't anybody tell you?"

In one of Paul's early conversations with Sam he had spoken of having read about Sicilian abductions. Sam's man unquestionably!

"Before you go, Vita," observed Paul evenly, "better make sure you are warmly wrapped."

The thing happened with unbelievable swiftness. Only an idiot would have attempted it; only a man who despised his opponent as a worm would have permitted it. One moment Paul was standing with hands high, disarmed and covered by the

You do if you stick to the old style method of protecting electric light, heat and power circuits with "one-time" fuses, as useless after operation as an empty fountain pen.

ECONOMY
renewable
FUSES

on the contrary, are used over and over again. The quick, easy replacement of a new "Drop Out" Renewal Link, costing only a trifle, instantly renews to its original efficiency any Economy Fuse that has done its duty in guarding lives and apparatus against the fire and accident hazards of overloads, short circuits and the effect of lightning discharges on electrical circuits.

Economy Fuse users cut yearly fuse bills 80% and enjoy protection under all conditions of service.

This is a sectional view of an Economy ferrule type renewable fuse. They are made in all commercial capacities (both ferrule and knife blade types) from 3 to 1000 amperes in both 250 and 600 volts.

"Drop Out" Renewal Links are accurately rated, inexpensive, and their use renews an Economy Fuse over and over again. A quantity always on hand represents only a small investment.

Whether you use a fuse or thousands of fuses a year, it will pay you to take advantage of this sample offer:

Send ten cents in stamps for one 3 to 30 ampere, 250 volt, ferrule type, Economy renewable Fuse, with two "Drop Out" Links. (Retail price, one fuse only, 35 cents, in Canada 40 cents.)

Send for the sample today. Ask for Bulletin S.

Europe's many tongues and consequent misunderstandings

The Fruits of Understanding

Throughout the vast area of this country prevails a common tongue. The whole of Europe hardly exceeds our territory, yet Europe has more than a score of nationalities and many different languages.

In the United States the telephone, as exemplified by Bell System, renders a matchless service in its mastery of distance and in encouraging the use of a universal language. This accomplishment is in spite of the great influx of population from every country in the world.

In Europe the independent countries, separated by barriers of language, and lacking efficient telephone service, suffer from inadequate facilities for intercommunication.

We now talk from the Atlantic Coast to the Pacific, and eliminate more than three thousand miles. In Europe, contending with a babel of voices and unrelated telephone systems, a bare quarter of that distance has been bridged with difficulty.

The ideal of the Bell System has been day by day to extend its service in the interest of all telephone users. Its efforts have resulted in providing the facilities to unite cities and rural districts in true American democracy.

janitor's pistol. The next the pistol had gone flying across the floor and the two men were at grapples.

The loss of the pistol did not much matter. The contest was never in doubt. The janitor soon had Paul helpless on the floor, the captured pistol in his coat pocket aiding in the argument by force. As for the object of the struggle, the abducted girl, during the first ten seconds of the fight she had leaped to her feet, thrown her blanket about her and fled.

If this were the story of a cave man—that mythical creature who with his superior strength, as Georgina Spindleshanks believes, carried off his woman and married her—nothing would have happened as it did.

Vita, propped against her pillows, saw the big janitor creep into view, saw him disarm her captor, saw Paul strike down the pistol and grapple with him. Her first impulse was to slip out through the door. She believed that the newcomer had been sent by her father; she could escape from the flat, run downstairs to the waiting car, and be back in her room at home in time to dress for breakfast, as far as she knew. Her father would probably have Paul arrested. Eventually she would marry the real-estate man, the son of a landowner.

But somehow the real-estate man had become distasteful to her. Paul must have loved her a great deal to run such risks for her. And he was eager to please her. The dresses in the clothes closet—she had never owned anything anywhere near so pretty. And the flat—she could see that it was modern and very nicely furnished. All for her, he had told her! He must have been saving his money for years.

Vita, who had already been doing her thinking, draped her blanket over her shoulders and fled into the vestibule. Here she noisily opened the outer door and as noisily closed it again. But she did not pass through it.

Instead she stole softly into the dining room and thence into the kitchen, where she cowered against the near wall behind the end of the table. Here she was hidden from the door. A little later she understood from his words that the janitor was victorious. Later still she heard him order Paul to precede him down the stairs—apparently to guard against a last-minute attack from behind. She gathered from what was said that both men had heard her open and close the outer door, and that neither doubted she had seized the opportunity to flee.

Upon hearing them go out she gave them time to reach the street; then she crept back to the door. The latchkey was missing; she remembered seeing Paul thrust it into his pocket. But she softly slipped the spring latch, after which she returned to the bedroom, locking its door with its key. The door leading into the dining room she also locked. Then she proceeded to investigate further.

As Paul had said, the bathroom was supplied with soap, towels and running water. She took her time about bathing. She had noticed a pretty crêpe kimono in the clothes closet. This she now found and donned. Then she began looking through the drawers of the dresser to see what Paul had considered that she would need. She quickly decided that he had had help—nothing had been overlooked. He had even undertaken to select shoes for her, three pairs, and each of a different size, so that she would be that much more likely to be fitted. The wrong sizes could be exchanged. Selecting the articles she wished to wear she laid them out, returning the remainder to their place in the dresser. She also looked over the gowns and dresses in the clothes closet for something she could wear in the kitchen. Seemingly there were no such humble garments.

Strange she had not noticed it before! Among all his purchases he had not included any working clothes. He had not thought of his wife as wearing them. What a man! She smiled at the oversight, but there were tears in her eyes to mingle with the smiles. However, she would not have worn working clothes this morning even if she had had them. Selecting a shirt-waist suit, she proceeded to dress.

As he had predicted, the clothing fitted her. Not a garment was wrong. And nothing was missing. When she came to do up her hair she found an ivory comb and brush ready to her hand, and hairpins. When she came to care for her teeth a tube of paste and toothbrush awaited her. A dainty manicure set helped her with her pretty fingers. After all these thoughtful provisions for her comfort, the powder-puff did not seem at all a thing to laugh at. Quite the contrary. She used it almost reverently, as she had used the other articles.

She now went to the kitchen, lighted the blue-flame stove and put on the teakettle. She then took down the few dishes she would need, and when the water was hot enough washed them. After that she set the table in the dining room. She also fried some ham and eggs, which she placed upon a platter and thrust into the oven to keep warm. When she had carried her preparations as far as she could she returned to the bedroom, where she stood in the front window watching the street for the return of Paul.

She had a long wait—it was nearly eight o'clock before he came into sight up the street. He was not walking briskly, but looked tired and discouraged. She at once ran back to the kitchen. Here she quickly made the coffee, carried the platter of ham and eggs to the table, and then the hot toast. The cereal was already served. Ordinarily she would have waited before serving the meat course, but she wished Paul to see the table completely set.

He found her in the kitchen, where she was trying to look nonchalant and matter-of-fact.

"I don't understand ——"

"Breakfast is ready," said Vita.

But she could not carry it off. Almost before she had spoken the words she broke down. The tears in her eyes, nearer the surface than she thought, quickly became tears on her cheeks. The next she knew the amateur gunman had somehow found her and she was pressed in his arms with her face buried in his coat.

They were married immediately after breakfast, so as to forestall a possible counterstroke on the part of old Monaca. A little later Vita got herself forgiven. Later still—that is to say, on Sunday—Monaca and his wife called to see the new flat. And on Monday Paul went back to work. He accepted his wage envelope for the preceding week without protest, although a deduction of two days' pay had been made with no allowance for the usual half-holiday on Saturday. He went about his business as before—good-natured, slow to take offense, imposed upon continually by Keiser. He did not mention his marriage. No one in the shop, Keiser least of all, would have suspected that he had ever held a loaded pistol in his hand. As for his abducting a girl at the point of such a pistol from her home in the heart of Chicago—marriage by capture—the action was quite unthinkable. He did not have the backbone.

Which is additional proof that Simplicissimus was wrong and that everyone cannot distinguish between substance and shadow.

Vita's opinion of the matter was different.

"I like him because he's so strong," she would have said. "And so stubborn. And so brave. And because he knows what he wants." And she would have added: "But I love him because he came and took me."

The question remains, however: Why did she love him, really?

That Scent of Purity Means Your Security

Pure Soap—All Soap

PEET'S CRYSTAL WHITE is made of pure vegetable oils, and has the most wonderful cleaning properties.

It is best for clothes—best for hands—best for economy—because a cake of Crystal White costs no more than ordinary soap, and lasts very much longer; prove it for yourself.

Ask your dealer for it; if he can't supply you, send us five cents for a full sized cake of this wonderful White Laundry Soap.

More than three million families have adopted Crystal White as the household soap. They never go back to the old kind.

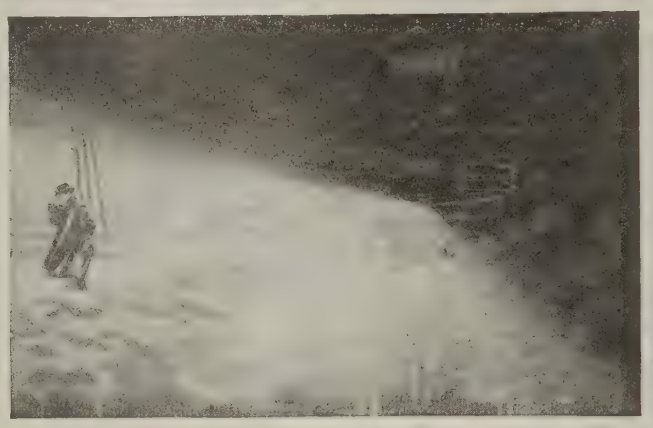
Without Warner-Lenz on a Dark, Sleeting Night



With Warner-Lenz You See The Way

Turn Night Into Day— Make Driving Safe and Pleasant

Now that over 350,000 drivers know and appreciate Warner-Lenz—now that fourteen discerning automobile manufacturers have adopted them as standard equipment—now that lawmakers and police officials everywhere approve Warner-Lenz—what further proof—what greater evidence—we ask you—is necessary?

You know the danger of night driving with the old-time glare. You know how hopeless dimmers are. You know the laws that are against those makeshift lights.

Why resist Warner-Lenz longer? Why put off that satisfaction that is sure to come?

Blinding Glares Ended

Most night driving troubles come from improper lighting.

Warner-Lenz—now that they are becoming universal—end all blinding glares forever. For this new scientific light breaks up the beams. It diffuses the light. You can look straight into a Warner-Lenz and not blink. Yet your light is not reduced. Warner-Lenz do not dim.

As you drive behind Warner-Lenz, each lamp throws out a penetrating spray of nearly 180 degrees. The visual angle of the eyes is similar to the luminous angle of Warner-Lenz. The greatest intensity is in front, of course.

But here is the great feature—Warner-Lenz light the sides as well, beyond the curb or roadside, just as your eyes give a circular vision, even when looking straight ahead. So sidewise dangers are disclosed.

Turns are lighted up plainly—and *while* you turn.

Not A Dimmer

Once you equip your car with Warner-Lenz, you discard dimmers, and other contraptions. Your lamps cannot blind nor confuse others.

Warner-Lenz removes dangers both to yourself and the other fellow.

Treacherous country roads, railway crossings, fallen trees and other menaces are unfolded as by daylight—before you reach them.

Night driving everywhere becomes a real pleasure. Strain is relieved. Protection is certain.

After once driving behind Warner-Lenz you'll never return to the glaring shaft or weak dimmer.

Why Resist?

Experts unite in saying that Warner-Lenz are the final solution.

Then why not equip your car with Warner-Lenz? If they were not as advertised, do you think 350,000 drivers would keep them? Or would our list of manufacturers keep growing? Would they spend this extra money if Warner-Lenz were not superior?

This great invention carries the personal guarantee of A. P. Warner, inventor of the Warner Speedometer. All motorists know his contributions to the automobile world.

Your nearest accessory dealer can put a pair of Warner-Lenz on your car in a minute. Whatever your car, there's a size to fit. Remember, these are lenses, not lamps.

Or if you cannot find Warner-Lenz nearby, we will see that you are supplied.

PRICE OF WARNER-LENZ—Per Pair

OUR ARMY OVERSEAS

(Continued from Page 28)

of his education in England. Though an American by nationality and sentiment, the boy felt it his duty to fight for England. At the age of nineteen he enlisted as a private and was assigned to a motor-machine-gun company. Within six months he had a commission. At last accounts he was a captain, and he had been invalided home for an illness that a few months away from the trenches will cure. He has become an expert in motor machine guns. We probably have no officer who ever fought a motor machine gun in action; few of our officers have ever studied the theory of the thing.

All modern warfare includes trench fighting at some stage of the game; there is where technical knowledge of grenades comes in handy. But all modern warfare begins with open fighting; and there the machine gun mounted on an automobile is most deadly. The superiority of the Germans in use and number of these weapons had much to do with their swift advance toward Paris in the first rush of the war. This young man could instruct us in an important matter on which we are probably quite ignorant.

A young American got a commission early in the war and entered the Royal Artillery. His eyes were injured by shell shock. The sight was unimpared, but, in the opinion of a Medical Board, the steady concussions of the Front might have blinded him. He was assigned, therefore, to the charge of an anti-aircraft battery at a point where the Germans have made constant raids. He, too, has become an expert in his specialty.

Probably no one in our army has ever fired a gun at a moving aëroplane. We may have had a little practice against kites; but the difference between shooting a cannon at kites and at aëroplanes is the difference between shooting a rifle at a fixed target and at a flying bird. Moreover, there is a complex system for getting the range against an aëroplane. Of that system our army scholars may know something in theory; they certainly do not know it in practice.

At least dozens of Americans, and perhaps scores, hold commissions in the British Royal Artillery. English officers have often remarked in my presence on the cleverness of Americans with artillery; it suits the mechanical genius of our people. So long ago as the second battle of Ypres they told me that some of the sharpest and most reliable young artillery officers they had were citizens of the United States. The number has increased since that time.

I know personally four or five of these men. One of them, a captain, has been assigned to the work of picking off isolated bodies of the enemy. This requires the most accurate handling of artillery. One of my acquaintances is commanding heavy guns with the Saloniki Expedition; the rest were in the Somme attack.

Difficulties of Curtain Fire

Napoleon has been described as a "Corsican adventurer who discovered that a cannon would kill a man"; he made artillery the ruling arm in warfare. Germany might be described as a Teutonic adventurer who learned that a shell would kill more men than a bullet. The great massing of heavy artillery, with which the enemy advanced on France, has brought about the unparalleled situation by which whole nations, the women with the men, have been mobilized to make ammunition for the ever-increasing number of guns.

Artillery technic has improved and changed. Indirect fire, invented by the French, who are the most expert artillerymen in the world, was studied and adopted by the American Army before the war; but now it has been brought to a perfection of which no one then dreamed. Curtain fire is all new; and it seems vital to a modern battle, whether fought in the open or against locked trenches. The British used it in the Somme advance, and the Germans in pushing back the Rumanians.

It consists, as most of my readers probably know, in employing all or most of your guns in drawing a line of exploding shells so thick and heavy that no one can cross it alive, before the enemy who is charging you, or between the enemy whom you are charging and possible reënforcements. As many as a thousand guns may be used in one burst of curtain fire. They are of all calibers and emplaced at varying distances from the objective; yet, when they go off, and continue to go off as fast as men can work them, each must be ranged accurately on its part of the objective line.

Moreover, curtain fire is often an emergency call. The commanding officer has no time to make preparations. The rocket signal goes up: "Stand by for curtain fire!" And almost immediately there follows the signal: "Fire!" All this requires the most expert teamwork; the most exact knowledge concerning the fine points.

As an officer of the regular army has remarked: "We haven't enough guns to make even a bead portière." But when, after the first muddle, we begin to turn out the guns we shall need to learn how to use them. Probably the staff and artillery officers of the army have studied curtain fire theoretically; nevertheless, there is hardly an artillery officer in the army who could not go to school, with advantage, to our subalterns in the British Artillery.

Again, aëroplane direction of artillery fire was unknown before the war. Now it is universal and vitally necessary. Our young artillery officers have been training a little with our new flying corps, I believe—learning to judge from the air the distance between exploding bombs and given objectives. Still, this is a very different thing from making the observation in actual battle, with the enemy exploding shrapnel about you and the shells falling on complicated military works.

Men of the Foreign Legion

Young French artillery observation officers, trained with the aviators at the flying schools, have told me that their education was only begun when they went to the Front. Here, again, our American officers with the British forces could give the best of our West Pointers cards and spades.

We have heard a great deal of the American flying squadrilla at the French Front, largely because it exists as a body, has the American name attached to it, and is supported from America. The American aviators with the British Army are scattered all through the flying corps, and have, therefore, lost their identity as Americans. Yet we have probably more airmen with the British than with the French.

The Scotch are as nothing for canniness to the French. Those admirable people love the stranger who has volunteered for France; but they take good care that the direction of things shall remain in French hands. So the Foreign Legion is mainly officered by native Frenchmen; and the legionary, whether Spaniard, Czech, South American, North American, or what not, must show exceptional valor and ability to get a commission.

Up to the time of my last information only two American legionaries had achieved bars on their coat sleeves. The one of these whom I know has been a lieutenant in our cavalry. When the war broke out he enlisted as a private in the Foreign Legion. His valor won him not only the regular military decorations but also the Legion of Honor, a ribbon usually given for civilian services to the state, but quite unusual as a military decoration.

However, the Foreign Legion includes scores of young Americans, privates or noncommissioned officers, who would have risen from the ranks under a more open system of promotion. Alan Seeger, that young poet who died for France last year, was exactly the kind of man who would have made a good American officer. These men are all far advanced in modern military education as compared with any but the most expert officers of our regular army.

While I am on this subject I must mention, also, the three or four hundred young Americans who have been running ambulances at the French Front. For intelligence and education they are a superb set of men—the very best kind of officer material. Being Americans, they are driven by our national intellectual curiosity to inquire into everything. Unconsciously they have been studying modern military technic, and studying it with that admirable army to whose conception of discipline we shall have to come if we are to make our army a success.

Up to last autumn, when I left France, thirty-eight men had received their brevets

Coal Bills Cut ½ to ⅔

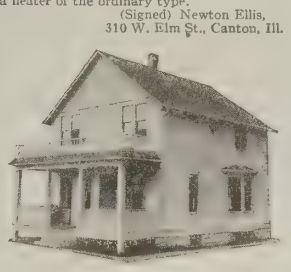
Guaranteed With The Williamson Underfeed

Here's the Evidence to Prove It

Saves 50%

"For the past four years I have been using a Williamson UNDERFEED. The longer I use it the better I like it. I am heating ten rooms. It has fulfilled all the claims you make for it, and I am sure has saved me at least 50% of what it would cost to operate a heater of the ordinary type."

(Signed) Newton Ellis,
310 W. Elm St., Canton, Ill.



Saves One-Half

"My house is a nine-room house and this was the hardest season we ever experienced in this part of the country. With the UNDERFEED I saved just about one half as to seasons previous. I used the cheapest fuel I could buy, Pocahontas Slack coal."

(Signed) Wm. Hogan, Gilbert, Minn.

Saves $47

"I take great pleasure in being able to advise that with the UNDERFEED our coal bill amounted to $48.00 for last winter; this covers twelve tons at $4.00 per ton, and we have nearly two tons left. The coal bills for the two winters before amounted to $95.00 and $87.00 and I think that this saving is enough to recommend the UNDERFEED alone.

"There is another point very much in favor of the UNDERFEED and that is the rapid starting and the short time needed to warm up the house. It is very surprising after our old furnace that five minutes after starting the house is warm."

(Signed) R. B. Zeller,
2140 Lunt Ave., Chicago, Ill.

EVERYWHERE from Maine to California UNDERFEED furnaces and boilers are being installed as rapidly as our factories can turn them out. The number grows daily. And back of every one is a guarantee of coal bills reduced ½ to ⅔. Just figure the millions of dollars saved to users the UNDERFEED way—*guaranteed, mind you!*

Back of that guarantee stands a million dollar concern. No matter where you live, or what dealer sells you an UNDERFEED, this guarantee is always good, provided the apparatus is properly installed and operated.

Read the letters shown to the left—picked at random from thousands just like them—letters telling of more and better heat, and of coal bills cut ½ to ⅔—guaranteed with the UNDERFEED!

In Buildings Large and Small

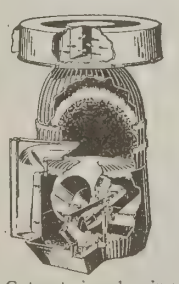
For Warm Air, Hot Water, Steam or Vapor

Forget how large or how small your building may be. Remember the UNDERFEED guarantee. The UNDERFEED saves, first, by burning the cheaper grades of coal as effectively as others burn the costlier grades. That's a first great saving you're always sure of!

Then, again, the UNDERFEED burns coal on the "candle" principle. Fuel is always below the hot, clean, effective fire, which is never smothered or chilled by new coal being dumped on. The fire never has to fight its way up against fresh coal. Smoke, soot or gas—valuable heat elements—are transformed into clean, effective heat as they *pass up through* the fire!

WILLIAMSON UNDERFEED Furnaces Boilers

Cut Coal Bills ½ to ⅔ Guaranteed



Cut-out view showing how the UNDERFEED burns coal on the "candle" principle. Coal fed from below. Hot, clean fire always on top.

And the same great guaranteed saving can be yours, whether you heat with warm air, hot water, steam, or vapor. It's all the same to the UNDERFEED. No stooping. No grubbing. No partly burned coals. Everything burned to a clean white ash!

Big Money-Saving Book Free

"From Overfed to UNDERFEED" pictures and fully describes the unique, scientific UNDERFEED principle. Shows how easily operated by a boy of twelve. You will find this free book mighty interesting. What is more you will find it really, downright money-saving—guaranteed with the UNDERFEED. The coupon brings it without cost or obligation. Send the coupon NOW.

Paint Your Ford for $1.00

You can do it easily, quickly and conveniently with Glidden Auto Finish.
—easily, because Glidden Auto Finish makes your car like new with only one coat.
—quickly, because it goes on in short order and dries in less than 48 hours.
—conveniently, because you don't have to lay up your car for a week or two.
Go to your regular dealer. If he cannot supply you send $1.00 ($1.25 in Canada) for one quart of Auto Finish Black to THE GLIDDEN VARNISH CO., 1502 Berea Rd., Cleveland, O.
Note to Dealers—Send at once for our Marketing Book of Glidden Auto Finishes.

GLIDDEN AUTO FINISHES

as flyers in the American Aviation Corps with the French Army. A few more were scattered among the strictly French units. Of the thirty-eight, three had been killed, two or three had gone home disabled, a few had served out a short-term enlistment, and the rest were still at work.

The uses of the aëroplane in battle grow month by month. At first, they merely marked for batteries or dropped projectiles in a rather unscientific fashion, and as units. Then the enemy began sending fighting machines to bring down the observers with machine guns. So, before the war was a year old, the machines, and the men who flew them, became specialized.

Roughly there are three types of machines, with skilled pilots to correspond. Heaviest and most formidable are the armored aëroplanes, the artillery of the air, equipped often with small cannon as well as machine guns, which guard places like towns, where they need not fly very far or fast. Then come the two-man observation machines, the infantry of the air, which do the work of marking for batteries and scouting. Last come the little, very fast, one-man machines, whose business is solely to fight in the air—to bring down other aircraft. This last type calls for great skill as well as courage in the aviator, and it is a compliment to our American aviators with the French that they run, for the most part, this type of machine.

Now we are teaching men to fly in our aviation school; but we are not teaching them, as yet, to fight in the air. Indeed, practice in this work is difficult to get, except under battle conditions. A target that will represent the motion of an aëroplane in flight has not yet been devised. And shooting a machine gun from an aëroplane doing a hundred miles an hour at another aëroplane making a like speed differs radically from shooting at a fixed target. Moreover, the use of the aëroplane in war has been extended to a point of which we scarcely dream on this side of the water.

Recently they have taken to swooping down and turning their machine guns on exposed troops. Further, during the Somme advance they often directed not only the artillery but the infantry advance. Soaring dangerously near the ground above the heads of the attacking force, they signaled the position and numbers of the enemy, and advised the infantry officers whether to go on or to dig in and hold. All these tricks and many others our aviators with the French Army know; our regular-army officers know them not, because they are brand-new developments of the last year.

A New Military Art

As an illustration of the innovations in land warfare, of its specialization, let me mention what the French call *camouflage*, which means the art of concealing things from the enemy. The French say: "A gun discovered is a gun destroyed." The armies hide their artillery from aëroplane observers as carefully as they hide their snipers. During the height of a great battle on the Western Front I skirted a sunken field of some forty or fifty acres. It had been planted in wheat before the battle; the wheat stood now, rank and overripe. From this field came the constant bang-bang-bang-bang! of field guns. Yet the only thing visible to the eye was a light mist of artillery smoke hanging over the wheat.

There may have been a hundred guns in that field; but, though I looked long and carefully, I saw not one. How it was done I do not know; and I asked no questions. That was a secret of the *camoufleurs*. Now I take it for granted that we know little of this art. Yet among these scene painters and landscape gardeners of war at the Allied Front there is more than one American.

Concerning the Americans on the Italian Front I must speak from poorer information. Of the two hundred thousand or more Italian soldiers who have lived in America, many if not most belong to the class of migratory laborers. These men generally sailed in the steerage for New York early in the spring and returned to Italy late in the autumn. The rest, however, had settled in America for good, but felt their duty to the land of their blood when Italy went to war. Many of them had been naturalized.

Again, a few native Americans of Italian parentage have volunteered. In Rome I encountered a sergeant, a naturalized American, married to an American woman; before the war an engineer in California. He was a Socialist by opinion.

"But Socialists are usually opposed to war and nationalism," said I. "What are you doing here?"

"I am here to fight not for king or for country, but for the spirit of the Latin race!" he replied.

On the Isonzo Front I heard of a naturalized American who has achieved a commission by his valor and intelligence. In the hinterland of the Adamello Alps I was hailed in sharp American by a captain of cavalry. He is a broker in Philadelphia, married to an American woman; and he was almost pathetically eager to hear some "home talk" in Broadway slang.

At least seven-eighths of the war on the Italian Front is mountain fighting. The Isonzo sector resembles, in its higher reaches, the Catskills; the Julian Alps are like the Appalachians, though in places they rise much higher; the rest of the way is a steeper version of the Rockies. The Italians are expert mountain fighters, with a technic of their own, much of which has been developed during this war.

We have range after range of mountains in this country, one or more of which might have to be defended in case of invasion. Moreover, war in this country might call for military engineering on a gigantic scale; and military engineering is the thing the Italians do supremely well.

By this time the drift of my remarks may be apparent. Making a conservative deduction from Lord Northcliffe's figures, let us say that we have in the armies of the Entente Allies forty thousand American citizens—a whole army corps. Assembled, they would make the most formidable body of its size that ever wore our uniform. Scattered intelligently through a new volunteer army, their value would be beyond calculation. As England has learned, the great difficulty in forming a brand-new army from a peace population is not in training the men but finding and educating the officers.

Our Obvious Course

Hundreds of these Americans are finished officers of the new warfare. They could take high command in our new regiments, or they could become instructors. Thousands of others, still in the ranks of the allied armies, would be better material for subaltern officers than almost any man now in civilian clothes. The rest, as non-commissioned officers, or even as privates, would make admirable stiffening among raw troops.

We may, before long, find ourselves in an alliance, avowed or tacit, with the Entente Powers. And the obvious thing to do would be to ask diplomatically for the return of these men to our flag.

If we keep out of this war, and if at its close we still intend to create an adequate modern army, the proper course is no less plain, though a little more difficult. We should be keeping track of these men, in order that when they are discharged we may persuade as many of them as possible to adopt a regular military career in our own army. In that case we at once encounter two obstacles:

First, the Department of State has ruled—somewhat hazily—that an American who has forsworn his allegiance to enter a foreign army in this war is no longer an American citizen.

The other is more serious: We have no provision for taking officers into our regular force above the grade of second lieutenant. One of these American officers with foreign armies who wished to enter our army would have to begin at the bottom.

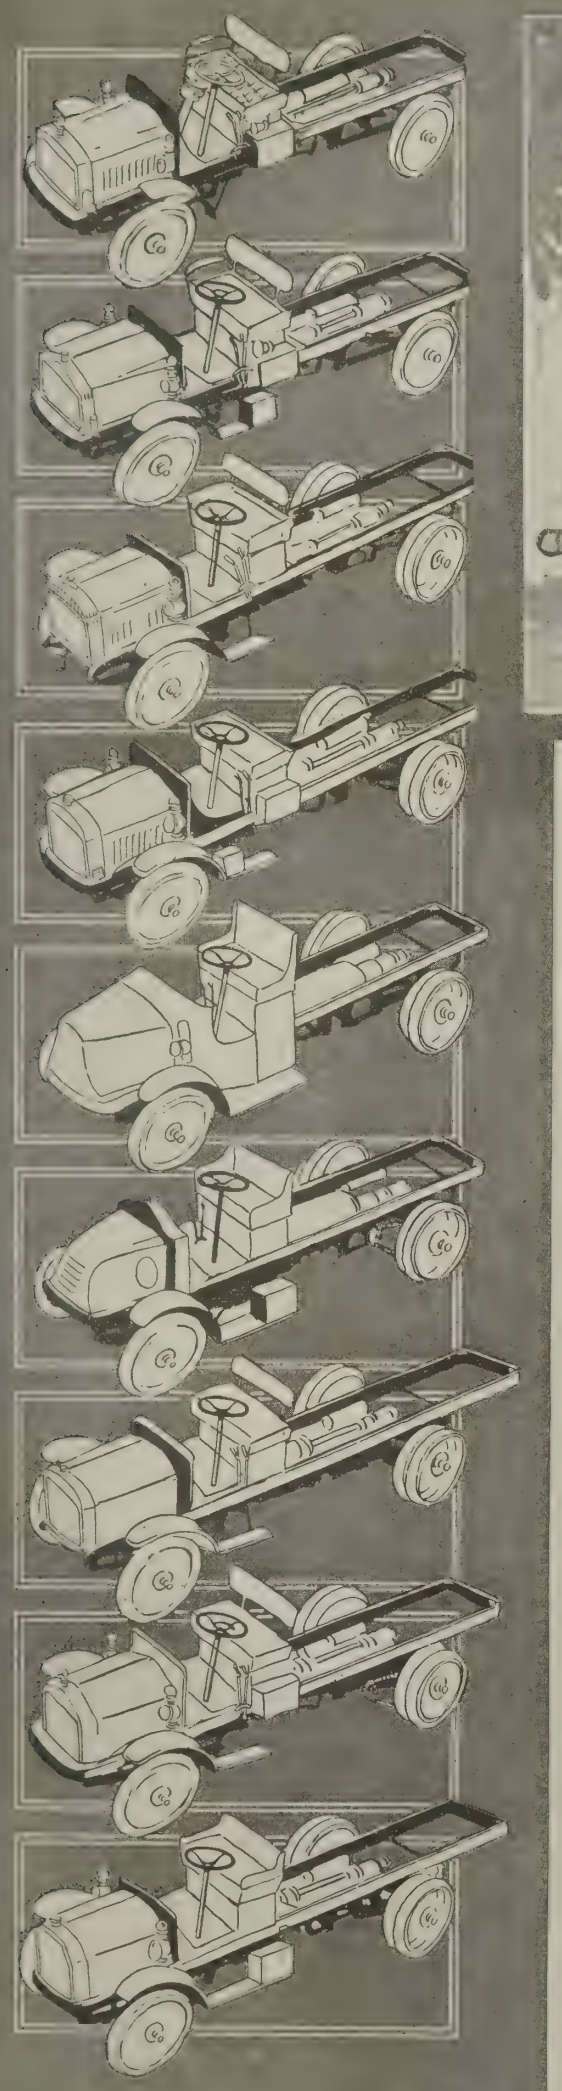
Now a veteran who has been a colonel or a major in this most real of all real wars, who knows more about some specialty than any man in the American Army, would be more than human if he consented to enter a peace army at its very lowest rank. And these men, with their knowledge and their proved ability, are the ones we may need most of all.

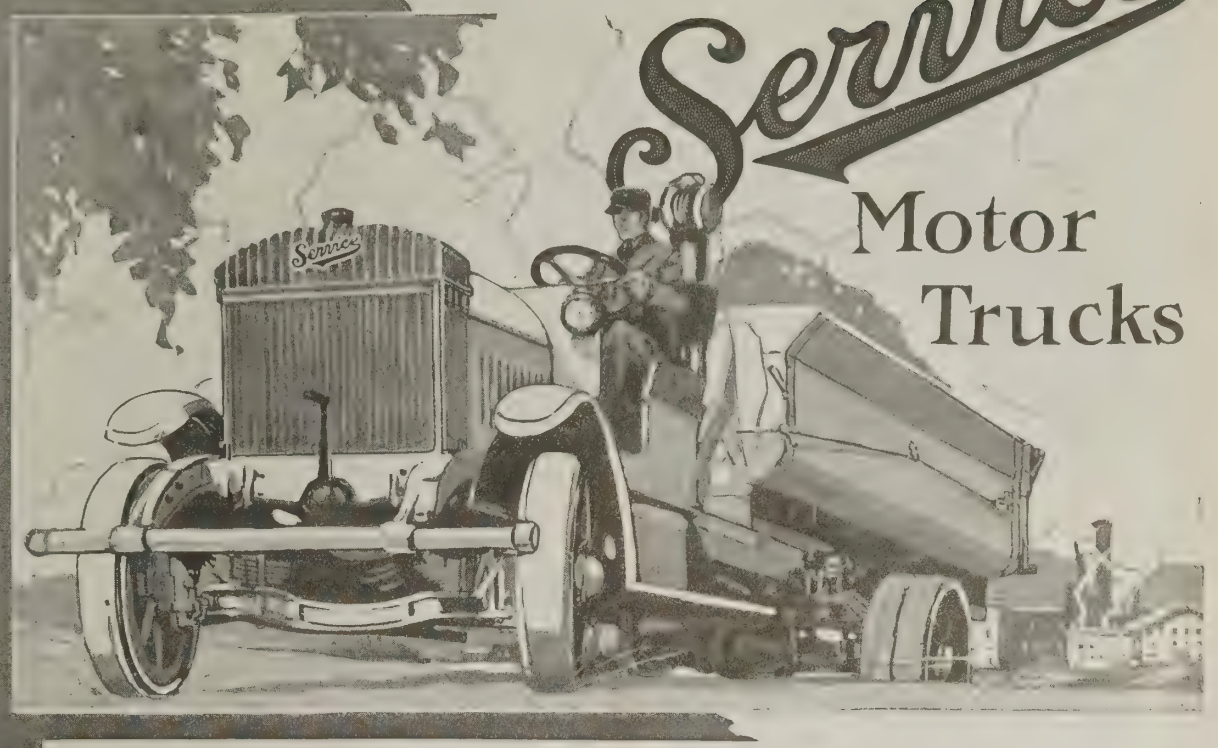
But our army, like most others, is jealous of its promotion system, and we may expect opposition to a change in the present course of procedure; in fact, a chief of a bureau in Washington, with whom I discussed this matter, said:

"Do you expect men who have stood by to give place to outsiders?"

This may not be the spirit of the army as a whole, but it is the spirit of some of its members.

It will require some intelligent understanding on the part of Congress and some self-sacrifice on the part of the Army. Yet we shall be foolish wasters if we do not grasp this opportunity.





Service Motor Trucks

Choose from the Dominant Ten

Base Your Choice of Motor Trucks on Specifications

You demand strength—economy—high service achievement—durability—specialized mechanical development in your motor truck.

Big buyers whose individual orders range from one to fleet equipment, who buy on proved specifications, confine their choice to ten big dominant manufacturers.

Definite Features of Advantage And even among the ten dominant manufacturers, SERVICE trucks stand out with certain very definite features of advantage—the result of the most exhaustive investigation of motor truck requirements.

Six Chassis—One to Five Tons SERVICE motor trucks are designed in six chassis sizes. Each is built—each as individual as though it were the only model individually is refined—developed—built for the work it has to do.

20% Super Strength

Among the dominant ten manufacturers whose product finds biggest use among careful buyers, SERVICE Motor Trucks stand out with 20% super-strength. Frame, springs, motor, worm drive construction—the truck throughout shows super-efficiency—super-strength—super-development of manufacturing ingenuity.

Yet with this super-strength—this super-design—SERVICE motor trucks are notably light, adding to wonderful road stamina, real remarkable economy.

67% of SERVICE truck sales were Re-orders in 1916
60% of SERVICE truck sales were Re-orders in 1915

Models to Meet Your Requirements—new prices

1 ton truck	$1425	2 ton truck	$2350	3½ ton (Special Contractors)	$3350
1½ ton truck	2100	3½ ton truck	3100	5 ton truck	4150

The normal increase in price of Service Motor Trucks is particularly reasonable in view of the general advance among all manufacturers.

13 Point Booklet

4

In Grand Rapids, for instance—

IN almost any American city—you can pick out any of the leading commercial buildings and say with fair certainty, "*That building has a Barrett Specification Roof.*"

Take the City of Grand Rapids, for instance. Here are the four newest buildings: the new Hotel, a new Wholesale Grocery, the new Y. M. C. A., and the new Bank.

They all have Barrett Specification Roofs.

Most permanent buildings in the country carry this type of roof—and their popularity is not to be wondered at when you consider the following features:

First—Lowest unit cost per year of service.

Second—Guaranteed for twenty years, with a record which shows that they last much longer.

Third—Freedom from maintenance expense.

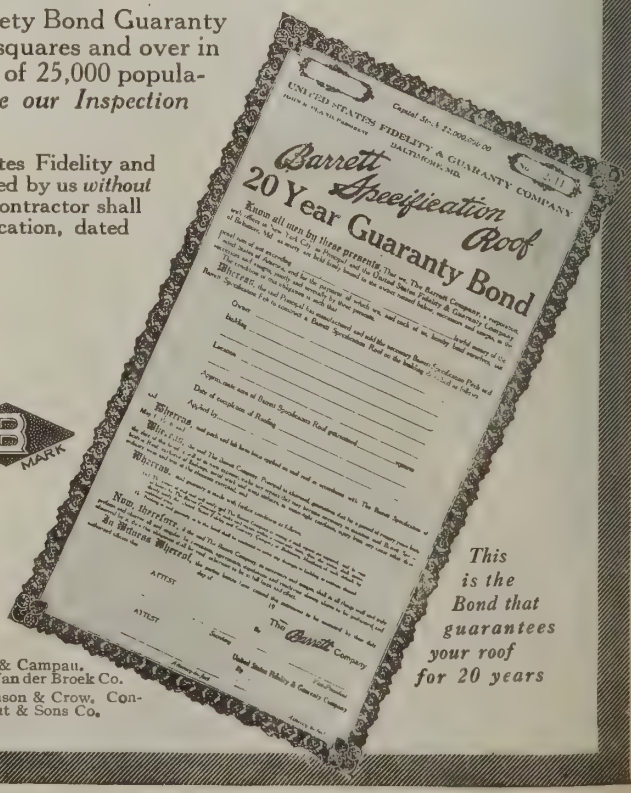
Fourth—Approved as "Class A" construction and take the base rate of fire insurance.

Tile, Slate, Shingle and Ready Roofings—all have their place on different types of steep-roofed buildings; tin is now rarely used for roofing. For all important commercial structures, however, the standard practice calls for Barrett Specification Roofs.

Guaranteed for 20 years

We are now prepared to give a 20-Year Surety Bond Guaranty on every Barrett Specification Roof of fifty squares and over in all towns in the United States and Canada of 25,000 population and more, *and in smaller places where our Inspection Service is available.*

This Surety Bond will be issued by the United States Fidelity and Guaranty Company of Baltimore and will be furnished by us *without charge.* Our only requirements are that the roofing contractor shall be approved by us and that The Barrett Specification, dated May 1, 1916, shall be strictly followed.



This is the Bond that guarantees your roof for 20 years

THE THRILL SHOOTER—By CHARLES E. VAN LOAN

FREE
Handsome Rug Chart

We have a handsome Rug Chart printed in colors. It gives you some idea of the beauty of Congoleum Rugs. Just send us your name and address and we'll mail you one free. It will help solve that floor covering problem.

CONGOLEUM RUGS

Be Sure "Congoleum" is on the Back

Whenever you buy Rugs, Rug Borders or By-The-Yard goods, be sure to look for the name "Congoleum" on the back. It insures you against imitations, and gives you the protection of our guarantee.

Modern Floors Need Them

THE modern home is turning more and more to rugs because rugs are more convenient, more artistic and more economical than carpets. Congoleum Rugs, while their patterns give the appearance of woven rugs, have a beautiful, firm, sanitary surface with many superior advantages.

Beautiful—Durable—Economical—Sanitary

Congoleum Rugs meet every requirement of the discriminating housewife. Their beauty is undeniable. Their durability is a proved fact. Their moderate prices put them within reach of all. Their variety of patterns and colors makes them suitable for any room in any home where a low-priced rug is required.

Think of rugs that require no beating—waterproof rugs that can be kept clean and sanitary merely by the use of a damp mop. That's all you need do to keep Congoleum Rugs bright and clean.

Lie Flat Without Fastening

Congoleum Rugs require no fastening of any kind. They never curl up at the edges; they stay where you put them; they "hug the floor."

Congoleum Art-Rugs

Sizes and Prices

Congoleum Art-Rugs have unusually beautiful patterns, the work of famous rug designers. Their deep, harmonizing colors give them great distinction and permit of their use with any color scheme. You couldn't make a better rug investment. Made in two sizes only:

9 feet x 10½ feet, $10.00 — 9 feet x 12 feet, $11.00

Congoleum Utility-Rugs

Congoleum Utility-Rugs are our original line. They have a wider range of sizes than the Art-Rugs and are even lower in price.

3 feet x 4½ feet $0.98 each	6 feet x 6 feet $2.60 each
3 feet x 6 feet 1.30 each	6 feet x 9 feet 3.90 each
4½ feet x 4½ feet 1.50 each	Two-piece Rug 9 feet x 12 feet $8.00 each

For sale by good dealers everywhere; if, however, your dealer cannot supply you, write us and we will.

Prices in the far West average 15% higher than those quoted; in Canada prices average 40% higher.

Congoleum Rug Borders

Congoleum Rug Borders, or "Rug Surrounds," as many call them, look like real oak because they are printed right from the original wood. They show every grain. Much better than painting or staining the floor. They also lie flat without fastening and are washable. Made in 36- and 24-inch widths, at 50c. and 40c. a yard respectively. Your dealer will cut any length you need.

Congoleum By-The-Yard

Here is the best covering for a whole floor ever offered at anything like the low price. It is better than printed linoleum and guaranteed to wear longer under equal conditions. Comes 72 inches wide. Price 50c. per square yard.

Protected By Patents

Congoleum Rugs are manufactured in accordance with United States and foreign patents, with numerous other patents pending both in the United States and foreign countries.

"See, dear, you simply lay it down without any fastening whatever."

The Congoleum Company
Department of
Philadelphia Chicago Montreal Toronto St. John, N. B. **The Barrett Company** Boston San Francisco Winnipeg Vancouver Halifax, N.S. Sydney, N.S.

This is Congoleum Art-Rug No. 300.
The 9 x 10½ ft. size sells for $10.00.

Big Ben

A *Westclox* Alarm

For the Rising Generation

BIG BEN at his best—at seven a. m.—opening little folks' eyes—there's a race to hush him—a pillow battle—merry laughter—and mother to tidy the kiddies for school.

Big Ben's little men bubble health and cheer, and they feel as big as Daddy with a clock all their own. They trust *Big Ben* to make their dreams of "When I'm big" come true—Big Ben smiles a promise to them all.

He gives 'em extra playtime, after porridge and milk,—a chance to peep at lessons that the Sandman made so hard. He gets 'em to school long before the last gong and this habit lingers when the children grow up.

You'll like Big Ben face to face. He's seven inches tall, spunky, neighborly—downright good all through. He rings two ways—ten half-minute calls or steadily for five minutes.

Big Ben is six times factory tested. At your jeweler's, $2.50 in the United States, $3.50 in Canada. Sent prepaid on receipt of price if your jeweler doesn't stock him.

Westclox folk build more than three million alarms a year—and build them well. All wheels are assembled by a special process—patented, of course. Result—accuracy, less friction, long life.

La Salle, Ill., U. S. A. **Western Clock Co.** Makers of *Westclox*

Other Westclox: Baby Ben, Pocket Ben, America, Bingo, Sleep-Meter, Lookout and Ironclad

HOLEPROOF HOSIERY

Strangers to the Darning Basket

THIS is one difference between Holeproof Hosiery and common hose—Holeproofs do not accumulate for mending.

Though worn and washed repeatedly they will need no darning for months; they will seem like new—smooth, shapely, snug and comfortable.

Holeproof Hosiery is recognized as a distinct American achievement. It seems that there is no other method of producing fine-spun stockings that wear like these. Our way has made coarse yarns unnecessary.

Today you will find in Holeproofs any weight you want. You can select the thinnest, closely woven styles with the assurance that they will wear for months.

You can get the newest shades for spring, in shimmering Japanese silk or fine-spun Lusterized Lisle.

Don't you agree that attractions like these are worth your while finding? Resolve to try them—stop the work that holes are making for someone.

Men's, 30c a Pair and Upward
Women's, 40c and Upward
Children's, 35c and Upward

Any obliging store will supply you. Should you fail to find Holeproofs close by, we'll ship direct, charges paid. Send your address for descriptive catalog. Write today.

Reg. U. S. Pat. Office, 1906

THE THRILL SHOOTER

By Charles E. Van Loan

ILLUSTRATED BY ARTHUR WILLIAM BROWN

"ROUND an' round the little ball goes; where she stops nobody knows!" chanted the dealer. "Make your bets, gentlemen, make your bets!"

A battered roulette wheel stood in the center of a small room, and over it leaned or sprawled a motley array of ill-favored humanity—slouchy ruffians with sinister and savage faces, who scowled as they placed their ivory disks upon the numbers or colors. The dealer called them gentlemen, but they had the look of thugs who would have committed murder for a white chip, and thrown in a dash of arson for good measure.

"Here y'are, boys!" croaked a fat, swarthy individual who sat at a table near the window. He was sliding cards out of a metal box, under the keen eyes of a dozen bandits as hard of face as were the roulette players. "Here's the ole tiger, boys! The ten loses an' the seven wins! Bet 'em up! The blue sky's the limit!"

Several dice games were also in operation, each one liberally patronized by tough customers. On the gamesters' looks alone a pirate captain might have recruited a crew without leaving the room, and sailed with the choicest collection of cutthroats that ever disgraced blue water.

The air was thick with stale tobacco smoke, and vocal with uncensored remarks; paper money passed swiftly from hand to hand; small fortunes were won and lost on every whirl of the wheel, roll of the dice or turn of a card. Gradually the gambling fever reached a crescendo; the crowd hung breathless over the roulette wheel; the faro players leaned forward in their chairs; the crap shooters yelled loudly for their numbers—there was, if anything, a shade too much of the dramatic in the air.

Just at the climax of activity the shrill trill of a whistle pierced the hum of conversation and the rattling undertone of shuffled chips. Instantly every movement was arrested; all eyes were turned toward the door, which was locked and heavily barred. For an instant the tableau held, and then, in the frozen silence, there came the thumping crash of axes and the whine of splintering wood.

"The bulls! Cheese, the bulls!"

Immediately there was a stampede for the lone window. The faro layout blocked the way; the crowd overturned it, and with the table went the fat, swarthy dealer. He curled up on the floor like a hedgehog, his head wrapped in his arms; those who were fortunate enough to reach the window used his body as a stepping-stone to safety. Fists began to fly. A chair crashed through the window. The air was filled with a sound as of many carpets being beaten, and the deep grunts of those who gave blows mingled with the deeper grunts of those who received them. There was also the thin tinkle of breaking glass.

The barred door yielded at last and a score of blue-clad policemen leaped into the mêlée, swinging their clubs right and left. The trapped thugs rallied and fought as cornered rats fight, disregarding all rules of the late lamented Marquess of Queensberry. A dozen desperate hand-to-hand encounters raged in the small room. Clothing was torn; blood was shed; the floor was knee-deep with underdogs.

Again the whistle trilled, and a sudden and astounding peace descended upon that scene of violence. Policemen, their clubs raised to strike, dropped their arms at their sides; the hard-faced men struggled to their feet, grunting with relief. The winners assisted the losers to rise; an amazing spirit of good will prevailed. In the midst of this miracle the fat faro dealer picked himself up, groaning dismally as he took stock of his bruises. With one accord the late combatants turned to a low platform in the foreground; there was about them the nervous, expectant air of vaudeville poodles when they look at the black-mustached gentleman with the whip.

On that platform stood a plump little man, tastefully attired in a green walking suit. His hands were thrust wrist-deep in his trousers' pockets, and a green cloth hat rested jauntily on the back of his head. He was not old nor was he young, but he had reached the age when a man ceases to regard himself as a child wonder. After an extra-special shave he might have passed for thirty-five; his friends knew that he would never see forty again; his enemies said forty-five. At his elbow stood a camera man, his hand still on the crank.

"Well, Gabby?" said he of the green suit with an interrogatory lift of his eyebrows.

"Rotten!" said the camera man calmly. "Too tame."

"Yes," said the other. "A Sunday-school picnic."

He turned to face his panting, perspiring audience, and it was characteristic of the man that he did not raise his voice to emphasize his displeasure. He spoke quietly, with a dry sarcasm which caused his listeners to writhe and look at the floor to escape the accusation in his eyes.

"Perhaps I neglected to explain the business of this scene," he began, choosing his words with almost painful precision. "If so, I owe you an apology. I was under the impression that I had made it plain enough, but it seems I was mistaken. Some of you evidently thought that we were putting on a pillow fight in a boarding school for young ladies."

He paused, and the hard-faced men quailed before him; even the big policemen hung their heads in shame and confusion.

"Now then," he continued, dropping his precise speech, "I may be wasting my time—I'm certainly wasting the company's—but I'll tell you again what this is all about: It—is—supposed—to—be—a—raid—on—a—gambling—house! The cops do not break down the door to take tea with you. They come to arrest you—and that means six months on the rock pile. You boys who have done time on a rock pile ought to show some real eagerness to get out of that window. Maybe I told you to step through it like a lot of old maids climbing a fence—maybe I did, but I don't recall it just now."

He paused to allow this insult to sink in, and the hard-faced men looked at each other and shook their heads hopelessly.

"Ain't Davy a bear?" murmured the fat, swarthy man. "I ask you, ain't he? He pans the life out of you, an' he don't never raise his voice once, nor call you nothin' you couldn't repeat to the old folks at home! Ain't he a marvel?"

The marvel resumed the thread of his complaint.

"We'll have to shoot it over again," said he with a sigh. "That means a new window and a new door and a big waste of time—and all because some of you Salvinis

misunderstood me when I said I wanted a real fight. . . . You boys at the faro table there! Haven't you any decent respect for your art? When you hear those axes, a couple of you take a running dive head first through that window. Never mind the glass; it won't cut you—much. Ivory is practically indestructible, and if your heads do get chipped or cracked we've got a hospital right here on the premises. . . . And when those policemen break in, think of your past lives and make believe they're after you. Fight 'em! Lay 'em out cold if you can—it'll be all right with me. Why, some of you dear boys were hugging and kissing 'em in that sham battle a minute ago! And remember, if any of you get cut up or hit on the nose, don't wipe off the blood—save it for the stills. Blood looks good in a lobby display. Blood is realism."

Here the fat faro dealer groaned, and the plump little man singled him out with an accusing finger.

"Sam," said he, "it hurts me to chide a sterling actor, but you dogged it. I was watching you. You quit like a sheep in the snow."

"Yeh," muttered the swarthy man, half resentful, half apologetic, "I dogged it, an' why not? I'm gettin' a little too fat for these rough-neck dramas. This underworld stuff is too fast for me. Las' time I work in a fight scene for you, one of your cast-iron cops knocks out a couple o' my teeth. That's realism, ain't it?" He opened his mouth to show his gums. "This time I'm lucky; my manly beauty is all right, but they cave in about six of my slats. I was down on the floor, an' every time I tried to get up some two-hundred-pound, hobnailed extry man used my belly for a leapin' tick. Yeh, I dogged it! Have it your own way!"

"I Can Laugh, Young Lady, But I'd Advise You Not to—That is, if You Expect to Finish This Picture"

The plump little man smiled—a rare, twinkling smile with all the radiance and warmth of a beam of sunlight. "I'm sorry, Sam," said he. "I owe you something for those teeth. I'll interpolate a little scene to show you being relieved by another dealer—that'll let you out of the fight. Now then, where are those carpenters? Get this broken stuff replaced—lively, boys, lively!"

The director strolled away, hands wrist-deep in his pockets, hat on the back of his head, and his hired men looked after him with admiration too keen for words.

"What did I tell you?" demanded the swarthy man. "I said he was a bear, didn't I? An' if he ain't a bear, where do you get your grizzlies? When you stage a rough-neck drama for Davy MacWade, you might as well stage a real one. These bunk fights—swingin' at a man an' missin' him a mile; startin' a punch an' then pullin' it—won't get you a thing with this ole-time trouper. He's wise. He'll have a real fight out o' you guys if it takes him all summer!"

"Yah!" sneered one of the policemen. "A real fight? Look at this eye, will you?"

"Save it for the stills!" exclaimed Sam. "Show it to Davy, an' he might slip you a dollar extry for it. Oh, he's a square shooter, this baby is! Look how he writes me clean out o' the next jam—interp'lates a scene specially for me, so's to establish another dealer in my place—just because I shed a couple o' teeth for him once! That's gratitude, that is! He's the best guy on this big lot—Davy MacWade—an' you can win a bet on it!"

II

THE Mammoth Film Corporation was all that the name implies, and more. One of the pioneer motion-picture plants of the West, its growth had matched, stride for stride, the astounding growth of the new amusement enterprise.

It began life with one producing director, who was also the camera man, and half a dozen actors, recruited heaven only knows how and where.

That pioneer director was not seriously annoyed with elaborate scenarios or scripts. He composed his stories as he went along, and what they lacked in coherence they made up in violent action on the part of the performers. In those raw days—not so far distant, if you remember—the moving picture was a new thing loose upon the world, and the more it moved the better people liked it.

The chase was invented. Somebody did something—and that was tragedy; or failed to do something—and that was comedy; but in either case the somebody was chased for it. Uphill, downhill, over obstacles or through them, first the panting victim, then the other members of the cast, winding up with the inevitable fat man who rolled down all the hills and fell into all the streams. It was the minimum of art and the maximum of motion—the heart and soul of the early film drama.

The Mammoth's first studio was a pitiful little affair which had once been a Chinese laundry. It expanded into a vacant lot, overlapped that in three directions, and at last took to the open country, with nothing but the brown California hills to set its boundaries. The lone director of the early days was multiplied by ten, then by twenty and finally by thirty. The six actors of the original stock company grew into a small army of men and women, recruited from the shops, the homes, the ranges and the stage—an army speaking a new language, playing a new and fascinating game, and leaning hard on a new industry for the necessities of life, such as canary-colored runabouts and palatial bungalows in the suburbs of Los Angeles.

Other film concerns, waxing fat on rich profits, adventured in Art with the largest kind of an A. They spent money lavishly on twelve-reel productions, each attempting to utter the last word in film drama; and some of these noiseless extravaganzas made money and some did not. The Mammoth's owners looked and listened, but steadfastly refused to be diverted from their original aim—namely, the economical manufacture of great quantities of film and the marketing of the same at a profit. Alien directors spoke slightingly of the Mammoth plant as "the film cannery," but the business men at the head of its affairs examined the semiannual balance sheet and were content to leave artistic experiments to their highbrow competitors.

Mammoth directors often spoke of Art—oh, my, yes! But at the same time they realized that their jobs depended upon the speed with which they ground out one, two and five reelers for the trade. In the eyes of the stockholders the most valuable director on the lot was not the one who burbled of Art, but the one who turned out the greatest quantity of salable goods in the shortest space of time; and thus we return, cross lots, to our plump little man in the natty green suit.

David MacWade was the star thrill shooter of the Mammoth staff. Anything out of the ordinary? Anything dangerous or difficult? Give it to Davy. Did the scenario call for a railroad wreck? Were there lions and tigers and leopards in the script? Must the ship drive on the rocks, the flood sweep down the valley, the aëroplane fall from the clouds, the automobile dash over the cliff? MacWade would manage to shoot the stuff somehow. Thrills were his specialty, his stock in trade; he had built a great film reputation upon them.

Nobody had ever heard MacWade denounce himself under the too elastic term of artist, and genius was a word not in his vocabulary. This was passing strange, for the plump little thrill merchant had been an actor in his time, appearing in everything from Shakspere to tank drama, and in every town hall west of Troy. His friends would never have believed it, but the one press clipping which he prized above all others was a yellowish slip from a Washington paper, commending his performance as Grumio in The Taming of the Shrew.

MacWade was proud of his histrionic achievements, and when he spoke of them—which was not often—he referred to himself as "a trouper." There were times when he applied the term to others, though sparingly and with a certain amount of reserve. When he wished to bestow the very highest praise upon a motion-picture actor he would say:

"If you stick with me I'll make a trouper of you yet!"

MacWade wasted very little shooting light in portraying the more delicate shades of human emotion; pastorals and pastels were out of his line, and fifty-foot close-ups of a leading man's dimple were never encountered in David's works of art. He painted his pictures with vigorous strokes—broad splashes of vivid color, laid on thick. Any man who could show his teeth and take a whipping without going to the hospital might play a MacWade heavy; any girl who dared to risk her neck often enough might be a MacWade star. One real thrill was worth a dozen glycerine tears upon the damask cheek of innocence; and while virtue was always rewarded in the last thousand feet of film, it had to earn that reward by winning a rattling good fight.

When MacWade turned his back on his gambling house he found himself in a cross-section of British East India, where the extra men wore turbans or pith helmets, and the punkahs stirred the branches of the imitation palms. The big open-air stage of the Mammoth plant made queer neighbors, and David did not waste more than a fleeting glance on the India stuff. It was no new thing to him, but he preferred the India of elephants and tigers and express rifles.

A few more steps carried him into the heart of Mexico, with its lazy peons and lovely señoritas, but still he did not pause. He had worn Mexico threadbare—shot it from the Rio Grande to the sea and left no thrill in all its borders. Then came a London slum, a New York pawnshop and a Wyoming dance hall, each reviewed at a leisurely footpace.

"Old stuff! Old stuff!" said David to himself.

Last of all he came upon a gilded café of the sort seen only in motion pictures, and here he halted to admire the richness of the "set," and to watch Travers Towne at his favorite occupation of staring the camera out of countenance. Towne was a temperamental young star who was permitted to direct the feature productions in which he appeared, and he was full of ideas about Art. His specialty was dress-coat drama. He had once asked to be billed as the John Drew of the films, and he changed leading women almost as often as he changed his clothes.

Towne was discovered seated at a table in the foreground, close—oh, very close—to the camera. He was elbow-deep in the wreckage of a rich repast, and save for one waiter yawning at a discreet distance he was alone on

the scene. Beyond the side lines or behind the camera the extra people were grouped—spindly young men in skimpy dress suits, and lovely young women in evening gowns, most of which bore the label of the Mammoth's wardrobe department. Towne bowed stiffly to David, for whom he felt no great amount of affection, and David returned the salute with a careless wave of the hand.

"All right!" said Towne. "Camera!"

The slave of the crank began to grind, and the John Drew of the films lifted his handsome head from his hands. Above the empty wine bottles he registered the skull-splitting remorse of the morning after—just barely registered it and that was all.

"Hold on!" he yelled, leaping to his feet. "Where's that music? Confound it! Have I got to tell you fellows everything? Play me something soft and—and sad."

He resumed his place at the table, and three shaggy musicians, located in a corner beyond camera range, began a melancholy air. The violin wailed, the cello groaned, the flute sighed windily; and under this rather dubious inspiration Mr. Towne offered his handsome features to the lens.

MacWade turned away to hide an amused grin, and it was then that he saw the girl. She was standing so close to him that he might have touched her; their eyes met, and she returned his smile with the frankness which comes of sharing the same subtle humor.

"I can laugh, young lady," said David, "but I'd advise you not to—that is, if you expect to finish this picture. Towne is rather sensitive."

"I was just wondering," said the girl, "what would happen if the violinist broke a string. Are all directors like this?"

"Well, no," answered David, "not all of them. Then you don't believe that music is an inspiration?"

"Oh, but I do," said the girl gravely. "This piece especially. I play it on the piano. It always inspires Stuffy."

"And who is Stuffy?" asked David.

"Stuffy is my fox terrier. He sits up and howls. If it has that effect on a dog ——" She paused and regarded David hopefully.

"It certainly should help an actor to put over a film headache," finished MacWade, and both laughed.

"You haven't done much picture work, have you?" asked David.

"None at all," said the girl, glancing down at her spangled gown. "I thought I would like to try it, and Mr. Towne was kind enough to say he might be able to use me for—for atmosphere." Again her eyes sparkled. "It sounds very important, but so far the experience has been disappointing. I've had nothing to do."

David chuckled. He was beginning to like this young person, so refreshingly different from the ordinary run of film-struck females. He paused to note that she was not more than twenty years of age, and of the athletic, out-of-door type not uncommon in Southern California. His professional eye told him that she would screen well, as the saying goes, and he thought her rather pretty, especially when she smiled. The time was coming when he would recall this first meeting and believe that he had seen much more in her.

"Atmosphere," he explained soberly, "is a term used by extra people. If you are working extra, and too proud to admit it, you say that you are 'doing atmosphere with So-and-so.' 'With' a director, you understand—not for him. It sounds like fifty a week at least, but all you get is three dollars a day."

The girl nodded.

"I had an uncle once," said she, "who was always hunting for a job; but when he found one he said that he had accepted a situation."

"Precisely the same thing," said David, and paused. He had seen Towne watching him from the other side of the stage, and though the John Drew of the films had shifted his gaze immediately there had been time to note a steely glint in his matinée-idol eyes. David, schooled to interpret human expression, picked a message out of the air, plain as print: "No Trespassing." He was fairly familiar with Towne's method of handling ambitious young women; it was really none of his business, but still ——

"I looked the extra people over this morning," said David, "but I don't remember seeing you."

"No," said the girl. "Mr. Towne asked me to report to him. I met him at a dinner party last week."

"Oh! And are you tied up for this whole picture?"

"Just for the café scenes," answered the girl.

"In that case," said David, "I think you'd better let me have your name and address. Oh, it's perfectly all right, I assure you. I forgot to say that I'm a sort of director myself. My name is MacWade, and one of these days I might have a part for you. The only thing I can really promise is that I won't call it 'atmosphere.'"

Later, as David was returning to his gambling house he encountered "Gabby" Trozier, who was also enjoying a brief respite from toil. Gabby was MacWade's camera man, team-mate and faithful friend. He would go anywhere or dare anything to shoot a picture with a thrill in it, and he knew his complicated "box" as a mother should know an only child. Many a director cast longing eyes at this husky and reckless youth, for a star camera man is as rare as a black pearl, and, like the pearl, worth anything one can afford to pay.

"I saw you!" began Gabby sternly. "Yes, I saw you, a-mashing of a strange dame!"

"No such thing!" growled MacWade.

"Well, you took down her name and address—right under Towne's nose too. What are you trying to do—steal the queen of the harem?"

"Nonsense!"

"All I hope," said Gabby, "is that you'll make a leading woman out of her. This Eileen Arlington person gets on my nerves, Davy. She does, for a fact. Look how she kicked on every stunt in the last picture—all easy ones too. She won't go through with this automobile stuff next week, you mark my words. Someone has been telling her that she can act. She thinks she's another Pickford, when all she's got is the curling iron. Now this new girl, Davy, she looks as if she might have a little sense. And it's a two-ace bet that she can swim like a fish."

"What makes you think that?"

"The line of tan on her shoulders. Sherlock Holmes, me! And say, if she can drive a car, you might use her to double Arlington in the auto stunts. One blonde looks pretty much like another."

"Arlington won't need a double."

"You think not? Just wait and see! Did you ask this new dame if she could drive a car?"

"No."

"Then it wasn't business at all, eh? Davy, I'm ashamed of you!"

"Wait a minute!" cried MacWade, between embarrassment and anger. "It's true that I didn't have any definite

"Las' Time I Work in a Fight Scene for You, One of Your Cast-Iron Cops Knocks Out a Couple o' My Teeth. That's Realism, Ain't It?"

A TALK WITH PRESIDENT LI

By Samuel G. Blythe

IF THE United States of America is interested in keeping open the Open Door in China, as the United States loudly proclaims to be the case, it would be the part of wisdom for the United States to encourage its bankers and business men to pile some investment money against that door, thus making it more difficult for any other nation to shut the door because of the financial obstruction.

Or, to put it in different form, one way, and probably the better way, to preserve such integrity of China as is remaining and to keep China as free a field as possible for American enterprise—China, the last remaining industrial El Dorado—is for Americans to take a big hand in developing China.

To be quite frank about it, what China needs most is money invested in China to make real the vast wealth that is now potential; and if the United States does not furnish the money, Japan will. If Japan supplies the bulk of that money which, combined with the Japanese exactions already made and in the making, slams shut the Open Door, no American need apply.

It may be interesting to recall the first and only other time when I saw the present president of China. He was vice president of China at that time, living luxuriously, though somewhat restrictedly, in a palace on an island in a lake that forms a part of the scenery of that portion of the former imperial city that has been utilized for the presidential yamen since the republic came in. This palace was used by some prince or other—there is a story about one princely Manchu who was uxoriously done to death therein in the days of the Dowager Empress, the Old Buddha—and it clusters most picturesquely with its red roofs and corridors and summer houses on the island.

Isolated and Insulated

LI YUAN-HUNG, in his capacity as vice president to the ambitious Yuan Shi Kai, had been informed that it would be far better for him if he came to Peking and occupied this vice-presidential mansion. Yuan Shi Kai, as it appeared, was very fond of the vice president, and desired him near the presidential yamen, in order that he might consult with him from time to time. Also, Yuan was very fond of his own job; and he had wide knowledge of the Chinese character. Though Yuan in no way had a suspicion that Li Yuan-hung would connive in any manner for the elimination of his superior, still, Yuan had an idea that others might connive with Li; and to that end he put Li where the presidential eye might always be upon him—on an island, you understand, in a lake that fronted on the yamen where Yuan lived and which was constantly surrounded by Yuan's soldiers—an island in a lake, and a lake surrounded by a wall. Any person desiring to see Li must climb a wall and swim to the island. Wherefore no persons saw Li of whom Yuan was not advised.

To be sure, Li was at full liberty to go and come, but he did neither. He himself had a lively appreciation of President Yuan's great concern for the comfort of the two—Yuan and Li; and Li was moved, on occasion, to expatiate thereupon.

"The president," said Li, "is a most kindly and solicitous man. He is most regardful of my comfort and welfare. Why, he even provides all my servants and attendants. His men are all about me, attentive to my every want. They walk with me constantly, and they guard me both night and day; and, lest I shall see persons who might not be of my exalted rank, each visitor is scrutinized by Yuan's secretaries, and none but those who have his sanction is allowed to come. This kindness and concern overwhelms me. Who am I, thus to be held in such keen concern by the mighty Yuan Shi Kai, the president of China?"

They allowed me to go out and see Li one day, not quite two years ago; and I found him a fat and jolly person, taking his position philosophically, which proved him to be a philosopher indeed—imagine the quality of democracy that keeps a vice president in close custody for a space of years—and having entirely conventional views on all subjects. We talked of China and the United States—a fertile topic—and passed the compliments of the time and season. He was in no position to say anything of importance; and, though he was undoubtedly extremely bored by his lot, he did not show his ennui, and we had a lively hour together.

Then came the monarchial aspirations of Yuan Shi Kai, a most remarkable phase of all the remarkable phases of the republicanization of China, of which I shall tell the story one day. And presently Yuan Shi Kai got clumsily on the throne, which he was to occupy for but eighty-three days. Even in progressive China there is no such thing as a vice emperor, and Li Yuan-hung was without a job. So Emperor Yuan the First conferred on Vice President Li the title of Prince Wu Yi, and gave him a palace elsewhere, leaving the house on the island untenanted.

Li Yuan-hung, The President of China

Prince Wu Yi, still philosophical, moved to this other palace and settled down to being a prince, having, as they say, no ambition to become president of a restored republic, or emperor of a revived monarchy. He was sick and tired of the whole business, and he liked the ease and lack of espionage that came with being a prince, without the succession, as compared to the seclusion he had observed as vice president, who was a constitutional successor.

The monarchy lasted but eighty-three days, and Yuan became president again. That automatically made Li Yuan-hung vice president again. Soon afterward Yuan died, at nine o'clock in the morning of a June day last year. At eleven o'clock that morning, there being nothing else to do, Li Yuan-hung was sworn in as president. A short time afterward he moved to the presidential yamen; and there is where I had my talk with him.

A portion of the former Forbidden City, wherein the Manchu rulers dwelt, in Peking, has been reserved for the pensioned remnants of the imperial family. The remainder of it, composed largely of the various official palaces, is used for the presidential yamen. One goes through the Gate of the Republic, over which the new five-barred flag of China floats, and finds himself at the shore of the lake in which is the island on which Li Yuan-hung passed his years of seclusion. It is a pretty lake in the summertime; but now it looks like a flat and level expanse of dirt, for the ice is covered with snow, and the snow is incredibly soiled from the dust deposited by the duststorms that make Peking so jolly in the wintertime.

Skating is all the rage in Peking this winter, and the first thought of the visitor to the presidential yamen is that the president of China might have a whale of a skating place if he so desired. Apparently he is not so inclined, for the only ice that is cleared is a path about ten feet wide running straight across to the Inner Gate. The visitor has two choices of progress: He may get into a boxlike sled, which is inclosed like a Peking cart, and be pushed across by coolies; or he may go round the edge of the lake in a ricksha. The sleds were at the other side of the lake when we went to keep our appointment, and we rode to the Inner Gate in rickshas.

Mr. Quo Tai-chi caught up with Anderson and myself—Anderson, that brilliant American who talks Chinese and thinks in Chinese, and knows the Chinese, and is known of them so intimately and appreciatively—and the three of us plugged along to the Inner Gate, where a file of the presidential bodyguard presented arms and stood rigid until we had passed inside. Quo Tai-chi is the presidential secretary—the Joseph Patrick Tumulty of China—who was educated at the University of Pennsylvania, and who is so youthful in appearance that he seems a boy. However, Quo Tai-chi is no boy. He is a Phi Beta Kappa man, was a star orator in Philadelphia, and has an American way of speaking and talking, and a good deal of an American viewpoint on things.

Two years ago, when I interviewed Yuan Shi Kai at the time the Japanese were pressing their twenty-one demands, we went first into a small room, in one of the outer buildings, that had served in the imperial days as one of the reception rooms of the Empress Dowager. This, on occasion, has been used as a reception room for the president, also, and the plan was to receive me there; but that was changed. There were shoals of black-silk-garmented Chinese messengers and others about. The head one, the chief usher, I take it, who wore a dark green uniform that looked as if it were of German design, asked for the third helping of cards. One must have plenty of cards when one goes out in China.

His Excellency at Close Range

OLD China hands have their names in Chinese, as well as in English, on their cards, and it was necessary for Anderson to write my Chinese name on mine. That formality over, we waited a few minutes and then started for the place where the president was to receive us. We walked past the lagoons where, when I was there before, the goldfish swam, and where now the dusty snow was piled, past soldiers standing on guard at every turning, until we came to the Foreign House. Sometime during the reign of the later Manchus, the Empress Dowager, or some emperor, was persuaded to build a foreign house, and some architect stuck up in the midst of that gorgeous cluster of fine, colorful, artistic Chinese buildings a perfectly typical and perfectly ugly replica of a French house, made of gray stone, and approached by a bridge along which stand, in a formidable row, twelve bronze gargoyles, six on a side, of the most hideous design I ever saw. It looked to me as if the French architect had taken his sculptural decorative designs from the top of Notre Dame. The Manchus wanted a foreign house, and they got one. It is perfectly and pretentiously and preposterously foreign in those surroundings, gray and square and unsightly.

As we went into the Foreign House we turned sharply to the right and entered a corridor, at the end of which stood a life-size crayon of the president, surrounded by a heavy frame—the president, in foreign clothes, as befitted a foreign house. The foreign clothes fitted the president about as well as the foreign house fitted its surroundings. He wore a frock coat, striped trousers, and held a silk hat gingerly in his left hand. He looked very stiff and uncomfortable in the picture; but apparently it is considered a work of art, for it has a place of honor.

We went into a big rectangular room, plastered in white, and with a red carpet. A long table, surrounded by straight backed chairs, constituted the only furniture. There was a red cloth on the table and the curtains were red. It was a bare and meager room. As I entered one door the president came out of another at the far end of the room. He walked forward to meet me, unattended. There were three in our party—Anderson, Quo Tai-chi and myself.

The last time I saw the president—when he was vice president—he was fat and smiling, and altogether comfortable in appearance. This time I noted that he had lost much of his flesh, that his face was grave, that there were lines on his forehead, and that he looked as if he wasn't so pleased over being president that he was chortling any about it. He wore the undress uniform of a field marshal in the Chinese Army, a simple khaki blouse and trousers, with no decorations or insignia of any kind save his gold shoulder straps.

Quo Tai-chi made the presentation and the president sat down in the chair at the end of the table, placing me on his right hand, his secretary next to me, and Anderson on his left. I had a good look at him.

His Excellency Li Yuan-hung is fifty-two years old, a squat, broad-shouldered, heavy man, of about five feet seven or eight. He used to be quite paunchy; but much of that paunch is gone, as was testified by the looseness of his blouse. It had fitted him when he was heavier. His hair is the intense black of the Chinese; his eyes are brown and heavy-lidded; his mustache black and sparse, but apparently conserved with solicitous care. His teeth are large and white and even, and he has a most engaging smile.

He sat stiffly erect, spoke without gesture, rapidly and in a low, soft voice.

The chief fact about His Excellency Li Yuan-hung is that he doesn't give a hoot about being president, and never has; which undoubtedly will make him a very good president. He didn't want to be vice president, either. In fact, most of the positions that have come to Li Yuan-hung have come to him against his will. They coerced him into the command of the revolutionary forces in the revolution of Wu-chang, and they forced him to take the vice presidency. Two or three times since he has been president he has had an inclination to quit, but each time has been held in place by his political advisers.

Li Yuan-hung is a good-natured, easy-going citizen; and this turmoil in which he lives in Peking, with its fanatical politics and its vast intrigue and all the unpleasant concomitants of Chinese politics, doesn't appeal to him. He likes his ease. Still he has successfully withstood various crises—one crisis bewilderingly succeeds another in Chinese politics—and probably will withstand many more. However, that isn't prophecy. It is merely speculation.

His main strength is a sort of cheerful and courageous democracy. His predecessor, and practically his jailer, Yuan Shi Kai, was in mortal terror of his life, possibly because he had killed so many men himself and knew how easily the trick of snuffing out a life in China is done. Yuan, in all the time he was president, never left the presidential yamen officially but once; and then he went to the Temple of Heaven through cleared and heavily guarded streets. During the remainder of his presidential life, and for the few days he was emperor, he stayed within doors, and had soldiers guarding every avenue of access to him.

Li has been out several times, going about in a most democratic manner. He went once to a review of the troops, taking his automobile, riding, with but a small guard, through the teeming streets of Peking; and when he reached the parade ground he took a black Mongolian pony and rode about the place quite as if he were an ordinary captain instead of the commander-in-chief and president in a country where the sublimation of politics is to gain a point by removing the human obstruction. Another time he went off by train to the graduating exercises of a military school. He has his nerve, whatever else they may say about him.

An Invitation

WE INDULGED in the usual compliments; and then, as is the formula in an interview with a Chinese high official, began to talk about relations between China and the United States—only the president talked much more to the point than the ordinary high Chinese official, whose idea is to say a few flowery nothings and drink a cup of tea with one.

"China looks to the United States," he said, "as a country coming fresh into the untrod paths of democracy must look to the greatest exemplar of democracy in the world. We consider the United States as our friend, our guide; and want the United States to be our supporting aid in our experiment in popular government. We confidently approach the United States, because the United States has proved to us that she is a real friend, not a friend seeking to convert China to her own uses. We know that the United States desires no part of China; has no covetous eye on any of our territory; does not seek to aggrandize herself at our expense. The United States has often enough proved her disinterested friendship for China; and we are grateful to the United States, appreciative, and believe in the absolute and honest and noncovetous concern your country has for mine.

"There have been many events to prove this; not the least of which, and the one we recall with profound gratitude, was the return of the Boxer indemnity, which has enabled China to send so many of her young men to your country to be educated and bring back to this country your modern ideas, which are so essential to our own progress as a democracy. Every young Chinese educated in the United States adds to our obligation to you.

The Chinese President and His General Staff

"It was the United States that enunciated the doctrine of the Open Door, by which China hopes to take, in the consensus of nations, the place her wealth of resource and her potential productivity entitle her to assume. The position of China is unique among the nations of the earth, and her peaceful needs are more pressing. We lack, in a large degree, that forward impulse which has made the United States so great a nation, because our manner of life and customs and education and thought have been along other lines for many centuries. Now that we realize our deficiencies, we also realize our necessities. What China must have, to make China what China has the potential power to be, is development of her innate productivity and development of her methods of transportation. In a word, coördinated and capitalized production and scientific and economical distribution. We need capital, not for the conduct of our governmental affairs, as is usually thought to be the case, not for administrative purposes, but for industrial development. The resources of China have not been touched as yet. The wealth of this country lies hidden in the ground. Our resources are practically untapped. Our productivity is unmeasured. Our energies are not loosed. We are tied to the past; and the only way the bonds can be cut is by the ax of capital.

The President Goes About in a Most Democratic Manner

"So, we look to the United States and say to the United States: 'Come to China, with your capital, and your men, and your energy and enterprise, and help us to take advantage of what we have. The benefit for you will be as great as the benefit for us.' We want the capital of the United States to come to China to develop our railroads, our mines, our water power, our iron and steel possibilities, our cotton, our manufactures.

"We have in China a territory as large, roughly, as the whole of the United States and Mexico; and in that country there live four hundred millions of people. And, as yet, we have less than six thousand miles of railroads. It is true that concessions for fifteen thousand additional miles have been held up by the war in Europe—French and English and Belgian and Russian and Japanese concessions—and it also is true that some enterprising Americans are about to begin the construction of some twenty-five hundred miles more; but, even so, the remaining opportunity is so vast and the possibilities of good return so great that it may well engage the attention of your financiers.

"We need iron and steel manufactures. We have the raw materials in abundance—the ore, the coal, the lime, and all the other necessities—in places where cheap transportation is available and production can be accomplished at economical cost. It has so turned out that the Hanyehping Plant is not controlled by China now; but, even if it were, there are deposits of iron ore in Kiang-su and in Anhua that rival those in richness and extent; and the development of these is awaiting the wise investment of the world. We have not the capital or the capabilities as yet. The outside world must help us develop these industries.

"A hundred million dollars put into the iron business in any of the three favorable places that exist in the provinces I have mentioned would make a China Steel Company possible that would be a formidable rival to the United States Steel Company; for production here would be cheaper than in your country.

"China has copper in abundance, and other great mineral deposits. China has other vast mineral resources. China can grow all the cotton needed to supply her cotton-clad population, and spin it, too, if the mills were here. China has agricultural possibilities that are as immense as her territory. We need capital. We ask the United States to supply that need."

The President of China at a Military Review

Capital the Best Door-Stop

THE president paused, took up his cup of tea, and drank slowly. Then he turned and faced me. He was grave and earnest.

"It must occur to any person who gives the matter thought," he said, "that the most potent guaranty of a future Open Door in China will come from the liberal investment of American capital in China. If American capital will come to China and develop China there will be no need for either the search for or the forced acceptance of other capital, and none of the obligations will be entailed on China that will go hand in hand with other capital.

"No nation in the world is so well equipped as the United States to do this work, and in no other nation is the good will, the unselfish good will, so greatly in our favor. No other nation in the world is so rich as the United States. No other nation in the world will do this work in the way we feel the United States will do it, if the United States can be brought to undertake it with no ultimate design on the sovereignty of China, and no aggrandizement in mind."

This laid the groundwork for the crux of the president's message to the United States, and gave me the basis for the interpretation that begins this article.

"If," said the president, speaking with great deliberation, "the United States desires to preserve the Open Door in China, the sure and safe and practical and profitable way to keep the door open is for the United States to invest its money in the development of China—for the United States to do that, and not for any other nation to do it."

(Concluded on Page 71)

A Story With a Happy Ending

By SINCLAIR LEWIS

ILLUSTRATED BY H. WESTON TAYLOR

MR. LEONARD PRICE was a colonel of business. Offices have grades as definite as the army—generals, who own things; colonels, who manage them; smart young lieutenants, who will be senior officers some day; and the ranks of the nameless. Price believed that all these differences were entirely due to innate ability. He liked to talk about "natural-born executives"; and he secretly—though modestly—believed that such was his caste.

But he did not rub it in. He was pleasant to work for. He was a good-looking, ruddy professional bachelor, with a gray mustache. He was the general manager of the Motor Accessories Department of the Magnus Machining and Electric Company, of New York; and under him the department had grown from a machine shop located in a tin shed and manufacturing a few shock absorbers, to the most important part of the Magnus concern. Price admitted that most of this growth had been due to the boom in automobiles; but he did congratulate himself that much of it was the result of his ability as chief.

He had been his own sales manager at first—yes, and salesman and accountant. He had taken the first shock absorbers out on the road and sold two hundred of them to a man in overalls who was building "horseless carriages" that looked like startled pullets and ran like perambulators. Nowadays he was a colonel, and had a crack regiment.

Just when the regiment was maneuvering at its best he had to stop and fill water bottles and polish buttons for a cub subaltern, who was not only ignorant of drill but was also—a woman!

II

MAGNUS came to him—rabbity, capable Old Magnus, the president—and implored:

"Mr. Price, I have a great favor to ask."

Magnus tapped on the tablet of Price's desk and looked humble, so that Price knew he was about to make an unusually unfair demand.

"My wife's second cousin," said Magnus, "has just lost her husband. She is a bright little woman, bright as a dollar, and the wife wants us to give her a job."

"She had any business training?" asked Price.

"Well, no—uh—but she's very capable."

"Um! You see, Mr. Magnus, way I feel is, office is no place for women. Trouble with them is, they can't create. Just imitative. And they're natural-born intriguers and flirts. Instead of taking a job and carrying it, like a man, they try to shift it onto some goat of a man. Office is no place for any woman above the grade of stenographer; and, honestly, even the female stenogs. are bad enough—shystering and making the same mistake over and over ——"

"Yes, yes," purred Magnus; "of course, as a crusty old bachelor—hee! hee!—you have to knock women. But—uh—well, Mrs. Magnus has wished this lady onto us—Mrs. Arroford, her name is, wife's second cousin—and I'm afraid we'll have to take care of her till—hee! hee!—some other man marries her. She's a pretty, plump little widdy, by jinks, and young; and ——"

"Couldn't you try her out in your own department?"

"Mrs. Magnus thought that castings and drills would be kind of heavy wares for the little woman to handle; and Mrs. Magnus said she was sure you would be kind to her ——"

"Oh; all right! And you say she's young and pretty? If she were only an old hex!"

Before Mrs. Arroford presented herself at his office Price worked himself up to a beautiful frenzy about her. He received sympathy from his sales manager at lunch, and both of them snortled about bosses' wives' second cousins and "pull." They rather disregarded the fact that about forty per cent of people get their jobs through pull, though afterward most of them hold the jobs only by real work; in fact, they weren't philosophical at all, but glared into their mixed grills and consigned women to different places—none of these places in offices.

In a few days Mrs. Arroford's card was sent in to Price—an engraved card, in delicate script.

She was a gray squirrel of a young woman, with black interested eyes, with furs, and a charming roundness. Her hat and boots and gloves were expensively smart; her cheeks were flushed; she bounced slightly in the dull office chair—and she didn't know a single solitary thing of any value to the Motor Accessories Department. "I have never been trained in business," she said; "but I was quite successful in managing a church fair in Mt. Vernon."

Price groaned.

"How old are you?"

"Twenty-nine."

"Do you want a real job or do you want a way to pass the time?"

"I have to support myself—or I shall have to when the insurance money is gone."

She was quiet and simple about it. She didn't shed tears or act as though she went the rounds being "brave about her troubles."

"Will you do what I tell you to?"

"Oh, yes!"

"Um! Well, I suppose for a while I can keep you halfway busy correcting our list of supplies. You compare the proofs with the annotated typewritten schedules. But, you know, I'll scalp you if you let a single error slip through!"

He smiled.

He tried to make it a chill November smile, but he couldn't feel very bleak, with her so soft and eager. And she replied, with the earnestness of a good child:

"Oh, yes; please do."

"Meantime I want you to study stenography and typewriting as though you were an ambitious cash girl. I want you to learn it, and learn it right—study all evening and every Sunday—either take classes or get private instruction, or buy your books and grind by yourself. There isn't—of course you understand I'm just speaking generally—there isn't much place for women in business, even with all this suffrage and Lord knows what folderols; and it is up to a woman who wants a career to learn to serve in every possible way."

"Oh, yes; I know. I can see that if I'm ever going to be an executive I must first ——"

"A what? Well, I'm afraid we'll have to wait a while to see about that. Executives are—well, born."

"Say, it Always Strikes Me as Funny, the Way You Women That Think You're Business Women are Afraid to Go to Dinner and a Show, Like I Asked You To"

"Yes," she said, so obediently that it sounded like "Oh, yes, sir."

"Huh!" considered Price when she had gone. "Not a bad little woman at all! Seems willing and well bred. But women in an office! Stuff and nonsense! Here I'll give her the benefits of a lifetime's experience, and she'll say 'Yes!' And then she'll get married again just as she begins to be useful. Well, we'll watch the good ship Flivver, with its lady pilot, wreck itself on the rocks of good intentions; in fact, I think I'll take Billy out and make him buy me a drink."

III

MRS. ARROFORD, of Mt. Vernon, undoubtedly had good intentions; but they did not seem to be rocks in her way. She must have studied stenography during all of her spare time, for after two months, when Price's secretary became ill, she offered to take his dictation—and took it. She spelled accessories with an adequate number of c's and s's, and she didn't fidget when he was pawing the air for words; and she found the addresses of motor manufacturers in the files without bothering him about them. So she became his secretary permanently.

He discovered that she had moved into a furnished room in town, and that she was taking evening courses in applied electricity, metal forging, accountancy and cost-finding. And every Saturday afternoon she spent in the Magnus shops, till she knew almost as much about the actual manufacture of Magnus accessories as did Price himself. She became paler and less round of cheek, and her voice was more nervous; but when Price told her that she was doing excellent work and ought to take more time to play, she said that, in moving into town, she had deliberately got out of touch with all the neighborhood friends of her Mt. Vernon days. For relaxation, she said, she went to the Y. W. C. A. for a swim.

Ten years ago, this was; and even to-day women are accidents in business, except for certain classes—stenographers, store buyers, nurses, teachers. Mrs. Arroford had no standard, as has the young male, who can in half a city block find a dozen business men after whom he can, wisely or foolishly, model himself. She was enormously alone. And before she could work at all she had to learn what work itself was, for she had been brought up to regard work as the elegant supervision of a Lithuanian maid.

Picture her walking home after two hours of work at a forge, in the evening, less wearied by the toil than by shrinking from the noisy young men who had been working beside her and dutifully seeking to discover whether she would let them make love to her; walking home tired in arms and brain, yet plowing sturdily along, keeping her eyes away from shop windows, so that she might not be interrupted in her reflection upon the modifications that might some day be necessary in the Magnus carburetor for the use of distillate.

At a time when Price had never thought of distillate as a substitute for gasoline she had read about it in some dusty chemical journal or other, and had talked about its possible use to him—and he pooh-poohed her; told her:

"You mustn't pay any attention to these freak enthusiasms."

She was walking home while Mr. Price was playing a last game of bezique at the club and fondly looking forward to bed.

She neither went out to lunch, nor did she eat her apple and sandwich with the gossiping, man-discussing stenographers. She lunched alone, with a newspaper propped up behind the bag that held her lunch, on the tablet of her desk; then she walked for a quarter of an hour and got acquainted with motor salesmen in a sexless, enthusiastic, friendly way that made them respect her.

There was a danger in this severe, clean application of hers, but it was exactly the opposite danger of what Price had feared; she was not disrupting the office by kittenish flirtations, but, rather, she was in peril of losing all her soft, adorable kitten quality; of becoming hard and driving and priggish; of hating too much the grace and affection to which she had been reared.

Two little incidents marked her climb to a control of the situation.

There was a certain Mac, a slender, impudent young man with a tilted Alpine hat and a cocked cigar, who used to come in to see Price. He would lean against railings and make love to the

office girls. He said to Mrs. Arroford, after repeated attempts to impress his Apollolike charm on her:

"Say, little girl, it always strikes me as funny, the way you women that think you're business women are afraid to go to dinner and a show, like I asked you to. You think that's being strong-minded. Why, you're simply afraid! Can't trust yourselves! Now a business man knows that if he can keep on the job only by showing he's so weak that he's scared ——"

Mrs. Arroford replied in a high, clear voice that reached the telephone girl: "Why, Mr. MacLafferty, I quite agree with you. That isn't why I refuse your invitations. I'd be delighted to play with anybody I liked. But I don't like you. You bore me. Now go make love to somebody else till Mr. Price can see you."

Mac heard a good deal of that incident.

The other indication of Mrs. Arroford's progress was her illegal and inexcusable taking charge of the entire department for a week.

Price had a kind of an assistant general manager, a nice, strong young man who was about as original as a train announcer; and with this lamb and the sales manager he was motoring on the Boston Post Road, trying a new-model spark plug—and some new-model gin drinks—when a joy rider smashed into them; and all the visible heads of the Motor Accessories Department were taken home to their several beds. None of them was seriously injured, but they were away for a week, and just at this time the assistant sales manager came to Mrs. Arroford for an O. K. on a sale of ten thousand of the new spark plugs.

She refused. Nor would she call up Price; he had sent in word that he was not to be bothered. She had understood Price to say that he wanted to hold up these plugs—not let them out on the market for two months. The assistant sales manager snarled at her that he would make the sale, anyway; he had had no such orders. Mrs. Arroford went to Magnus and demanded—she did not ask, but, with her eyes vehement, like a cornered squirrel, she absolutely demanded—that Magnus order the sale held up.

"But who's running the department, Cousin Nancy?" inquired Magnus.

"I am! I know more about it than anybody else!"

"Well! . . . Well, I guess you are, then."

When Price came back he praised her decision and raised her salary.

After this triumph Mrs. Arroford settled back into obscurity—apparently. Really, she had become an unofficial assistant manager of the department. There are many such unofficial officials in the bureaus of our business government: men who have risen from office boy or packer, and still retain a shabby shyness, but know so much more about the business than most of the decorative heads that they run the concern. But they get neither kudos nor cash. They are not executives; they merely execute.

So was it with Mrs. Arroford. To the eye she was a pretty woman, tired and subdued. But she was left to handle important visitors, and she did not falter: "I don't know—I'll have to ask Mr. Price." She did know!

Unconsciously, still believing that she was only a feeble feminine makeshift for an aide, Price had come to depend on her as his eyes and ears and memory.

He had been kind to her. He had not nagged; he had taken her version of events; he had not slighted her in the presence of big outside visitors; he had guided her in her study of mechanics and office procedure. And he had never tried to hold her hand! He was still rather paternal and quizzical when she was excited over a new idea; but he was courteous always.

In return, she worshiped him—no, she did more than that; she really liked to take his dictation! She wasn't crotchety when he wanted her to stay after hours, and she personally mailed his late letters. When he slacked she covered up his errors and put them down in her mind to the strain of his position. Even when she had to keep after him to get him to dictate a letter that should have been sent out two days before, it never occurred to her that she was anything other than the colonel's striker.

So she followed him zealously into the battles of the second great period of the motor war: the time when people ceased to regard the motor car as a luxury or an experiment, and saw it as a daily necessity.

IV

WHEN the discerning historian of 3000 A. D. writes of this century he will give less space to the Great European War than to the development of gas motors. Already, incredibly, the motor vehicle has changed the face of the earth. It sends the most stodgy city dweller into places where he can find wisdom and fresh air; it has solved that ancient problem of the desolation of the farm. It has transformed the ways of pleasure—it has even changed the life-old ways of love-making! Though poets still call our attention to roses, a poetry more magnificent is being sung about us by popping—or sliding—valves.

A Yacht Was Fleeing Up the Hudson, its Searchlight Shifting Over the Snowy Heights

Something of this romantic miracle was realized in the humdrum offices of the Magnus Machining Company. Till now people had—most of them—taken motor cars as they came. You bought a car, and it was hung all over with accessories; and you never thought of changing it. You didn't know how. But now ordinary motorists began to be discriminating about spark plugs, radiators, shock absorbers, speedometers, oil gauges; and to add them or change them to suit themselves. Magnus and Price, between them—possibly with some slight assistance from certain workmen and people like Mrs. Arroford—made good accessories, and got them out on time. So their business boomed enormously.

Price rose from colonel to brigadier general of business; his salary rose from nine thousand to fifteen thousand—almost painlessly—and promised to go higher. He was constantly in conference with the sales manager; jobbers and special dealers in accessories had come into existence, and their accounts were as important as those of the smaller manufacturers. Price was growing.

But it seems probable to the historian that he wasn't growing in the right direction. He was too contemptuous of detail.

You hear of executives who are geniuses at delegating details; who keep themselves for the big decisions. But every decision is a synthesis of many details, and there is yet to be found even an executive who can walk up a long, a very long flight of stairs without touching some of the steps.

Price was, for example, bored by the question of whether the new Macklin & Macklin Company should be allowed to open an account. He was rather tart with the accountant who consulted him on the question at a time when he was planning a campaign to get the Viviere people to adopt the Magnus carburetor as a stock feature. Only—the Macklin account was opened, and it netted Magnus a dead loss of seven thousand dollars before it was caught; while the Viviere negotiations gave one revolution, sputtered, and went dead. . . . An executive isn't one who neglects details. He is a man who knows which details are significant. And usually Price did know; but ——

Perhaps he was getting a little tired of year on year of grind. While Mrs. Arroford every day was more exultant in her power to steer the job.

This growing tiredness on the part of Price was indicated by his increasing love of expansive ease; of all the things that go with a well-to-do middle-aged bachelorhood—long lunches, with long cigars; hotel bars, with leather chairs and carved-oak grills; club card rooms; taxis; recognition by head waiters. But he really did know motor accessories. And perhaps his very habit of being about with costly, large-waistcoated, throaty-voiced gentlemen helped him; for at a dinner he met and unconsciously made an impression upon Vorhees, the gun manufacturer, and so came to be chosen for the Big Job.

Vorhees offered him the general managership of the new Pistoflash Company, with the entire Vorhees Rifle Corporation behind it; offered him a free rein in the business, a salary of twenty thousand a year on a two-year contract, and a ten per cent share of stock after the two years if he made good.

The Pistoflash was a combination of revolver and flashlight. It was, Vorhees asserted, the one perfect weapon for the touring motorist—Price's special quarry—as well as for policemen and alarmed householders.

"I think," said Vorhees, "you ought to be able to sell one to practically every motorist in the country; and we use a special long-life battery, and get follow-up business on that."

"You're on!" said Price.

To work for his own share in the company; to work for himself—not just for rabbity old Magnus! He said good-by to the Magnus offices somewhat grandiloquently; much like a popular preacher "called to a wider field of usefulness."

He was buoyant with his friend, Billy Turner, the sales manager, who was to be his successor as general manager. He was polite but not too regretful with Magnus. He was noble-minded with the stenographers, the foremen. Then, in his office, with his personal letters cleared out of his desk, and his private fountain pen recovered from behind the files, where it had been marooned and practically useless these three months, and with his deerstalker hat and bachelor's tan overcoat and new yellow chamois gloves ready to put on, he started to be advisory and kindly with Mrs. Arroford.

Now that he was no longer to have her deft care, he realized how dear to him was the daily office companionship of this woman. She stood before him, eyes downcast, hands nervously straightening a wire basket on his desk. Her foreshortened face was pale but clear; her lips were the fresh lips of a girl. He was saying:

"Well, I'll be leaving you in good hands, Mrs. Arroford. Billy Turner will make a good chief. No reason why you shouldn't rise above this secretaryship. I don't believe that offices are just the place for women; but there must

be some exceptions, of course, and I don't see why you shouldn't become a sort of assistant manager some day. Got lots of faith in you, child. The one thing you want to watch out for is getting too wildly enthusiastic over novelties—new customers and patents, and so on. Thing's got to have a good, sound, practical basis, first of all. Well——"

"I'm sorry you're going," she said dully.

She was leaning against the desk. Her hand was trembling a little; the wire basket she was fingering clattered faintly on the oak top.

Then it was that he saw her not just as a tool, a rather intelligent notebook or pencil, but as a woman, with dear eyes and a smile that had made of the office a place of contented work. He visualized her woman ways; knew that he would miss her trick of sitting, waiting with brooding eyes and with cheek resting on inward-arched fingers, when they were interrupted during dictation.

He leaped up.

"You look tired. Sit down—please do! I'm a brute to let you go on standing there. Didn't mean to be rude. Got so used to depending on you as an aide that I suppose I forgot you're a mighty fine girl too."

"No; I'm not tired," she sighed. "Good-by!"

She turned resolutely away and opened the door of his office. He might not see her again; not ever see that sturdy retreating back, at which he had looked a thousand times as she had gone off with his dictation, and which had, therefore, meant to him a thankfulness that some beastly pile of work was done and now in her competent hands.

"Don't—don't go yet!" he begged.

She looked back; he was startled by the glow in her eyes, then equally startled by the suddenness with which a mask of office impersonality covered the glow, so that she seemed merely to be awaiting orders.

"Will you miss me?" he said.

He was essentially a lonely man, who had happened never to fall very much in love—just as he had happened to become an executive. He was reminded now that there was such a thing as love, and he was challenging the evanescent glow which had flashed at him from her face. Not that glow but the office mask answered him:

"Yes, I am sure we'll all miss you. Mr. Giddings and I were saying, just now, that there could never be such esprit de corps as ——"

"Oh, hang the corps! Will you miss me?"

"Why"—as if in surprise at this breach of office etiquette—"I shall, of course. I've got so used to your dictation."

"I suppose this serves me right for making you a machine. Look! Come out to tea with me. Now!"

He felt a stirring in him, an eagerness to know what that glow meant, a discovery that he had insensibly grown very fond of her; and he was disappointed when she said unenthusiastically:

"Very well; if you wish."

They didn't talk much on the street; but he planned, once they should be snugly seated, to throw aside all the slight severity of being her boss and make her exult with him in his discovery that they were friends. But when they were in the smart hotel tea room he was unable to find anything to say to her. The best he could do in the way of affectionate intimacy was to stammer: "Well—uh—well, we've had a good deal of fun working together."

"Yes," she said more prosily than ever.

There was between them, not glow and discovery but the peculiarly solid phantom of a peculiarly solid oak desk, and three years of such amorous murmurs as:

"Say, Mis' Arroford, could you get out a letter P. D. Q.?"

They talked—now when he wanted to make a touching farewell—they talked of the appearance of the brass name plate on the new carburetor! He saw her anew as a woman, an attractive woman. He tried to drop notes of tenderness into the conversation. But she went on discussing brass stamping.

She looked at her watch, which had been a timepiece to him before, but was now a slender bracelet on a sentimentally white round wrist, and exclaimed:

"Heavens! It's five o'clock. And I have two hours' more work. Must have your records ready for the new chief."

"Wouldn't you like to consider coming with me to the Pistoflash Company? I need you for my secretary there."

"No—you have been good to me, but I've identified myself with auto accessories so completely now that I can't turn to anything else. I've—I'm married to them. . . . I must hurry now."

He had no excuse for returning to the office with her. He had done complete justice to a Washingtonian last farewell to his troops. So he put her on a bus, and felt that he had lost the chance to acquire something fine and good. He walked slowly to his club.

He called up the Magnus office and suggested to his successor, the former sales manager, that he come down to the club for a last drink and talk.

The purpose of this talk—and drink—wasn't to give his friend the benefit of his wisdom. It was to insert casually the hint that though, of course, they both knew that women were out of place in business, yet Mrs. Arroford was the best man in the shop, and it would be for the good of the concern to advance her beyond a secretaryship.

"Let's see," Price craftily mused: "you're raising your old assistant to sales manager and you haven't chosen his successor. This is butting in—just a suggestion; but why don't you just try out Mrs. Arroford as assistant sales manager? Send her out on the road for a while, and then try her? I've watched her for three years, and I'll bet a hat she knows more about the stock and the quirks of a lot of the trade than either you or me, Billy. She can handle the crankiest customer ——"

"By golly, that's a good idea!" said Price's successor. "I'll try her out. Though, of course, a woman ——"

"Oh, of course you couldn't expect any woman ordinarily to stand the hard knocks like you and me, Billy; but still ——"

V

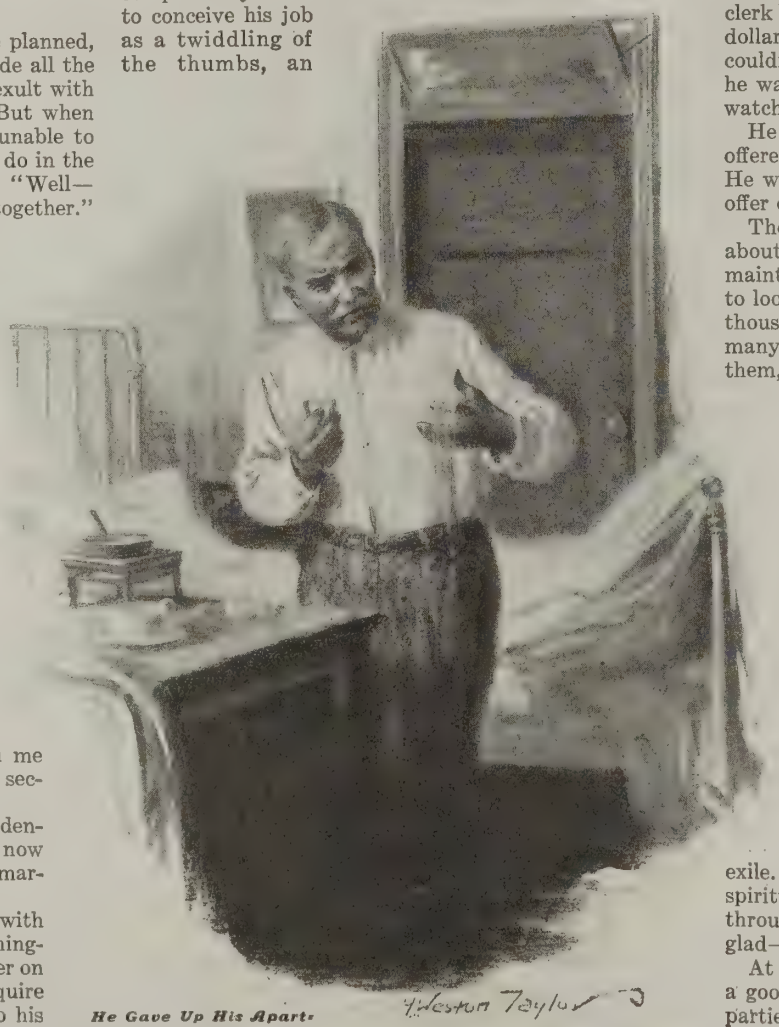
IF PRICE could have gone to the Pistoflash Company as a subordinate, could have worked slowly into the gun business, he might have learned something about it; but he arrived with a fanfare of trumpets, as the big executive who already knew all about executing—executing almost anything.

They had provided an obliging young man to insulate him from anybody who wanted to annoy him with details. He didn't need to see a single employee except his secretary, the factory superintendent, the purchasing agent and the advertising man; and as for the powers above him, he was responsible to no one but the board of directors. Officially Vorhees, the majority stockholder, was president of the company; but he interfered as little with the actual workings as though he was only chairman of the board.

With such a royal position ready made, Price could not help sliding into a notion that he was rather above the average run of business men. He was the executive; whatever he did, that must be right. His decisions were papal bulls.

They all encouraged him in that belief. He had come to them as the expert, the man who was to make Pistoflash sell. It wasn't his fault entirely—he really was a pleasant chap and popular at the club—if he felt that it wasn't necessary for him to study things minutely. He kept himself for the big decisions.

As he didn't know much about the business, those big decisions didn't consume any too much of his time. He complacently came to conceive his job as a twiddling of the thumbs, an agreeable siesta in his enormous chair, and frequent absences from the office during work hours, while the anxious young men of the company wrote the advertisements or tried to persuade the jobbers to take large consignments of Pistoflashes.



He Gave Up His Apartment, Took a Two-Room Suite, and Cooked His Own Breakfasts

It was easy; and Vorhees said nothing—except that at the end of the first year he murmured:

"Price, after your experience with auto accessories, I'd thought you'd make a more direct appeal to individual motorists—good way to get the Pistoflash introduced. Seems to me you let the jobbers do too much of your pushing. Fish for the direct consumers. You ought to know them, if anybody does. The people who buy cars and speedometers and cameras and phonographs, they're the ones that can afford to buy Pistoflashes. Spend whatever is necessary in national advertising."

Price was rather jarred by the criticism and tried to profit by it. He turned his publicity department upside down that second year and made a real advertising campaign—well, fairly real, but not quite alive and breathing. He did not follow it up by getting at the small local dealers, and by this time the oversolicited jobbers were bored by Pistoflash.

His first year had resulted in a loss to the company; the second year increased that loss.

He began to realize that he was up against it for the first time since he had been a cub salesman; up against the reality of struggle. But he was unable to shake off the hypnotic spell of sloth into which he had drifted. There was no one to stir him. He remembered how Mrs. Arroford, as his secretary, had always roused him to activity. Even when he had not been ashamed to be indolent before himself, he had been ashamed to be so before her trusting eyes.

He wanted to see her—have her inspiration. He asked his successor at Magnus' about her and found that she had made good as assistant sales manager; that she was in line for sales manager, and was none the less valuable because, as a woman, she was a novelty. He asked for her home phone number; rang her up once at home and once at the Magnus office, planning to call. She was away both times.

He gave her up—gave himself up to the despair of mental beach combing.

His peril was increased by the expensiveness of his establishment and habits. He had a large apartment, a Jap, dinner parties, two cars, occasional vintage champagne. He had saved out of his considerable salary only seven thousand dollars at the end of that second year, when Vorhees and the board of directors called him in and fired him as uninterestedly as though he were an impudent office boy.

VI

HE HAD, for the first time in twenty years, to hunt a new position like a young clerk, not like an executive for whose services firms contested; in fact, the job-hunting clerk had the better of it, for Price was a twenty-thousand-dollar man now and he couldn't take a position at less; he couldn't even visibly economize without admitting that he was a failure, on the downslope. So many eyes were watching him ——

He told himself that he wouldn't take the first thing that offered; he would wait and choose. He waited, all right! He waited four months; and he did not receive a single offer of any kind from any firm.

They were bitter months. At first, he enjoyed sitting about the club all day. Vorhees had permitted him to maintain the fiction that he had "resigned from Pistoflash to look after interests of his own." Inasmuch as twenty-thousand-dollar men are never fired, but always "resign," many fellows at the club were a little cynical; most of them, however, in view of his unreduced expenditures and his ruddy blandness, believed the jolly tale and envied him his armchair leisure. But behind his well-trained face muscles he wasn't comfortable. He worried. He kept making estimates as to how long he could hold out at this rate of living.

He became bored by idleness. What had been a refuge from business was infernally dull as a regular abiding place. To drift all day from library to grill to card room, and then to go out for a poky walk through undiversified streets, or even to sneak into a movie—that existence was more arduous than the stress of anxiety during the most critical days of Magnus Accessories.

Price began to meditate about himself. He remembered his business career as a series of half-done tasks, half-seized opportunities, half-understood purposes, half-lying self-satisfaction. He felt that he had been a plain shyster at the Pistoflash Company. He longed for another chance to make good; less and less he saw himself as a Napoleon in exile. But unfortunately no one else could see this real spiritual change, and a bad reputation of him had crept through the circle of automobile men who might have been glad—once—to give him the chance.

At the end of four months, during which he had used up a good deal of his seven thousand dollars in small smart parties and a general attempt to appear more prosperous

(Continued on Page 101)

Glenmere White Monarch and the Gas-House Pup

By R. G. Kirk

ILLUSTRATED BY HARVEY DUNN

More Than a Thousand Men Sat, Whispering, Waiting in the Shadow Back of the Low Fence

MC DONALD'S Grip and Mr. Slugs O'Boyle had just rounded the northeast corner of Madison Avenue and Twenty-sixth Street when the White Monarch's limousine drew up to the curb; and, simultaneously with the opening of the door of the car, the leash in Mr. O'Boyle's huge fist snapped rigid. And the White Monarch of Glenmere, stepping lazily down from his car, suddenly turned solid in his tracks.

Miss Audrey deHavin screamed and caught her skirts up about her so hastily and high that approximately ten dollars' worth of golden silk hosiery flashed into the view of an appreciative metropolis.

Mr. Forsythe Wentworth deHavin, who was handing her out of the Monarch's car, called out a command in a voice of mezzo-tenor sternness.

"I say, fellow," he said loftily, "hold more tightly to your leash there! You'll have your beastly cur upon the Monarch in a moment."

Mr. A. Beckwith deHavin, III, however, dashed out of the auto, past his expostulating brother and sister, and did something. He snatched up the White Monarch of Glenmere just as Mr. O'Boyle, with a sneer on his thin lips, allowed the Gas-House Pup to jerk the leather out of his hand. But, instead of meeting in the snowy coat of the Monarch, the teeth of the leaping dog clicked in the air. A quick twist of the lithe waist of the third Beckwith deHavin had swung his burden back of him, and the hurtling brindle-and-white flash carried past, right into the Monarch's car through the open door, which was slammed quickly shut, leaving the Grip alone, confounded, and perhaps a little frightened in strange quarters, somewhat more luxurious than his box of straw in the Interborough Gas Company's stables.

"'Beastly cur,' huh?" Mr. Slugs O'Boyle was snarling into the faces of Miss Audrey and Mr. Forsythe deHavin, as Mr. A. Beckwith replaced the squirming Monarch on the sidewalk. "Fat chance for your white snob to get a champeenship in there to-day if I had only turned the 'beastly cur' loose to pasture on him a second sooner. His champeenship!" And his mouth went wry with scorn. "Of what? Of a thousand stalls of milk-fed pussy-hounds. Where a pit bull, such as is all dog, ain't even allowed to bench!

"B'Chees, I believe the bunch of you stuffed shirts is afraid to let your candy pups go up agin a honest pit terry, even in the show ring, let alone the pit, for fear the judge would get his eye full wanst of a honest-to-God dog!

"'Beastly cur,' huh?" he repeated, and his lips pulled away from some broken teeth. "Wot's his name? Champeen Pure White Percy'd be my guess. There's just wan place where champeens is made—the pit! And him! In the pit!"

And Mr. Slugs O'Boyle, in his contempt, puckered up his mouth and thrust out his chin toward the spot where the White Monarch of Glenmere was sniffing very doggily at the lower crack of his car door, and looking back questioningly over his shoulder at A. Beckwith deHavin, with that certain uptilt of chin and backroll of eyes which have been patented for bulldoggy use the wide world over.

An ugly stain splashed out on the Monarch's perfectly groomed coat. Upon which Miss Audrey deHavin screamed again, horrified; and it was she, this time, who caught up the heavy animal, careless of the moist smear of my Lady Nicotine against the yellow silk of her sport coat.

Mr. Forsythe Wentworth deHavin, true to form, also did something useless.

"I owe your ugly brute an apology, my dear but filthy mucker," said this narrow-chested gentleman. "I should have called the animal on the other end of your dog's leash a beastly cur."

And he raised his light walking stick backhanded over his shoulder.

Mr. Slugs O'Boyle grinned crooked amusement. He laid the back of his left hand along his right cheek, hunched his broad back, lowered his chin on his chest, and drew back his right arm a trifle. The switching cane would have found only the button of his tight-pulled cap uncovered; and the "counter" trembling in that right arm would have laid Mr. Forsythe Wentworth deHavin on the social shelf for as many weeks as it would have taken his dentist to make up the necessary bridges.

But A. B. deHavin, III, tapped his knuckles briskly on his brother's soft biceps, and the cane fell to the sidewalk.

"You were about to say, when you accidentally spat on my dog ——" inquired the third A. Beckwith of Mr. O'Boyle.

"I was sayin,' when I spit on your dog ——" began Mr. O'Boyle, emphasizing the omission.

"I'm sure you'll pardon my interruption," said Mr. deHavin with utmost suavity; "but you were saying, when you accidentally spat on my dog ——" And he reached back into the tail of his coat with a very careless but deliberate gesture.

Mr. O'Boyle had looked often enough into the eyes of gentlemen in the other corner of the squared circle to be a fair judge of what he saw there. But he looked now into the eyes of the best poker player at the Glenmere Hunt Club—which, as you may be aware, is not an inconsiderable distinction—and he could learn absolutely nothing in their pale gray depths about the deliberate hand menacing under those immaculate coattails. It was daylight in the very heart of New York; so, surely —— But the eyes were hard—very hard.

"When I 'accidentally' spit on your dog," repeated Mr. Slugs O'Boyle, putting a contemptuous accent on the word, but using it, nevertheless, "I was sayin' that any champeenship he ever got would last him about three minutes in the pit with the best dog that ever got inside of that gas buggy there."

Mr. A. Beckwith deHavin, III, brought from back of him the threatening handkerchief and flicked various imaginary dog hairs from his coat. Mr. O'Boyle went raw at the thought of what a hand had bluffed him down; and rawer still when, without another word, or so much as another glance, all three aristocratic backs were turned aggravatingly upon him as Mr. deHavin, III, piloted his brother and sister toward one of the Twenty-sixth Street entrances to the Garden.

Going up the steps, Miss Audrey repeated a charming golden display. A door swung wide. Out into the noisy city came a chorus that jerked forward the delicate rose ears of the White Monarch of Glenmere and made him lose all interest in his limousine and what his limousine contained. But the sweet resounding din from a thousand show benches warmed no cockles in the heart of Mr. Slugs O'Boyle. He merely made his final insults more contemptible by calling them to the bulldog instead of to his escort.

"And to get your lickin' wouldn't be so bad, you big white mut!" he said. "The best of dogs and men that ever fights gets licked. But you wouldn't have the guts to lose right."

In another moment the door would close on those three intolerable backs. Mr. O'Boyle raised his voice to a shout:

"There never was blue bloods yet, if you put the gaff into 'em, that wouldn't show a damn sight more yellow up their backs than up their legs."

Mr. A. Beckwith deHavin, III, whirled instantly on his heel, his face as purple as his sister's. He stepped swiftly down to the pavement and flashed a card out of his vest pocket, extending it between two fingers.

"Communicate with me, please," he said very quietly, "whenever it suits you to have your dog try to prove that what you please to term a blue blood can't lose right." And then he added just as evenly, with never a rise in his tone: "And count on this, please: that if your dog has any convincing arguments I shall be satisfied to let the matter stand as demonstrated; but if not, you will either offer decent apology for your indecent insults or I shall feel obliged to further disprove your theory by personally batting the few teeth the other fellow left for me right down your filthy throat!"

Andrews, the chauffeur, unlatched the door of the deHavin car, and McDonald's Grip, still bewildered by his sudden and luxurious imprisonment, nosed Mr. O'Boyle's leg, broke that gentleman's astounded stare toward a closed entrance of the Garden, and proceeded with him out Twenty-sixth Street as far as Lexington Avenue before his trainer realized that the fiercest pit terrier in America was traveling New York's streets with a trailing leash.

Glenmere White Monarch proceeded to his bench, pawed his way clumsily onto it, received a touch of soapy cloth, towel and talcum on a stained spot over his shoulder, shook an ingratiating paw stiff-leggedly with as many visitors as knew how different was his disposition from his style of beauty, and finally proceeded to the winners' ring, where, scoring over the old campaigner, Champion Forrest Hills Kennels Penfold Cavalier, in sourness of expression only, he took, nevertheless, the blue, and the five points he needed to give him the coveted prefix, Ch.

Mr. Patrick O'Boyle was, both naturally and by consistent effort, as different from his brother Terrance, better known to fame as Slugs, as he could possibly be.

Mr. Terrance O'Boyle's forehead was low. His hair was bristly black. His eyes were close. His lips were thin. His body was bovine, his nose broken, and his ears cauliflower.

Mr. Patrick O'Boyle had a fair, broad brow, crowned thickly with a curly dark-red thatch. His eyes were set out on the edges of his face. His mouth smiled steadily such a Celtic breadth that it threatened the location of his ears. And these ears had been, up to this time, too cleverly protected to allow any five-ounce glove, full of knuckles, to break their gristle. His nose, too, had shared this same impenetrable defense, for it still uptilted in undamaged impertinence above the long upper lip. And as for muscular action, the movements of Brother Pat partook of none of the bull-like strength of Brother Terrance. Let it rather be said in description that a young tiger, by minding his step, could no doubt have moved his body every bit as easily and as wickedly swift as could KO Pat O'Boyle.

Also, Patrick's body was scrupulously clean from heel to head outside, and from skin to skin inside—muscle, tendon, blood, nerve, bone and marrow—and, therefore, matched his immortal soul. The soul of the other Brother O'Boyle was also a fit tenant for its house; which need not

necessarily be construed as a compliment, for Brother Terrance had no special enthusiasm for Saturday evening, on which day he followed the time-honored custom of performing certain rites deemed necessary only in connection with donning Sunday attire. And as for internal cleanliness, he had ceased even his ill-spirited training after the old third-rater trial-horse heavy, Jim Flint, had bounced a haymaker off the point of his jaw.

As to the point of material prosperity, Mr. Terrance was not what might be termed an object of envy, for his present position in the world of affairs was that of trainer of Shamus McDonald's stable of fighting dogs; while at the moment of our introduction to Brother KO Pat we find him surrounded by a circle of reporters, backers, trainers, managers, gamblers, true sportsmen followers of the Game, and friends; among whom could be numbered, as belonging to the last two classes, a tall, dapper, well-knit young fellow, caned and monocled to extinction, pale yellow of hair and tintless of skin, but with light eyes whose gray sparkle belied the general pallor of his coloring; which same young swell answered in this company to the seemingly appropriate name of Becky.

"Now throw in the high, the bunch of you," grinned Pat O'Boyle after a quarter hour of the usual after-training chatter; "for I'll not be answerin' foolish question number 31569 to-day, and I'll be makin' no statements as to how I'm going to lay Stinger Wilson away before the sixth. You reportin' lads can easy enough write out a column or two of that con without any help from me." And he unceremoniously shooed out of his training quarters all but his very closest friend, who proved to be the pale-haired Becky mentioned above.

"Do I know anything about McDonald's Grip?" repeated Mr. O'Boyle. "Do I know the Gas-House Pup? You don't happen to know the maiden name of Mrs. Patrick O'Boyle, I guess. Well, I'll be tellin' it to you when I say that Old Shamus McDonald is the whitest, squarest old sport of a daddy-in-law that any lad ever crowed about. And McDonald's Grip is as white and square as his master, and can go twice as far in a ruction; which is such high praise as could only be said of the best pit terrier in the world—which he is. And more than that, for that doggie has brought out the only love that ever showed through the black heart of his trainer, which same is my own blackguard brother, Terry. Why do you ask?"

Mr. O'Boyle Looked Into the Eyes of the Best Poker Player at the Glenmere Hunt Club and He Could Learn Nothing in Their Pale Gray Depths

"Only because a short, broad, red-faced, white-haired gentleman, who, no doubt, is this same daddy-in-law, came shouldering into our drawing-room last evening, a-bouncing our protesting Jephcott backward off his chest at every step, and presented me with one of my own cards, and wanted to know, first, if I was the son of my dad; and, second, if he might be allowed the courtesy of looking over the White Monarch; and, third, when it would suit me to match the dogs."

"Match what dogs?" growled Mr. O'Boyle skeptically.

"Grip and the Monarch."

Patrick O'Boyle let out a whoop that would have graced the liveliest ruction at an ancient Donegal Fair.

"For the worship of my good name saint!" he yelled, and ducked back under the shower as though to revive his fainting spirits.

He gave the faucet handle a fling wide over to the cold-water side of the valve. A moment later, standing wide-legged in dripping and superb unconscious nakedness before Mr. Becky deHavin, he addressed that gentleman vehemently, emphasizing his remarks by waving a wetter and wetter towel under the aristocratic nose.

"You don't mean to stand there in front of me, without your guard up, and tell me you're gonna put the Monarch into the pit with the Gas-House Pup!" he shouted.

Becky deHavin nodded affirmation.

"But—hell's bells!—Becky, me boy, if he could come out of it with no more than a slit ear he'd be done on the bench forever. And him with a Garden best-of-the-breed win tacked onto him at the beginning of his career!"

"But I had to do it, Pat. A beast who had Grip on the lead said that the Monarch couldn't lose right. And that there never was a blue blood that could. And then the skunk passed an insulting remark that brought my sister rudely into our street brawl. There are times, friend Pat, when a man and his dog have simply got to fight."

"True for you," sanctioned Mr. O'Boyle; "and specially if it's my hard brother's ugly sneer that goes with the words; and I seem to see his fine Irish hand at work in this. But do you know what it means when the gang at the pit says a dog's 'lost right'? Here's what it means: that when it comes his turn to scratch, no matter how he's torn and weak, or how many of his legs is broke, or how many hours he has stood up under the teeth of a better dog, just the same he carries the fight across into the other corner of the pit, without a stop or a pause, if he has to crawl every inch of the way to his beatin' flat on his belly. A dog or man, or any other fightin' animal, loses when he quits; and a pit dog that loses right quits when he's dead."

KO O'Boyle's eyes were full of accusation.

"Sure, you don't want the old friend dog to come to an end like that!" he said.

"I think the old Jerrypup might prefer just that kind of an end," replied Becky. "I believe he'd rather round the Horn, if he had his choice, in the strength of his youth and the joy of death grips than to have me end the suffering of old and worn-out days by holding the cone down tight over his feebly protesting nose."

DeHavin's eyes went hot at the thought of the hour that comes to all who have had a dog for a friend. Then he applied his handkerchief to his nose—a little high perhaps—and said:

"And, on the other hand, why assume that he's going to lose?"

"Undershot!" explained O'Boyle, dismissing the possibility of a win with that one word. "I'm tellin' you 'tis a damn shame to be putting a white wonder like the Monarch onto the tanbark with Grip. If it was only the spoiling of all them thousands of dollars' worth of dog, I'd not be kicking to you; for a good scrap's worth whatever you can afford to pay for it. But this won't be good. There won't be no fight. It ain't treatin' the Monarch fair; for he won't have the chance of that old cotton cat."

"Why not?"

"His jaw! He ain't made for the game. He's lived too easy—him and his ancestors. The fighting days of his breed is hundreds of years in the past. Why, I'll bet you my winnings with Stinger that you won't even be able to make old Monarch train."

Mr. Becky deHavin smiled superior knowledge. He switched his light cane to and fro complacently.

"Train?" he said. "Why, the old Monarch is fit to go to the mat this minute with any dog, wild cat or elephant in the country. There's not an ounce of fat on him. While getting him in shape for the Hunt Club's outdoor show, where he made his last killing, I walked him five miles up hill and down dale every day for a month."

Patrick Aloysius O'Boyle gazed into his friend's monocle in despair. "Five miles a day!" he roared.

"Duck your nut!" A. Beckwith ducked it. A soggy towel, bundled into a heavy wad, flew over his head and banged against the wall.

"All of that?" KO Patrick exploded derisively. "And you're the man that's going to put your good dog into the pit with McDonald's Grip? Considerin' his fondness for bones, you ought to let the Monarch nibble on your head a while. Five miles! Well, I'll be damned!"

Mr. O'Boyle paused for breath and surveyed his pale-haired friend witheringly before he went at him again.

"Listen to common sense!" he said. "I'm trainin' for ten rounds, or as much less as it'll take me to drop Stinger Wilson into the garbage can—thirty minutes' actual work, with ten minutes' rest divided among the thirty. But I go out that damn sand road that far and back again every morning to earn my breakfast—a little starter for the day's work. If you got brains, now use them: In his last fight it took the Gas-House Pup three hours and twenty-seven minutes to kill Gallivan's Slasher Bill."

Becky deHavin's delicate pale face showed the dawning of grave comprehension.

"All right, Pat," he said. "I guess I've been miscalculating the size of the Monarch's job."

"I thought I could show you it was the right thing to call it off," said Pat.

"Call what off?" snapped Becky deHavin. "Both I and the Monarch have been living too easy. We're going to work. He's got a theory to disprove; and I've contracted with you to help me train to trim a man twice my weight, who probably is your brother. When do we start the grind?"

Patrick O'Boyle saw in the pale eyes the kind of fire that he knew meant trouble when he saw it gleaming in the opposite corner of the ring.

"To-day," said KO Pat. "And because I'm foolish fond of the two of you I'm gonna work you till you holler for mercy."

Late on a sunny afternoon a month after the meeting of Mr. Slugs O'Boyle with the scions of the House of deHavin a lacquered palace, built on pneumatic foundations—a sort of castle on air, as it were—floated to a stop in front of the training quarters of KO Pat O'Boyle, challenger for the world's lightweight title; and two elderly gentlemen disembarked. The stout pale gentleman, with the shell-rimmed glasses and the grouch, was none other than Mr. A. Beckwith deHavin, II, president and general manager of the Interborough Gas Company, himself; and the stout florid gentleman, without any glasses at all, and a smile, was none other than Mr. Shamus McDonald, P. and G. M. of the Interborough Gas Company's stables, himself.

The grouch and the smile linked arms and sallied up the steps to the entrance of the long and high-fenced yard that reached from the motor drive down to the Hudson.

"What newspaper?" asked a young man who affected the habiliments of his calling—heelless ring shoes; wide-cuffed peg trousers; and a high-necked, long-sleeved jersey, tucked down shirt-fashion inside a belt which was rendered superfluous by the flaunting suspenders that topped his sweater. A cap of generous size completed the towel-swinger's uniform; and this was cocked sidewise and yanked down tight from the back of the neck to where the pouch of the long peak was stretched down to his eyebrows; and it added just the bellicose touch necessary to elicit a pugnacious reply from Mr. deHavin, II.

"Newspaper—hell!" responded that gentleman. "Do these two fronts look as though they belonged to a couple of half-starved cubs?"

"Big belly or small," shot back the suspenders, "they don't come busting in on Mr. O'Boyle's afternoon nap unless they show me first."

"Which means," grinned Shamus McDonald at his boss appreciatively, "that you send in your card and cool your heels in the lobby for a while, gettin' a taste of your own medicine thereby."

"You'd think he was a hundred-thousand-dollar-a-year man," blustered Mr. deHavin.

"He will be that, and more, the minute he hangs a KO on Stinger Wilson's jaw," said Shamus McDonald proudly. Then: "Here, son"—to the lilac-suspendered Cerberus—"lean that tin ornament over to me." And he whispered a few words in his ear.

Upon which a wide gleam of teeth opened up under the long-peaked cap, and with all affability he ushered the two stout gentlemen into the sacred sleeping presence of KO Pat.

"What's the open-sesame, Shamus?" asked Mr. deHavin.

"What's the what?" said Shamus.

It happened that, at the time the visitors entered, Mr. O'Boyle was not, as was his usual custom at this time of day, enjoying a well-earned siesta under the little canvas that was spread down by the springing board at the wharf, but was hanging over a low fence that inclosed one corner of the training camp. On one side of him the second A. Beckwith deHavin recognized the supple shoulders and pale-yellow hair of the third of that same name. On the other side of Mr. O'Boyle there leaned a purple bathrobe, out of the top of which poked a rubber bathing cap of tan, and under the skirt of which appeared a pleasant prospect of neatest bathing slippers and light-brown, bare, slender ankles.

Age had not dimmed the eye of the second A. B. deHavin; and immediately a suspicion came into his mind that boxing lessons, the training of Glenmere White Monarch, and a true friendship for Pat O'Boyle, the man, were not the three only attractions that brought the pale blond Beckwith out to the fighter's quarters daily.

Inside the fence on which the trio leaned their elbows stood a center upright post of four-by-four timber, some eight feet high, guyed at the top through a bearing and seated at the bottom in a socket. Extending from a point near the bottom of the four-by-four, two horizontal two-by-fours, braced to the upright, extended radially ten or twelve feet, until they were a considerable distance apart at the ends. A beaten tanbark path marked a circle about the upright as a center, with the horizontal timbers as radii.

And, lying flat on his stomach, tethered back and front between the ends of the radial two-by-fours, with forelegs stretched out in front and back legs stretched out full length flat behind him, frog-fashion, lay the panting form of the White Monarch of Glenmere. His tongue hung out for yards and yards and dripped a clear and healthy saliva as he perspired there. And his sweet brown eyes, with never a move of his recumbent head, rolled toward the three who stood there trying to wheedle him into further revolutions in his training machine.

"This is my good friend Pat O'Boyle, governor," said the young DeHavin as his father and the smiling McDonald came up to the fence. "And this is my daddy, Nora—father, Miss McDonald."

Nora McDonald held her purple bathrobe close about her with one hand and put the other one out to the senior DeHavin. It didn't look exactly like the hand of a stable boss' daughter; in fact, it was a better-looking hand than the daughter of the stable boss' boss could have shown. Not any softer, to be sure, but just as soft—and firmer in the grasp; and a beautiful live brown instead of dead white; and a little rounder and a bit more shapely. All of which A. B. deHavin, II, noticed as he held it. A. B. deHavin, III, had inherited all his noticing abilities—which were acute.

"I'm mighty glad to meet a daughter of Shamus McDonald," said the president of the Interborough Gas Company, "but I'm very sure, Shamus, that I've met your girl somewhere before. Her face is mighty familiar. Do you remember our ever meeting, Miss McDonald? I'm both ashamed of and astounded at myself for not recalling where."

And he took a fine big look at her, ostensibly to assist his recollection; maybe for other reasons best known to himself. At any rate, the pale eyes of A. B. the third took on a twinkle; and, apropos of nothing whatever, he said:

"Dad, you'll have to buy a ticket for that."

Nora McDonald's eyes sparkled, also.

"Perhaps you will recall me when you see more of me," she said.

At this a grin broke out that was shared by all present but the senior A. B.

Not being in on the laugh brought Father deHavin's ever-ready grouch blooming into view.

"Well," he asked his son, "do you think that dog is going to get into shape for the Gas-House Pup by lying there on his stomach? How many minutes did he do to-day?"

"Fifteen."

"Fifteen, huh!" retorted father and grouch in unison. "The only part of the training that you seem to be able to make that dog do thoroughly is to take his alcohol rub and eat his five pounds of beef rump daily. You made the match that's going to ruin him for the bench if he doesn't get killed; and I'm putting it up to you to have him right. I want at least one member of the family that I needn't be ashamed to put up against a scrap. Get this accomplished at least—I haven't asked you to do anything else, so far, have I?"

The pale eyes of the third A. Beckwith deHavin shot the same fire that came out of them when he put on the ten-ounce gloves with an erstwhile and future friend named Pat O'Boyle. When they flew at each other in their training bouts, if any friendship lived on then, it was invisible to the naked eye. Had not the presence of the girl restricted the flow of language that rose to his lips, he might have relieved the pressure that made his colorless skin glow red. As it was, he mastered his tongue in gentlemanly fashion and blushed out his embarrassment with only a few low-spoken words.

"This Girl Has Seen Enough Brutality To-Night"

"Why *don't* you ask me to?" he said.

But Shamus McDonald broke in with a word:

"Let's not go to war about this," said he. "As I've insisted many times since the match was made, let's call the ruction off. Never would I have been a party to it, anyhow, if I had looked at the bulldog's fangs when I first went out to see him. No matter what's his condition and courage, the fight's not goin' to be a fair one unless your dog can punish; and that he can't. We'll call it quits."

But the hard look was still in the eyes of Becky deHavin.

"He'll do his other ten minutes in the trainer," said that young man. "He's done his schedule every day, so far; though it does take a bit of persuasion." He scowled squarely at his father, with a look that returned the grouch with interest; then turned and glared at Shamus McDonald. "And there'll be no more talk about calling quits. I don't like the word."

Then he spoke to McDonald's daughter; and the scowl vanished, and the gray glint melted to an altogether different color in his eyes:

"Will you help me with him, Miss McDonald?"

Now the training of a pit dog is almost a cruel thing. For a month before his fight he walks and runs interminably. He worries a coonskin, tied to the end of a heavy flexible sapling that springs with his weight and the pull of a rope in his trainer's hand, till at times he is flipped back somersaulting off his feet. He works with this endlessly, till his eye grows accurate and his jaws become perfect to strike the snapping skin; and he learns to hold his grip, and to switch his body back and forth with bone-breaking force by the play of his powerful neck thews.

But the grind that tries the heart and patience of the most courageous dogs is the daily monotony of the training machine. Ten minutes, fifteen minutes, twenty, twenty-five, thirty, thirty-five—the daily drag increases until the poor dog thinks he shall never cease his endless circling round the sawdust path. Cajoled, bullied, scolded, bribed, punished by all methods but those that would tend to break his spirit, he does his allotted daily bit; and the discipline of it gets to be part of him. As he learns that he must stand up under long and punishing work, the heart to endure the bitter hours through which he may have to stand his beating in the pit grows sturdy within him; and, along with the fiery joy of perfect health and strength and dazzling speed, comes the power to endure under monotonous suffering—and endure—and endure—and endure; which is the true measure of all kinds of strength.

And the good-natured, lazy, lovable White Monarch of Glenmere was puzzled and annoyed at the necessity for leaving off his days of splendid indolence at the Glenmere Hunt Club Kennels for the rigors of the training camp of Pat O'Boyle. But by rapid degrees he came to enjoy that part of his work which had the zest of sport in it. He fairly reveled in his daily boxing bout with KO Pat. Again and again and again he would charge into the blows of the boxer's padded fists. Knocked head over heels, end over end, into the sawdust, he would scramble savagely to his feet again and, with a lion's growl rumbling in his throat, fly into the whizzing gloves with a speed and craft which increased so rapidly day by day that the time soon came when he could bull his way occasionally through the accurate blows into the padded sweater. Then a twist of his thick neck muscles would lash the fifty pounds of his body back and forth till the fabric yielded and the sweater was ripped from top to bottom. So fierce and swift became this romp that it soon began to help the eye and speed of Pat O'Boyle; and the stopping of those snarling charges had no ill effect on the boxer's courage, albeit the short tail wagged and wagged throughout the game.

If some mysterious reason had not arisen for Miss Nora McDonald to pay very frequent visits to her sister, and so to spend much time practicing her twenty-five beautiful dives off the wharf of her brother-in-law's training camp, it is doubtful if the White Monarch could ever have been compelled to forgo his hatred for the training machine. But the Irish girl was the one who discovered his almost hysterical fondness for the water. And now, at young Mr. deHavin's request, she used again the bribe she had found would work on the Monarch.

"Jerry go swim?" she asked.

Ears up.

"Go swim?" she wheedled again.

The panting dog was on his feet, eyes bright, head tilted to one side, tail so close to being gay that, had he ever elevated it to such a height in the judging ring, he might never have affixed the Ch. to his name.

"All right! Go swim," she said again, and started toward the wharf and the springing board that stood at the river end of the camp.

And good old Jerrydog, knowing from previous lessons that he should get no water romp unless he completed his task in the machine, started briskly to complete the deadly grind; and so plodded his unhappy way about and about, dragging the cursed lumber back of him, pushing ahead of him the devilish scantling that he could never overtake, until at last the voice he loved best in the world said to him, "That's a *good* dog!" Thus the gentle big bulldog learned that at the end of every long and honest fatigue there was a reward; and a white streak heads for the river.

On the wharf a purple bathrobe drops away, and a brown one-piece—one very small piece—diving suit shows how daringly near a match can be made between tan silk and tanned skin—and many other altogether charming things. An undulating stride or two and a slim brown figure hits the end of the springing board and rises almost perpendicularly into the air, hands up, back arched; and then, without any motion below the waist, bends double till finger

(Continued on Page 57)

The White Head and the Tan One Come to the Surface Together, and There Starts That Romping Hour of the Day for Which Both of Them Live

KENTUCKY TURNS

By Lowell Otus Reese

ILLUSTRATED BY DEAN CORNWELL

"We Didn't Know What the West Looked Like, But We Just Set Out Same as You Would Start Out Into the Dark"

For everybody life is a warfare; a constant give and take. But here and there is an individual for whom it is only take. A poor, pathetic creature, born without the instinct that bids him fight back, he cowers through life.

Always the under dog, he yet makes no whimper when he is mauled. He asks only to live.

Not always is it cowardice. It is a strange ignorance of the world in which he finds himself; a lack of that combativeness with which Nature strives to endow us all. Now, this bit of philosophy must be forgiven, because it bears strongly upon our story; for Kentucky was an under dog.

HE CAME into the Copper Sky Mining Camp one evening just at sunset, driving a miserable skeleton of a horse attached to a crazy spring wagon. Beside him, on the front seat, was a woman, frail and worn, but wearing upon her face, under its protection of slatted sunbonnet, traces of a vanished beauty. Kentucky stopped in front of the Palace Hotel to inquire for a camping place. Two tousled heads peeped from beneath the stained and patched wagon cover. Somewhere inside, a babe wailed. Beneath the wagon a yellow mongrel panted wearily and watched through the rickety wheels.

"Howdy?" said Kentucky.

Like his sallow, discouraged face, with its pale, discouraged mustache drooping over his discouraged mouth, his voice was dull and emotionless. He sat hunched listlessly forward and regarded the loungers upon the sand-littered porch with pale, deprecating eyes, chewing slowly.

"I reckin I'd like to camp somewheres close round here," he went on. "My hawss kain't go no furder to-day. Seemed to start failin' before we got halfway over the Tehachapi; and he's been gettin' wuss and wuss every minute, ever since we got down on the desert. He needs rest. My wife and children needs it too—powerful bad."

The Lizard dike was suggested. The Lizard was a long black ridge of rocks that shot out into the desert at the foot of Soledad Butte. In a way it resembled a great black lizard, its head lying upon the rising slope and its body extending out into the sand, appearing at intervals above the surface, like the vertebræ of some mammoth beast half buried in the earth.

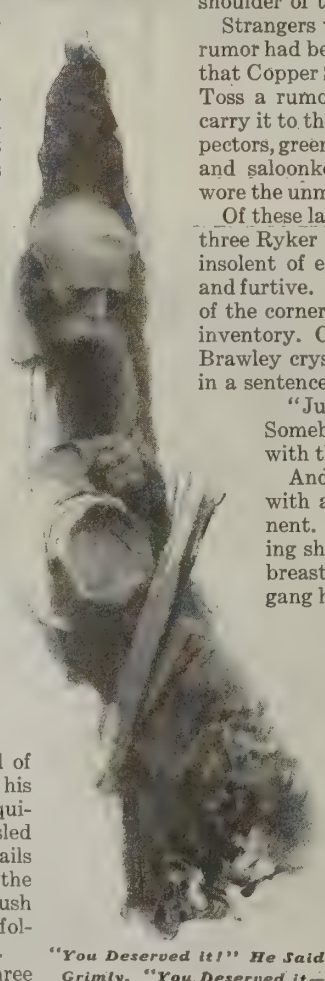
It was Old Dad Tolliver who suggested the Lizard as a possible camp for the strangers.

"And you might locate it while you're in the business," said Old Dad. "Nobody thinks there is any pay on it; but you go ahead and locate it anyway. If the camp makes a big strike"—he smiled—"you can sell the Lizard out in town lots."

Kentucky thanked him in a flat voice, quite devoid of inflection, and slapped the reins upon the bony back of his horse. The animal responded tremblingly and the equipage creaked down toward the Lizard dike, the two tousled heads peering back from beneath the canvas and the wails of the babe rising louder. The laboring wheels rolled the sand high as they lurched crookedly over the short brush that grew sparsely here and there. The yellow dog followed under the wagon, like a faithful spirit of poverty.

The Kentuckians camped at the foot of the mesa, three or four hundred yards below the Lizard's head. That night death came mercifully to the old horse, and next day Kentucky buried him. Then the man dismantled the worn-out wagon, and out of the wreckage constructed a rude shelter, using the battered canvas for a roof. In the evening he tacked up a location notice on the Lizard's head and began to dig. The Copper Sky Camp promptly forgot him; for he was far down from the main field of activity, which was high up on the rocky slope of the Butte.

A year passed. Kentucky managed to get a few odd jobs and so kept his family from absolute starvation. Provisions were high and water cost a dollar a barrel. But most of the time he was down in the shaft on the Lizard's head, with his wife standing by the rude windlass, winding up bucket after bucket of the yellow waste and adding it painfully to the slowly growing dump pile. But nobody noticed; for a small strike had been made on the Queen Esther and valuable float had been found farther up the slope, where the gray dump spilled over the shoulder of the Happy Chance ledge.



"You Deserved It!" He Said Grimly. "You Deserved It—and You Got It!"

Strangers were coming into camp, and a rumor had been tossed into the air—a rumor that Copper Sky was going to be a big thing. Toss a rumor into the air and the winds carry it to the uttermost corners. Old prospectors, green prospectors, wildcat promoters and saloonkeepers came—and a few who wore the unmistakable signs of birds of prey.

Of these latter, the most notable were the three Ryker brothers. They were bold and insolent of eye, insolent of speech, vulpine and furtive. Copper Sky observed them out of the corner of its eye and made a mental inventory. Old one-eyed Cœur d'Alene Tom Brawley crystallized the camp's suspicions in a sentence.

"Jumpers," he said, "and gunmen. Somebody will have to shoot it out with them some day."

And again the months went on, with a great strike seemingly imminent. Men labored like fiends, driving shafts and tunnels into the hard breast of old Soledad. But the Ryker gang hovered hungrily upon the edge of things, watching. And nobody thought of Kentucky, away down on the Lizard's head, or noted that both man and wife were worn almost to skeletons, though they toiled day by day, feeding the yellow dump pile.

II

COPPER SKY itself was a thing of scattered shacks, dotting the rocky slope here and there, close up against the great body of the Butte. From the window of old Judge Navlett's office one could look far across the desert, over the intervening shacks that straggled down the slope, and see how the heat mystery wriggled and danced, weaving strange mirages away out toward the east, where the Panamint Range lay like a crouching beast against the sky line. Judge Navlett was justice of the peace, district recorder—and an honest man.

The door opened and three men came in. Judge Navlett looked up and a strange glint came into the steady eyes lying beneath their ambush of bushy gray brows. The three men were the Ryker brothers. One of them advanced and laid a paper upon the table before the judge.

"Like to have you record that, Judge," he said. "And here's the recording fee." He placed a silver dollar beside the paper and waited.

Judge Navlett gazed at the paper as though it were a rattlesnake.

"Why," he exclaimed, "this is the Lizard Claim—Kentucky's claim!"

The three grinned insolently.

"Sure!" chuckled the spokesman. "But it's ours now—see? Faulty location—see? We just happened to find out that the poor fish had struck rich ore. We had a hunch that he wouldn't have sense enough to make a proper location; and, sure enough, he hadn't! So we relocated it—see?"

He had a trick of twisting down the corner of his mouth when he said "See?"—a trick that Judge Navlett found singularly repulsive; just why, he could not have told.

There were no more words. The Ryker gang went out; and after a long time the judge began entering the filing in the district's book of records.

Hardly had he finished when once more the door opened and Kentucky came in. The man was pale, and the pallor accentuated most shockingly the pitiful emaciation of his face.

"Jedge," he said before he was hardly seated, "I've come to ask your opinion—and I ain't got nary dollar to pay you for it."

"It makes no difference, Kentucky," said Judge Navlett. "A dollar never ought to stand between neighbors."

"Thank ye, Jedge." Kentucky rubbed his forehead with a thin, bony hand, which was cracked and calloused with hard work, the knuckles scarred and bruised where the unfamiliar singlejack had glanced from the drillhead upon them. "I been jumped, Jedge," he said.

"I know," said Judge Navlett; he tapped the open page before him, where the ink was hardly dry.

"They said my location was wrong," continued Kentucky. "They give me until six o'clock to-morrow to get off the claim. Told me they'd shoot me if they found me there trespassin' after that hour." He took a paper from his pocket and handed it to the judge. "It's a copy of my location notice," he said. "Read it, Jedge, and tell me what's wrong with it."

Judge Navlett read carefully and sighed.

"Is it wrong, then?" asked Kentucky.

Judge Navlett nodded.

"There's no doubt that your corner monuments are set right," he said; "but the description of your boundaries reads this way: 'Beginning at a stone monument marked North Center; running thence in an easterly direction to

a monument marked Northeast Corner; thence south to a monument marked Southeast Corner; thence east to a monument marked'—— Don't you see?" broke off Judge Navlett in hopeless exasperation. "According to this description you ran east instead of west; consequently your description shows your boundary line to be nothing but a zigzag line beginning at your North Center monument and wandering off into the desert to God knows where!"

He took up a blank and wrote rapidly for some minutes.

"There," he said, "is the correct description, written in the form of an amended location."

He handed the paper to Kentucky and sat gazing moodily through the window, and down beyond the town to where a torn, stained canvas flapped in the wind among the scattered greasewood below the yellow dump.

Kentucky gazed also with dull eyes. "I done a heap o' work there, Jedge—me and my little woman."

Judge Navlett nodded.

"And we done it in good faith. I *know* my monuments read right. But this paper ——" Here the first spark of passion seemed to strike from the man's negative personality. "Is it my fault that I ain't got the schoolin' to show me the tricks and turns of language writin'? Is it my fault I didn't have the money to hire somebody like you to draw up this here notice all legal and bindin'? I set my monuments high and at the right places. I done everything in good faith. Why should me and my family have to suffer just because the readin' was wrong?"

Judge Navlett was silent. Why is there no answer to the impotent cry of protest from the one whom Nature and Circumstance robbed before ever he was born?

Kentucky rose and picked up his hat with a trembling hand.

"And there ain't no hope at all, Jedge?" he asked miserably, his hand on the doorknob.

"No hope, Kentucky," said Judge Navlett. "Some camps hang claim jumpers; and here and there a man—shoots 'em. No; I'm sorry to say there is no help for it. As a judge I am bound to say that in taking your property these men are acting within their rights. As a man I might say that they are infernal skunks of hell! And—and——" Judge Navlett choked.

Kentucky opened the door.

"Thank ye, Jedge," he said. "I—I understand. Much obleeged." And he went out. A moment later he put his head back into the room.

"Just one more question, Jedge," he said: "Couldn't my amended location make it all right—noways at all?"

"No," the judge assured him. "This relocation of the Rykers would take precedence in any case. You see, your boundaries, as described in your notice, do not in any way inclose your claim. The Ryker notice does."

Kentucky thought for a full minute, his shrunken head bowed in the barely open doorway. "But if it wasn't for that relocation of the Rykers?" he asked finally.

"Your amended location would be perfectly good."

"Much obleeged." Still Kentucky stayed. "My wife's sick," he said irrelevantly—"powerful sick."

Then he closed the door softly and went away.

III

ON THE afternoon of the next day Judge Navlett found his gaze constantly seeking the window and straying down to the Lizard's head. As the hour of six approached, Kentucky came in and sat down where he, too, could see through the window and down to the Lizard's head.

"How is your wife to-day?" asked Judge Navlett.

But, even as he asked the question, his eyes were on the Lizard's head. Three men appeared by the yellow dump and advanced to the mouth of the shaft.

"Porely, Jedge; porely."

But Kentucky, too, was watching the three men creep under the rude windlass, upon which showed a patch of white which gleamed in the dying sunlight. It was the Ryker notice, tacked upon the windlass frame. The men disappeared down the shaft.

"She had a bad night, Jedge—a mighty bad night. . . . I'll tell you later."

He was watching through the window and his voice trailed off into a whisper.

Both men fell silent; both were looking down toward the Lizard. Inside the room there was a silence so profound that the great old-fashioned watch in Judge Navlett's pocket sounded like a wall clock. A gentle wind rustled the landscape of scattered greasewood among the widely separated shacks. A dingy black raven sailed by with a guttural "Awrrkk!"—swept low to the ground by the Lizard windlass, circled once, and then floated steadily down into the far sky line and was gone. The sky was a dull blue, turning to a darker hue along the east, where the night was creeping up from the Panamints. The sun's last rays, shooting from under the shoulder of old Soledad, fell feebly upon the windlass below and the white paper posted upon its frame.

Suddenly the Lizard's head seemed to rise into the air, as though lifted by some monstrous thing struggling upward in convulsive agony from the core of the earth; and from the mouth of the shaft a hell of black smoke and shattered rock roared into the sky, and the accompanying detonation seemed to flatten out the world. The awful echo of it crashed back from the face of the impending Butte like a second explosion. Then the sinister blackness spread and floated heavily away. There was a hideous silence.

For a second Judge Navlett's horrified eyes met Kentucky's. Then, bareheaded and in his shirt sleeves, the old man ran from the room and down the rough ways toward the scene of the explosion. Everywhere appeared men running. The tremendous thunder of the cataclasm had advertised its tragedy, and high up on the slopes of Soledad red-shirted figures were leaping along the ledges and hurrying downward over precarious trails.

And as he ran, somewhere in the back of his mind Judge Navlett kept remembering Kentucky's eyes as he had met them in that paralyzed second following the explosion. The man had not seemed surprised!

These two were the first to arrive at the Lizard's head. No shaft was there. Instead there was a wide, sunken hole filled with blackened rubble; and up from among the jagged masses a sluggish black smoke oozed in scattered ribbons. The air was full of biting vapor and one could taste death in it.

Men began to arrive. In an incredibly short time an excited crowd surged about the crater. Old one-eyed Cœur d'Alene Tom Brawley came running by, carrying a shovel. He recognized Kentucky and stopped.

"How did you get away, old-timer?" he asked, panting.

Kentucky shook his head.

"I wasn't here," he said.

Brawley's hoarse voice rose above the uproar.

"Here's Kentucky, boys!" he roared. "He ain't killed none, after all!"

The crowd stilled and listened, watching Kentucky.

"Who was it, old-timer?" asked Brawley. "Wasn't somebody in the shaft?"

Kentucky nodded.

"Three of 'em," he replied. "The three Rykers."

"Rykers? What were they doing in your hole, Kentucky?"

Kentucky cast a faded eye down into the smoking ruin.

"They calculated to jump me," he said simply.

Brawley flung down his shovel and, turning, spat into the pit.

"A fine job!" he bawled. "They can stay there until hell ships ice cream to Greenland before I'll help dig 'em out! Unless *you* want help, Kentucky. In that case, of course ——"

Kentucky shook his head.

"I ain't aimin' to dig none in it again," he said. "Much obleeged."

"Then it's up to the coroner!" grinned old Cœur d'Alene; "and he'll have to love a jumper a heap more than I do before he'll spend two or three weeks muckin' down through that mess on the chance of finding maybe a suspender button or a bent corkscrew when he gets to the bottom. So far as I'm concerned, the Ryker gang is dead and buried; and I'm going right uptown to buy myself a drink because I'm so sorry. All who sympathize with my poor busted feelin's thataway will come along and have one too."

The unanimous laugh which followed was the only requiem that sounded above the grave of the Ryker brothers. As the crowd moved away, still talking excitedly and following the old pagan to his celebration, Kentucky touched Judge Navlett upon the arm.

(Continued on Page 109)

"If I Seem to Say Too Much, Jedge, or if You Feel Yourse'f Gettin' Weary, Just Try to Remember That I'm Talkin' for My Life"

THE DUB

By DANA BURNET

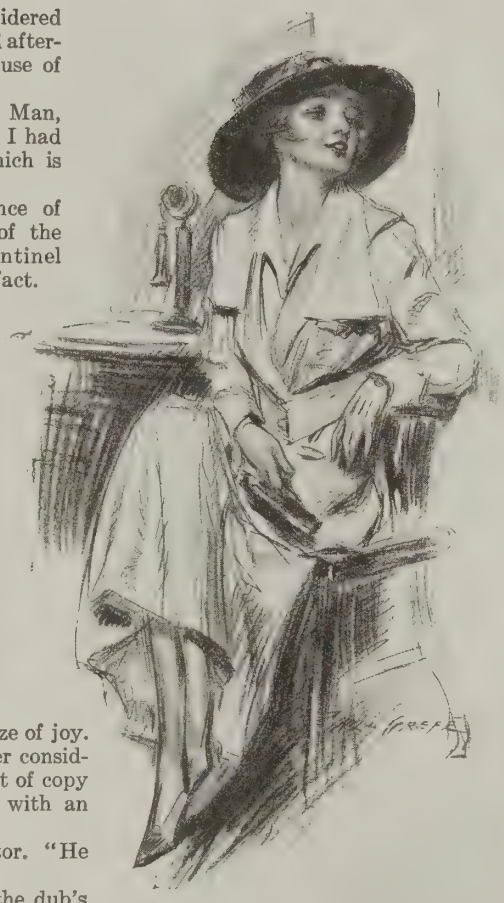
ILLUSTRATED BY WILL GREFÉ

THE managing editor, who was considered an excellent judge of men, confessed afterward that he had hired him because of his ears.

"They fascinated me," said the Old Man, "and before I could get my mind off 'em I had offered him fifteen dollars a week, which is ridiculous."

As ridiculous as it was, the presence of Sandringham Wilson upon the staff of the Kingstown, West Virginia, Daily Sentinel nevertheless became an accomplished fact.

He appeared one June morning with a hopeful countenance, a high standing collar, and a pair of trick ears that would have been his everlasting fortune in vaudeville. For upward of a fortnight he sat in the corner devoted exclusively to the cubs and the water-cooler, unnoticed by anyone except the auburn-haired young woman who kept the files. At the end of that time the city editor sent for him, and in the voice of one who confers a great happiness upon his fellow man told him to go out and write a description of Main Street. Every Sentinel reporter for the past fifty years has begun his journalistic career by writing a description of Main Street. It is a tradition in the office.



It Was Whispered That a New Era Had Begun, Not Only for Kingstown and the Sentinel, But for the World as Well

Sandringham Wilson departed in a daze of joy. Half an hour later he returned and, after considerable labor, brought forth a single sheet of copy paper which he delivered to the desk with an exalted smile.

"The poor dub!" said the city editor. "He thinks it's literature."

Then the city editor began to read the dub's description of Main Street. He had no more than glanced at it, however, when he was seized with a sort of vertigo. He arose and walked with uncertain step into his superior's office. "Do you see what I see?" he asked feebly.

The director of the Sentinel's fortunes took the sheet of paper held out to him, and surveyed it with phlegmatic calm. It was covered with sprawling hieroglyphics, as follows:

MAIN STREET

A beautiful snake asleep in the sun—
An old snake that has made a philosophy of sleep—
An old brown snake that knows it is better to have dreams than ambitions.
Young snakes run in every direction from its lazy sides, and dart their tongues into the yellow waters of the River, and fatten upon the plump Hills . . .
But the old snake sleeps in the dust of the years, and is beautiful ——

The managing editor, having read thus far, lifted his eyes from the page and looked at his assistant.

"Print it!" said he.

"Where?" asked the city editor.

"On the front page, with a box round it."

"A box! Oh, I see. You want to fence in the snakes!"

"I want to call the attention of Kingstown to the only original description of Main Street ever printed," said the managing editor, and added: "I knew that there was something unusual about this boy Buckingham ——"

"Sandringham," said the city editor.

"Sandringham—besides his ears. Why, damn my spectacles, he may be a genius!"

"Take it from me," said the city editor, "he's a dub."

The opinion of the world at large varied between these two extremes. The following morning Sandringham Wilson awoke—not to fame, perhaps—but at least to fame's first sidelong glances. Let a man be utterly condemned or utterly approved and he will perish with pain or pleasure as the case may be. But let him be caught squarely between two judgments and he will be squeezed up from obscurity as inevitably as rocks are squeezed out of the ground by the opposing actions of heat and cold.

Thus it was with Sandringham Wilson, whose description of Main Street had cleft Kingstown in twain. Approximately one half of the Sentinel's readers immediately took pen in hand to express their hurt surprise at the desecration of a thoroughfare which had once sustained the martial tread of General Grant. The other half no less promptly hailed Sandringham's bit of *vers libre* as a symbol of culture and a pledge of progress. This latter view, fortunately for those concerned, was entertained by Colonel Perse Allison, the hereditary proprietor of the Sentinel, whose daughter, Miss Charlotte Allison, recently had been graduated from an Eastern college. In the course of her senior year, Miss Allison had taken a course in Tagore and the New Poetry. Consequently she waxed enthusiastic over Sandringham Wilson.

"You must encourage him, papa," she said. "Real artists are so scarce—especially here in America. And I'm sure that he is a real artist. I have a good mind to give him a tea."

"Wait till he justifies our expectations," said the colonel shrewdly, "and I'll give him twenty-five dollars a week."

Miss Allison shook her head.

Her dark eyes—reputed to be the most beautiful in Kingstown—grew even darker with that melancholy which afflicts idealistic youth.

"No," she said. "What an artist needs is human sympathy, not—not material reward."

Miss Allison, thanks to her sojourn in the East, had analyzed the artistic nature with great exactitude. Sandringham Wilson cared nothing for the munificent stipend which he received every Thursday noon. He invariably got rid of it before the following Monday, so that he was in continual difficulties with his landlord. On the other hand, he cared considerably for the auburn-haired young woman who had distinguished him from the water-cooler.

Miss Lucy, as she was known to the staff, occupied a unique place in the Sentinel office. She was down on the books as Librarian, and in justification of that title maintained a shelf of dusty volumes consisting of the Encyclopedia Britannica, Who's Who, The Home Book of Verse, and a very dilapidated Bible. But her real employment was to cheer the footsteps of beginning journalists; to cherish them in sickness as in health, and to save for them, as far as possible, the shattered remnants of their early illusions. The beginning journalists, in return, fell mildly in love with her, year after year, until such time as their hearts were broken and their educations completed.

Miss Lucy was not a beautiful woman, but decidedly she was not plain. She possessed a trim, neat figure, a good complexion, and a pair of very kind blue eyes. Her hair was of a dark-reddish shade, and possessed a certain undulating quality which all feminine critics agree is of inestimable value. Her years were twenty-seven.

She had smiled upon Sandringham Wilson in his obscurity. Consequently he regarded her with a vast and behemothian tenderness, as the mastiff regards the child who has patted his ponderous head. He formed the habit of walking home with her evenings, much to the gratification of the boarding house in which Miss Lucy resided. Indeed, the young man's devotion was freely remarked upon, and though it was conceded quite generally that his ears were too large it was admitted as widely that ears do not make the man.

Mrs. Tuthill, the landlady, was so intrigued by hope as to sweep and dust a large double room upon the second floor, which chamber she contrived to hint to Mr. Wilson might be had for the absurdly reasonable sum of eight dollars per week.

Mr. Wilson looked at her with his trustful and somewhat absent-minded smile.

"I'll take it," said he. It was what he always said when people asked him to buy or rent things.

Mrs. Tuthill fairly thrust the keys into his hand, insisting meanwhile that she felt like a mother toward him; collected a week's rent in advance, and departed to provide the boarding house with a premise for future deductions.

The boarding house, with one exception, was delighted at this turn of events. The one exception was Miss Lucy, who hastily sought out the simple Sandringham.

"Oh!" she said with a blush that was quite lost upon that blundering innocent. "You shouldn't have taken a room here!"

"Why not?" he asked. "It's a first-rate room."

"But—but you can't afford it!"

"Oh, yes, I can. I've figured it out, and I can afford it very nicely. You see, I get fifteen dollars a week, and the room is only eight dollars, so that I have seven left."

Miss Lucy laughed helplessly, and Sandringham Wilson ascended the stairs to his new chambers with the pleasant sense of a man who lives not only well, but efficiently. It may be added that the subsequent whisperings of boarding-house gossip never penetrated the armor of his innocence. If it had occurred to him to fall in love with Miss Lucy, he would have done so. But it did not occur to him.

Nothing occurred to him, in fact, except the strange and grotesque flowering of his own imagination. He was like a child who, having been provided with paper and pencil, finds himself marvelously full of pictures. He looked upon the world as one might look at a procession of clouds in the sky, seeing therein the drift and change of curious shapes which have no meaning in heaven or earth, but which, conceived as a spectacle, are of fascinating interest to the beholder.

"The worst of it is that he can't see anything but animals," said the city editor resentfully to his chief. "If I have to handle his copy much longer I'll get the d. t.'s. Listen to this!"

And the city editor read aloud the following contribution to American letters:

THE WHITE RABBIT

There is a White Rabbit who lives under a lilac bush in an old back street—
Every morning I see him hopping about the flower-tangled yard—
He has timid eyes and a crop of pink whiskers
And sometimes he ventures as far as the hedge
And looks at the world as though to say:
"You think that I am an old gentleman with a respectable past and a decent crumb of a future—
But I am not what I seem;
I am a White Rabbit with a gift for gardens ——"

The city editor's voice came to a lugubrious pause. The managing editor rubbed his chin and thoughtfully damned his spectacles.

"People enjoy menageries," he said. "I believe I'll give this boy Cunningham ——"

"Sandringham," said the city editor wearily.

"Sandringham—a column of his own."

"Call it The Ark," advised the city editor, and went about his business with the glowing sense of having said a good thing.

So it fell about that Sandringham Wilson was accorded space upon the editorial page, and became the ringmaster of a small but satisfactory circus which he conducted with childish enthusiasm and a considerable cracking of the whip. The circulation of the Sentinel rose steadily.

Colonel Perse Allison, once more placing himself squarely upon the side of progress, took occasion to commend the managing editor.

"My daughter, suh," observed the colonel, tilting back in the chair that was reserved for his ceremonial visits to the office, "my daughter says that this young fellow Dillingham ——"

"Birmingham," interposed the managing editor.

"Birmingham—is a real genius. If he is, I don't want him hidin' his light under a bushel, suh. Pussonally, his writin' reminds me of old Jed Harper's cohn whisky That whisky, suh, was as full of wild animals as a fust-rate zoo. It was mighty good whisky," added the colonel reminiscently, "up to the point where it killed yu outright."

"The boy's a queer duffer," said the managing editor "Frankly I don't know whether his stuff will ever be popular. But it's something new—and this is the United States of America ——"

The colonel nodded, pulled his white mustaches, and looked out of the window.

"Did it ever strike yu, suh," said he, "that Kingstown was wallowin' knee-deep in sin and corruption?"

The managing editor gazed suspiciously at his employer

"I reckon it's no worse than most towns of its size," he answered warily.

The colonel brought his right fist into sharp contact with his left palm.

"It's a modern Gomorrah, suh! It needs upliftin' the worst way. My daughter, suh ——"

The managing editor half rose from his chair.

"I resign," said he.

"Nonsense, suh! Yu are indispensable to the paper, suh. Your salary is increased by half, suh."

The managing editor sighed and sank down again.

"I suppose," he said, glancing sharply at the colonel, "I suppose that I am to find a place for Miss Charlotte on the staff!"

"Exactly, suh!"

The following Monday morning, at ten o'clock, Miss Charlotte Allison, looking especially beautiful, walked into

the city room of the Daily Sentinel and sat down with an air of charming humility. Coincidentally it was whispered throughout the office that a new era had begun, not only for Kingstown and the Sentinel, but for the world as well.

Every city that is large enough to be respectable must maintain, necessarily, some element of evil upon which to lay the burden of its sins. Kingstown maintained a gambling element, which was headed by a picturesque gentleman named Triggs. Whenever Kingstown was to be reformed John Triggs was run out of town. In his earlier and more impulsive days Mr. Triggs had struggled against these periodic banishments, both with legal argument and an old-fashioned revolver, so that the party of purification had generally to hire a lawyer and occasionally an undertaker. Of late years, however, Mr. Triggs had gone lightly enough, well knowing that he was indispensable to Kingstown's moral outbursts, and quite certain that he would be suffered to return within the month. Kingstown had only to lift an admonishing finger, or to glance significantly in his direction, and John Triggs betook himself into exile, leaving behind him that sense of civic sweetness which comes only with the purging of the communistic soul. At least Mr. Triggs theoretically betook himself into exile. As a matter of hard fact he merely closed the front door of his popular, if horrendous, Casino, and retired into a rear room neatly outfitted to accommodate the business of the closed season. All this was thoroughly understood and appreciated by the authorities.

Thus when the Daily Sentinel announced, in a stentorian editorial, that it was high time for Kingstown to redeem its soul from sin, John Triggs merely stroked his decorative goatee, glanced somewhat wistfully at the historic weapon above the bar, and retired into his quarters in the rear. His attitude was that of a man who plays a rather childish, but at the same time expedient, game. He calculated that the tide of righteousness would turn in about two weeks. But Mr. Triggs had not counted upon the activities of Miss Allison.

Scarcely had that lovely young modern established herself in the office of the Sentinel when the whole atmosphere of the gentle, lazy old paper became surcharged with currents of belligerent progress. Miss Allison herself launched out almost immediately into a series of inspirational essays: essays written in a fine collegiate style, and published twice weekly in the column adjoining Sandringham Wilson's literary circus. But by far the most important result of her journalistic enterprise was the effect that she produced upon her fellow members of the staff.

The young men of the Sentinel became imbued with a passion for revolt, for reform, for high spiritual adventure. Some wrote plays. Some wrote poetry of the better sort. Some turned to socialism and the thought of universal brotherhood—possibly because Miss Allison had promised to be a sister to them all. The contagion spread even to the editorial department, which consisted of a certain Mr. Lance Podderfoot and a somnambulistic negro boy who was popularly supposed to look after Mr. Podderfoot's proofs. Mr. Podderfoot was a tall, tapering individual with eyeglasses and an extraordinary golden mustache. He had been in love with Miss Allison, in an abstract sort of way, for the past ten years. Now, inspired by her presence, he took the Sentinel's campaign for civic purity with unwonted seriousness and hurled broadside after broadside of double-leaded editorials at the bewildered and increasingly resentful Mr. Triggs.

Nevertheless, Miss Allison felt her triumph to be incomplete. For the one person whom she had hoped especially to inspire continued to sit sprawled in his corner, chuckling rudely to himself and writing grotesque lampoons upon mankind in general. All Miss Allison's subtleties of approach had fallen short of the mark.

Sandringham Wilson, busy painting the human race in terms of flora and fauna, was impervious to subtlety of any sort. Thus it happened upon a summer's morn that Miss Allison crossed the city room with a resolute smile upon her lips and extended the hand of good fellowship to Sandringham Wilson.

"You are doing perfectly splendid work!" she announced, in the assured tone of one who not only recognizes genius, but does so regardless of the consequences.

Sandringham Wilson, who had been scribbling contentedly in his corner—like a dog worrying a bone—got awkwardly to his feet, and perceiving the dainty hand of Miss Allison hovering in mid-air seized it with obvious bewilderment.

"How do," said he, insensibly moving his remarkable ears.

The city editor, who had observed this pantomime from afar, groaned aloud and reached for the cut plug that was the one solace of his sorrowing spirit.

"The dub," he muttered, "the poor—damned—dub!"

So Miss Allison's public greeting to genius was not the success that she had planned. But at least it had served to break the ice. Thereafter she gave herself determinedly to the task of winning this strange creature's friendship, devoting quite as much time to that project as she did to her inspirational essays. She even took Miss Lucy into her confidence—Miss Lucy being the only other woman within earshot.

"Of course I'm not interested in him personally," said Miss Allison. "It's his art!"

"Of course!" echoed Miss Lucy, and smiled to hide the pain in her breast.

"He's really very fond of you, isn't he?" continued Miss Allison with an air of youth addressing age.

"Oh, no," said Miss Lucy hastily; "I'm just a habit with him."

"You do monopolize him dreadfully. Everyone is talking about it."

"Talking!"

"Yes. But I shouldn't mind that if I were you. People always talk—especially in small provincial towns like this—don't you think?"

Miss Lucy did not reply; but that night she looked tragically at her reflection in the mirror.

"Twenty-seven—last—April!" she said slowly, accusingly. And then crushed by the burden of her years she wept, and was compelled to bathe her eyes with cold water before going down to tea.

Later she sat with Sandringham Wilson upon the steps of Mrs. Tuthill's boarding house and adjusted her existence to the iron laws of spinsterhood.

"You mustn't walk home with me any more," she said, going at once to the heart of the matter.

"Why not?" he asked in honest bewilderment.

"I have my reasons."

"But I like to walk home with you. I enjoy it."

"That is one of the reasons," said Miss Lucy.

There was a moment's silence, during which Mr. Wilson puffed solemnly at a cigarette which he had forgotten to light. Finally he said:

"Perhaps you don't enjoy having me?"

Miss Lucy laid her hand lightly upon his sleeve.

"Oh, yes, I do. But I've concluded that it isn't right for you to lavish all your attentions upon one old maid. You're getting to be quite a famous person now, you know, and I'm sure that there are others who ——" She paused, drew breath, and concluded firmly: "Others who would enjoy having you walk home with them."

"I had never thought of that," said the simple Sandringham.

Miss Lucy smiled a rather twisted smile. And then she began to talk to him, in a very serious voice, about the beauty of giving pleasure to others. And he missed the excellent satire of it completely.

The upshot of the matter was that upon the following afternoon Sandringham Wilson walked home with the radiant and obviously triumphant Miss Allison—walked home with her gravely, firmly, and at a pace marked more by determination of purpose than by any inherent gallantry. They had proceeded but a few blocks, indeed, when he stopped and looked intently down at her.

"Are you really enjoying it?" he asked.

"The walk? Oh, yes. I adore walking—though perhaps if we didn't go quite so fast ——"

"Ha!" said Mr. Wilson, and strode on again, but at a somewhat milder rate of speed.

Miss Allison, who up to this point had been forced to economize on breath, now found herself free to say those things which must necessarily be said if the world is ever to come to any good.

"Mr. Wilson," she began with sweet seriousness, "I have been wanting to talk to you about the broader aspects of your work. Sometimes I have wondered whether you realized its full significance. Artists are so apt to be a trifle self-centered—don't you think?"

She glanced up at her companion with that frank smile which so became her lovely countenance; but immediately the smile waned and disappeared.

Mr. Wilson was not paying the slightest heed to her remarks. He was staring with fascinated interest at a chance passerby: a middle-aged stout woman in a flowered-silk dress, whose supposedly civilized bonnet was adorned with monstrous waving feathers.

"By George!" said Mr. Wilson. "The human parrot! I've never seen such a fine specimen before."

"But she has a soul," interposed Miss Allison gently.

"If she has," said Sandringham, "it's sawdust."

And forthwith he began to improvise a poem on the Human Parrot. At first his labors of composition were purely mental, but soon the lines burst from his lips. Quite unconsciously he chanted his poem aloud, to the amusement of various pedestrians and the embarrassment of Miss Allison.

"I met a Parrot walking along Main Street"—thus ran his inspiration—

"You are an Artist—a Real Artist—and Yet You Alone, of All the Members of the Staff, are Not Working for Revolt"

"A gorgeous green and gold Parrot with a red topknot—
She had the fine successful look of one who has reduced life to a single phrase.
So I asked her for her formula
And she replied:
'Polly wants a cracker!'
And I marveled at her wisdom.
But when she dies she will not go to heaven—
She will go to some celestial taxidermist
To be stuffed."

By this time a small crowd had collected at the poet's heels, much to Miss Allison's dismay. The poet himself seemed distinctly pleased at the acquisition of an audience, and went forward with the air of a public character, repeating and polishing his narrative in a fine sonorous voice.

It was with undisguised relief, therefore, that Miss Allison turned in at her own gate and, after closing it firmly in the face of the crowd, led her genius to the sheltered cloister of the colonel's garden. There Sandringham was invited to seat himself beneath a rustic pergola, which he did with no enthusiasm.

"They seemed to like my stuff about the parrot," he said. "I—I wouldn't mind walking a little farther—if you're not tired?"

"I'm exhausted," said Miss Allison firmly.

"Ah!" sighed the poet.

Miss Allison cast about for a means of diversion.

"Would you like a julep?" she asked.

Sandringham Wilson looked at her with new interest and promptly forgot his immortal lines.

"Without much sugar, if you please," said he.

So the poet had his julep, with a minimum of sugar, and Miss Allison had tea. And the shadows drew a misty curtain about their sylvan retreat.

"Art," said Miss Allison suddenly, "is cruel. It must be cruel. I quite understand ——"

"This is the best julep that I have ever tasted," murmured Sandringham Wilson, upon whose spirit had descended a great peace.

Miss Allison was conscious of a slight shock, but she was resolved to continue the conversation upon an exalted plane. It is not often that one encounters genius in a pergola.

"The true artist," she persisted, "should be without pity. If he felt pity he would be tempted to cloud the mirror that he holds up to the eyes of the race. Tell me," she whispered, turning to him, "are you ever sorry for the world?"

"No," said Sandringham Wilson.

Again Miss Allison experienced that sensation of slight shock.

"Why, then," she demanded somewhat coldly, "why, then, are you trying to help the world? Why are you seeking to better it? Why are you so busy picturing its soul?"

"You mean the stuff I do for the Sentinel?"

"Your work; yes!"

The poet was moved to confession.

"It isn't work," said he; "it's fun. I have never been able to understand," he added simply, "why they pay me for it."

"Mr. Wilson! Surely you are joking!"

The young man shook his head.

"They'll find out about me one of these days, and then I'll have to go back to reporting," he concluded, and took a long drink of his julep, as though to drown the melancholy thought.

Miss Allison sprang to her feet. Her eyes were bright with indignation. Her cheeks were prettily flushed. The idea of genius not comprehending its own divinity was more than she could bear.

"Oh!" she exclaimed. "You must see, you must understand! It's all very well for you to be individualistic—in a sense—but your work belongs to others."

"Yes," said Sandringham, "it belongs to the paper."

"Exactly! And the paper belongs to Kingstown, and Kingstown belongs to America, and America belongs to the world. So you see that you are universal, after all!"

He seemed rather bewildered at her logic.

"I am not accustomed to taking a julep at this hour of the afternoon," he stated apologetically. "May I ask what you are getting at?"

"I am getting at your responsibility," cried Miss Allison, "your moral responsibility. You are an artist—a real artist—and yet you alone, of all the members of the staff, are not working for revolt. Every person in the Sentinel office, except yourself, is working for revolt. The spirit is splendid, simply splendid! Mr. Podderfoot especially ——"

"Why should he want to run John Triggs out of town?" asked Sandringham Wilson, suddenly aroused. "Why should anyone want to run John Triggs out of town? That man Triggs is one of the most interesting creatures in Kingstown. He is the nearest approach to the human goat that I have ever seen."

Miss Allison looked at him as an angel—a very modern angel—might have looked at some particularly exasperating backslider. There was so much despair in her glance, indeed, that Sandringham Wilson rose from his seat feeling instinctively that hospitality was at an end. Miss Allison accompanied him in dignified silence to the gate.

She had decided upon a cool parting, a very cool parting indeed. But the soft haze of the evening, the scent of roses, the habitual peace of the elm-shaded street and, above all, the noble desire to uplift mankind—which was ever present in her nature—conspired to defeat her purpose. She placed her hand in the poet's, and looking up at him said with a sweet sadness:

"You are much more splendid than you realize. Some day you will grow tired of just—making pictures. Some day you will want to serve—and then you will understand what I have been trying to tell you ——"

Her voice died in a lovely trailing whisper. Her hand gently pressed his. He stood holding that hand a pleasant prisoner, and wondering whether the julep had gone to his head. He was aware that she had said something, but what it was he could not get clear. He only knew that her face was upturned to him in a beautiful, flowerlike way, and that, flowerlike, it seemed to await some culminating benison of nature. It seemed—expectant.

Sandringham Wilson leaned down and kissed the pleasant lips of Miss Allison. And at that moment two persons walking along the sidewalk stopped by common impulse in front of the colonel's gate and said:

"Oh!"

They were Miss Lucy and Mr. Lance Podderfoot.

It was an excellent dramatic situation, but as usual no dramatist was present to take advantage of it. And the actors themselves were not coached in their parts, so that they muffed them quite badly. Mr. Podderfoot turned red, stared fiercely at Mr. Wilson, and gnawed his extraordinary mustache. Miss Lucy looked white and startled. Miss Allison, after recoiling involuntarily from the salute, made a tremendous attempt to appear at ease and came dangerously near being absurd.

Of them all, the poet seemed the most genuinely astonished at his own behavior. His ears were agitated. His voice fell vaguely upon the twilight air:

"Amazing, by George! Quite unintentional—and temporary. I should never have taken that julep!"

Some two hours later, after a purely perfunctory dinner and a tasteless cigar, Sandringham Wilson climbed the boarding-house stairs to Miss Lucy's chamber. He was unaccountably depressed in spirit, painfully troubled in mind. Somehow his world had gone askew.

He knocked and was immediately appalled at his own temerity. There was a dreadful moment of waiting. Then he found himself face to face with Miss Lucy. She was pale and disturbingly unfamiliar.

"I came up to see if you were—all right," he stammered. "I—Mrs. Tuthill thought you might have a headache."

"I'm perfectly well, thank you."

The "thank you" smote him uncommonly hard.

"I wanted to explain about that business—this afternoon," he went on rather desperately. "It worries me. I should like to define it ——"

"Why should you define it to me?" she asked with unexpected vigor.

He looked at her determinedly.

"I define it," said he, "as the logical accident of illogical circumstances. It is essential to me that you should understand ——"

Miss Lucy became the spinster incarnate. She assumed an overwhelming age; she put on years.

"My dear boy," she said, "I understand that you have kissed the prettiest girl in Kingstown. More than that I do not care to know. And your secret is quite safe, so far as I am concerned."

The door closed. Sandringham Wilson turned and went slowly down the stairs to his own room. His definition had not served to clear the atmosphere. Apparently it had only complicated matters. The awful thought of having a secret caused the cold sweat to break out upon his forehead. And such a secret! He spent a miserable night.

The Sentinel's campaign for civic purity thundered rapidly to its climax. Mr. Lance Podderfoot's editorials became exceedingly bitter in tone. He attacked the astounded Mr. Triggs with unprecedented violence. He pointed out that the gambling element was still in full control of its evil faculties; that the Casino was closed only in theory; that life in general was a sham and a delusion and that Kingstown was no place for the entertainment of ideals. There was something almost personal in Mr. Podderfoot's despondency. As a matter of fact he had never recovered from that scene at Miss Allison's gate. He had been deeply wounded. He had been darkly and passionately jealous. He had taken that kiss as a theme. He had enlarged and embroidered it into a philosophy of despair. He had hurled it like a thunderbolt at the sacrificial person of John Triggs.

The effect upon Mr. Triggs was interesting and ominous. Day by day he grew more morose, more gloomily indignant. He drank prodigious amounts of his own

"Shoot Me," Said Sandringham Wilson. "I'm the Editor!"

DEEP MINING FOR BRAINS

By Edward Mott Woolley

DECORATIONS BY J. GORDON SMYTH

JIMMY LITTLEPAY, of the silks and velvets, went into the superintendent's office one day and asked for more money. How could any fellow live decently and pay the installments for an engagement ring on fifteen dollars a week?

Jimmy's plaint came at a time when the store was getting ready to adopt different methods of handling employees; so he was turned over to a new executive known as the development manager. This executive sent for the sales records of the silks and velvets, and after he had asked Jimmy a lot of questions he suddenly said to him:

"Can you start for Europe to-morrow morning?"

"W-what?" inquired Jimmy.

"I am going to make you buyer of the silks. You will sail at ten o'clock; but meantime you'll have time to talk with the merchandise manager and the president. You want more money, and here is a big-man job. It's worth five thousand dollars a year at the start, Mr. Littlepay; but, of course, if you don't make good ——"

"W-wait a minute! W-wait ——"

"It's all up to you, I say. You have a good opinion of yourself, and you've had four years in the silks and velvets. In four years a fellow can learn quite a lot."

Jimmy got up, somewhat pale.

"Excuse me," he said. "I appreciate your joke; but cut it out! I am not qualified for a silk buyer; but that is no reason why you should play horse with me. All I ask is decent pay for the job I've got right now."

"Please sit down," suggested the development manager. "Really, Mr. Littlepay, it was not more absurd to offer you the buyership than for you to demand more money because you wish to get married."

Clever Methods of Stimulating Clerks

THEN for ten minutes he held a clinic. At fifteen dollars a week Littlepay had been costing the store, according to the records, eight and four-tenths per cent of his sales. In four years he had shown no gains; nor had he exhibited anything worth noting in the way of ambition, initiative, observation, or special knowledge of silks and velvets and ways of selling them. As a producer he was worth less than fifteen dollars a week to the store. Why hadn't he figured it out for himself?

Then he gave Littlepay a touch of consolation:

"You are not altogether to blame, because the store hasn't helped you much. In the future we mean to look at each man and woman in the organization something as a miner regards his undeveloped claim. We are going to develop our human properties with intensive mining; and you may go to Europe yet."

Jimmy hasn't achieved this aim; but he almost doubled his sales the following year, and his pay is now round twenty-five dollars a week.

There are large profits to be made from the deep mining of men and women for brains; and every now and then a rich vein is struck. Nevertheless, there are hard problems in this kind of mining.

Take the case of Teddy A., who applied for a job at the age of twenty. On the application blank was the question: "What is your ambition in life?" And Teddy wrote: "Drive delivery wagon."

In a store without intensive management they might have taken the boy at his word, and perhaps he would have stayed out on the wagon all his life, an economic loss to the store and to the world, and a personal failure.

Instead, they put Teddy in the rugs, as a junior, at seven dollars a week; and then they began experimental drillings to find out what they could make of him. There is a system in this store requiring floor managers to make periodic reports on all employees, going into detail and answering many specific questions; and the first report on Teddy A. was a dreadful roast. For one thing, he had no sense of personal appearance. His clothes were soiled and ragged; his tie was hopeless; his shoes were unacquainted with the brush.

Here was a problem of some interest. Perhaps Teddy was a worthless claim; and if so, the sooner they found it out and abandoned him the better. But beneath those shabby clothes might lie a pay streak!

It is one of the fundamental theories of the development department that unless the faculty of observation can be cultivated it is practically impossible to develop a person. It is also a theory that in teaching observation the academic discussion should be secondary to actual contact. So they gave Teddy half a day off and told him to spend it in the store, making notes about the six best-dressed men he encountered.

Right here comes in another important factor in this method of mining human nature. Periodic absences from routine duty are compulsory, for definite purposes in which observation plays a large part. This idea is quite the reverse of the old-fashioned don't-miss-an-hour scheme of things.

Perhaps you know the grocery clerk who hasn't lost a day in seventeen years. "Good, hard-working, faithful chap!" says his boss, who has taken maybe six days off himself.

Neither of them ever had a chance to observe that some grocery stores and some clerks are different, and neither has climbed very high in the scale of success. Yet if they had taken a hundred days off they might not have observed anything worth copying, unless they did their observing under the direction of minds more keenly analytical than their own. You can set it down as an axiom that the average human nature will not mine itself.

Teddy A., however, responded satisfactorily to the test; for when he turned in his report next day he wore a new necktie and had polished his shoes. After that his progress in dress was rapid. It required only a lecture or two and a few more observation trips to turn him into a well-dressed young man.

Meantime they set out to develop his ambition. In one of the classrooms they had a big chart of the store organization, and all over it were red stickpins; and they made him understand that each one stood for a man. The ordinary chart is just a piece of the furnishings; but this one was a stage, with live men walking over it. They talked about men, and told him over and over that he could walk on that stage in almost any rôle he chose. It depended on himself. They told him the stories of some of the boys who had gone into stores just as he had done, and how they had gone up and up. To this boy, who had lived twenty years in an ant hill, it was a revelation—a sort of afflatus.

Then they gave him a lesson to do:

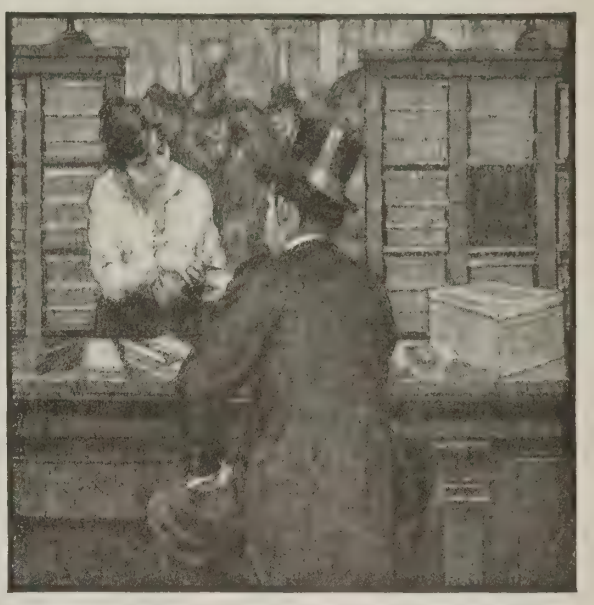
"Write some little stories about successful men. Dig them up out of biographies in the store library; out of the newspapers; from everyday life about you."

There is nothing that grips a man so much as the stories of men who have done things; and they cultivated Teddy's observation of opportunity so that in a little time he laughed at his erstwhile ambition to be a delivery driver. They developed other qualities in him, too; and now he is assistant manager of a department.

For variety, take Ned B. as an illustration. Here was another youth without much of an outlook on life; for he applied for work as an elevator boy. He had never thought in higher terms.

It is curious, by the way, to observe the number of boys and men who look out on a befogged horizon. Out of twenty applications for work at this store, by youths under twenty-one, only one aspired to be a buyer or higher executive. Glance at the others:

Four named the delivery wagon as their desideratum; two wanted to be elevator men; one had an ambition to be a flunky on the sidewalk and open automobile doors for customers; three thought they would like to be store detectives; two gave their ambition as floorwalker; seven viewed the position of salesman as their ultimate goal.



Ned was put at work in a stockroom; but first reports on him were unfavorable. In grading his qualities the executive who watched him gave him H for initiative, which signified hopeless.

In other words, the boy's faculty for original thinking was quite undeveloped. In this respect he was not much worse off than the average store employee, factory hand or office man who has had no specialized training in the great underlying faculty of observation. Perhaps Ned had never heard the word "initiative"; or, at least, it was an abstract term to him and he was unable to apply it to the practical things about him. He had a grammar-school education, which seems to be lacking in the application of the abstract to the concrete.

The Testing of Tillie

IN HIS work he had many sorts of packages to handle and to pass in and out; and when left to himself he did this in the most roundabout ways, frequently rehandling goods many times, when by the exercise of ingenuity he could have reduced the time and labor from ten to ninety per cent.

Some traps were set for him, as a test—such as mixing different kinds of bundles to see whether any systematic betterments would suggest themselves; but he fell into every trap ignominiously.

Then he was turned over to the development department, which gave him some preliminary talks on the importance of using his head. He had never been taught to think for himself, which is more or less of an extrinsic habit; though, of course, some people are endowed. Then he was sent on a trip through the store, with instructions to report ten things that could be done better. He turned in some grotesque recommendations, but among the lot was one that caught the attention of the executives. He criticized the drafty spaces adjacent to the entranceways; and the management had shields put up.

On being instructed in this line of thinking, Ned B. developed unusual initiative, and within a few months after his advent into the store he was making important suggestions—such as the sale of certain toys adjacent to the men's furnishings. A year or so later he won first prize in a suggestion contest, turning in the largest number of available ideas. He is now manager of a basement department.

There was a hard-working girl in the infants' wear—Tillie C.—whose record previous to the establishment of the development department showed an almost unbroken chain of days in harness, stretching back in weary monotony for a decade. I compared her sales for the first week in November, over a period of years, and they averaged round a hundred and ninety dollars. But in the two years following the development work her sales had jumped to an average of more than three hundred dollars. Tillie's story is an odd one. About the first thing the development manager said to her was this:

"Take Thursday off and spend it in the store studying the salespersons. Pick three clerks who you think deserve promotion. Don't bother about names, but make a report telling in detail your reasons for picking them."

Tillie's report showed that, even after all her years back of the counter, she was hazy as to many of the requirements of good salesmanship. The reasons she advanced were mostly superficial. In one instance she picked an elderly saleswoman because it seemed to her that this clerk deserved

recognition for long service; and in another case she gave her reason as "a pleasing personality." She chose a clerk in the toys because she seemed to like children.

Of course Tillie was working at a disadvantage because she had no access to sales records, and at best her opportunity to judge was limited. Yet she showed herself incapable of discerning such points as knowledge of goods, sincerity, tact, ability to express oneself clearly, knowledge of different types of customers, offensive mannerisms, and so on; in fact, Tillie had never heard salesmanship analyzed in this fashion. After all those years of labor she was still a mental infant in the selling field! But, late as it was, she began to look out on the sales world with the new vision of a nearsighted person wearing her first pair of glasses.

Anna D. worked in a department that sold bathing suits, sweaters, shawls, various dainty wraps, and fancy articles of many kinds. She had averaged round two hundred and fifteen dollars a week in sales and was considered a good saleswoman. The term "good" is about as unstandardized as the word "cigar."

In the course of his survey of the store the development man discovered her, and gave her unusual consideration because she showed certain glaring faults. In his peculiar mental viewpoint it was hard to understand how she had remained in the store two years. She was the kind of salesgirl who says to customers:

"What do you want to pay?"

"What color?"

"You take a big size, don't you?"

"We haven't any demand for that any more!"

"Would you care to see something more expensive?"

"This is the cheapest we have."

As a preliminary test in observation he sent her on some shopping trips to two classes of stores—the first representing the advanced and refined type of salesmanship, and the other the primitive sort. Not a word was said to her about her own faults, but she was asked merely to commend or criticize anything that impressed her.

Her report was quite inane and missed the point altogether. And no wonder; for she was mentally blind in these matters. Was she any worse in this respect than her employers had been? They could scarcely expect intelligent observation on her part, since they themselves had never observed that she was of a type of salesperson especially distasteful to customers.

Questions for Self-Analysis

ANNA D., however, was no fool; and when she began to comprehend real salesmanship she applied it to her own work and increased her sales sixty per cent in a year. You can only guess what her inward struggles were; but her efforts and those of the development department were fairly indicative of what may commonly be accomplished.

These things may sound like truisms to the keenly philosophical business man; yet the world is running over with employers and salespeople who are still in such a mist of crudity that even this elementary psychology is an utter stranger to them. Moreover, there is a new batch perpetually coming along, so that nothing but continuous development work will keep a business up to date.

It should not be inferred that this development progress is measured wholly by the detached individual sales records. Jessie E., before the development work began, sold six hundred and sixty dollars' worth of laces in November. In the following November—after having her observation, initiative and general salesmanship cultivated—she sold ten hundred and forty-nine dollars' worth. Though this gain shows up as her personal achievement, she is not really entitled to all the praise. Bertha F. may be responsible for some of it.

Bertha is in the knit underwear. In the old days of hit-or-miss salesmanship she sold, in November, eight hundred and ninety dollars' worth of goods. Afterward she sold, in November, twelve hundred and sixty dollars' worth. In addition, her improved influence in the store has been acting indirectly on the sales of Jessie E., and vice versa.

Though it is difficult to gauge this intangible influence, the store makes an attempt to estimate it by rating its salespeople fifty per cent for net sales and fifty per cent for the aggregate of the following qualities:

Health, appearance, manner, initiative, industry, accuracy, loyalty, coöperation, responsibility and knowledge.

An analysis of these qualities subdivides them something like this:

Health: Regular in attendance, healthful appearance, erect of posture, vigorous in daily work, alert in mind.

Appearance: Businesslike, dress according to requirements, hands and teeth well cared for, hair neatly arranged, clothing well brushed and neat.

Manner: Smiling, courteous, interested, tactful and persuasive, voice pleasant and speech correct.

Initiative: Introducing merchandise not asked for, making extra efforts to please customers, originality, finding things to be done, suggesting ways of improving service.

Industry: Serves customers promptly, good at stock-keeping, in department as much as possible, always on time in department.

Accuracy: States facts correctly, systematic worker, observes rules of the house, fills orders promptly, minimum of errors.

Loyalty: Speaks well of the house, does nothing to reflect discredit, offers constructive criticism, does everything possible to help the business, willing to stay late when necessary.

Coöperation: Saves expense when possible, willing to straighten out mistakes, willing to assist in other departments, assists fellow workers in own department, willing to assist with other work along with regular duties.

Responsibility: Willing to assume it, careful in making and keeping promises, avoids mistakes, does work satisfactorily, good stockkeeper.

Knowledge: Thorough knowledge of stock and of store system, familiar with location of departments, knowledge of store advertisements, knows steady customers.

You can see that this is a rather keen analysis. Each salesperson is rated monthly by the floor manager, buyer, and an assistant superintendent, as excellent, good, fair, poor or bad.

There are ratings, too, for rank in department sales, percentage of salary cost, returned goods, times late, times absent without just cause, and so on. One executive characterized some of these things as frills, but said that the moral effect, nevertheless, was excellent.

In investigating this subject in various stores I was surprised to find how much deep thinking had been given to this matter of development work; and for any person who wishes to increase his or her earning capacity I recommend a perusal of the following condensed self-analysis report, many of the questions in the original being omitted altogether, because of its length. Every salesperson is asked to fill this out, but only after careful meditation:

"What are your favorite studies? What studies do you like least? Are you doing any definite reading or studying? What? What studies have you taken that will help you in your position? What studies have you planned to help you in your present position? What studies that will prepare you for advancement? What papers or periodicals do you read regularly? What lines of merchandise do you understand? What lines do you like best? Would a knowledge of any foreign language help you? And, if so, have you made any plans in that direction?

"What do you do with your leisure time? Have you control over your temper and emotions? Do you use liquor? And, if so, do you consider it a safe habit? Can you concentrate your mind? Are you inclined to be lazy? Do you appreciate the price you must pay for success?

"Do you like or dislike to mingle with people, and do you realize that the proper contact with the world is essential to success? What are you doing to cultivate this quality? Are you studying self-expression or the forceful use of language? Can you trust yourself? Are you absolutely honest?

"What weak spots in your character are you building up? What is your greatest strength? What is your greatest weakness?

"What special training do you need? Do you work well under supervision? Without it? Are you willing to learn new and better ways of doing your work? Can you save money regularly? Are you in debt? Do you realize that your earning capacity depends on what you produce for your employers, not on length of service or favoritism? Do you understand that there are definite ways through which you can become more productive, and that by faithfully studying the development work of this store you can largely increase your income?

"Do you have to be told more than once to do a thing? What occupations have you followed, and for how long? Did you give them up for good reasons or for lack of courage and persistence?

"What is your greatest ambition? Could you reasonably set a higher goal, considering your natural endowments and the results others have accomplished under similar conditions?"

Then follow spaces in which the employee is to enter an estimate in the form of percentage of his or her personal qualities, some of which I have named in the foregoing. Others are adaptability, alertness, determination, discretion, economy, enthusiasm, frankness, imagination, optimism, patience, resourcefulness, thoughtfulness and thoroughness. And finally:

"Are you satisfied with yourself as shown in this analysis?"

The employees are invited to confer with the development department for advice in any effort toward improvement. Of course there are numerous classes going on all the time, which I shall not attempt to enumerate or describe.

A Better System of Promotions

I HAVE before me a copy of a different kind of analysis, made by a floor manager, the subject being a salesgirl in the candies and favors. The blank form contained many questions, and the substance of his report was this:

"M. W., aged twenty-two: Influence in department, good; discipline, good; inclined to relax in her work when not under direct supervision; is willing to learn and needs coaching in store systems; should be drilled in the analysis of salesmanship; has improved materially in last six months; believe she can increase her sales forty per cent. As a means of increasing her value to the store I should suggest Classes F and G."

In connection with these various analyses the fact was disclosed that the majority of salespersons had remained for years in the departments where they began, if they stayed in the store that long. There had never been any tangible policy of promotion and, hence, the opportunities were limited by those of the departments. Yet there were departments that returned the store very much larger profits than others. So the development department asked: "Why not give the salesforce the incentive of stepping from a poor department to one that can pay more?"

This was done, and definite lines of promotion established between departments closely related. For instance, experience in silks could be put to a higher utilization in the selling of silk waists and dresses. When a saleswoman reached maximum earnings in silks she was transferred as soon as possible to this other department.

In like manner the wash-goods people were advanced to the cheaper dress goods selling at prices inside a dollar a yard; then into plain blacks; next into fancy dress goods; and then into coats and suits, as being made up of the fabrics they had been handling.

A study of the salesmen and saleswomen in a number of departments showed that, under the old method, or lack of it, ambition was practically dormant, so far as getting into higher work was concerned. Gertie S. had been doing precisely the same thing for nine years, a topnotcher in the ribbons, yet at the limit of her aspirations because there was no door through which she could escape. Now she has been passed on into the millinery.

"Once in the basement, always there!" was a saying in the store, but not now.

Some clever development work may be seen in the methods of eliminating errors. A preliminary study of errors was made, requiring many months; and the common mistakes made by employees were found to aggregate about fifteen thousand a month. There were four hundred and thirty kinds of errors, including such things as overmeasuring goods, wrong change, names and

(Concluded on Page 101)

BRINGING OUT BARBARA

The Experiences of a New York Débutante

III

By ETHEL TRAIN

ILLUSTRATED BY CLARENCE F. UNDERWOOD

THE roses faded, and for several weeks I saw their sender no more. I had my sketch; but even that was only an impression of him upon whom my thoughts dwelt. Emotion feeds upon an absence of details—especially that vague form of it which agitates a young girl's breast. It was not love that was at the bottom of the emotion, but the emotion that was at the bottom of what, with beating heart, I thought I recognized as love. Whatever it was, it had taken hold of me and soothed my turbulence. I became surprisingly acquiescent in everything that mother demanded of me, and found myself the gainer by this docility. I went wherever I was told to go and endeavored to behave according to instructions.

By the time we were ready to exchange Long Island for Newport I had a large though sketchy acquaintance among those who were to share in our migration. It comprised nearly everybody except the Spencers, the Glendennings, the Winty Athertons, the Boltons, and a few others of their ilk, who remained consistently withdrawn. I did see the Bolton girl one day getting some polo practice in a field. She handled her mallet with the utmost skill, swinging it with long, sweeping, pendulum strokes of a brown arm, bare to the elbow. Her hair was all blown, her cheeks scarlet; she sat her scampering pony like a jockey. She looked like a real girl, and I wanted most awfully to meet her. I found out upon inquiry that she was fifteen; and that she never went out in the evening, but had her supper with her two little brothers at half past six.

There was no lack of girls of that age who did go out to our subdébutante festivities. The Hill twins, for example, wouldn't be sixteen until September. They were the two shoulder shakers who had been talking with John Randall at Mrs. Winslow's tea. Their mother had been deposed from office several months before upon grounds that had not failed to reach even our juvenile ears. Rumor had it that negotiations were pending for a successor; but meantime there was nobody to look after the twins, who floated about as they pleased.

Nobody looked after any of us, really. So long as we frequented only certain houses we were considered safe. We should have bored older people and they had no intention of being bored; so they would give us the run of the house for the evening, and take themselves off to more congenial companionship. After dinner there was always something to divert us from any attempt at acquiring the art of conversation: if not dancing, then an oily trick man, or a mind reader, or a singer of not very nice topical songs.

We moved to Newport toward the middle of July. Our house here was not so large as the Westbury house, but it was rather more ponderous.

It seemed too heavy for the contracted grounds upon which it stood. There was no space for a garden, so our flowers were forwarded to us from Long Island several times a week by express.

Whenever I thrust my nose out of doors I was in full view of the strollers along the shore walk. Everything we did here was done under the public eye. The resort outdid the suburb in gregariousness. Neither mother nor her associates ever seemed to feel the need of being alone.

Anybody to whom money is no consideration can own three houses, but nobody on earth can have three homes. Having no home of course we had no home life. We lived in other people's houses, and they in ours. None of us had any household gods, since such commodities do not come in triplicate.

She Looked Like a Real Girl and I Wanted Most Awfully to Meet Her

The luxury in the midst of which I now found myself seemed to me harmful chiefly because of its falsification of values. The house, for example, instead of being a means to an end, became an end in itself.

Existence was complicated by the needless elaboration of what intrinsically was simple enough. It was not that we overdressed—any girl who appeared in lace and muslin on golf links or tennis courts would have been well laughed at; correct sport attire for the young consisted of the plainest of white shirt waists and skirts, but when it came to crispness and starchiness you might go to any lengths uncriticized.

Mother insisted that I should change oftener than the most fastidious standard of personal cleanliness could possibly have demanded. Every time I turned around there stood Yvonne holding out a fresh white skirt for me to put on. Serviceableness, for which such garments were designed, thus gave place to style, a term having meaning in one small stratum of society, but without signification to the rest of the world.

I should think it would have enraged the laundresses, of whom there were three in our laundry, to be obliged to go through the whole process of "doing up" a dress when all it needed was a little pressing to take out the creases. The idea was, I suppose, that, since they were paid to work, it made no difference what work they did.

Of our three abiding places Newport was the least familiar to me, for the nine weeks of my family's sojourn here I had for years spent in a girls' camp in Maine. It was a far cry from that to this. The transition had taken my breath away. I was given no pause to regain it. No allowance was made for any bewilderment on my part. A routine was mapped out for me and I was expected to follow it without ado. I got up late; for, once started on the day, it was one long, dizzying whirl. Its only quiet moments were those relegated to the changing of clothes. I now had too much exercise in conjunction with everything else. Sleepy from tennis and bathing, I had to sit up and make conversation in hot, crowded rooms at lunch; black coffee stimulated me to more exercise in the afternoon; tea restored my verve after that; then came dinner, with renewed chatter, food and coffee; and then, to finish off the evening, dancing! More exhausted than any factory girl, I tumbled into bed.

I began almost at once to form a variety of acquaintances among the opposite sex. Some blew in on yachts for a night; others came as visitors and stayed indefinitely. Few were under twenty, for the boys of our age liked girls older or younger than we were, when they liked them at all. Our swains ranged in age from eighty to twenty. There were retired rear-admirals who still danced, preferably with girls in their teens. There were men married, unmarried and remarried; there were paupers, pet cats and sudden millionaires; there was everybody who was anybody, and anybody who had become somebody by the magic of money, through foreign alliance, by hook or by crook. We had steel kings and crockery kings, cotton kings and carpet kings; the only monarch who hadn't broken in yet was the copper king, and from latest advices we were informed that he was on the way, and was due to arrive presently.

Between the girls who were not "out" and those who were there was drawn a strict line of demarcation. We were never invited to their entertainments, nor they to ours. But when it came to men, not one was considered too old or too experienced for us to associate with on equal terms. Once they had obtained the entrée they were asked "to everything." I wondered, when I first saw them standing about in the doorways at our very young dances, what we, who knew so little of the world, could possibly have to offer them.

One night I found out.

It was at a little dance at the Hills. The party was frankly "sticky," and everybody was having a dull time of it. The ballroom was hideously decorated in blue and silver, with designs reminiscent of the calliopes in circus parades. There was no angle at which these did not hit one in the eye. Wherever one looked were quirks and querls

innumerable, Cupids with overdeveloped stomachs, and bowknots that did not tie anything.

After one unsuccessful effort to pilot him round the room I had sat out two interminable dances with my Long Island acquaintance, the Midnight Follies boy, whose name was Cyril Chub, and had come perilously near yawning right in his pink and placid face. Never to my dying day should I forget that soulless eye, that plastered hair and that perennial gardenia. From this extremity I was rescued by an oldish man, whom I had met on another occasion, and invited to seek coolness somewhere outside. I was flattered at his having remembered me, and gratefully accepted, though I knew nothing of him but his name, which was Watson. We went out on the veranda, but that was too damp, he thought; so we adjourned to the conservatory, a green and bowery spot most grateful to me after the glare of the lights inside.

I expressed my satisfaction and drew his attention to the beauty of a great palm with drooping fronds. We got to talking about flowers and I told him how I loved them. Then he began comparing girls to flowers; and I thought that sounded rather silly, but put it down to an older point of view. When I was fifty or sixty, no doubt I, too, should be sentimentalizing over the freshness and innocence of that youth which I was so matter of fact about just now. Still, it was tiresome of him to continue harping on this subject, with lowered voice and bated breath.

I had no idea there was anything personal about it, however, until his flowery language suddenly ceased and I distinctly felt something touch my bare arm. I could not believe that my senses had not played me false; and, drawing every muscle taut, I waited, absolutely still. Then I heard in an insinuating whisper:

"Don't be frightened, Little One. I'm not going to hurt you. I'm only helping you to wake up! You've got to wake up sometime, you know!"

In one bound I was out of that wicker chair. Luckily there was light enough to see the open door.

If there hadn't been I believe I should have crashed right through the glass.

In all my life nothing had ever so outraged and surprised me as this episode. As a result, I suddenly hated and distrusted all men—Allan Denning not excepted. John Randall alone escaped. I did not think of him at all. The bubble of my youthful self-sufficiency had burst. There was no gas left in my balloon. I wanted somebody to take care of me.

Mrs. Barton Winslow sat among the patronesses; *soignée;* exquisite; the woman of fashion from the tip of her small, white-crowned head to the toe of her slipper, but more, far more than that when you looked at her eyes—dark eyes, mirroring life—human eyes! . . . Oh, if I could have confided in her. . . . Instead, I went up to her, extended the tips of my fingers, murmured something about being tired, and left.

A thin line of light underneath mother's door showed me that she was within. Sadly I passed it; for mother had failed me. She had sent me forth unprepared and unwarned.

In my own room I sobbed for hours, flung athwart my bed. At last I slept, very heavily. In the morning I woke, stiff and weary, last night's melting succeeded by an exaggerated and deplorable cynicism. Since there was no one to take care of me, it behooved me in future to take care of myself. This I thenceforth did—a little too well. I thought I saw a devil lurking in ambush behind every masculine face; for there is no disillusion comparable in poignancy and passion to the disillusion of extreme youth.

The hours, with their overlapping engagements, hurried confusedly along, and I hurried with them. In Allan's absence I continued to include him in my sweeping distrust of men. I did not know when he was coming, or whether he was ever coming. Meantime I rushed from one activity to another. If anybody asked me to play golf or tennis, I played; wherever I was bidden to lunch, tea or dinner, I went. Mother arranged my engagements, Yvonne dressed me for them, and the chauffeur conveyed me to the designated spot. The more keyed up I got from overdoing, the more I overdid. Society had harnessed me to its chariot, a poor little three-year-old colt, without full strength of wind or limb.

Then, one day, Allan turned up. No sooner had I laid my hand in his and looked into his eyes than I found myself, by sheer force of reaction, more than ever under the spell. "All men are liars," I had thought. Now I said: "All men are liars—except one."

During this period John Randall did not exist for me. Ever since I had turned my back on him, and run straight into the arms of Allan Denning, the bolder image of the latter had usurped his place upon my mental retina. The young painter had been the unattainable moon; Allan Denning was the coin which, held close to my eye, served to exclude that moon from my field of vision.

One night, however, the coin was struck aside and the moon shone once more in the midnight sky. It was at a vaudeville performance at one of the houses. Allan was sitting beside me. He did not honor many of our sub-débutante dinners with his adult presence, but he often dropped in afterward to applaud good-naturedly whatever entertainment was on for the latter portion of the evening.

On this occasion it was acrobats. Upon an improvised platform a delicately muscular fellow, in tights, was awaiting, lithe and watchful as a panther, the moment for his leap onto the shoulders of a colleague. There was something in the set of his lips, the concentration of his eye, that vividly suggested the young painter and curiously clutched at my heart. The leap was made; more than the usual polite applause followed—even this assemblage had not escaped a thrill.

He who had evoked it deserved no less; spurred on by merciful necessity to sweat and strive, he had evaded softness, a quality warranted to make of whatever it touched that had once been young and glorious a thing all gone to rot—decadent and mean. From the boy's thin, streaming face my eyes turned to Allan. He was clapping, heavy-handed; complacently calling out "Bravo!" With a shock I wondered whether it were possible that he would one day be fat!

I dreamed feverishly of John Randall, clad in cheap pink tights.

As luck would have it, the very next day Mrs. Winslow invited me to lunch, to see her portrait, which had been all this time getting framed, and had just arrived from Long Island.

I was taken to the drawing-room to wait. With my foot on the threshold, I was arrested by the direct gaze of a pair of gentle yet burning eyes. The portrait hung over the mantel, directly opposite the door. The canvas was not very large. It showed Mrs. Winslow sitting at ease upon a sofa with plenty of give to it, and took in the knees. She was in a simple tea gown that fell in loose folds about her; her delicate neck, the poise of her exquisite head with its piled-up white hair—ah, with what appreciation had they been reproduced! With high courage, Randall had dared to put in every line he saw in that face of a woman approaching sixty; not one had been omitted. The result was that he had portrayed the dignity, the nobility that only years can give; and proved that truth is beauty—beauty, truth.

So compelling, so intense was the quiet of that seated figure that it made all the little things with which my brain had been so busy fall away at once, leaving my spirit rever end and hushed. So absorbed was I in my contemplation that I did not hear Mrs. Winslow come in. I started when I felt her hand on my shoulder, and turned with a smile But I could not speak for a minute, because—just as they did when I was listening to music—my eyes had filled with tears.

"There's not much doubt as to what you think of it," said my hostess, adding quietly: "I learned to know John Randall well during the sittings, and to value him highly as a friend."

Upon this opening might have ensued confidences that would have changed the whole course of this narrative, but for the fact that at this inopportune moment Ruth Alvord came dawdling in.

The following afternoon Mrs. Winslow exhibited the portrait by means of a tea. From four o'clock on her house was jammed. The portrait took Newport by storm. For the rest of the season, at least, the young artist's name would be on every tongue. Why wasn't he present? a hundred voices demanded. I made spurious criticisms of him to myself. He ought to have come, I argued, even if only out of curiosity. It must be an affectation—this seeming indifference as to whether thumbs turned up or down. Nobody could really be as cool as that.

Deep down inside I knew well enough that the reason its creator refused to embrace his big opportunity was nothing more important than myself. He wished still to avoid me. Out of pique or out of embarrassment—what matter, since he had not come?

Memory stands a poor chance in competition with the actual presence of a delightful, assiduous and constant companion, such as Denning. We were "Allan" and "Barbara" now; we swam together every morning, played golf every afternoon. A girl does want some man after having been with spinsters all her life, and here was a very charming one who was ever within call. Yet, even in his company I was subject to moods of taciturnity and abstraction.

"You look so unsatisfied sometimes!" he commented one day, leaning on his club, throat bare, sun glinting on his hair. "I believe you still worry like the devil about being made to come out."

"I do—often," I admitted gravely.

For a while he regarded me in silence.

"If you became a highbrow," he then said whimsically, "what I want to know is Where should I come in?"

My heart thumped agreeably.

"I didn't know you wanted to come in!" I stammered.

His smile went out.

"You bet I do!" he said in his deep vibrant voice. "Why, I've told you a dozen times I'd never met anyone like you We don't grow 'em round here. And now you talk about deserting us! Don't you think that's rather hard?"

My eye sought the horizon at the end of the wide sweep of green. He must have noticed its wistfulness, for he said consolingly:

"*I* understand exactly how you feel But, unfortunately, I'm not your mother The plain fact is, you're up against it You don't know women with social ambitions as well as I do. You might talk yourself blue in the face—she wouldn't give in She knows what she wants, and she wants what she wants, when she wants it There's the whole thing in a nutshell Why not succumb with a good grace? No rows—smooth sailing—lots of laughs on the side—somebody to laugh with—me Is that such a ghastly prospect? Don't take it so seriously! Why, you're almost as serious as she is! Come on! Be a sport Play the game!"

At seventeen you don't refuse to be a sport, any more than you refuse to take a dare. And the accusation of seriousness is a serious accusation, carrying with it the opprobrious implication of lack of a sense of humor. Besides, an exceedingly attractive young man, who intimates that he is in love with you, is an influential factor in any situation.

"Oh, very well!" I said gayly, though my spirit was troubled. "I don't care. I'll see it through."

The first of these statements was a lie. I did care terribly. The second was a pledge. The importance that I was to attach to that pledge was evidence that I was incurably serious after all. In Allan Denning mother had gained a powerful ally.

I Thought That Sounded Rather Silly, But Put it Down to an Older Point of View

Two days later Mrs. Winslow was one of the guests at a luncheon of women at our house.

I was "down"; and as soon as opportunity offered she whispered in my ear:

"He's coming after all. I persuaded him. He's sailing himself up from New York in his own boat. He ought to be here to-day."

I paled and all my pulses thumped.

Mrs. Winslow introduced John Randall to Newport at an evening reception. I was there by her special request.

He shrank at sight of me; but I went straight up to him, where he stood under the portrait, and held out my hand.

"I can't tell you," I said slowly with look upturned to it, "how picayune, how idiotic, in the light of this, I seem to myself for having resented your resentment with me—about the letter ——"

A warm glow suffused his face.

"It was only because I couldn't bear to think of it that I was so cross," he said, boyishly eager. "Of their beginning the—metamorphosis stuff, you know. But now I see I was wrong. They haven't touched you! You're the very same girl I met that night."

I started away from him, wide-eyed.

"I don't think I am," I said uneasily. "You only get that impression because I'm still able to recognize inspiration in a picture when I see it."

He smiled.

"Anyone would be a fool," he averred, "not to draw inspiration from such a subject."

Somebody came up to him just then, after which Mrs. Winslow brought others, and presently he was surrounded—obliterated from my view—closed in. For the next two hours he was at the mercy of the throng. They would hardly permit him to breathe.

When the crowd had begun to thin out he found me again.

"Thank the Lord that's over!" he said with a deep, heartfelt sigh.

I laughed.

"How brown you are!" I commented. "I never knew a painter could be so brown. What fun it must have been, sailing up! I'd love so to sail."

"Come sailing with me to-morrow!" he flashed.

I shook my head, wondering what to tell him. He should never know of the friction that had occurred between myself and mother on his account. I was glad now that he had not divined her attitude toward him. With these thoughts in mind I was completely taken aback by his next words.

"Your mother's been awfully kind to-night," he said appreciatively. "Said how much she liked the portrait; asked me to dine week after next, and to tea on Tuesday."

This change of front on mother's part took my breath away. It hadn't mattered that I had vouched for this man out of the depths of my being, with everything in me that intuitively recognized what he was; she had forbidden our association just the same. What had altered her decision? Mrs. Winslow. Whom Mrs. Winslow accepted, it was meet that Mrs. West should accept. There was nothing for it but to get in line with the other sheep. Of my thoughts I showed nothing, but said eagerly:

"I hope you're coming!"

"Of course I am!" was his prompt reply. "Meantime, what about that sail? Come on! I'll get you back in a couple of hours. I swear I will!"

I beamed. There was nothing now to stand in the way of my accepting.

"It'll be wonderful!" I cried.

We looked at each other, radiant. Then suddenly the sun went out. I had remembered an engagement. How came it that it had slipped my mind?

"I forgot," I said. "I can't. I've got to play golf at half past three."

"Too bad!" Randall replied. "Oh, well; never mind."

His disappointment was evident, from his eyes all the way down to the sensitive tip of his chin. I found myself unaccountably contrasting that chin with Denning's. That Denning had allowed his to forfeit something of its natural contours outraged my artistic sense. Adonis he was, beyond question; but Adonis "to date," a little blunted as to edges—a few pounds overweight.

The Party Came Perilously Near Being a Frost

"Have you been doing any painting?" he asked with an effort, after a pause. "You have! I can read guilt in your eyes. Confess!"

I blushed furiously. If he should discover that my golf partner and the subject of my sketch were one and the same, it would spoil our fresh start.

"Only one sketch," I deprecated. "Nothing at all. I finished it in a day."

Glancing toward the door at this juncture I saw two or three late arrivals who had just come on from somewhere else. Allan was one of them. He joined us at once, turned to Randall, offered congratulations and shook hands. How charmingly cordial was his manner! No reminiscence in it of that cool stare with which he had looked him over at their first meeting. Was this change due to the recognition of genius, or could it be that he, too, was one of the sheep? Instantly dismissing this suspicion, I yet wished he had been endowed with foresight rather than hindsight. He ought to have recognized at a glance the quality of that face. . . . I had!

"I only dropped in for a minute," Allan said. "Good night, Barbara. Don't forget our match to-morrow, will you? Three-thirty. And do show Mr. Randall that sketch you did of me. She did a cracking sketch of me, Mr. Randall. Get her to show it to you. Make her!"

He was off, and Randall and I were left uncomfortably together. I knew what that line in his forehead meant, that almost imperceptible quiver of the chin. He was drawing deductions at the rate of a million a minute.

"Please," I besought him, in acute distress, "stop thinking—what you are thinking! I might just as well have sketched anybody. He happened along just when I wanted to sketch. When I want to sketch I sketch anything that comes along. I ——"

From these verbal involutions I was rescued by mother, who, approaching, wished Mr. Randall good night with the utmost cordiality and said it was time to take me home.

When I laid my hand in his something in his expression reminded me of the way Miss Wier had looked when she had come upon me in my dinky little hat.

Tuesday came without my having caught sight of him again. That afternoon my game was unspeakable, I was so afraid of not getting through before five. Luckily Allan was due somewhere else at teatime; so we only played nine holes. In his absence I was sure of an opportunity for a frank talk with Randall that would clear things up.

Arrived at home, I waited confidently; and he didn't come. After everybody had been sitting around for hours, the doorbell rang. I heard soft sounds, as of things being laid down on a table.

"It is he, after all!" I thought, exuberant.

It wasn't he. It was Allan!

One moment of blank disappointment; and then a lightning chemical transformation of all the ingredients of that disappointment—the chief, hurt pride—into overwhelming gratitude toward a friend who never failed.

"I thought you weren't coming to-day," I whispered. "I thought you were going to have tea with the Glynn-Rollinses."

Before answering, he bent so close that in one moment I seemed to feel the pressure of his lips upon mine.

"I've had tea with the Glynn-Rollinses," he said, implying that the Glynn-Rollinses were powerless to hold him long away from me. "And now I'm going to have more tea," he added comfortably, "with you."

He chatted for a while with mother, who handed it to him, and with the other guests; and then we went and sat on a remote sofa. He was not only in high spirits but he was most awfully good-looking in golf clothes. Some day I would sketch him like that—one leg thrown over the other; hair all crisped and kinked with fog; teacup in hand. I would sketch him forty ways and show all the sketches to John Randall, just to see him wince—for so reckless was my mood that I delighted in the thought of hurting.

He began gossiping about people; I responded. It was a form of diversion I despised; but my ideas were all out of kilter this afternoon—and it required so little effort. He laughed at some rumor I retailed. I followed it up with another choice bit; he laughed again, and the more he laughed, the hotter my cheeks flamed—the more excitedly and incoherently I talked.

"Do you know," he commented, suddenly slapping his knee, "I've never known you to let yourself go like this before! By George! You're waking up!"

At this expression, I stared at him. Could it be true? "I'm only helping you to wake up," had hissed the serpent. "You've got to wake up sometime, you know!" Ah, how soon I had begun to wake up!

That night a formidable dinner occurred at our house, and I entered the drawing-room amid a loud hubbub of indignant talk ensuing from a medley of dowagers, diamonds and fans, all in motion. No strikers gathered on a street corner could have given more unmistakable evidence of indignant agitation.

The men who were there did not say anything; they let the women talk.

A single name was on everybody's tongue—the name of the new lion. It appeared that this lion, instead of submitting to being decorated with garlands by soft hands, had shown his teeth. In plain English, devoid of metaphor, John Randall had actually dared, without a word of explanation to anybody, to give Newport the slip. Taking advantage of the lasting qualities of the breeze, which my weather eye had foretold, he had slipped his moorings at Mrs. Winslow's dock that very afternoon and sailed away into the sunset in his little catboat.

Enter cocktails—exit girl. That was my program. That night I thought the cocktails would never come! Snatches of talk reached my ears:

(Continued on Page 93)

ALIEN ENEMIES

By Melville Davisson Post

PHOTO. FROM BROWN BROTHERS, NEW YORK CITY

Scotland Yard Men Always Bring Their Captives to Jail in an Enclosed Yard, So That They Will Not be Known Generally

FOR the present situation in the United States our Government has little precedent in its own history. On any day it may be called upon to deal with the problem of alien enemies. In the solution of this problem it will doubtless follow what seems expedient to American conditions; but the experience of Great Britain, under conditions in some respect parallel, may be cited as a guiding factor.

The policy of England has been a careless liberality in dealing with all resident aliens. Deposed princes and the conspirators who had deposed them came with equal freedom to the English Islands. London was the headquarters of all revolutionist propaganda in Europe. Every form of fanaticism was released there. The whole island was practically free to any alien upon the same terms as to the English resident. This national policy was in contradistinction to that of any continental country. France and Germany required the registration of all foreign visitors.

Consequently when war was declared the continental countries had an accurate record of every alien, on that date, within their borders. Great Britain was practically in the position of the United States at this time. It was not precisely in the position of the United States, for, as early as 1905, the government realized that the great system of German espionage which had been laid down carefully over the whole of France had also been extended to the English Islands. At the suggestion of the Admiralty and War Office a Special Intelligence Department was organized to operate with the Home Office, Metropolitan Police, and the principal police force.

This was a tardy initiative.

Men like Lord Roberts, the Earl of Portsmouth, the Earl of Crawford, Lord Leith of Fyvie, Viscount St. Aldwyn, Lord St. Davids, the Earl of Selborne, Viscount Galway, Lord Curzon, and others, had warned the country in vain against a system of German espionage by resident aliens. But the force of these warnings was so slight that, even after the Special Intelligence Department had been set up, it was found that the existing laws were so confused and defective that it was necessary to pass the Official Secrets Act. This Act, passed in 1911, undertook to put the subject on a clear basis, and to extend the law to cover any information that might be conveyed to an enemy and be useful to it in time of war.

Suspects Under Martial Law

THIS precautionary measure proved to be of great service to the English Government. Under it they discovered the central headquarters which resident aliens had set up in Caledonian Road, London—an Intelligence Department conducted by a naturalized German who had been a resident of Great Britain for sixteen years. The authorities watched and shadowed the movements of resident aliens from this headquarters, but without taking any hostile action or allowing them to know they were being watched. Only when the resident alien, under the direction of this central office, undertook to send documents of importance out of the country was he arrested.

It was not the object of the Special Intelligence Department to institute prosecutions. Public opinion regarded German espionage in England as a nightmare of the fancy, the idle alarms of timid and excited persons. For this reason the Special Intelligence Department kept its discoveries secret, and contented itself with endeavoring to locate the resident aliens connected with the German headquarters.

It happened, therefore, that on August fourth, before the declaration of war, upon the direction of the Home Secretary, the secret service of Great Britain was able to put under arrest at once twenty of the principal resident aliens acting as spies in the country; and they were able, immediately upon the declaration of war, to intern a great number of persons who had been under special observation.

The British Home Office believed that these precautionary measures, begun in 1905 and carried forward by the Special Intelligence Department, broke the backbone of the German spy organization, which had been established by resident aliens before the war.

But this belief was not entirely justified.

Unquestionably a precaution, even to this extent, had been of incalculable advantage. But, as the Home Office admitted, it was still necessary to take the most rigorous steps to prevent the establishment of any fresh organization, and to deal with individual alien enemies who might previously have been working in the country outside of the organization, or who might be sent to it in the guise of neutrals after the declaration of war.

In addition to these advanced measures the English Government acted with more expedition than one would imagine. The Aliens Restriction Act was passed on the fifth of August, and immediately the Home Office and the police, by an Order-in-Council, were given stringent powers to deal with aliens, and especially alien enemies.

The Home Office and the police took over very large powers under this Act.

They were now able to prevent any alien from coming into or going out of the country; they were able to divide the country into districts and remove from these districts undesirable resident aliens. It was thought unadvisable to permit resident aliens, whether naturalized or not, to reside in the vicinity of naval bases, dockyards, munitions plants, or other strategic points. These sections of the country were laid off in prohibited areas. The following report of a military order is illustrative:

"Notices to quit coastal towns adjoining the Tyneside district were yesterday served by the police, on behalf of the military authorities, upon persons regarded as undesirable residents. The people affected include enemy aliens and naturalized aliens of both sexes; also, British-born descendants of aliens, including even the second generation. Exceptions have been made in cases of advanced age and extreme youthfulness. New addresses must be approved by the military. Notices were also served on German residents in Sunderland to leave the town and district and move into an area approved by the military authorities. The order applies to men, women and children, whether naturalized or not, and must be obeyed within eight days. The approved area will be about thirty miles from the coast."

Leading authorities in England advocated the transportation of all aliens to a distance inland of at least thirty miles from the coast.

But these precautions were not considered sufficient. The Defense of the Realm Act was passed on August eighth, and Orders-in-Council under this Act were immediately issued. These orders covered, in the widest terms, any attempt on the part of either aliens or British subjects to communicate any information that "is calculated to be or might be directly or indirectly useful to the enemy."

The objects of these orders were to make espionage a military offense instead of a civil one, and to permit summary punishment. Under this Act the offender could be tried by a court-martial and sentenced to penal servitude for life. The police and military authorities were empowered to make arrests without a warrant. Under the Defense of the Realm Act the police could take into custody, without any preliminary paper, any person whose behavior was such as to give rise to suspicion; and the one so arrested could be summarily turned over to the military authorities for trial by court-martial.

This took the whole matter out of the hands of the civil authorities and put it into the hands of the military authorities.

Stamping Out Internal Espionage

WITH one stroke this Act did away with all the delays and safeguards the civil law might throw round either a British subject or an alien enemy charged with espionage. It enabled the military authorities to deal, in any case, with expedition.

The Act provided that only in the event of the military authorities being of the opinion that there was no prima-facie case, on the charge of espionage or any other offense triable by military law, could the prisoner be turned over to the civil authorities.

All internal espionage in Great Britain now became a war crime.

The only distinction was that if one were tried under the Defense of the Realm Act the maximum punishment was penal servitude for life. If he were dealt with outside of the Act he was punishable with death. Practically the whole country, by this Act, was put into the same position as territory occupied by arms. The same methods of summary arrest and court-martial trial were in effect all over England; and the only distinction was that the accused was imprisoned for life instead of being executed.

It will be seen that civil jurisdiction was entirely set aside. This meant that the country would be protected against alien enemies by swift military measures; but that if any mistakes were made they could be afterward remedied. An accused person imprisoned for an offense was not beyond a reconsideration at some later date.

While the authorities found it necessary to apply military measures to the whole country against the danger of espionage by alien enemies, the civil authorities also acted.

The government thought it expedient to keep track of every alien in England. It, therefore, required every foreigner, not naturalized, to register his address, give up any

A Scene on Embankment. The Police Were Picking Up Suspected Aliens All Over London

weapons, and not to leave his residence, for a distance of more than five miles, without obtaining special permission from the authorities. In addition to this, as has been said, all alien residents were transported from districts of military or naval importance.

This registration was by no means so difficult as one would suppose. The post-office authorities were able to handle it everywhere, and in a very short time the country had a complete registration of all aliens, with a fairly complete knowledge of their movements.

The authorities estimated that they had about twenty-seven thousand alien residents in England in 1915. At the opening of hostilities foreign residents were permitted to go out of England and were given a certain time in which to leave the country. This privilege was condemned by some of the military authorities, who held that it was merely permitting German and Austrian reservists to join their regiments.

And when, on January fourteenth, the United States Embassy, acting for Germany and Austria, announced that German men over fifty-five and Austrians over fifty, together with all those physically unfit for military service, were to be assisted to leave Great Britain, this permission, granted by the Home Office, was thought unwise by more than one English authority.

Quick Results From Special Measures

THEY pointed out, with great force, that men unfit for military service were not, under any rule that they could imagine, thereby unfitted for military espionage, and that it was merely a method by which information from all over England could be carried to the German and Austrian authorities.

At the very opening of the war the Home Office gave the closest attention to the possibility of conspiracies to commit outrage. Naturally such conspiracies would be undertaken with the greatest secrecy; so that the only practical thing was to guard the railroad lines, munitions plants, and all means of communication, industries, public works, naval bases, and so on.

From the beginning the Home Office assured the English people that any alien enemy residents whom the police believed likely to be dangerous had been arrested and were being held as prisoners of war. It also announced that as soon as the military authorities desired it general action would be taken to arrest and hand over to military custody all Germans of military age, subject to exceptions which the Home Office thought necessary on grounds of public policy. Under these orders some ten thousand German and Austrian residents in England were rounded up in detention camps.

The English authorities were of the opinion that these precautions pretty thoroughly broke down the system of espionage by resident aliens in England. They based their conclusion upon a significant fact: The English Invisible Service on the continent turned over to the War Office a German Army order. This army order disclosed that on August twenty-first the German military commanders were still ignorant of the dispatch and movements of the British Expeditionary Forces. This seemed extraordinary, because for many days prior to August twenty-first large numbers of people in England knew all about the British Expeditionary Forces.

Nevertheless, the Home Office warned the people that there should be no relaxation in the efforts of the Special Intelligence Department and the police to prevent a spy system from being set up again in England by resident aliens; and it requested everybody to give the authorities any information with respect to suspected persons. They were to make their report to the local police, who were, in turn, to communicate with the Special Intelligence Department. The people were advised to communicate with their local police secretly; not to make any public utterance or any communications to the newspapers.

Sir James Henry Dalziel had advised the government to turn the whole matter over to an Aliens Board. The Board should have entire charge of this feature of the national defense. He thought that such a method would be more direct, and would prevent any conflict among the three departments which were undertaking to work together—that is to say, the Home Office, the Police and Post Office Departments. The English Government rejected this suggestion. But it is worth while to remember it and to consider its advantages.

Several Aliens Were Caught in This Street, and in One House Rifles Were Found Between the Floors and Buried in the Cellar

Another thing of striking significance is the fact that Great Britain found it necessary in the midst of the war to revise its naturalization laws, and to exclude everybody whose good character could not be conclusively established and who was without an adequate knowledge of the English language.

The Act contained, also, a clause of marked interest to the American Government. This clause gave the Secretary of State power to revoke any naturalization certificate obtained by false representation or fraud. The language of the clause is as follows:

"Where it appears to the Secretary of State that a certificate of naturalization granted by him has been obtained by false representations or fraud, the Secretary of State may, by order, revoke the certificate; and the order of revocation shall have effect from such date as the Secretary of State may direct."

It will be observed that this provision of the Act gave the government power to revoke immediately any certificate of naturalization and at once to deprive any naturalized foreigner of his right of citizenship. This meant that the government could act quickly and with the summary authority of military tribunals against any naturalized foreigner, without being compelled to deal with him in the civil courts as a citizen.

It is proper to remember that when war with a foreign country is imminent there is always a rush on the part of subjects of the foreign state to take out naturalization papers in the country in which they are domiciled. For example, it is reported that in the first four days after the American Government had severed diplomatic relations with Germany five thousand subjects of the German and Austrian Governments presented themselves for naturalization in New York City.

Leading newspapers, strangely, commented upon this as illustrative of a great patriotic impulse on the part of these aliens, and a conclusive decision in favor of the American Government as against the governments of their birth. But has such a conclusion any justification in fact?

The rush to naturalization means merely that the foreigner in America wishes to avoid the discrimination which might be shown against him in the event of hostilities. He has in mind the English detention camps and the rigid methods of sequestration adopted against resident aliens in France and Germany on the opening of the war.

The English authorities assure us that enemy aliens who intend to remain in the service of their own government always take out naturalization papers. They report distinguishing cases in which such persons have resorted to all sorts of devious devices in order to obtain these much-prized documents. One English authority maintains that the naturalized alien spy is to-day one of the most dangerous enemies to the British Government.

We, therefore, hesitate to conclude that the rush to naturalization is necessarily evidence of any great moving desire of loyalty to the American Government.

"Naturalization," says an English author, "is one of the spy's favorite devices, and surely one of his best methods of disarming any possible suspicion."

The experiences of the English Government seem to justify this conclusion. Adolph Ahlers, a naturalized foreigner, who undertook to send German reservists out of England, said, at his trial for high treason, that, though naturalized, he was at heart attached to his own country. Such experiences moved the English Government to provide a summary method for the revocation of a naturalization certificate.

Attacking the Store of an Alien Who Was Also Held as a Spy

Sequestration and Registration

THE French Government has also considered this protective step. Early in the war a law was proposed giving the French Government authority to withdraw naturalization from persons who preserved their original nationality, or who, by reason of their attitude to the enemies of France, are judged unworthy of French nationality. The American Government will do well to consider the advisability of this protective step.

On any day the American Government may find it necessary to consider how it shall act toward resident aliens. Its quota of this element of population is perhaps larger than that of any other government. The naturalized foreigner, having the right of citizenship, would be entitled to common protection under that right. And it must be constantly remembered that we have assembled a great patriotic citizenry under this class—a citizenry that has already come forward with declared loyal intent.

But, against the dangers of misuse, authority could be given to revoke naturalization, after the manner of the provision in the English Aliens Act. We could deal with unnaturalized aliens by two methods only:

Sequestration—that is to say, by rounding up undesirables into detention camps. This method is decidedly the most advisable with respect to all aliens under suspicion and such as the authorities have any reason to believe might develop into active enemies. The Government Secret Service, after an experience of almost three years, ought to be able to indicate at once such dangerous aliens as it would be advisable to sequester in detention camps.

The second step, in the light of the experience of the English Government, would be to remove all resident aliens from the vicinity of naval and army bases, munitions plants, submarine bases, coaling stations, and all places connected with the national defense.

Foreign experience shows that this provision for national defense ought to be taken at once upon the determination of hostilities.

After these provisions have been accomplished the Post Office Department ought to be empowered to effect a registration of all resident aliens from countries hostile to the government. This could be easily accomplished. Such a step would at once place before the authorities the residences and names of all hostile aliens in the United States. Later, then, if it should be deemed necessary, these

National Solvency

IF GERMANY pushed the United States into alignment with the Allies, coöperation with them would doubtless involve a more liberal extension of credit, and the question of their solvency would take on new importance. Having borrowed eighteen billion dollars in thirty-one months, England is unquestionably as solvent as she was three years ago and no limit to her financial resources is in sight.

Macaulay pointed out that the public debt—unprecedented at that time—created by the wars with Louis XIV was regarded by many intelligent men as a menace to national solvency; yet "trade flourished, wealth increased, the nation grew richer and richer." The far greater debt created a century later by the wars with France gave rise to gloomy predictions of bankruptcy. If a banker had been told at the beginning of the French Revolution that thirty years later the British Government would be punctually meeting the interest on a public debt of four billion dollars he would hardly have believed it. Yet again trade flourished and the nation grew richer and richer.

It is often said the belligerents are mortgaging the future. But they are not spending the future; because that is impossible. The only thing that can possibly be spent is a dollar in hand at the present moment. So whatever England spends is money that Englishmen have in hand now. The nation is poorer because the money might have been invested in productive enterprises instead of being dissipated in war; but the power to produce is as great as it was before. It simply hasn't been increased as it should have been.

In the Same Boat

THE railroad freight congestion and embargo in February are reminders that Germany could not succeed in its designs upon England without inflicting an enormous loss upon the United States. We shipped to Europe last year three and three-quarter billion dollars' worth of goods, while exports to Canada and in some other directions were a reflection of war demand. All trade and industry in the United States at present is more or less directly linked with this enormous export business. The price of nearly every commodity is affected by it. The German plan implied a virtual embargo upon shipments to Europe. That this would react disastrously upon business of all sorts throughout the country goes without saying. It would affect the prices of farm products as much as those of the steel mill. It would throw much labor out of employment.

Submarines so far have usually kept well out of reach of war vessels, so while German submersibles were keeping merchant ships from reaching the Allies, English cruisers would keep them from reaching Germany. If the German "prohibited area" could be made effective, trade between the United States and Europe would be virtually suspended. The consequences to this country would, of course, be less disastrous than to the Allies, yet sufficiently disastrous to warrant our resisting them.

England's command of the sea has been harshly exercised in this war, yet in practical effect it has seriously crippled nobody except her enemies. As to its practical effect upon ourselves, there is the record of three and three-quarter billion dollars of American goods shipped to Europe in a year. To acquiesce in Germany's assumption of control over any sea area she chose to prohibit would mean virtually to give up the sea altogether. It would be impossible for Germany to ruin England in that way without inflicting immense damage upon us.

Conscription of Capital

RADICALS in the British Parliament and elsewhere have been saying that conscription of men and labor should be accompanied by conscription of capital. In fact, that is about what has taken place.

Up to the beginning of February the British Government had borrowed fifteen billion dollars for war purposes. This was four times as much capital as the London market had ever supplied, for all purposes, in a like length of time. We should naturally expect that when the demand for anything was multiplied fourfold the price of the thing would advance sharply. Under free play of competition the price of capital undoubtedly would have advanced sharply. But the government had a virtual monopoly of the investment market and for this last war loan it paid four per cent net, after deducting income tax. At that price it secured over three billion dollars of fresh money.

Commodity prices have risen two-thirds since the war began. In other words, a four per cent income, measured in purchasing power, is little better than a two per cent income in July, 1914. In a free market and without a powerful sentimental compulsion capital would no doubt have made better terms for itself.

In announcing this last loan the Chancellor of the Exchequer said bluntly the terms were the best the government proposed to offer, and he intimated that if all the money it needed was not forthcoming voluntarily on those terms, it would resort to other measures—presumably meaning a forced loan. But, in fact, while preserving volunteer forms, conscription of capital has virtually taken place. The government gets capital on its own terms. Some bankers here who talk of a high interest rate on government bonds in case the United States should have to borrow very extensively may keep that in mind.

Business Combination

THE Sherman Law has been on the statute book more than a quarter of a century; but the basic question with which it was supposed to deal—namely, May competitive business concerns combine?—is still an open one. Briefs recently filed by the Government in the Steel and Harvester cases ask a conclusive answer to this question.

The broad facts in these cases are identical. Both concerns were formed by combining, through a holding company, plants that had been independent and competitive. All the results of the combinations were brought out in voluminous testimony before the trial courts. It was not shown that either combination had used its dominant position in the trade oppressively; that it had unduly advanced prices, or lowered wages, or pursued competitors unconscionably. No harm to the public was proved.

The trial courts decided one case in favor of the Government and the other against the Government. That is, on substantially the same set of facts and with all the court decisions for twenty years before them, they took practically opposite views of the meaning of the law.

The Government's contention is that such combinations, although no actual harm can be traced to them, must be dissolved because they are presumed to possess the power to do harm; that artificial restrictions must not be placed upon the competitive system through combinations of competing business. The defendants hold substantially that such combinations are permissible unless some actual wrong and harm can be attributed to them. The Government wants the cases decided according to a theory and the defendants want a decision according to the facts.

The Supreme Court's answer will have an important bearing upon the whole question of business organization.

Niggardly

WE SPEND on public schools about one and a half per cent of the national income, or, say, one-fifth as much as we spend on alcoholic drink and tobacco. Our pretension of a deep interest in popular education is a good deal of a sham. If we felt such an interest as we profess we should be spending three times the present amount, taking the country over. The backward states would be spending five or six times the present sum.

For adequate instruction there should be double the present teaching force and public school-teachers as a class should be better paid. Many prosperous sections of the United States cling to a pioneer equipment for the education of children because they are too indifferent and too stingy to improve it. Much the worst disadvantage of farm life in various regions lies in the rural schools.

It is by no means wholly from snobbishness that many people who can afford it send their children to private schools. It is because of an idea—founded on fact in too many cases—that instruction in private schools, with fewer pupils to the teacher and greater attention to the individual pupil, is superior to that in public schools.

If democracy is to justify the best democratic hopes, then every other political question that comes up is inferior to the question of the public schools, for that involves the fundamental thing of giving every child the best practicable start and opportunities as nearly as possible equal to his competitors. There are very difficult questions of technic—what should be taught and how; but they do not affect the general proposition that at least double the money should be spent on public education.

Immigration

AS AGAINST the theory that immigration would be of negligible proportions for many years after the war, even if we put no restrictions upon it, the fact that our net gain in alien population in 1916 was greater than in 1914 may have some significance. As compared with 1915 the number of immigrants increased by a hundred thousand in spite of all the obstacles raised by a second year of war, while the number of aliens departing from the country was smaller than in the year before by over a hundred thousand. Departures, in fact, were but little over one-fourth the average for 1912, 1913 and 1914. If any inference can be drawn from decidedly increased arrivals and decreased departures in the second year of war it is not that immigration after the war will be negligible.

But if we assume that immigration will be negligible for many years, to say that we will admit only those who on the whole are most likely to make desirable additions to the population is still sound principle. It overthrows the theory that we are morally bound to hold an open door for whoever seeks residence here—a theory which, in fact, we have never practiced, for we have always put restrictions upon immigration.

American Ships

FOR many months before July 1, 1916, the upbuilding of the American merchant marine had been engaging the attention of President, Congress and public. Since that date, according to a recent report in the Journal of Commerce, one hundred and nine American ships of about one hundred and thirty-six thousand tons have been sold to foreign flags—half of them to Norwegians and the remainder to various nationalities.

At the date of the report about two million tons were building in American shipyards—exclusive, of course, of war vessels. Three hundred thousand tons were for the Government, in the form of coast-guard boats, lighthouse tenders, and so on; four hundred and twenty-five thousand tons were for foreign owners; five hundred and twenty-five thousand tons were tankers or small craft; the remainder included lake boats, so the net prospective addition to ocean-going merchant marine available for general trade was about five hundred thousand tons.

A proclamation by the President under the new Shipping Act put restrictions upon the sale of American bottoms to foreign flags, and the Shipping Board has moved for an amendment under which sale to foreign owners of vessels under construction may be prevented.

It is an encouraging sign that the board gives no indication of an intention to embark upon Government purchase or construction of ships at present; but the whole question of American merchant marine is still to be solved.

Poor Team Work

WHEN President Wilson handed Count von Bernstorff his passport the situation was this: The United States had said flatly that merchant vessels plying between this country and England should not be sunk without warning, and Germany had said flatly they would be sunk without warning. At that moment an American liner lay at the dock in New York ready to sail. The obvious move was to take the women and children off the boat and send it out at once.

The international drama had reached a climax. Germany and the United States confronted each other. One said "It shall!" the other said "It shall not!" A student of public psychology would have known that one declaration or the other should then be validated by an act. But apparently there was no coöperation. The liner, it seems, waited for the Government to tell it what to do and a direct, open command from the Government to sail would have had the appearance of inviting Germany to knock the chip off its shoulder. Nothing happened, and when any drama comes up to a climax and nothing happens an important psychological value is lost. Any situation that works up to a breaking point and simply hangs there tends to grow stale. The incident suggests the lack of intimacy between Government and business. Having clearly stated the lowest terms upon which it would maintain friendly relations, there was nothing for the United States to do but go about its business, leaving Germany to decide whether it would accept the terms or not.

FINANCING WAR

By WILL PAYNE

TO FINANCE a war the United States Government could, no doubt, quite readily raise ten billion dollars yearly during three years at about four per cent interest.

Two and a half years ago that statement would have been considered absurd; but meantime financiers have learned things about the borrowing powers of a modern nation that they had not dreamed of.

For several years before August, 1914, there was a growing menace of war in Europe. The Kaiser had shocked his good friend the Czar by appearing before him "in shining armor," as a reminder that he had better let Austria's Balkan plans alone. The Morocco affair happened. Germany levied an extraordinary tax on capital to strengthen imperial armaments. France raised the term of active military service from two years to three. Russia undertook a vast plan of military expansion. England laid down more and bigger battleships.

Amid these disturbing signs bankers, economists and the business community generally held fast to the reassuring idea that a great European war was almost out of the question, because the money to carry it on could not be found. Experts wrote a whole library on this subject, demonstrating to their own satisfaction that a war involving four or five big nations, under modern conditions, would be so enormously expensive that even the richest states could not long endure the strain.

There were many expert estimates as to what such a war would cost. Only a year before the war actually happened a very distinguished French economist made an elaborate calculation as to the cost of a war involving Germany, Austria, England, France, Russia, Italy and Rumania. He figured that it would come to fifty-four million dollars a day.

All Guesses Prove Wrong

THIS calculation was pretty generally regarded as quite extravagant—also, as supererogatory, because it was held that a decidedly smaller daily expense would soon bring the belligerents to their senses through financial exhaustion.

The daily cost of the war, in fact, is almost exactly double what this French economist calculated it would be. War has been going on for two and a half years, and as yet there is not the slightest sign of financial exhaustion. Apparently, so far as finances are concerned, it can go on for two and a half years more.

In estimating how much a government could borrow for war the economists took the situation as they found it. Of course, if a government borrows a dollar for war, or any other purpose, somebody must have a dollar to lend; and they simply calculated, on the evidence at hand, how many dollars there were to lend. Some years before the war happened a capable statistician had figured up that the total amount of capital in the civilized world which was available for investment in government bonds, or anything else, came to only two and a half billion dollars a year.

Presumably his calculation was made with care and intelligence; yet here is the indubitable fact that in two and a half years a fraction of the civilized world has dug up nearly sixty billion dollars for investment in government war securities. The calculators simply did not understand the resources of a rich modern nation. They did not begin to see how much investable capital such a nation can produce when everybody not under arms is working and saving to the limit, and the whole national energy is bent to the one object.

For example, in a banner year before the war the London market had absorbed about one and a third billion dollars of new securities, that being the total of all the stocks, bonds, and so on, which were floated in the twelvemonth; and that was considered about the limit of England's capacity in the investment line. But in a year after war broke out the same market readily absorbed four and a half billion dollars of government war loans. Banks, insurance companies, and like concerns, invested more heavily in war loans than they would have invested in other securities. Prices were high and many lines of business that fed the war were producing large profits, which went into war loans. Labor that was not in the training camps was fully employed at rising wages.

At this writing the British Government is floating its third great war loan; and subscriptions, representing the savings of all sorts of business and all classes of people, are pouring in. The insurance companies alone have subscribed more than three hundred million dollars. On all accounts England has been borrowing at the rate of six billion dollars a year and Germany considerably over four billions. On the basis of comparative national wealth and income, then, the United States could borrow at least ten.

As to our investments on a peace basis, stocks and bonds issued for new capital—excluding those issued to replace old obligations, and so on—and listed on the New York Stock Exchange in 1916, amounted to two billion dollars. Of course, taking the country over, many stocks and bonds representing investment of new capital were issued and not listed on the New York Stock Exchange—among them some four hundred million dollars of municipal bonds. About a billion dollars was invested in new buildings in cities and a large amount in real-estate loans for purposes other than city building. Judging by the experience of England, Germany and France we could invest in war bonds at least two or three times the amount of our visible investments on a peace basis.

In the European countries now at war, investment—except in war loans—has almost stopped. Municipal and industrial extensions and improvements that would ordinarily take up much capital are mostly deferred. Government borrowing monopolizes the market. We have just seen that England in a year subscribed four times as much for war loans as she had ever before subscribed for listed securities. The same thing would happen here under a like national necessity. One may almost say that the Government could borrow as much money as it could spend at home.

Another universally held ante-bellum opinion was that if war continued more than a few months, and the belligerents were not bankrupt, they would have to bid higher and higher for capital, so that interest rates would rise to a height unknown in Europe for a century. Experience has upset that calculation as completely as the one about speedy financial exhaustion.

England's first war loan bore three and a half per cent and was sold at a small discount. The second loan bore four and a half per cent, and was also sold at a small discount. The third loan, exclusive of loans floated in America and of temporary financing at home, bears five per cent and is sold at ninety-five cents on the dollar. Nominally that is quite a rise in interest rates. But England's war loans are subject to income tax and the income tax has been moved up to twenty-five per cent on incomes over ten thousand dollars a year, at which rate the government withholds the tax. So the net yield to the investor, which means the net cost to the government, is only four per cent. Indeed, part of the new loan is in the form of a tax-free four per cent bond; so, if a subscriber thinks the income tax may be boosted still higher he can insure himself against that by taking the tax-exempt bond.

Germany's War Loans

GERMANY, with a rather longer look ahead, began at five per cent and has floated five loans, aggregating nearly twelve billion dollars at that rate. The first loan, in fact, was offered at ninety-seven and a half cents on the dollar, and the last at ninety-eight cents; so the interest rate has actually fallen a trifle in spite of the government's enormous borrowings.

The two cases show that in such a situation as that of England and Germany it is not necessary for the government to bid high in order to attract capital. When the government, being virtually the only borrower, has a monopoly of the investment market it can fix the interest rate; and if that rate is at all reasonable whatever investable capital there is in the country will come forward. In peacetime the government has not so free a hand, because it then comes into the money market in competition with many other bidders for capital—railroads, public utilities, and so on; and the patriotic fervor of a war is lacking.

Very good judges of the investment market in the United States think that our Government could borrow half a billion dollars now at about three per cent, and probably another half billion round three and a half. But if the Government were faced with the probability of a big borrowing campaign it might as well start with an interest rate that it could presumably maintain to the end, say about four per cent.

Investors would be somewhat shy of a three per cent loan if they thought it was going to be followed in a few months by a four per cent loan. Fair treatment would imply that investors in the first loan should be given the right to convert their bonds into any future issue which bore a higher interest rate. England followed that policy, the first three and a half per cent bonds being convertible into the second four and

The Gas Attack

a half per cents, and the latter into the new fives. Germany achieved the same equitable end more simply by fixing the rate at five per cent in the beginning and sticking to it. Give our Government a monopoly of the investment market and that emotional state which a big war begets, and it could no doubt borrow ten billion dollars a year at four per cent.

At the date of the November, 1916, report to the Comptroller of the Currency, the resources of the national banks of the United States were considerably greater than the aggregate resources of the central banks of all the belligerent countries, including Japan; while the resources of our state banks were only a little less than those of the national banks. At the end of last June all the banks held six billion dollars of stock and bond investments, exclusive of government bonds held by national banks to secure circulation. In two years these bank investments had increased over a billion and a quarter. Life-insurance companies now hold over five billion dollars of invested assets, and a ten-year comparison shows an average increase near ten per cent a year. Mutual savings banks have over five billion dollars, mostly invested in mortgages, bonds and stocks. These figures suggest the larger reservoirs that can be tapped for government loans.

But if the Government had to borrow on anything like the scale indicated it should immediately resort to a radical increase in taxation. Next to issuing fiat money, failure to augment government revenue by sweeping increases in taxation has been the great fault in war financing. A heavy increase in taxation not only supports the credit of the state, often enabling it to borrow to better advantage, but enforces thrift. Many Englishmen advocated it on the latter ground alone. Yet, alone among the big belligerents, England faced this situation squarely, raising the government's revenue, roughly, a hundred and fifty per cent—or from a normal of less than one billion dollars to two and a half billions—by ruthless taxation, which bore especially upon those able to stand it.

Thus, the chancellor was in a position to say recently that, notwithstanding the enormous borrowing and the huge rise in interest charge, if the country should return to a peace footing, with government charges, other than interest, the same as before the war, present revenue, after paying bond interest and pensions would leave a surplus of about half a billion dollars a year, to be applied to the extinction of the debt.

National Sinking Funds

It may be mentioned here that this latest British loan contains a sinking-fund provision, though for many years a sinking fund for a government in England's position has been regarded as an obsolete absurdity. In financing the Napoleonic wars Pitt fell in with an arithmetical crank who persuaded him that by setting aside yearly for the sinking fund a given percentage of each loan, and investing the sinking fund at compound interest, it would in due time produce a sum that would cancel the debt. The theory is practicable enough for a borrower who borrows once and then stops; but for one who is continually borrowing it means that he is taking out of each new loan the sums necessary to keep up the sinking fund for prior loans—in other words, that he is borrowing money to get himself out of debt. The new British sinking fund, however, has another object. By it the government proposes to create a reserve with which it can support the market for government bonds—in other words, go into the market and buy bonds when the price falls.

The revenue of the British Government before the war was not very much greater than the ordinary revenue of our Government. It was raised to two and a half billion dollars without crippling industry, handicapping production or materially lessening the accumulation of investable capital. Our government revenue could be multiplied in the same or a greater ratio.

For example, the income of the British people is about one-third that of the American people; but the British income tax is now yielding from seven to eight times as much as our Federal income tax—meaning the tax both on individuals and corporations. Its yield is some thirteen times that of our individual income tax.

We adopted an income tax during the Civil War, when the population of the country, North and South, was about a third what it now is, its wealth about one-twelfth the present figure, and its income not over one-eighth that of 1916. The Civil War income tax, finally, was five per cent on incomes over six hundred dollars but under five thousand, and ten per cent on those over five thousand dollars. In its best year it yielded seventy-three million dollars—or five millions more than our individual income tax yielded in 1916.

With little over one-third of the present population, the Civil War income tax was paid by four hundred and sixty thousand persons, or about a hundred thousand more than are paying income tax now.

On that showing it is certain that a Federal income tax could be made to yield three-quarters of a billion dollars. The exemption, it will be seen, was only six hundred dollars. That made it almost everybody's tax, and almost everybody paid it. Without any elaborate machinery for collecting income at the source, evasions were probably negligible when the tax was at its best. Our present income tax provides elaborate precautions for catching income at the source; but it was designed to be a "rich man's" tax, and a study of revenue returns raises a presumption that there are many evasions among those whose incomes are not far from the exemption line. Being a rich man's tax, perhaps a good many citizens do not choose to regard themselves as rich men for taxation purposes.

The Excess-Profits Tax

In 1867 the income-tax exemption was raised to two thousand dollars. At once the number of taxpayers dropped to about half what it had been. Within two years the yield of the tax had fallen off by half. Doubtless war fervor would put an end to a good deal of tax evasion. By rigorous application of the law the Government could put an end to much of it. Probably it could raise ten times as much by an income tax as it raised in 1866.

The so-called "excess-profits" tax in the new revenue law is expected to produce two hundred and twenty-four million dollars of revenue. The tax is eight per cent on net profits of corporations and partnerships in excess of eight per cent on the capital invested. This calculation would imply that the profits of corporation and partnerships in excess of eight per cent on the capital invested amount to two billion eight hundred million dollars a year. England's excess-profits tax, or "war-profits tax," takes fifty per cent of net profits above those earned before the war. Of course our levy of eight per cent could be decidedly increased in a pinch.

The new Federal inheritance tax could be decidedly increased, with lower exemptions and higher rates for estates under a quarter of a million dollars. Stamp taxes could be reimposed, liquor and tobacco taxes increased, more revenue-producing import duties levied. In comparison with England it must be borne in mind that American taxpayers have a big bill to shoulder for state and local government—amounting to at least one and a half times the cost of the Federal Government. All the same, the Federal Government, if put to its trumps, could no doubt boost its revenue to three billion dollars a year.

Whatever it has lost, the world has found out how to finance a war. This incredibly costly war in Europe, in fact, has been financed with less friction, less confusion, less bungling and breakdown of financial machinery than any other really great war. It shows a great development of the art of finance.

It is true the first effect of war was panic—mostly a big bankers' panic, as usual. But under the circumstances bankers might well be forgiven. The growth of international trade had developed an enormous web of international debits and credits, which war threw into an apparently hopeless tangle. London banks held about two billion dollars of bills of exchange mostly based on foreign trade, which were uncollectible at the moment. London held several billion dollars of American securities, which it might dump on the New York market. There was no telling where anybody stood. So finance simply shut up shop for a time. But, once the machinery was gotten into gear again, it has operated with remarkable smoothness.

Money has been readily obtainable, not only for war but for everyday business purposes. At this writing, the interest rate on call loans at London is three and a half per cent, and at Berlin four and five-eighths per cent. That a great amount of business aside from the war is going forward is evident from the steady growth of British exports, which amounted to two and a half billion dollars in 1916 against one billion nine hundred million in 1915; and to two hundred and thirty million dollars in January, 1917, against one hundred and forty millions in the corresponding month two years before. It is true that foreign exchange has been in an altogether abnormal position, requiring great gold shipments as to England and France, and going to a great discount as to Germany. Nevertheless, there has been money enough to go round among all the big belligerents, with no breakdown of the financial apparatus.

As I said before, business is getting very little capital for extensions and permanent improvements. The investment market is almost completely monopolized by the government. For example, new securities floated on the London market in 1916 footed up six and a half billion dollars against only one and a quarter billions in 1913; but all except about fifty million dollars of this was for government account, whereas in 1913 nearly a billion dollars was for cities, railroads, manufacturing, shipping, and so on—that is, for ordinary industrial and commercial purposes. This means, of course, that pretty much all ordinary building, extending and improving is being deferred until after the war; yet the ordinary business plant is kept going, and, though the British Government at the beginning of February had borrowed fifteen billion dollars, money for business purposes was comparatively cheap. It may be noted incidentally that the capital subscribed in 1916 was more than five times the total for 1913, which was a fair ordinary year—showing how the supply of capital can be multiplied when a rich nation is put to the test.

Except as to the foreign exchanges, the financial machinery appears to be working smoothly and efficiently in Germany and elsewhere. In a word, the world has found out how to finance a war. The remarkable success of the Bank of France in financing the Franco-Prussian war and the payment of a billion-dollar cash indemnity to Germany might perhaps be cited as a parallel achievement, and England had financed twenty years of Napoleonic warfare with remarkable success; but this country's experience in war finance gives little of which to boast.

The Revolutionary War, of course, mainly financed itself. On that side it was such a welter of poor makeshifts which promptly broke down under the first strain, that even now students of the period have some difficulty in untangling the record. The Continental Congress had little aptitude and little authority. Mainly it got money when and how it could, and the several Colonies did much the same on their own account. From all available data it has been calculated that the total income of the Continental Treasury, from 1775 to 1783, measured in specie value, amounted to a little less than sixty-six million dollars, over half of which was obtained by the issue of paper money.

Printing-Press Currency

Like Revolutionary France, the Southern Confederacy, and other hard-pressed belligerents, the Continental Congress simply printed paper promises to pay, called them "money," and handed them out to its creditors. It attempted to provide for the redemption of this currency by apportioning to each state the amount it should be obliged to pay off. But, as neither the Central Government nor the several states had visible means of paying the notes, their value soon began to decline; and as their value declined it took more and more of them to meet the needs of the government. Up to 1790 the Central Government had issued two hundred and forty million dollars of this currency, and the several states had issued over two hundred millions more. At the beginning of 1779 it took eight dollars in notes to equal one dollar in specie, and by the end of the year the ratio was nearly forty to one. By the beginning of January, 1781, the ratio was one hundred to one.

About then they ceased to be regarded as currency and were frankly regarded as jokes, being hawked about at one thousand dollars in notes for one real dollar. A Revolutionary writer says barber shops were papered with them; sailors, being paid off in bundles of practically worthless currency, pinned the bills over their clothes and paraded the streets literally covered with "money." The great losses from this depreciated currency no doubt fell heaviest upon those least able to bear them.

When the War of 1812 came along the United States had a real Government, and that Government had the sound traditions bequeathed by Hamilton. It steered clear of fiat money; but its credit was weak, and it suffered throughout the war because of the stubborn refusal of New England, then probably the richest section of the country, to give the Government financial support. The war was highly unpopular there, where the shipping and commercial interests had been hard hit by Jefferson's embargo. Of forty-one million dollars borrowed by the Government to the end of 1814, exclusive of temporary loans, the New England States contributed less than three million dollars. The Government's six per cent bonds and temporary loans were placed at a progressive discount. A committee of Congress in 1830 estimated that, for loans amounting to over eighty million dollars, face value, the Treasury actually received only thirty-four million dollars, specie value.

Civil War financing began rather promisingly; though Lincoln found the Treasury practically empty and the credit of the Government so low—due largely to war prospects—that in the winter before his inauguration it had been obliged to pay twelve per cent interest on temporary loans. Secretary Chase recommended increase in taxation and an issue of short-term bonds bearing seven and three-tenths per cent interest—a rate high enough, in his opinion, to insure their successful flotation. Congress went but a short way in meeting his recommendation for more taxes, but did authorize the loan.

Civil War Finances

The secretary then negotiated with a syndicate of Boston, New York and Philadelphia banks, which agreed to subscribe to a hundred and fifty million dollars of the new bonds at par, taking them in three installments. As the combined capital of the banks was only a hundred and twenty million dollars, and their total specie holdings half that, this was quite an undertaking. Unfortunately, however, the banks and the secretary presently fell out—partly because the secretary, like so many other distinguished American politicians, was suspicious of the big banking fraternity.

The mistake of failing to order a radical increase in taxation no doubt hurt the Government's credit. Military and international affairs developed unprosperously. At the end of the year New York banks suspended specie payments, and that example was promptly followed by banks elsewhere and by the Government.

In that situation Congress resorted to practically irredeemable paper money, authorizing—in February, 1862—an issue of one hundred and fifty million dollars of legal-tender notes. That was the beginning of the greenbacks. Bankers and others protested vigorously, drawing upon experience for examples of the dangers of such currency. But selfish motives were attributed to the bankers.

To Congress, meeting the Government's needs by simply printing notes seemed the easiest way; and no doubt the country generally took that view. In congressional debates bankers were referred to as "usurers"; and it was held to be utterly incompatible with the dignity of the United States Government to go "shinning round Wall Street" trying to borrow money when it possessed the power to issue money. Congress adhered to the dignified course.

Probably no event in modern financial history has been more discussed than this Civil War resort to legal-tender notes. During the war the Government issued four hundred and thirty-one million dollars of them. Their value, as measured in specie, pretty steadily declined. At the beginning of 1862 a hundred dollars of notes were worth ninety-eight dollars in specie. In July, 1864, when the note issues ceased, a hundred dollars in notes were worth thirty-nine dollars in specie.

This involved, of course, a great rise in the currency price of commodities, which made the war just that much more expensive to the Government. The net effect of this paper money in increasing the cost of

(Concluded on Page 88)

Water Storage Tanks on the Roofs of Down-town New York © Jackson & Whitman, N. Y.

Where Long Time Service Is Desired Armco Iron Proves Its Economy

Architects and contractors who plan for lasting efficiency, and owners who seek greatest safety for their investment, specify Armco (American Ingot) Iron for Water Storage Tanks. The ease of construction and the long, low-cost service of Armco Iron Tanks are in strong contrast with the repairs and replacements that must be made constantly in inferior installations. Armco Iron is the most economical tank material.

ARMCO IRON Resists Rust

Armco Iron resists rust because it is pure—the purest iron made. It is almost wholly free from gas bubbles and pockets, as well as from impurities in solid form so common to ordinary sheet metal. Armco Iron resists rust because it is evenly dense throughout, slowly and carefully made—reheated and annealed until no part is more dense, more hardened than another.

Manufacturers know that Armco Iron works easily, welds perfectly, eliminates waste in making up, and gives long service. That is why you will find Armco Iron being made into roofing, siding, fences, metal sash, stoves, enameled ware, grave vaults, culverts, silos, closet tanks, safes, metal lath and many other products too numerous to mention here.

Armco Iron Tanks are made by S. F. Bowser & Co., Inc., Fort Wayne, Ind.; The Heil Co., Milwaukee, Wis.; The Leader Iron Works, Decatur, Ill. Write to them for catalogs and prices.

"The Story of Armco Iron"

A valuable book that tells how to prevent rust-waste and save money on up-keep.

THE AMERICAN ROLLING MILL COMPANY

Licensed Manufacturers under Patents Granted to The International Metal Products Company

BOX 845, MIDDLETOWN, OHIO

BRANCH OFFICES: Chicago, Pittsburgh, Detroit, New York, Washington, St. Louis, Cincinnati, Cleveland, San Francisco, Atlanta

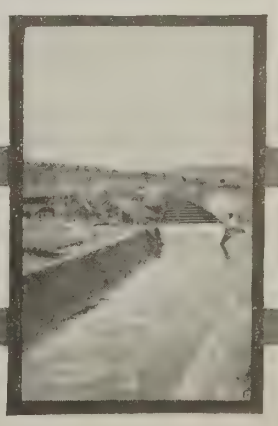
The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

Armco Iron Corrugated Culvert in Yosemite National Park—installed under Government supervision in 1909—in excellent condition today.

A great improvement in rural and suburban sanitation is made possible by the Kaustine Waterless Toilets, manufactured by the Kaustine Co., Buffalo, N. Y. For all regions unprovided with sewer lines, they constitute a satisfactory solution of a vexatious problem. The tanks are of heavy-gage Armco Iron.

Lasting Grave Vaults and Caskets are made from Armco Iron by Galion Metallic Vault Co., Galion, O. Other manufacturers of Armco Iron products of this character are the Springfield Metallic Casket Co., Springfield, O.; National Casket Co. (branches in principal cities), and (caskets only) Cincinnati Coffin C., Cincinnati, O.

Intake end of Armco Iron Flume installed by the Gage Canal Co. near Riverside, Cal. It is 573 feet long. All sheet metal portions are of Armco Iron.



SEA POWER

By John Fleming Wilson

ILLUSTRATED BY ANTON OTTO FISCHER

F. EDWIN HINDERWICK interrupted three months' debate by the directors of the All-Seas Shipping Trust by stepping forward and saying in a modulated, thin voice:

"You gentlemen miss the point of this sudden success of the Southern Mail Packet Line. You speak of nothing but the fact that the company that lost its brains when Henry Barstow died is keeping its old business and getting ours. I believe I can assure you ——"

Nobody ever asked F. Edwin Hinderwick what he meant when he went so far as to say "I believe I can assure you." This time his fellow directors drew back, silent and shamefaced. One only, a tall, gray-bearded, pallid-cheeked magnate from Vladivostok, spoke hesitatingly:

"Don't make any mistakes, Mr. Hinderwick. Miss Barstow, who inherited the majority of the Southern Mail's shares, evidently has the entire loyalty of her subordinates. And her line is somewhat of a national pet too. Its ships fly the American flag. We are not too popular as it is."

Hinderwick opened his cold gray eyes.

"Mistakes?" he said in a muffled voice. "The gist of the matter is that this small rival company has seized a flour contract that belongs to us. If Miss Barstow is actually in control—a girl of twenty-eight can't be for long—she must be taught to respect agreements and the rights of others."

"I don't know anything about that," the other speaker went on with an expression of distaste. "But somebody has shown a vast deal of energy and wisdom in taking an old fleet, a directorate of three old men, a score of old captains, and making of them into a modern, dashing, machine finished business concern that is fast getting control of the cream of the Pacific trade. Whoever it may be is no person to go at—er—clumsily."

Hinderwick did not change his sneer.

"Ah!" he remarked. His fellow directors shrank back still farther into their seats; but they said nothing, and acquiesced without demur in leaving the problem to a man of whom they didn't at all approve.

Mr. Hinderwick belonged to the small, enviable class of those whose secret movements and thoughts are of immense interest to a large group. Powerful and unscrupulous, he was hated and shunned. He was at once wicked and indispensable. By pure mass of wealth and undiluted energy he dictated policies no man would own to, executed plans every man secretly fought against, and, with it all, led an openly successful and commended existence.

Within two months after he had made his cool boast a door clicked to in the bustling offices of the Southern Mail in San Francisco and a rakishly capped messenger boy put a yellow envelope before Ezekiel Ames, deputy chairman and general manager. The old man read the message, tucked it into his waistcoat pocket, and proceeded out of his own room into another with "Domestic Business" painted beneath the name "James Matthews."

"Captain Matthews," Ames said, "I guess we made a little mistake after all in accepting that cargo from Luey Shun. Our Sybarite has been taken into Kirkwall by a British cruiser. I have a cable here from Hudson saying that the Admiralty has affidavits that that Luey Shun freight is for Germany. Luey Shun told us on his word as a Chinese banker that it wasn't; but someone has set the authorities against us. Third ship of ours to be taken in and us made to stand the loss."

Matthews brushed his thin chin whisker with a sinewy hand.

"You and I have known Luey Shun for sixteen long years," he said curtly. "Crooked? No, the crook is at the other end. Somebody is swearing our life away."

Four Able-Bodied Men in New Uniforms Were Bearing F. Edwin Hinderwick to the Stairs

"The Sybarite may as well be marked off our books for six months anyway," Ames said with a sigh. "And there's forty thousand tons waiting for her and our other ships right at Bush Terminal. It—— I don't like the imputation on our good faith, captain."

"Hey?" Matthews said dryly. "You make a fuss over foreign business! That's a risk during a war. But I've got my hands full right here on the coast. I told Angela not to fly too high. She persuaded you and me and Conrad to put two more steamers on the China run out of the Columbia River on that Export flour contract. It looked like half a million profit. But that business never had been ours, and we made enemies. Now the Export people are pointing to a clause in their contract allowing them to substitute tonnage where we can't load a consignment *in toto*."

"Well?" Ames demanded. "There's only five thousand tons on the wharf at Portland and our Sulu is there this morning with hatches off to load it."

"Load it!" Matthews croaked. "The Export people have suddenly wished another two thousand tons on us. The Sulu can't carry a ton over five thousand. And there's a big Japanese freighter right alongside this minute ready to load eight thousand. The Export folks give us five days to supply a ship with seven thousand tons capacity or they'll charter the Jap. See?"

Captain Ames' old eyes glittered.

"You and I have lived forty years in this business, more or less," he remarked. "I guess we know what's doing when a crook gets started. Somebody—and it's the All-Seas Trust—is after us. Secret information to the Admiralty! False oaths on information and belief! Secret dealings with weak men here and there. I tell you what, Matthews, they know that this line is owned by a woman. They know that Angela Barstow isn't fit to deal with them."

"Fit to deal with them?" snapped Matthews, reaching for his old derby. "They don't know Angela, cap'n. And they don't know us either."

The general manager shook his head.

"We ought to have a real, upstanding, two-fisted man at the head of this line," he mourned.

"'Man'?" repeated the other irascibly. "We'll show 'em!"

But when he was seated in Angela's pretty sitting room, with a cup of tea awkwardly balanced in his great palm, Captain Matthews lost some of his assurance. Very carefully and laboriously he explained the situation and predicted that matters would grow worse.

"Ames and Conrad and I know just how far a crook can go when he begins to fight underhanded," he concluded.

Angela contemplated her neat silk-shod feet.

"Just one man?" she suggested.

Matthews waved his hand impatiently.

"When you get down to facts it's mostly one man who has an idea," he said. "And in a case like this it isn't likely that many men would agree to dirty work. They might shut their eyes and let a man try it, though."

Angela sipped her tea thoughtfully.

"Ralph Somerset was here a while ago," she remarked presently. "Funny! He was awfully embarrassed! He warned me against trying to do too much."

"Too much!" Matthews responded with scorn. "He'll never die of that trouble."

"Still," Angela protested mildly, "he gives me ideas sometimes." Her eyes shone. "And I have an idea right now. You say it's usually one man who is back of deals like this? You suppose this—ah—gentleman thinks that I am only a woman and helpless?"

Matthews grunted an assent.

"In that case," she went on, "I believe I will work out the idea Ralph gave me."

Matthews rose.

"With Somerset?" he demanded gruffly. "You had best not confide the company's business to too many people."

"I shan't," she replied. "It's Ralph's idea—which he didn't know was an idea, poor boy—that I'm going to use."

"What was it?"

"Oh, just an idea about a man! Don't worry, godfather."

"I have to," he answered curtly. "I haven't a ship to send to the Columbia for that flour. The contract's worth half a million."

"Now just sit down again and give me the names of all the men who really have to do with this contract," she coaxed. "I don't mean the names of clerks. I want the big names—the men who can either let us have our rights or keep us from getting them."

Matthews carefully recited names and official titles.

"You can't do anything with them," he ended. "They would deny it. They aren't letting anyone even suspect what they are up to, or why."

"I must think," Angela responded.

Captain James Matthews hesitated.

"You know we aren't worrying about things for our own sakes," he croaked. "We don't aim to be rich and I guess we shouldn't go broke too badly. But you oughtn't to risk all your property, Angela. In fact, if things keep on the way they've been going the last two months I reckon the Southern Mail will haul down its flag in about six months. That is what we look at. Captain Henry left us in charge. We don't aim to bring his daughter to poverty."

"Pooh!" she said happily. "I'll never be poor as long as I have you boys with me. And a woman has her ways!"

II

AT NOON the next day Ezekiel Ames rose to receive his visitor and chief.

"We've been talking things over," he said. "Here come Conrad and Matthews now. We think we'd better make a concession."

(Continued on Page 33)

THE CONSERVATION OF ENERGY AND THE TRANSMISSION OF POWER

Belts Determine Dividends

In the quest for efficiency it is the obvious that is most often overlooked.

This is as conspicuous in the efficient transmission of power with belts, as a great railroad genius made it evident in the efficient transportation of freight.

In the haste and hurry of our national development railroad executives long overlooked the obvious truth that there were such things as unnecessary curves and reducible grades—both dividend-devouring wasters of power.

But the genius came and saw the obvious—demanded action—had curves straightened and grades leveled—and the stocks of his railroad rose hundreds of points.

Had he been a manufacturer, he would have attacked power-wasting belts.

For ordinary transmission belts are profit-squandering wasters of power—long unperceived because too obvious.

For engine and machine—power-producer and power-user—depend for their final efficiency on the BELT.

The Belt is the connecting link in the production chain. It determines the efficiency of that chain.

That is only another way of saying that belts determine dividends.

Because executives are now beginning to recognize this obvious connection between power-transmission and profits, the use of Blue Streak Belts is increasing enormously in every industry.

They are built to conserve power in transmission—cost records kept in scores of plants in every industry show that they do conserve it.

The method of construction and the materials used *compel* efficiency.

The specially-woven duck having a tested tensile strength 25% greater than that commonly used, makes for strength without power-squandering weight.

To insure maximum pulley contact Blue Streak Belts are made extraordinarily pliable by impregnation with highest grade friction at enormous pressure.

To make efficient use of the pulley contact thus obtained the belt is provided with a friction surface—flexible, tough and gripping.

What the tread is to a tire the friction surface is to Blue Streak Belts.

And no matter what the price of labor or materials the quality of Blue Streak Belts remains the same.

They are the best transmission belts The Goodyear Tire & Rubber Company can make.

The demands of safety for employes as well as the need for conserving power everywhere recommend the use of Goodyearite. The durability and heat-resisting qualities of this asbestos sheet packing prevent the dangerous and costly blow-outs chargeable to gaskets of inferior material.

Angela fixed her calm eyes on the three old men, giving each his own confidential glance.

"Yes," Ames went on, "it's been suggested, merely hinted, that if the Southern Mail will hand over that flour contract we won't have any more trouble."

"'Suggested'?" Angela repeated quietly. "By whom?"

Matthews shook his head. Martin Conrad answered:

"Just a suggestion. They're often made when a dispute arises. And in this case I believe the man meant well."

"The same man who schemed with the Export people to take advantage of a clause in the contract to throw business to a Jap?" she demanded. "The same person who got someone to make false affidavits in England?"

Hasty disclaimers came from the three, but Angela was not satisfied.

"I wouldn't trust him," she said. "You admit that there is crooked work going on to wreck our company. I know! How about the bribe offered Captain Simms if he would let that barley cargo catch on fire?"

"Simms is not safe," Ames returned. "The reason such an offer was made him—if it was made—was that Simms has a bad reputation."

"Why did you engage him as master of the Emperor?" she asked.

"Needed him," Matthews put in. "Simms' reputation isn't bad as a shipmaster and navigator. It's bad as a man-handler of crews. He was skipper of a whaler for a while—nearly hanged a couple of times. But nothing was ever said about his being crooked."

"I'm not saying it now," Ames hastily put in. "I'm merely explaining why people wanting a dirty job done would approach Simms. Anyway, he's a kind of embarrassing man to have on the pay roll."

"He took the Emperor smack into port without a ton spoiled," Matthews remarked acrimoniously. "And that was something."

Angela tapped the chair arm impatiently.

"That question is over with," she remarked. "Now I want to be sure of certain facts. As I understand your hints and innuendoes, you think some man in a rival line has gone to his partners and said 'Let me have a free hand in putting the Southern Mail out of business.' And the directors looked at him and turned their honorable backs while he went out. They'll never ask any questions and he'll tell them no more than they wish to know. Is that the way business is done?"

"Not by this line," Ames said sternly. Angela smiled.

"You are a dear! But suppose I tell you that I want a free hand, will you agree to turn your backs and never ask any questions? And be proud and upright and moral, and despise people that come and wag their heads and say you knew?"

There was a mortal silence in the big office. The three old men blinked and covertly glanced at each other. Finally Matthews, having wordlessly gathered the consensus, spoke mildly: "Angela, you just keep out of this. It's no business for a woman. Go and—and play with Ralph Somerset."

With a single oblique glance she silenced her godfather. Then with the crispness of authority she spoke:

"You remind me often enough that this is my line. Go ahead and make all the protests you are able to with the Export folks in Portland. Keep right after them week in and week out. Next month have two vessels in the Columbia River ready to load any amount. I'm going to fight. Captain Henry Barstow's flag isn't going to be hauled off a single trade route. And you'll let me have one hundred thousand dollars to-day to do as I please with, and introduce me to Captain Simms."

"But, Angela!" they cried in unison.

"Pooh!" she breathed affectionately.

Then: "Put a hundred thousand dollars to my credit in my bank this afternoon, and send for Captain Simms."

Promptly Israel Simms responded to the summons and was duly introduced to his superior. Angela looked coolly at the bronzed, elastic stepping, sullen-eyed man. Apparently satisfied, she nodded to the three oldsters, picked up her skirts and departed, Simms following her with a defiant expression of readiness to receive his discharge from the service.

Outside on the cobblestoned street Miss Barstow stopped and ordered him to call a taxi. Installed within it, she curtly said "The Park!" and made room for Simms.

"Now how was the bribe offered you when you were master of the Emperor and taking that barley to Hakodate?" she demanded.

Captain Simms laid his derby on his broad knee and frowned.

"Like they always do," he growled; "sent a man so crooked that nobody would ever believe him on earth. Ames laughed at me when I told him—said everybody knew the man for a crook, and I was a fool to think anybody would trust him on such a business. Which was exactly what the men who tried to wreck your ship expected people to say. And which is why they always pick a man so low to do dirty work that nobody will take him seriously. I knew he could come through with his promises. But what was the use of making a fuss? I kicked him out of my cabin and kept my mouth shut. I told Captain Ames and he laughed at me."

Angela beamed.

"Of course he would!" she responded. "He wouldn't admit that people did such things as bribe captains and burn ships. But I—I believe I'm a little of a pirate myself. How much of a one are you?"

Simms laughed.

"I've been master of ships since I was twenty-one. I've traded on the China Coast with cargo paid for in *chits* handed me by a coolie. I sealed in Bering when the smell of fur was enough to hang you. I've been up against all kinds of deals I never would have dreamt of. There isn't a crookeder game in the world than running ships when crookedness is the play. And I lost out because I bucked the crooks. I hate 'em! But when it comes to out-and-out scrapping, with nothing on the horizon except a feather of smoke, I like it. I was born a pirate. And I'm nothing but a kicked-about skipper of a freighter, with the general manager sniffing when I come round to see whether I ain't tainted with graft."

Angela nodded.

"I'm not going to ask you to do anything I don't do with you," she said quietly. "Captain Matthews and the rest are too honest. But I looked a man in the eyes three days ago"—she suddenly grew bitter-lipped—"and I knew I belonged with the pirates. He met me socially. He's quite the gentleman. He flattered me. He's in the shipping business. And I saw into his eyes. Ugh!"

Captain Simms nodded gravely.

"I get you," he said briefly. "I've been there." He burst out in a low voice: "And they tried to say I was a common murderer!"

Angela smiled faintly.

"They may say hard things about us this time. But now; will you do what I say?"

"I will," Captain Simms said soberly. "What does this—er—gentleman call himself?"

"By his right name," she replied pleasantly, "F. Edwin Hinderwick. He's a director in the Ultra-Asian and the Purple Stack lines, and he's smooth and he's wicked and he's conceited. That's where he fell into my net!" Miss Barstow's eyes gleamed. "I forgot his name and where he came from. And I looked my very best all the time. I couldn't remember he was in the shipping business, and the man actually crawled to make me understand who he was. 'I believe I can assure you that our interests are connected,'" she quoted. "The only true thing he said!"

"An honest man has a hundred weak points; a crook has just one," Simms remarked sagaciously.

"Quite right!" Angela assented. "Mr. Hinderwick's is wanting to be thought a dreadfully dangerous man. Maybe he is. We shall see."

"We shall," Simms said fervently. "I'm not overlooking that bribe. Hinderwick! Now where ——"

"He stops aboard the yacht of a friend of mine," Angela answered—"a very good friend and a very good yacht. Both have their uses."

"I think I see," Simms responded, "partly. Shanghai is our next port."

"How stupid you are!" she responded impatiently. "Mr. Hinderwick is a very big man. I must make him a very small man. I must play his own game. We have very little time, captain. There's a contract up in Portland the Southern Mail is going to keep. Mr. Hinderwick has made it his business to interfere with my flag all over the world. Only this morning the Jacqueline was refused clearance from Mororan on the ground that she had more coal than was needed for her voyage. And Kirkwall is full of our ships held up till the authorities can verify reports made to them from secret sources. All Hinderwick! And, therefore, we shall proceed to protest to Mr. Hinderwick."

Angela extracted two small newspaper clippings from her handbag and offered them to her companion. He read them with a puzzled face.

"I see by the first that F. Edwin Hinderwick will be in Portland three weeks from now to complete the organization of the new Astoria-Port Arthur Steamship Line," he remarked. "I see that. But this?" He held up the second clipping. "What in the world do you expect to have to do with the sale of the condemned old cruiser Alaska, Miss Barstow?"

"To private parties," she added. "That will be your affair. My affair is that Mr. F. Edwin Hinderwick expects to reach Portland on the date set for the signing up of the Astoria-Port Arthur Company on my good friend's yacht the Curlew. I am invited to go along with them. I expect to go. Now you will ——"

For two long hours the taxi circled through the windy dunes of Golden Gate Park, while Angela explained in detail to the impassive-faced Israel Simms what he had to accomplish in the following days. At the conclusion she drew out her check book.

"Here is five thousand to start with. When you reach Seattle you'll find fifty thousand more in the Seaboard Bank and fifty

thousand coin at Wells Fargo Express. Can you do it?"

Simms took the little check and folded it up with steady fingers.

"It's never been done," he remarked capably. "I hope to heaven it will never be done again. I'll do it."

Angela slowly spread a silk scarf on her lap.

"You see this bird of paradise embroidered on this corner?" she inquired. "I believe that will make an excellent flag for you." She tossed the silk into his hands. "Take it."

Captain Simms folded it and put it with the check.

"I have the dates down," he responded. "Now if you'll just get me to the ferry I'll start for Seattle and Bremerton navy yard."

III

THE following afternoon the careless and casual Ralph Somerset stopped his roadster outside the Barstow mansion and entered to ask for a cup of tea from its mistress. She received him with her usual good nature, gave him the tea, and balked a dozen attempts of the handsome youth to descend to sentimentalities.

"I am thinking seriously of going with you when you sail for Astoria with that nice Mr. Hinderwick," she said. "I almost telephoned your aunt I would go. But maybe you and Mr. Hinderwick will have a lot of business to talk over. I really believe you are thinking of going into his new big company."

"You are the one who has been urging me to do something worth while," he said.

"That's the very reason I don't want to interfere," she protested, "just when you are taking a serious interest in life."

"Hinderwick is really on the inside," Somerset explained. "He's the big man in a dozen combines. He doesn't say much, you understand. Too shrewd. But I'm being let in on a good thing. As Hinderwick suggested, I'd be in a position to—to kind of work in with the Southern Mail, offer friendly services, and all that!"

Angela smiled.

"Exactly! I didn't dare hint it to you, Ralph; but Mr. Hinderwick knows so much. It would be so nice to have a friend in another big line. That's why I don't want to intrude! I might spoil things."

"Not a bit of it!" he returned joyously. "It's all settled—on the Q. T., of course. Hinderwick says one must learn not to talk. But there's nothing to hinder your going with us. Aunt Elizabeth will be overjoyed. She's so lonely. And she can't entertain a man like Hinderwick, anyway."

"You will have to put off sailing till the very last minute," she said musingly. "I have engagements I simply can't break till the twenty-third."

"Pretty late," he responded. "That gives us only two days to get to Portland. But the Curlew can step, and I'd wait till the last minute on a chance of getting you as my guest."

"Count on me," she said cordially. "But you must positively stay away till then and not interrupt me. Entertain Mr. Hinderwick and get all your business settled first. I'll want you both to entertain me on the trip."

The following week Angela stayed away from the Southern Mail office and responded to Captain Matthews' daily telephones with pleasantries. But in the secrecy of her own room she spent serious hours over the steadily flowing streams of brief telegrams that arrived from Seattle and were signed "Paradise." They read as follows:

Auction price forty-five thousand stripped except machinery. Tug to-morrow to haul vessel to West Seattle.

Survey made. Fifteen thousand fits for voyage to West Coast Mexico. Coaling now. Crew gathering.

Reported in morning papers former cruiser bought for collier by Mexican capitalists. Three funnels or four?

Four funnels goes. Electric wiring badly messed. Coal all in bunkers. Papers hint at purchase by Central American republic. Crew assembling slowly. Picked men.

Townsend to-morrow afternoon for stores. Charter to Guaymas to load spiles outside port. Paint four thousand dollars.

Spiles load day after to-morrow. Crew on board. Steam up. Sail from straits four days.

Back from getting cargo. Clear Guaymas this afternoon. Wireless inspected and O. K.

S. S. PROTEST, at Sea 17 September. Thirty-three miles south Flattery. Steaming six knots. Light northwest breeze, smooth sea. Fog.

S. S. PROTEST, at Sea 18 September. Fog. Smooth sea. Steaming eight knots. Code PTS. All well.

There were others, but these marked the various steps in the accomplishment of her plan, and Angela waited for the final word. It came late one evening:

S. S. PROTEST.
Forty miles northwest Columbia. Very thick weather, southwest wind, heavy swell. Send orders. PARADISE.

With a swift brush of two hands she swept the accumulated messages into a drawer, locked it and went to the telephone.

"If you are so dreadfully anxious, Ralph," she said clearly to the person who answered, "I might be ready early in the morning."

Grateful monosyllables floated back.

"At six o'clock? You say your captain thinks bad weather is due? Aunt Jacqueline will suffer, won't she?"

Once the Curlew was at sea and sweeping gracefully up the California coast over a smooth sea, Angela Barstow assumed an unusual and flattering attitude of dependence on her host. At moments her abdication of her old independence and authority was almost embarrassing. He had somewhat boasted to Hinderwick of Angela's capacity for affairs, and now she openly confessed that business worried her, that she was incapable of understanding it.

"Mr. Hinderwick and you, Ralph, have convinced me that a woman ought to take advice of experienced men. Godfather Matthews means so well; but he's old and timid. Things bother him. Nothing seems to bother either of you. I know what a big thing you are both going into! Oh, I hear things!"

Again she prettily took it upon herself to inform Ralph on the high qualifications of his guest.

"It's like Mr. Hinderwick not to tell," she said. "But everybody in the shipping business knows he's the head and front of the All-Seas Trust and a dozen companies besides. I know he'll make your new line wonderfully successful." She glanced to the cold-eyed Hinderwick and went on: "They told me at the office we simply would have to share our business with the new line."

Ralph flushed.

"That's all right," he said modestly. "Hinderwick and I agreed on that. Of course with your old-fashioned directors you'll stand at a disadvantage, but don't let that worry you, Angela. I'm going to be there!"

"Coöperation is the life of modern business," Hinderwick remarked casually. "I know I—our lines always work for the common good—friendly offices, and all that, confidence, and so on. Then one has friends when it's a tight pinch."

Angela nodded gravely.

"I have always felt rather lonely," she murmured. "I simply can't understand all they try to tell me."

Hinderwick laid aside his frosty manner for good and exerted himself to promote the understanding suggested. Far into the night he skillfully interrogated and gave advice. He was glad to be of assistance. He referred to Mr. Somerset as "my able coadjutor," and spoke of combinations of extraordinary extent and power, dropped hints of a future "unforeseen by the general public," and finally clinched his smooth arguments with a smiling "We'd better let Miss Barstow into our new line, eh, Somerset?"

Angela glowed gratefully. As she passed to her room Ralph halted her:

"I told you I'd get into something worth while, old girl. The two of us might do wonders? Well, good night."

In her cabin Angela undressed slowly and thoughtfully. Once or twice she seemed to wince at some recollection, but compressed her lips determinedly.

The next morning Hinderwick followed up his advantage and made himself amazingly interesting and helpful. Angela poured out to him story after story of her difficulties. He solved them masterfully. He gave her to believe that he already had a

TRY DIRECT FROM FACTORY
HAYNER CIGARS

Just to PROVE how fine they are—we will send you

25 for $1.25

Exact size of Hayner Standards.

PARCEL POST PAID

MEN—start now—buy the Hayner way—get your cigars fine, fresh and fragrant—direct from factory at the factory price.

Introductory Offer

Just to show you how fine they are—and what a great saving our "Direct from Factory" plan of selling means to you—we will send you a special box of 25 Hayner Standards—or 25 Hayner Panetelas—for only $1.25—parcel post paid by us.

Note the Price

Only 5 cents each for cigars that in size, quality and workmanship cannot be equalled anywhere over the counter for less than 3 for 25c.

Hayner Standards

Are hand-made, long filler cigars—Londres shape—4⅞ inches long—a choice blend of genuine imported Havana and finest domestic tobaccos with genuine Sumatra wrapper—a mild, sweet and delightful smoke that will please every man who tries them.

Hayner Panetelas

Are particularly fine in flavor and aroma—full 5-inch panetela shape—a long, cool, even smoking cigar that is immensely popular with our patrons.

Money-Back Offer

Try these cigars. Send for a box of 25 Standards or 25 Panetelas—smoke 8 or 10—judge them squarely on their merits—and if you don't find them pleasing in every way, send back the balance and we will return your money without a word.

Don't wait—get your order in the mail ***today***. You can't lose—we take all the risk and stand all the expense if we fail to please you.

In ordering—state shape preferred—Standards or Panetelas—and mention whether you like light, medium or dark cigars.

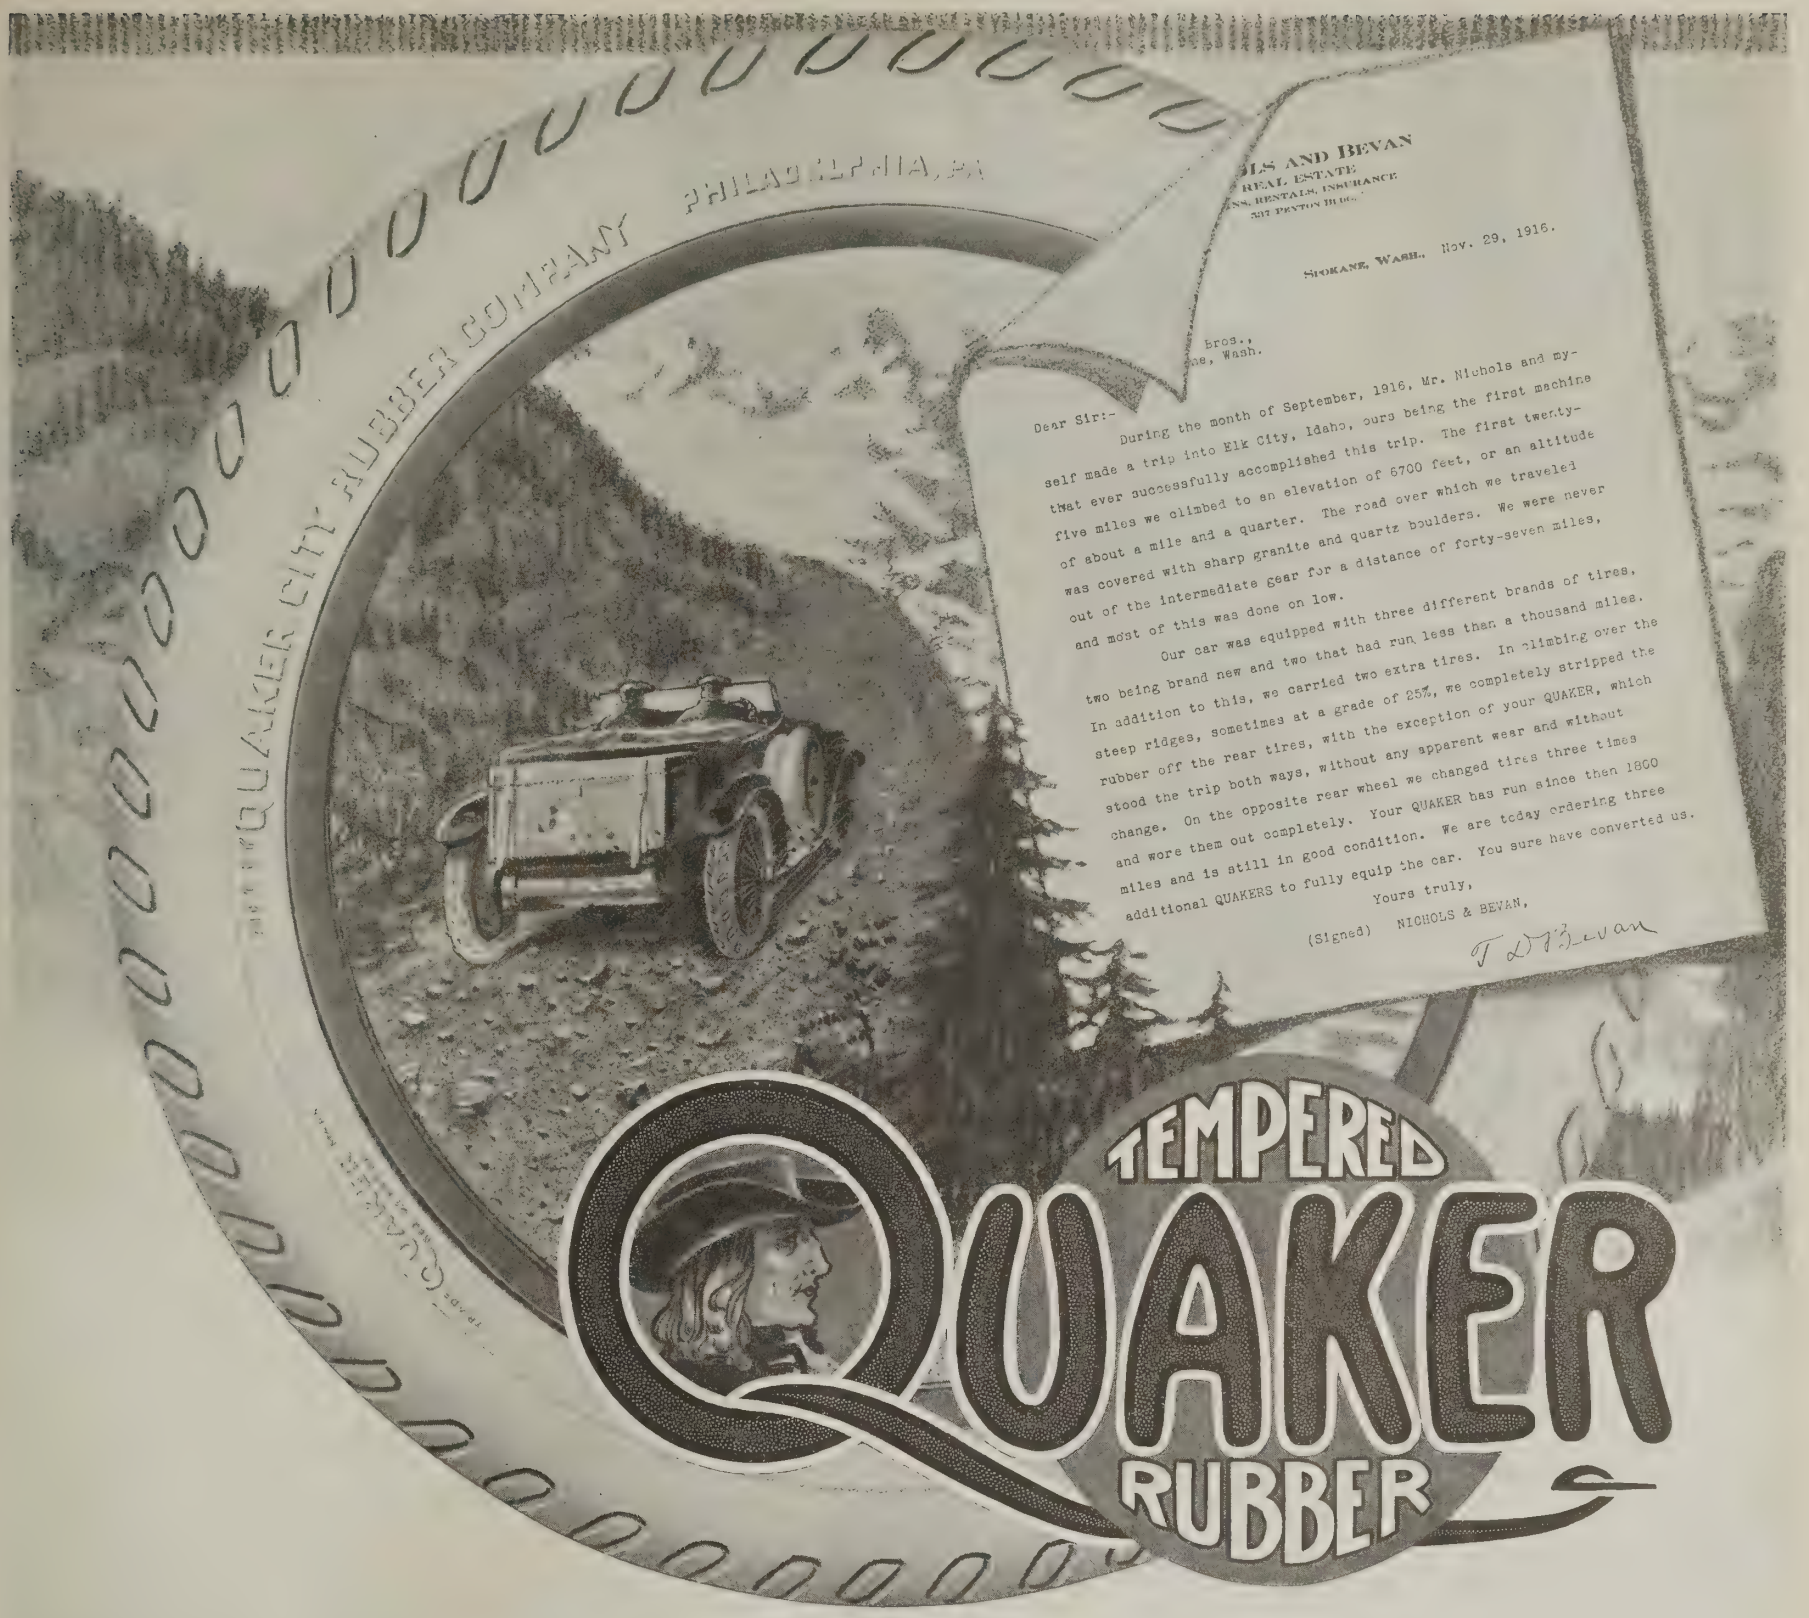
Victor J. Evans & Co., 727 Ninth, Washington, D. C.



Isn't it MILEAGE you want from tires? Quaker Tires deliver exceptional mileage. They are adjusted on a 5000-mile basis, but are built to give big *excess* mileage. Records show that, in frequent instances, Quakers run 11,000 to 14,000 miles; Quakers have run 15,000 to 20,000 miles.

Time and again we have told you about Quaker Tires—the way they are built, the materials used, and the wonderful added resiliency, flexibility, elasticity and endurance secured by tempering the rubber. Now, users tell you what Quaker Tires do.

"I have a Quaker Tire purchased in July 1914, and run continuously until April 1, 1916, 9977 miles. Have had but one small blowout in it and the tread is not worn off yet."

(Signed) F. A. Turner, M. D., Rockport, Ill.

"I have and am still using Quaker casings on my car and have gotten the best of satisfaction out of them. I live in one of the roughest Counties in the State of Texas. Have got as much as 6000 to 7000 miles use of them. I average about 1000 miles per month and have used a Quaker Tire for nine months without a blowout or serious puncture."

(Signed) W. G. Abernathy,
Sheriff, Palo Pinto County, Texas.

"I will start this letter by saying that you have the best tire made. You shipped me a tire over two years ago and that same tire is running today. I am sorry that I haven't the mileage."

(Signed) W. E. Shackleford, Miami, Florida.

"In the month of June 1915, I purchased from your Company one pair of 3½ x 32 Non-Skid Quaker Tires, which I placed on my car and kept in constant service until the latter part of July 1916. During all this time they were free from blowouts and never had the original air taken out of them."

(Signed) John S. Kenney, Johnstown, Pa.

"I have used two Quaker Tires on a car which was bought second hand. One Quaker was practically new when the car was bought and was on the rear. I changed the new Quaker to a front wheel and have run it without necessary change for nearly 8,000 miles and expect to run it some more thousand before it is worn out."

(Signed) Andrew B. Winsor, Johnston, R. I.

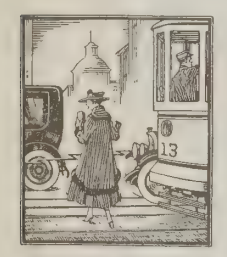
THREE PEOPLE A MOVING VAN, AND A DANGEROUS CURVE.

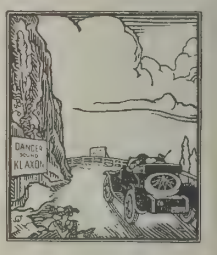
A youngster on roller skates. He doesn't think. He skates. And suddenly before he knows it—before *you* know it—he's in front of your car!

An absent-minded man with his nose in a newspaper. You know him—he's the kind who crosses streets without looking up. He too must be told that you're coming.



A woman on a shopping errand. She's thinking of clothes and shoes and groceries and the baby at home. She also crosses streets. And your car is bearing down upon her unnoticed. She too must be *warned*.

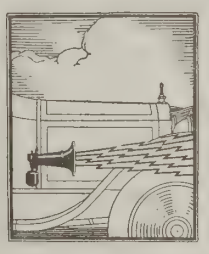
Half an hour later—you're in the country. There's a car ahead. A car moving SLOWLY. Or it may be a moving van—the driver half asleep. Or a farm wagon or a load of hay. You want to pass. There's not room. In some way you must let them know you are coming and ask them to turn out.



A mile further is a sharp turn. What's ahead? Possibly another car or a team. You don't know; you can't see. You're about to round that turn. It's dangerous.

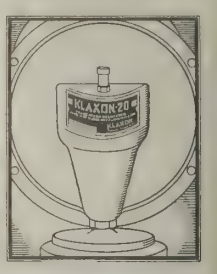
So AGAIN you sound your Klaxon!

A million Klaxon sound waves shoot forward—a mile ahead! The driver of the car around the bend instantly knows that you are coming. He edges over. Your share of the road is ready. You round that corner in SAFETY.



They always GET HEARD—those Klaxon sound waves. They're like the teeth of a saw. They CUT THROUGH other noises no matter how loud. They cut through the air itself with greater CARRYING POWER than any other sound waves known. And greater WARNING power!

And you'll find those Klaxon sound waves—which have made Klaxons the most widely used signals in the world—ONLY IN GENUINE KLAXONS.



Look for the word "KLAXON" on the name plate.

pretty fair insight into the affairs of the Southern Mail.

"And the last straw was when poor Captain Matthews came to me and told me we had lost a flour charter up in Portland to a Jap," she complained finally. "He couldn't understand it at all!"

Hinderwick smiled.

"I suppose not. As a matter of fact, we have got to allow foreign countries a little of the business—feed them along, so to speak, till we can combine and crush them. No need of making enemies when we have to do business with them."

"Oh," Angela murmured, "do you have trouble with the Japanese too?"

"We try not to," Hinderwick answered. "Coöperation—the strongest combination wins. And the prize is a big one."

Angela changed the conversation and did not revert to the subject again. But that evening, as they sat under the great space of the starry sky and talked to the steady beat of the yacht's engines, she said abruptly:

"You said this morning that the prize you were contending for on the Pacific was a big one, Mr. Hinderwick. You excite my curiosity. What is it?"

Hinderwick blew the smoke of his cigar thoughtfully from his thin lips.

"Half an empire," he said curtly. "They can say what they like, but trade follows the flag. Trade and empire are inseparable."

"That sounds like a hard saying," she responded.

The nattily dressed wireless operator stepped up and handed her a message. She unfolded it, read it, and glanced westward out over the gleaming sea. Then she looked up at her host.

"Such a funny message, Ralph!"

She gave him the paper and he peered at the writing.

"'Bird of paradise in full feather,'" he read. "What does it mean?"

Angela swept a blue scarf from her shoulders and spread it on her knee.

"It's a device I always have embroidered on my things," she explained. "See? And I always like captains of our steamers to get me a real one if they can."

F. Edwin Hinderwick laughed appreciatively.

"I tell you, Miss Barstow has the right idea of a woman's ownership of a steamship line! She leaves the business end to the directors while she collects fine feathers!"

Angela turned her eyes on the speaker and Somerset detected in them something which made him hasten to change the subject.

"I say, can you see that steamer out there?" he asked.

Miss Barstow glanced at the dark, low-lying vessel that was running along the horizon, and murmured:

"It looks like a passenger ship."

Hinderwick sat straight up in his chair and sniffed.

"It's a cruiser," he said stiffly; "and an odd type. Somerset, have your sailing master here and let's have his opinion on that ship."

There was an uneasy ring in the man's tones, and Somerset summoned his skipper, who nodded his head and stated that it was indeed a cruiser, and decidedly affirmed that he neither knew nor cared for its nationality.

"Four funnels!" Hinderwick remarked, fixing his pale eyes on the apparition. "Now ——"

The skipper's keen eyes saw something else. He stepped over and whispered to his owner.

Somerset laughed.

"Nonsense," he said, "we're a yacht! They aren't even watching us."

As he spoke a long pencil of extremely brilliant light shot from the foreward part of the cruiser and swung round till it rested on the yacht. In that intense and dazzling glow Angela sat motionless and serene. Her eyes did not remove themselves from Mr. Hinderwick's face. The light rested on the yacht a moment, and was then switched off. In the consequent darkness a yellowish-red spot flamed in the direction of the cruiser, and almost immediately a whirr, followed by a sharp zip-zip, told of a shot fired across the yacht's bows.

"Get inside the three-mile limit!" yelled Hinderwick. "It's a roving cruiser!"

The sailing master stepped to the rail and jerked a handle.

Suddenly a gong clanged below and the engines came to a stop. He stood there staring out into the darkness. Presently he remarked:

"She's running down to us, Mr. Somerset. Wants to board us, I reckon. I suppose we shall have to let her."

In the ensuing tumult Angela slipped down into the cabin and quickly locked the door of the room she knew to be Mr. Hinderwick's.

Then she returned to the deck unnoticed and watched proceedings.

The cruiser emerged from the shadows and showed herself a high-riding vessel of considerable tonnage. Angela could see the long, slightly tilted muzzles of four great guns projecting from the two turrets on her deck.

Smoke issued in vast clouds from her four funnels. Very few lights shone along her steel sides.

"Launch is away," the sailing master of the Curlew said presently. "We'll soon know what all this is about."

In a very brief time Angela heard the puffing of a steam launch alongside and saw Hinderwick peering at it over the rail. What he saw seemed to decide him. He slipped back and away down to the saloon. Through the skylight she saw him try to open his room door; then turn angrily to a bewildered servant.

In two swift strides she was at the yacht's rail. A boyish, stern face upturned brightened at sight of her.

The youth touched his gold-laced cap, swung himself up, and whispered to her as he stopped:

"Name of Mills. Cap'n Simms said to bring Hinderwick off."

"Down in the saloon trying to get into his room—valuable papers," she returned in a hasty whisper.

The young officer whirled, called to four men who leaped on deck, and curtly ordered them below to watch that no papers or luggage were disturbed. Then he politely addressed the captain of the Curlew and demanded to see his documents and his crew mustered.

The captain stood on his rights.

"Who are you, sir?"

"Lieutenant Mills, of Her Majesty's cruiser Protest," came the response. "Please lose no time."

The sailing master cast a single glance at the dark bulk cradling in the long swells to port, and yielded.

"I don't know what majesty nor who 'her' is," he muttered to his mate; "but that cruiser means business. Hello, what's this mean?"

Four able-bodied men in new uniforms were bearing F. Edwin Hinderwick to the stairs leading on deck. They were treating their prisoner with anything but respect, and the outraged magnate was protesting furiously. With a rush the group went by,

WING FOOT

LAWN HOSE

The robins are here. Mother is meddling with clods and bulbs and trowel. And soon the baby shoots will be thrusting through the soil and ready for a gentle shower to start them off in life.

Such satisfaction it is to have Goodyear Wingfoot Lawn Hose then! Lawn Hose so seamlessly welded into one crack-proof, leak-proof, kink-proof unit. Lawn hose so tug free and tangle free, so glide-easy and wear enduring.

Goodyear goodness is in every foot of Goodyear Wingfoot Lawn Hose. Goodness in such measure that it is guaranteed against bursting for two whole lawn hose seasons.

Be sure it's Goodyear Wingfoot Lawn Hose you buy. It will add so much to your gardening pleasure.

and Lieutenant Mills touched the captain on the sleeve.

"The man we're after," he said simply. "Wanted badly. His luggage and papers?"

The sailing master breathed with relief.

"You're welcome to him, sir," he said cordially. "His room is here."

"Locked," snapped the youth, and kicked the door in.

For ten minutes the boarders were silently busy. In that time they had huddled Hinderwick into the launch and crushed him into resentful silence; his luggage, traveling desk and papers were carefully stored under guard; a detail had wrecked the Curlew's wireless room; another had engaged in doing obscure things to the engines, to a choked chorus of anathema from the engineers; and Lieutenant Mills had held brief but satisfactory converse with the sailing master.

"Her Majesty's orders," he said in conclusion. "Don't attempt to tell me about the three-mile limit. You will proceed at daybreak to your destination and make what report you like."

The launch puffed away, and Somerset stared after it with unbelieving ejaculations. At last he turned and called:

"Angela, they've gone!"

"So has the young lady," said the mate gruffly. "She's with them in the launch out there."

Somerset raved incoherently for five minutes. Convinced at last that he was helpless, that the wireless was useless and the engines disabled beyond the engineers' ability to repair in less than ten hours, he subsided and began to ask questions as to the identity of the cruiser.

"I know nothing about her," his skipper sullenly answered. "That young lieutenant carried a parti-colored bird in embroidery in his cap, sir. I never heard of Her Majesty!"

Later he confided to his mate over a glass of mild grog:

"I says to myself when they grabbed that Hinderwick, says I: 'Less said the better by all!' I stand by that."

The mate smiled sardonically.

"A British cruiser in disguise, of course! Avoidin' international complications. I bet that Hinderwick wishes he was ashore!"

"We had one passenger that knew all about it," the skipper pursued. "I worked for her dad. Here's to her health!"

IV

DO WHAT he could, Captain Simms had been unable wholly to restore a warlike air to the stripped wardroom of the old cruiser Alaska. True, he had hastily mounted a couple of light quick-firers where the old quarter guns had been, the old arms rack was filled with modern rifles and the temporary light effects did their work. Yet he felt uncomfortable when the sounds of a whistle, the low calls of officers and a vast creaking of gear and thumping of blocks announced that the launch was back from its errand. But when his improvised lieutenant entered with a composed face and indicated a prisoner in the hands of the four impassive sailors behind him, Simms recovered his poise.

Out of the corner of his eye he saw Angela walk quietly in and slip into a shadowy nook.

"Are you Mr. F. Edwin Hinderwick?" Captain Simms asked politely.

"That's my name," snarled the prisoner. "I'm an American citizen and I demand to know what vessel this is."

"Tut-tut," said Captain Simms mildly. "Your papers?"

Hinderwick started to deny he had any, when a sailor calmly brought the desk, bags and files in and arranged them before his commander.

"All right," Simms said briefly. "Take the man away and lock him up."

"You'll get your superiors into the worst difficulty ever they had," Hinderwick foamed. "I am powerful. I can wreck careers and I can go right to headquarters."

"Your headquarters will be a room for'a'd," Simms said, and waved him away.

The door closed at last. Captain Simms mopped his forehead and smiled feebly at Miss Barstow.

"Now for the rest of it," he said. "Here are the man's papers—*if* they talk!"

They did, and through the long hours, broken occasionally by the entrance of an officer to report the yacht still helpless inshore, Angela Barstow studied the plans of F. Edwin Hinderwick. Now and then she would turn to her companion a face filled

Taylor Instrument Companies
ROCHESTER N.Y.
There's a Tycos or Taylor Thermometer for Every Purpose

This great manufacturing metropolis, anxious that the nation shall know more of her achievements—salutes you.

Milwaukee—a city of thirty-six hundred factories, foundries and mills, supplying to the people of practically every civilized nation, food, raiment, machinery and tools wherewith to labor—bespeaks your favor for her products.

In your home, your factory or on your own person you probably are using or wearing more than one Milwaukee product. You bought them not because they were made in Milwaukee, but because you knew their exceptional worth.

Glance over the few names of Milwaukee manufacturers listed and doubtless you will find amongst even these few, several whose products you have personally found to be of the highest standard. This standard is not incidental, but typical and characteristic of Milwaukee products.

Allis-Chalmers Manufacturing Co.,
All kinds of power and industrial machinery

David Adler & Sons Clothing Co.,
Makers of Collegian Clothes

The Cutler-Hammer Mfg. Co.,
Largest producers of electrical controlling devices

Eagle Lye Works,
Largest exclusive lye manufacturers in U. S.

Evinrude Motor Company,
Detachable rowboat and canoe motors—80,000 sold

The Federal Rubber Co.,
Federal tires and mechanical rubber goods

Gemco Manufacturing Co.,
America's largest producers of automobile bumpers

Holeproof Hosiery Co.,
Famous Holeproof Hosiery—worn by millions

O. C. Hansen Mfg. Co.,
Quality gloves—known the world over

Hummel & Downing Co.,
Makers of fibre and corrugated shipping cases

B. J. Johnson Soap Co.,
Makers of Palmolive Soap and toilet specialties

Robert A. Johnston Co.,
Johnston's Chocolates—The appreciated candy

Kearney & Trecker Co.,
Milwaukee Milling Machines have double over arms

F. Mayer Boot & Shoe Co.,
Honorbilt shoes for men, women and children

Milwaukee Corrugating Co.,
Manufacturers of sheet metal building products

Milwaukee Paper Box Co.,
Candy boxes of quality

National Enameling & Stamping Co.,
Largest manufacturers of tin and enameled ware

Nunn & Bush Shoe Co.,
Service shoes—"Farm-Wear" Shoes—Army Shoes

Phoenix Knitting Works,
Phoenix silk hosiery—largest selling brand

Pawling & Harnischfeger Co.,
America's largest makers of electric cranes

The Richardson-Phenix Co.,
Lubrication engineers and manufacturers

A. O. Smith Corporation
World's largest automobile frame plant

Sterling Motor Truck Co.,
Sterling Motor Trucks—2½, 3½, 5 and 7 ton

Sivyer Steel Casting Co.,
Quality has made their business national

Wisconsin Motor Mfg. Co.,
Auto, boat and aëro motors—Three world's records

Milwaukee wants you to know more about the high quality of her products. The story of her progress is an interesting romance. You may have this story gratis—for the asking. Just write the

The Glorified Eight

Peerless introduces extremes of performance in one and the same distinguished car

IN the Peerless Eighty Horsepower Eight extremes meet—limitations that formerly stood in the way of complete motor car enjoyment have been overcome. The most pleasing characteristics of equally attractive but opposite types of cars have been combined in one—the Peerless Eight.

Ultra smoothness, the extreme of responsive flexibility, delectable softness, are yours with marked economy of operation in a car capable of the speed of the charging racer and of prodigious feats of power.

Two Power Ranges

The "Loafing" Range

Imagine, if you will, your ideal car for ordinary everyday uses. It must creep on high gear with absolute smoothness. It must respond to the throttle without trace of hesitation and accelerate in a flash to any permissible city speed. It must give no sign or sound or effort in this accomplishment.

The Peerless Eight in its "loafing" range is ready to realize this ideal for you and to do it on half rations—consuming fuel so sparingly as to shame many a lesser powered six—even many a four.

The "Sporting" Range

But there comes the emergency which calls for superpower or the need or desire for speed of which no other ideally soft, smooth motor would be capable.

You have only to open the throttle wider to release the double poppets of the Peerless Eight and use her "sporting" range.

And now you have a brute of a car, responding with a deep note of rugged, relentless power which makes you master of any situation with which any motor car can contend.

You have utterly changed the whole character of your car.

Give the Peerless dealer an early opportunity to demonstrate the well-nigh unbelievable contrasts in performance of which this car is capable.

Peerless

Peerless Eight

(Concluded from Page 38)

with disgust. Each time Simms would shake his head and mutter:

"Dig on! We gotta have that man right. He mustn't have a leg to stand on before we get through with him."

At last they were done. Simms yawned.

"Just as you say. I say that he'll be good. Here you've got the evidence that he's dealing with both sides. He's no fool; he'll cry quits. Now if I were you I'd cut out the mutual recriminations and the bad words that he ought to hear and merely make him sign over to you control of this new company, the Astoria-Port Arthur! You'll just keep these documents, of course."

"It seems as if ——" she began.

Captain Simms shook his head.

"What do you care that he told people you were a silly fool? Just remember that we're out here where ships are likely to toddle along any time. A yacht helpless in the trough of the swell and a four-funneled cruiser in battle paint and with guns mounted *à la* Quaker might excite curiosity. We've got to hurry. Shall I ask Mr. Hinderwick in?"

"Do!" she said.

"Mr. Mills," the captain said gravely, when his subordinate appeared, "you will present my compliments to your guest in the locker and ask him to come this way. Also please spill the beans. It's daylight. Show the fellow our flag, will you?"

So F. Edwin Hinderwick, rubbing his smarting eyes, saw first by the gray light of the dawn a huge ensign floating above the rolling cruiser. He peered, stopped and gaped. A large, rudely worked but lifelike bird of paradise spread its plumage against the sky. A prod from behind hurried him on and into the alleyway leading to the captain's quarters. In that spacious apartment and in the presence of his captor Mr. Hinderwick lost his final courage. He glanced at Angela and then at the papers neatly docketed and spread on the desk. His face assumed a sickly, bilious hue.

"You see!" remarked Simms gravely.

"Piracy," mumbled Hinderwick. For an instant a savage glitter flared in his eyes. "Hanging matter!"

"It is," Simms agreed amiably, "for you. Right outside of us fifty miles is a British cruiser. They would enjoy these papers and your society. Right inshore is Uncle Sam, calm, patient, but kind of touchy about his honor. Uncle Sam would really enjoy your little manuscripts." He bowed to Angela. "I think Miss Barstow has a few things she wants to say to you."

Firmly, clearly and without a trace of feeling she laid her terms before Mr. Hinderwick. To his spasmodic attempts to play on her woman's fears and show her the risk she ran, she returned calm replies.

"You understand," she said simply, "that you must never bother me or my company again? You see that? You comprehend that I want control of your new company? You thoroughly understand that?"

Hinderwick gathered his courage.

"Well," he demanded with an endeavor to swagger, "you've talked quite a lot. What if I tell you to go to the devil?"

Simms lifted his hand.

"I'll tell you," he said evenly. "Miss Barstow foresaw that question of yours and asked me to answer it. And my answer is—sign that paper!"

Hinderwick glanced about him. Then sat down in the seat indicated and read the papers offered for his signature. At first his lip curled scornfully, but gradually fear showed in his face. He looked up, all his bravado vanished.

"These papers were prepared by a lawyer—this is a conspiracy! You are only tools!" he cried.

The captain sighed.

"You'll probably see the point. The less you ever have to say, the better for you."

F. Edwin Hinderwick signed. When he had finished he made a last attempt to recover his papers. Simms smiled cynically and dismissed him.

"Now, Miss Barstow," he said quickly, "you must hurry back to the yacht. I must be away from here in an hour. I know you can handle Hinderwick from now on."

"You are going to send him back to the yacht with me?" she asked.

"I am not," Simms said quietly. "I'll attend to him. You just go on up to Portland with Mr. Somerset and attend to the organization of the Astoria-Port Arthur line. You have the proxies, the papers to show, and all the instructions you need. Strike quickly."

Angela rose.

"I'll have a hard time explaining to Mr. Somerset," she murmured.

"Somerset? Tell him nothing. Tell him to wait a week. He'll see what you do in Portland, and when he sees the papers in a day or so he'll decide not to ask any more questions. He's innocent. But when he comes to think over the papers of his in Hinderwick's hands he'll lay low."

"And the papers?" she inquired.

Simms laughed.

"I'll have them safe for you. Now I must send you away. Hang it all, I enjoyed this game! I'm much obliged!"

They shook hands. The launch duly restored Miss Barstow to the deck of the Curlew, and hurried back while she stemmed the torrent of questions shot at her by her host and his aunt. She smiled and frowned. She drew Somerset away.

"It was important business for Mr. Hinderwick," she said. "He particularly hoped you would understand. He urged you to go on to Portland. He said you would know what to do there."

The young man nodded.

"I understand!" he returned in a whisper. "What a man! Angela, it makes one feel mighty good to be right in the heart of this international intrigue. To be trusted! We have seen a big thing! A cruiser out of nowhere—and the destinies of nations changed!"

"I know very little about the destinies of nations," she answered tartly. "That commander kept me awake on a sofa all night while he and Mr. Hinderwick talked business. My hair is a sight!"

V

EZEKIEL AMES closed the door of James Matthews' room and demanded to know where Martin Conrad was.

"He was just looking for you," Captain Matthews replied testily. "You two are full of news. What's up?"

Conrad entered, stared round him and nodded. Together he and Ames laid before their associate the morning papers and two telegrams.

The news that leaped to James Matthews' eyes was this:

"PORTLAND, Sept. 27. To-day the organization of the Astoria-Port Arthur Steamship Company was completed by the election of Miss Angela Barstow to the presidency, Ralph Somerset to the vice presidency and the choice of Miss Barstow's company manager, Ezekiel Ames, as secretary and treasurer."

"SAN DIEGO, Sept. 27. The steam schooner Mahala, arriving at noon to-day from the North, confirms the reported loss at sea of the old cruiser Alaska which was sold to private parties by the Government some time ago and outfitted for the Mexican trade. The Mahala reported that the Alaska sprung a leak off Point Reyes and was abandoned by Captain Simms and his crew on the night of the twenty-fifth. The wrecked crew landed in Drakes Bay safely. No trace has been seen lately of the vessel and wreckage washed ashore points to her total destruction."

Captain Matthews looked up.

"Angela always did see something in that Ralph Somerset, and he's made good. Bless the girl!"

"Simms seems to have been in hard luck," Ames murmured.

"Simms?" rasped Matthews, brushing his chin whisker with his sinewy hand. "Simms? The man's a fool. Got what he deserved. Lucky Angela dropped him."

"Dropped him?" repeated Conrad, shoving a yellow telegram under his associates' noses. "Look at that—to me, the superintendent of the Southern Mail!"

Matthews and Ames bent over the message:

"ASHLAND, OREGON, Sept. 28.

"Martin Conrad,
"Sup't Southern Mail S. P. Co.
"Pier 162, S. F.

"Raise Simms' salary to three hundred a month and give him the Equator. Treat Captain Simms right.

"ANGELA BARSTOW."

"The Equator!" Ames murmured. "Our best ship! Now what in the deuce has Simms, the old cruiser Alaska and this new company got to do with Angela?"

"Angela?" repeated Matthews. "You get things wrong. I'm learning fast. I don't ask what have things got to do with Angela Barstow. I just wait round and see what Angela Barstow will do with men and ships and things!"

Plain Tread Tires, like Cinderella,

get scant attention these days when everybody is talking about the relative merits of anti-skid tires.

Whereas the plain tread is the real basis of tire value—of wear—of mileage.

* * *

Get at the heart of the matter.

Compare the plain treads of different makes.

Then you can take up the consideration of anti-skids.

For the anti-skid is really a plain tread, plus anti-skid qualities.

* * *

Compare the *United States "Plain" Tread* with any other plain tread.

United States "Plain" Tread Tires are the product of

—microscopic and ruthless scrutiny of raw material,

—parental patience with even the veriest details of manufacture,

—an aggregation of workers who are aristocrats of skill,

—a manufacturing ideal to make a tire that shall wear, and keep on wearing, longer than any other tire.

* * *

The proof lies in these two conclusive facts:

—first, the continued amazing sales increases of United States Tires;

—second, the fact that these sales increases last year were proportionately far larger than the tremendous increase in the number of automobiles during the same time.

They are facts strong enough, big enough, masterful enough, to command conviction.

* * *

Then—if you want anti-skids, bear in mind that the *United States "Nobby," "Chain," "Usco" and "Royal Cord"* are so far in a class apart that even a casual examination of the design and structure of their treads is conclusive evidence.

So that in United States Tires—plain or anti-skid treads—you have the supreme of anti-skid efficiency and low-mileage-cost.

The five types

'Nobby' 'Chain'
'Royal Cord'
'Usco' 'Plain'

United States Tires Are Good Tires

"You Failin' Me Too?"

IV

I WANTED to tell someone about the change in Bittner, and looked toward Miss Krog. But I knew she would not understand. She would not see in his attitude toward Mrs. Gray birth of reverence, the bending of the crude to the cultured, as a rude plant to sunlight. She would see only the beginning of what she would call a "case," and so I had to keep my observations to myself. It is dangerous to start such a suggestion in an office full of women.

Mr. Bittner came sauntering back as innocent as a lamb, and again paused by my desk. I looked up, waiting. But he seemed perplexed.

"Mrs. Gray would find it hard to attend to the entering of names on cards, giving out work, requiring results of the other workers, and so on," I said.

He sat down.

"Her big value," I continued, "is her sympathy, her kindliness and understanding. She has the knack of soothing. Her touch is like velvet. Why not advance her to the later, more difficult work on the Fifty Principles? Let her be chief instructor. She would like that better, I am sure, and I want to get rid of instruction work altogether. I have enough to do with the advertising."

"That's a good idea," he said, relieved. "Tell the bookkeeper to enter 'em both at eighteen a week from the first of the month."

"One other thing, Mr. Bittner," I said. "Miss Krog's work is dwindling terribly. I think it worries her. We have never used our number-four letters, and but very few of the number threes, as you know. Why not make her head of the entire book business as well as forewoman?"

"Book business won't last long."

"Neither will Miss Krog, unless we make her more important."

Miss Abbot's Decision

"I think we had better keep the book business alive as a come-back for the Fifty Principles people," I went on.

"That's not a bad idea. Tell Miss Krog about it."

"No, you tell her. It's better that you should."

He went over to her desk, and I went to the cage to speak to Miss Lutkins about raising the two women.

One other thing bothered me. Mr. Bittner had said nothing about Miss Abbot, and she was now doing very good work. While I was thinking about the best place for her in the business, she came up to me.

"Miss Gale," she said with sweet deliberation, "I am leaving Saturday."

"I am sorry, Miss Abbot. You are becoming valuable to us."

She dropped her eyes and seemed distressed.

"It isn't you," she said at last, "but some way I can't bear to work for an illiterate man like Mr. Bittner. He should be working for me, it is so absurd."

I smiled. I had once thought that same thing.

"Miss Abbot," I said, "the market proves one's value."

"Beg pardon?"

"The very fact that Mr. Bittner, still a young man, has got all our brains working to carry out his ideas proves that his brain is the keenest, regardless of appearances."

"It is just chance, opportunity," she said.

"It is will power and initiative," I contradicted.

She sighed and looked out of the window. "I think a woman loses so much when she remains in such surroundings as these," she said at last.

"It takes a big woman not to," I agreed.

"Look at Miss Lutkins."

"Have you never met gruff, ill-mannered women out of business?" I asked.

Dollar Democracy

She sighed. "Well, I've made up my mind to go. I am planning to take a course in library work."

"Can you manage there always to give out books only to educated people?" I asked. "It seems to me you will be a servant to a large illiterate public, where here you are servant to one."

She looked up startled. She did not like that word servant.

"All business, Miss Abbot, caters to all kinds of people. If you are a merchant you must sell to maids as well as ladies. Even in the professions there is no aristocracy of clientèle; clergymen preach to tramps, physicians attend washwomen, and lawyers divorce bootblacks. Money-changing levels all rank. In catering for pay we must cater to all alike. I am sorry you are going, but I wish you well."

She seemed perplexed about it all, but just then Mr. Bittner came in.

"Just the same, I'm going," she said. "And I think you are perfectly wonderful to stand it." She stooped suddenly and kissed me.

I was sorry to lose Miss Abbot. I had grown fond of her. But when I thought of her everlasting "Beg pardon" I felt cheered, and called up a woman who had applied for

Forewarned is Forearmed

THE thrill of *more* power and *finer* style goes hand in hand with the thrill of spring days that call you into the open. Here is car quality, beauty and energy that *satisfy*. Velie Biltwel Six, with its silent, supple, special Continental motor, is more than equal to *any* spring road, or *any* hill that has just emerged from snows and rains.

And Velie Biltwel Six has *lots* of room. Its deep-tufted, genuine leather upholstery and long, under-slung springs give you restful comfort—the real luxury of riding. One seems to soar through the air, far above any mechanical bonds of control.

On country road or city boulevard, Velie Six commands the admiration of authority in car fashion and construction values.

The demand is enormous. Even now it is taxing the capacity of a mile of Velie factory to the utmost. Don't be disappointed when the greater rush is on. Insure a prompt delivery by placing your order now. Forewarned is forearmed.

If you have not obtained your Velie, see your nearest dealer at once. Eight body styles—open or convertible, including snappy Four Passenger Roadster, Touring Sedan and Coupé.

(Continued from Page 43)

work and left her address in case there should be a vacancy. She was so happy to come, she said, and would be at the office without fail the following morning.

But the morning came and she did not appear. I waited till noon, waited through the afternoon. At closing time I got her on the wire.

"Oh, Miss Gale," she gushed, "I decided that I just couldn't work over in that wholesale district. And I was too busy all day to call you up and tell you. I'm so sorry."

Being sorry didn't get out mail. It was just like so many women to imagine an excuse covered their responsibility. If women only wouldn't lie—if, for instance, they would have some other reason for being late than a car accident—it would be such a help. If the car accidents reported at our office as a reason for tardiness were duplicated in every other office in the city, I could see nothing but a vast flat waste of broken cables, damaged trolleys and telescoped elevated trains—a devastation comparable only to war. I rang off and again inserted an advertisement for desperate women.

When the September magazines came out, there, occupying two full pages, was the Borrige & Kemp advertisement. It was as Bittner had predicted, they had followed us up. They offered to American business men who had so far shown absolute confidence in the Borrige & Kemp business books, a complete course of instruction by mail in the Philosophy of Business, planned and written by the greatest masters of finance of the day. That the course was practical was guaranteed by the fact that a practical business man was the critic and instructor. The advertisement was written in Binks' most florid style. His picture was used, and under it were the words: "This is the man who will guide your work. It won't be done by cheap office girls." The price, forty-five dollars, was in bold type, and it cut just enough under ours to catch men economically minded. The advertisement was more striking than ours; and it had a hurry-up, get-on-the-band-wagon, don't-lose-a-minute impetus that would carry the reader through.

Although I had been prepared by Mr. Bittner for just this, the thing came to me with a shock. I sat a long time; not thinking or planning or wondering, just stunned. I had heard of such things, but I had not before experienced a direct steal in business.

Shrewd Stealing

Bittner came in, grinning; but his grin did not tell me much. He ambled over, sat down, and picking up the magazine gazed at the advertisement.

"He's got us on price," he said. "We've got him on every other count."

"Five dollars is quite a difference," I agreed mechanically.

"Too much. We gotta knock it."

"Cut?" I asked, surprised. That didn't seem to me dignified.

"Sometimes," he said, eying me narrowly, "you're that quick you beat me to it, and then again you're that slow I wonder how you get on at all."

"Remember the halves of the apple," I said, determined to keep my temper. "Where you're quick I don't need to be."

"That's so," he came back more genially. Then he got down to business. "We gotta liven up our October copy and meet his price by givin' more for the fifty dollars. We'll do it by givin' with the course of study the set o' desk books that we sell for ten dollars. We'll use 'em as an incentive to start at once. We'll say we'll give these books till the edition is exhausted. The offer's just good while they last."

"I wish we might use your picture," I said. "It adds to the personal pull. But of course we can't now. Binks is ahead of us."

"We'll make that face missed after a month or two," he came back, jabbing viciously at his pencil.

But his tone was not so confident as his words.

The fight was on.

Mr. Bittner sent off an inquiry at once, under an assumed name, that he might see just how Binks was handling his inquiries. He would also subscribe later, that we might be able to examine the steal closely.

It was a most difficult task for me to attend to Wagner's work which from the beginning I had handled personally. To correct his problems, send him our letters, talks and everything pertaining to the Fifty Principles, when I now knew positively that it was all being hustled away to Binks as fast as possible to be read by him, absorbed, and then retold in a florid, vivid style, was a maddening procedure. Binks had worked with Bittner so closely, he had had so much experience in taking the latter's ideas and running them through heavily padded copy, that he could do this with great facility. He knew the man so well that one phrase gave him a whole sentence. And with the many letters and the extra questions that Wagner had constantly propounded, Binks must now have the entire spirit of our plan. Wagner was on his last month's work. After a few months the fact that Bittner started in March and Binks in September would be lost on the reading public. They would merely represent two firms in the same business, and interested inquirers would investigate both. A subscriber to the two courses of study would recognize the current of similarity, but he would be as apt to think that we stole the idea from Binks as that he stole it from us.

Fifty Jumbled Principles

I had just started our October copy on its way East when Mr. Bittner came in and without a pause hurried over to my desk. I saw that something was wrong.

"Binks is using three pages in the principal October magazines," he said with a sharp indrawing of his breath. "I've telegraphed for three. What have you got that I can run in strong at once?"

I pulled down a file and drew out the various letters of commendation that I had been saving and placed them before him.

"That's the stuff! Select the most biting lines and head it: 'What men who have subscribed think of the Fifty Principles.' Get it copied right away."

In a couple of hours the extra page was following up the first two to New York. Almost breathlessly I waited for the October issues. What would Binks put in his three pages? In the meantime I studied the first lessons of Binks' course of study as supplied through our "tool" subscriber. The main difference was one of phraseology. Where we called our papers "talks" he used the more academic word "lectures." Where we said "problems" he said "lessons." Where we used short crisp sentences he amplified. Where we suggested he developed the theme. Where we had been thorough he satisfied himself with a mere mention. But the most maddening part of the whole steal was his taking our later talks and putting the ideas in them early in his course. He had so jumbled the thing that should two friends subscribe for the two courses and work together, the Binks man would have all the pith and point of our later talks long before the Bittner man would have reached them. This would cheapen the Fifty Principles immeasurably. Always the impression is made on the first hearing; anything of the same nature after that seems weak.

There was one notable change from the old-time Binks: there were no errors of construction in his lectures. He evidently had an excellent critic.

The October magazines came in and I opened the first one, tense and anxious. I found that Binks' advertisement had the better position. He had secured his three pages earlier than we and was therefore given the preference; but our copy showed up better than his—at least I thought so. Every line was insistent with proof of value. Every line in that of Binks was a promise. But this would not last. He would take his keynote from us. Bittner at once sent off another dummy inquiry to see whether Binks had followed up our offer of the desk books.

We pitched into new literature, getting out special little folders to be used as inclosures in our follow-up letters. Bittner heard from Binks in due time. He was offering an inkstand as an inducement to subscribe immediately. He played up this offer in the opening paragraph of his number-one letter.

It was his first false move, and it brought a gleam into Bittner's eyes that made me sorry for Binks in spite of myself. To offer an inkstand to a substantial business man as an inducement to subscribe—well, you might as well offer a cigar or a box of candy. Our books were in line with the idea of study. They were a practical accessory to the Fifty Principles course, and we mentioned them in the last paragraph of our letter. We had taken it for granted that

Beautiful Enough for your Drawing Room—
Durable Enough for your Front Door—

economical enough for use wherever a fine, lasting finish is required. Such is Enamolin, *the whitest Enamel in the world.*

The leading painters and decorators have long known it as the "quality" Enamel. They have used it not only on their finest, most delicate work, but wherever conditions demanded good looks and hard service.

You, too, should know it. No matter how small or how large a job you have to do, Enamolin is *the* Enamel to use.

And what Enamolin is to woodwork, Namlac Floor Finish is to floors—the great floor beautifier—the strong floor protector—water-proof, scratch-proof, mar-proof.

Enamolin and Namlac Floor Finish are on sale at the better paint and hardware stores. If you cannot secure them, write us.

Ask for free copy of "The White Spot" booklet.

A sample can of either Enamolin or of Namlac Floor Finish sent for 10c.

UNIVERSAL COMBINATION RANGES

Repairless Roofs

Asphalt Shingles are going on thousands of roofs whose owners are tired of repair costs.

They are buying *Asphalt Shingles* to stop those expenses. They want a roofing that does not crack or leak. One that will last long after *other* roofings would have worn out.

They find these advantages in *Asphalt Shingles.* And with them they find a *triple-thick* roof—three substantial proofs that it cannot leak under any circumstances.

Asphalt Shingles

"The Roof that Stays Young"

No other roofing at a moderate price looks so beautiful. Rich, permanent colors that *last.* Evenly cut shingles that lay smoothly on the roof. Fire protection, too. Sparks will not ignite them. These are reasons why so many thousands of home owners are demanding *Asphalt Shingles.*

Reliable quality *Asphalt Shingles* are made with a strong felt, saturated or coated with Asphalt, with crushed rock products tightly embedded on the surface.

CALL on your Contractor, Lumber Dealer or Builder's Supply Man and insist on getting reliable quality ***Asphalt Shingles.*** This will insure you a roof that *stays young.*

Fast Shells and Fast Dogs Get the Most Game

The speed of a shot-shell depends largely on the strength of its primer and the width of its flash passage.

Test the primer of a Black Shell. Empty the shell of shot, wads and powder. How high will the primer alone shoot a quarter into the air? How high will another shell's primer shoot it?

Make this test yourself and select your shells by the result.

US THE BLACK SHELLS

Smokeless and Black Powders

Ask your dealer for The Black Shells. If he hasn't them, mail $1.25 to our nearest selling agent to pay for a box of twenty-five and he will ship prepaid. Be sure to specify gauge and details of load. This is a trial offer and holds good only in towns where The Black Shells are not now sold.

General Selling Agents: National Lead Company, Boston, Buffalo, Cleveland, Chicago, St. Louis, Cincinnati; John T. Lewis & Bros. Co., Philadelphia, Baltimore; National Lead & Oil Co., Pittsburgh; United Lead Co., New York; Selby Smelting & Lead Co., San Francisco.

UNITED STATES CARTRIDGE COMPANY, 2691 TRINITY BUILDING, NEW YORK

subscribers would want them, would feel their need, would purchase them, and we had given them an opportunity to get them included with the Fifty Principles. Poor Binks, always close in small matters, always greedy about getting something for nothing, something free, had grabbed at the idea and had offered an inkstand! The value he put on free things himself made him overrate their value to the average business man.

"It's just as I told you," Bittner said, coming over to my desk with the open letter in his hand. "A man's gotta be right himself. He's gotta have the right perspective on business. Binks is right only in spots. He can't go far alone."

"He seems to have some pretty good people associated with him," I said. "His English is perfect."

"English is valuable only to get ideas over with," he came back quickly. "When they ain't no idea in it it's as harmless as a gun unloaded. Bein' pretty don't help."

"I wonder if that is altogether true," I said. "I wonder if lots of people are not carried along by the mere sound of words. They're hypnotic sometimes, words."

Bittner sat thinking.

"If I were he," I went on, "my next move would be to play up the college men strong. He's got a good list on the backs of his books, and he's helped to make them authoritative with the public. If I were he I would have half-tones made of their pictures and use them in my advertising. I would go in strong for the academic pull. He has started that way and he ought to pull hard for that audience, the audience that likes authority. He's got a mighty good start, if he would quit imitating you and cut out his inkstands."

Signed Testimonials

Bittner sat silent for a long time. Finally he got up and went away. The next morning he came to my desk before I had opened it.

"I been thinkin' about that thing of authority," he said. "I guess we'll have some—the kind American business men recognize. You're right, there ain't any other way for Binks, and he'll likely see it. He ain't any fool, just spotted. He'll play up his college men—if he's got any sense—in November, and if he don't it's our move anyway. You write out some good, strong, short opinions of the Fifty Principles such as should come from the biggest business men in the game—big merchants, bankers, railroad men, editors, the kind of men whose names get in print. Write out some opinions on the Fifty Principles; also some paragraphs commending the idea of reducing sound business to a science and teaching it so's a man can know the whole game and find his right place in it. Get 'em ready for me by noon, will you? Each one on a separate sheet."

"Mr. Bittner, do you think men like that—big men—will agree to be used in an advertisement?"

"A lot of 'em got big through publicity and a lot of 'em like it," he declared. "I want the ones that get in the prints, so the general run o' men will know who they are. The very fact that they get in print shows they like it. Men can stay out if they are big enough to want to."

I do not know exactly how he managed it, but I think it was through men he met at his club—he belonged to one of the most exclusive clubs in town—and also through some of the publication representatives who were always glad when possible to do him a favor. At any rate in a few days he had a fine collection of hearty testimonials. Very often a busy man's objection to doing a favor of this kind is the time required. But Mr. Bittner went to each one with his commendation written out, and all they had to do was to sign their names. And they signed.

We devoted a page in November to establishing our authority. We used in addition to the testimonials the convention episode treated seriously. It was a handsome page and it would carry weight.

Mr. Bittner was in constant communication with Hart, our New York representative, and through him we learned that Binks had been swamped with inquiries since his first advertisement. He had benefited by our six months' start. We had prepared the business man for this sort of thing, and he no longer hesitated. Advertising representatives who called from day to day also reported things booming with our rivals. Well, they were booming with us too.

The Purity-Spirit in San-Tox

There may be greater discoveries than that of toilet purity for the skin, but there are few more pleasant ones.

What a pleasure it is to discover the San-Tox nurse-face smiling from a San-Tox toilet purity for the first time! How grateful the skin feels for the smoothness and the restfulness you give it.

Is there a masculine face that knows San-Tox Shaving Cream that does not thank it for the shave-easing, skin-soothing quality of its lather? Or one that does not wish a second visit from the San-Tox After-Shave Talc—cool as it is and healthful in every way?

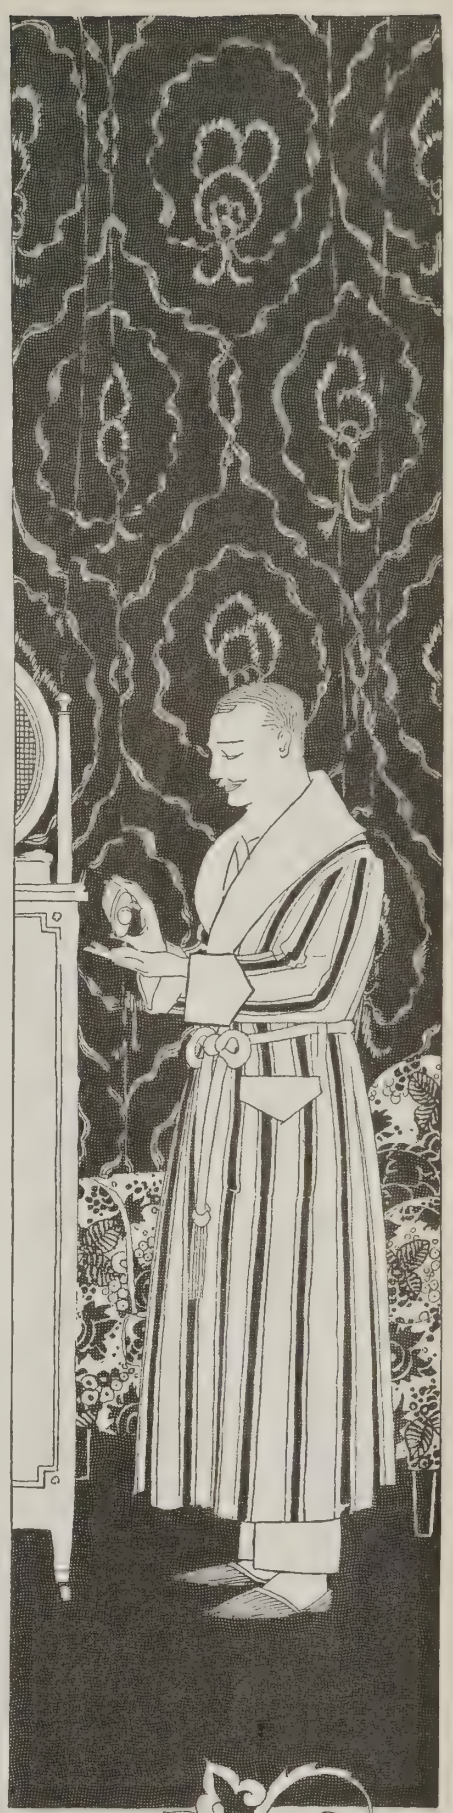
Is there a feminine face that is not glad of the youth-bringing bloom and skin healthfulness of San-Tox Cold Cream? Or of the softening, feminine skin-charm San-Tox Enchantment Complexion Powder leaves in its wake?

Well does the San-Tox druggist know that San-Tox purity. Well does he support it by his offer to return your money on any San-Tox purchase which is not the keenest satisfaction to you. But then, each San-Tox druggist is a druggist carefully appointed. There is one, only one, in each locality.

The San-Tox preparational purities number 125

SAN-TOX FOR PURITY
De Pree Chicago

San-Tox



Let the Spirit of Patriotism to-day Honor our Heroes of Yesterday

and let that patriotism have perpetual depiction in the material that Nature has designed for it.

The earth yields no other substance so appropriate for these permanent reminders—whether for the hero or the humblest person; whether to mark spots made sacred in history, or to preserve individual memories—as Barre Granite. It is the time-resisting stone; the sturdy, imperishable, beautiful gift of 'the ages for mankind's purposes in the erection of memorials.

BARRE GRANITE

The Rock Beautiful—and Everlasting

remains unspotted throughout the years. It resists the action of weather, and because of its low absorptive power does not discolor or become soiled. It is *perfect* in texture—the ideal rock for mausoleum, monument or the smallest memorial.

The Rockefeller, Fleischman, Heinz, Schley, Armour, Tarkington, Potter Palmer, Anheuser, Leland Stanford, and thousands of other memorials have been cut from Barre Granite.

Make the erection of a family or individual monument your own task rather than leaving it to others. See Barre Granite in your local cemeteries. Ask your monument dealer about it. Specify that every part of your monument be made of genuine Barre Granite.

Write for illustrated booklet, *"Memorial Masterpieces,"* showing some specimens of Barre Granite in finished form.

(Continued from Page 46)

I wonder how many people realize that though a business may be booming it may be booming its way to destruction. It was the old trouble over again only worse, as second attacks are likely to be. We were doing an immense business and it was increasing daily; but our advertising, forced out of all proportion by our rivals, more than consumed our profits. Both Mr. Bittner and I began drawing smaller salaries each week than we paid Miss Lutkins or Miss Krog, and I moved to a cheap boarding house on the South Side where I had a tiny hall bedroom. This was the hardest part of economizing, for I had grown accustomed to more spacious surroundings. I could sit on the edge of my sanitary couch and reach out in one direction for my hairbrush or nailfile and in the other for my book or sewing. Literally everything I had was in reach. It may be a convenient life, but it is mightily cramped. Inwardly I rebelled daily. However, Miss Lutkins' figures showed a losing game, and there was no possibility of a change until Binks should give up the fight.

I was anything but easy in my mind. Once more I envied the carefree life of employees. They have only to do their set tasks satisfactorily, while the employer has to be responsible for the setting of the tasks and do a lot of the routine work besides.

With November it was neck and neck, four pages apiece in a number of the leading magazines, and our business-men authorities balanced by Binks' handsome row of college presidents. Mr. Bittner sent an immediate inquiry. Binks had dropped his inkstand offer. Someone in the Borrige & Kemp Company was wiser than he. I was worried.

Our original operating force of one hundred was reduced to thirty, but we had in the Fifty Principles department besides Mr. Dumble six women, all ranging between thirty and forty years of age. These women with few exceptions worked magnificently. They all had dependent families and were constantly bent on improving themselves and increasing their value. I think they learned a great deal just going over and over the Fifty Principles work. They took it seriously and it sank in. Mr. Dumble remained steady and reliable, both in business and in love, for Miss Lutkins seemed to have entirely appropriated him. Our plan in every detail was working out excellently and things looked well for greater expansion. A request came in for specific instruction in stenography to follow the Fifty Principles course. It was from a young man in a small Western town who said that he could not leave home to attend business college. I had already heard it suggested that Borrige & Kemp would very soon install courses of instruction in specific businesses. This one request suggested to me that there would be others. If we could not fill the demand inquirers would naturally turn to Borrige & Kemp. But when I broached the subject to Mr. Bittner he regarded it lightly.

Getting After Binks

"It's a tool letter Binks sent so's he could see what we mean to do in that line," he said. "I sent him one the other day through another man, and he hasn't answered it. He's waitin' for my answer first."

"But what will you do?"

He dropped into a chair.

"We're goin' behind financially," he said, "but if we can just hold on Binks'll make enough mistakes to queer him. That inkstand was the first. He ain't got the best kind of a record himself for advisin' sound business methods. After he's done for we'll see about specific courses."

"Mr. Bittner, you wouldn't use his record against him, would you?" I asked, suddenly alarmed.

"He'll bring it on himself."

"How?"

"A man in any sort of public life has gotta pay big for a blunder that strikes at the core of his claims. Binks' record of conspiracy while he was in this firm is a blot on his name that he can't wipe out. I've never told it, but I've got the papers to prove it. It's one little detail of his business career that he don't dare touch on. He can't stand as much limelight as he's bringing on himself. Now that Kemp's dead—did I tell you he died in England last week?—everybody knows that Binks is the head of the firm. He used his picture and his name as instructor. People are goin' to begin to ask: 'Who is Binks?' As he gets in deeper and deeper, the story of the dissolution of the partnership of Bittner & Binks will leak out and filter through here and there."

"Mr. Bittner, you surely won't tell it!"

Anxious as I was about business, I didn't consider it fair to expose Mr. Binks. He had been in a tight place.

"I don't need to tell it. Binks has gone in strong on personality. Very well, when you do that you invite the searchlight. He's gettin' it; he'll get it some more; and he'll have to give an account of himself that'll satisfy. He'll have to account for everything he's done and show up strong and straight. There'll come a time when he's told all about himself but that last dissolution act. He'll have to meet that. He'll be pushed to it."

"Mr. Bittner," I said, facing him, "I wish you wouldn't do this thing. I wish you would fight it out in the open."

"Has he fought in the open?" Bittner demanded fiercely. "Did he steal in the open? Is there any law to protect me from his thefts? Why in thunder should I protect him from the consequences of his own misdeeds? You talk like a woman!"

Big Rogues and Little

"All I ask is that you fight this thing out squarely on the merits of the Fifty Principles without using the incident of his leaving the firm of Bittner & Binks," I persisted.

"All you ask is that I hang him but don't hurt him," he threw back.

I said nothing.

"I'll promise you one thing—I'll let him hang himself. Maybe that won't hurt so much."

I didn't feel particularly relieved.

"The very fact that he could form a cold-blooded conspiracy for stealing the Bittner & Binks business from me is the first proof that the man ain't right," he went on. "The fact that he hasn't seen his own crookedness, but still takes a sentimental view of it, as shown by his infernal desire to get even, proves that the lesson didn't do no good. He was vaccinated but it didn't take. And his out and out steal of the Fifty Principles is further proof."

"Do you know," I said, "I believe that Binks' trouble is a lack of understanding of the ethics of sound business. I don't believe the man realizes that he is stealing. He thinks all he can get under the law is his rightful quarry. He doesn't see himself as a dishonest man, but as a man outwitted by others who are quicker and cleverer. He doesn't see himself as you put him."

"It's the same with all the rogues, big and little," Bittner retorted sharply. "With Binks' record it's a positive duty for me to put him out of business. He will always purvey stolen wares. Because he uses nice words ain't no reason for lettin' him keep on in the stealin' business."

"He didn't have much chance," I persisted. I was thinking of his meager boyhood. Binks had come up from the slums.

"Every man has a chance at honesty," Bittner retorted, and left me.

The morning after this conversation we were surprised by a visit from Mr. Hart. Bittner had just sat down at my desk and begun to outline a plan he had evolved overnight, which he said would "get 'im" sooner or later—there was no other "him" these days than Binks—and I was subconsciously wondering if our finances would permit of our carrying out any plan that required time, when we both looked up and beheld Hart in the doorway. For some reason I knew him at once. As he stood there, fair, good-looking, well-dressed, in immaculate linen, white vest, gray suit and well-polished shoes, with the general air of a metropolitan man of affairs, I instantly became aware of our shabby office and equally shabby personal attire. I felt a sudden inclination to grab this article and that, dust things in passing and draw down a blind, as a surprised housekeeper will sometimes flutter about when an unexpected guest surprises her in the midst of disorder.

Bittner merely said: "Well, Hart," and went over to greet him. He brought him back to meet me, and I saw that he was not as young as he looked at first sight—he must have been as old as Bittner. We shook hands and I wished I hadn't grown so careless about everything. I could read poorly hidden disgust in our representative's face. He had never before visited the home office.

But Bittner appeared oblivious of any bad impression we might be making.

ELCAR

For Beauty and Quality The Elcar at $845

THERE are few cars equally beautiful at any price, and few, if any, equally good at as low a price. We put into the ELCAR the style, class and high-grade workmanship that went into our former models selling up to and above $3,000. Our organization has had long training in the production of quality cars, and both beauty and quality are inherent in the

A Few Elcar Specifications

Wheel Base—As long as some cars selling up to $3,000 and more—115 in.
Motor—4 cylinder; long stroke; high speed; 34.7 h. p. at 1,800 r. p. m.
Fuel Supply—Stewart vacuum system.
Ignition—Delco automatic spark advance with manual control.
Starting and Lighting—Dyneto two-unit; double-bulb headlights; Willard storage battery.
Clutch—Dry multiple disk—seven plates, steel on Raybestos.
Rear Axle—Full-floating with roller bearings at each end of wheel hubs.
Differential—Spiral bevel driving gears, with roller main bearings and ball thrust bearings.
Brakes—Internal and external, two inches wide on 12-inch drums.

Three New Models at $845

Five Passenger Touring Car
Four Passenger Touring-Roadster
Two Passenger Roadster

Each model is large and roomy—some would say room to spare, but you want a car that will seat its full load comfortably. Fine in appearance, fine driving and remarkably easy riding qualities, power in excess, economical in upkeep and fuel consumption, a car to give you satisfactory service for years to come—a car that we believe to be as high in quality and as nearly mechanically perfect as any car ever offered at an approachingly low price.

Our Illustrated Catalog

will show you views of all the ELCAR models and the more important mechanical parts, and is descriptive even to the minute details of construction. We will gladly mail it to you upon request.

Model D—5 Passenger Touring Car $845

For Ease and Efficiency Hartford AUTO JACK

"Upkeep Reduced Fifty Per Cent by Motz Tires"

Goodyear Motz Cushion Tires rapidly are revising all conceptions as to what a non-pneumatic tire can do.

For instance, the Vancouver Taxi and Auto Livery Company, of Vancouver, Washington, states in a letter, "We never have had a delay due to tire trouble since putting on Motz Tires and our *cost per mile has been reduced one-half.*"

Other statements in the same letter are equally enlightening:

"To date our records show on this car (Motz-equipped) a mileage of 23,754."

"Our upkeep on the four cars equipped with Motz Tires has been 50% less than on our Ford taxicabs, which are equipped with pneumatics."

You will find that Motz Tires will save a great deal of the cost of *your* fast delivery or light truck service.

The Kind of Clothes KAHN MADE TO MEASURE CLOTHES Gentlemen Wear

KAHN TAILORING CO.
OF INDIANAPOLIS

"Sit down," he said, pointing to a chair by his own desk.

Hart lifted his brows in surprise, but instantly checked an answer and took the seat. Bittner returned to his chair by my desk and resumed the thread of his conversation where it had been broken off by Hart's entrance. He had been talking to me about a biography of himself that he wanted worked up at once, but I couldn't put my mind on it.

"Please, Mr. Bittner," I protested at last, "see Mr. Hart first. It isn't as if he had come in from Madison Street, you know. Tell me the plan later."

"Well, I'll be ——"

He frowned, paused, then got up and slowly ambled over to Hart. "What's the row?" he asked, sitting down at his desk.

Hart drew his chair up more closely. The men talked in low tones for several minutes, then they left the office together.

I heard just enough to bear out my suspicions. Hart intended going over to Binks. He had repeatedly complained of the falling off of the book business inquiries through the cutting down of advertising, and of our not using the New York address on the Fifty Principles advertisements. Bittner had put him off from time to time, explaining that he wasn't yet ready to have the Fifty Principles inquiries taken care of outside the home office, and now Binks had made him a better offer and he had come on to ask for a release from us. Hart was a good man for the New York office; we couldn't have a better. Besides, if he should go over to Binks it might stir up discontent among our other branch-office representatives. Business had fallen off with all these men and we had not been able to explain the state of affairs. Bittner had induced them to have patience and wait, but this could not last indefinitely.

Depression settled down upon me. I tried to work on copy, but I could put no enthusiasm into it. No matter how successful we were, the cost of running the business overbalanced the possible income. Everything seemed going to pieces. Capital is a fact that you can't get around. Binks evidently had it; we hadn't. We would be frozen out in the end, so why prolong the suspense?

I went out to lunch, and returned in a still worse mood. I had eaten a cheap lunch and I was sick of cheap lunches. I sat down at my desk and looked about at the common pine tables, the bare ugly walls, the dirt and litter here and there. Then I took stock of myself. I was wearing a dull brown ready-made business suit. Even my waist was dowdy—of silk to save laundry bills. I was certainly in a far from happy mood, and so it was only natural that I should choose this time to recall an incident that had occurred at the boarding house the evening before.

No Time for Ibsen

"What are you reading?" I had asked a languid young person in trailing draperies who sat by a reading lamp in the public parlor. She gazed up from soulful eyes and responded:

"Nothing that could interest you—it isn't workaday in the very least. Ibsen."

At the time I had laughed at her remark, but as I thought back on it it didn't seem quite so funny. The young girl was right—I had indeed become a very workaday person. What, I asked myself, had I given up in my intense desire to become a successful business woman? And what had I gained? What was I likely to gain?

I was aware that Bittner came in, but I did not look round. He sat down by my desk.

"That biography," he began, "has gotta ——"

He stopped. His narrowed eyes rested on me. He waited. At last I turned my head and looked at him.

"What's the use, Mr. Bittner?" I said wearily.

His face, already tense, whitened.

"Good Lord!" he exclaimed harshly, with a swift indrawing of his breath. "You failin' me too?" He thrust his hand out and rested it on mine. It was as cold as ice.

It came over me in a blinding flash how he was depending on me—depending on me to keep the business headed steadily with never a move out of its course while he skirmished. If a single advertisement showed weakness, or lack of nerve, or—what was worse still—confusion and fright, it would be all up with us. Well, after all, it was just a game. When we went down there would be other games.

"I'm just tired," I said, trying to speak lightly but someway wanting to cry. "I'll go to a show this afternoon and start the biography to-morrow."

"Let me telephone for a ticket," he said anxiously. "Or wait: we'll both go. Get on your things."

It seemed awfully queer to be going out with him on a pleasure jaunt. It is difficult to change all at once to an unaccustomed footing with a man. We went down the elevator and out into the brisk nipping air like two runaway employees. He laughed as we rounded the corner and hurried toward Randolph Street, for we had both glanced back to the windows to see if we were watched. I hoped Miss Krog had not observed us.

"Whatcha want?" he asked. "Music?"

"Something awfully foolish," I replied.

"There's a children's matinée over on Randolph. They're openin' the new theater," he said. "Try that?"

"It sounds good," I answered.

"Where'll you sit?" he asked as we reached the box-office.

"Let's go to the gallery and have some peanuts," I answered, feeling suddenly a desire to abandon myself to complete shabbiness.

"Gallery goes," he said and got the seats. We went outside again and climbed the stairs at the side entrance—three long flights.

"This is what it's like to be poor," I said, panting, and with the tactlessness that one sometimes achieves at a critical moment.

"There's worse things," he came back. Then he added almost to himself: "It ain't bein' poor, it's bein' beat that kills."

We See a Show

We found our seats. They were on the aisle in the first row. Children filled the house and they were having a fine time. The first act had ended. We craned our necks, looking over the solid phalanx back to the roof. A page came down the aisle with candies. Bittner stopped him, and buying his stock emptied it into my lap.

"Help yourself," he said to me; and to the boy: "Get some more." He began tossing boxes to the children near. Eager, happy little faces popped up above erect little spines, and expectant hands strained toward us. The candy was soon exhausted.

"Wish I had some glasses," Bittner said, feeling in his pockets. "Boy," he called as an usher came in sight, "get me some opery glasses."

"Not supplied to the gallery," the boy answered disdainfully.

"Well, you supply 'em to the gallery," Bittner commanded, and handed the boy a silver dollar. The boy went off grinning. Presently he returned with the glasses, and Bittner at once focused them on the boxes. I smiled to myself—he had not offered them to me. I wondered if he had ever taken a young woman to the theater before. He certainly was a unique escort, but I was really enjoying it. Presently he turned the glasses on the rows of faces back of us. At last he handed them to me.

"Looks like that little Gray boy over there toward the center," he said. "The one with the crutch."

I looked. I had seen Harold once when he came to the office to bring his mother's lunch.

"Yes," I answered, "I think that is Harold."

"He's got that same gold in his hair," Bittner remarked. It was entertaining to hear his ordinary comments on everyday matters, and it was a new experience to me. I wondered if he were really interested, or just trying to make conversation for my benefit to take my mind off business. And then all at once I remembered the time he drew the blind for Mrs. Gray and spoke to her about the gold in her hair.

"Mr. Bittner," I said, "why don't you marry? You need a wife to look after you."

The music began and the children listened in delight.

"I ain't never had time," he answered simply. "Wonder if I could get one o' these boxes up to him?" He was peering again toward the Gray boy. Directly he stood up and whistled softly. All the little heads lifted, alert, including Harold's. "Catch," called Bittner, nodding to him.

The boy's face lighted with pleasure and he stood up quickly, using his crutch.

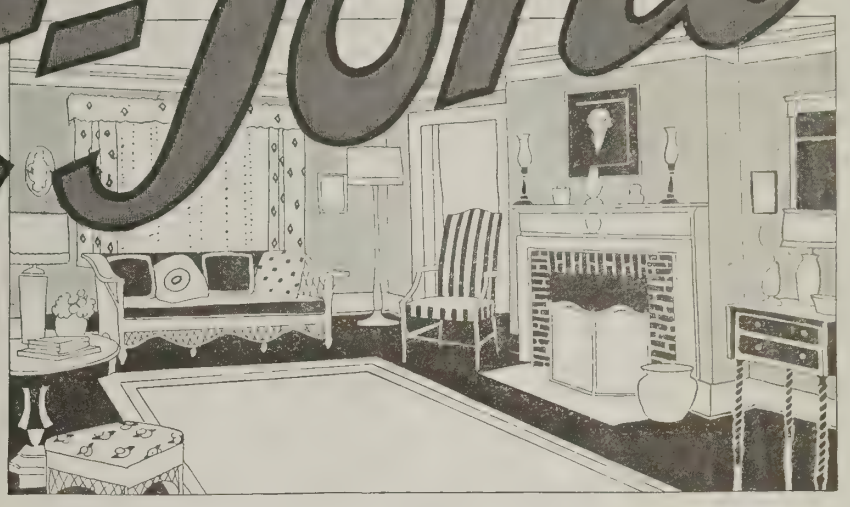
SHERWIN-WILLIAMS

Flat-Tone



There is nothing so desirable as painted walls

Decorative Suggestions Free

We maintain a decorative department that is unequalled by any paint and varnish company in the country.

This department is at your service without cost. Suggestions are furnished in colors, with complete specifications for carrying out the effects shown. Write us fully as to the help you require.

The soft, rich, restful effects that Flat-Tone produces cannot be secured with any kind of wall covering. A heavy, durable oil paint that can be cleaned when soiled, is not easily marred and does not crack or loosen, has much in addition to its artistic appearance to recommend it.

Although when measured by years of service given, and by general standards of economy, Flat-Tone has always led, it is now under existing conditions almost invariably lower in initial cost than ordinary wall covering. Investigate Flat-Tone before you decorate. The Sherwin-Williams dealer near you has the goods and the color cards. Ask us his name.

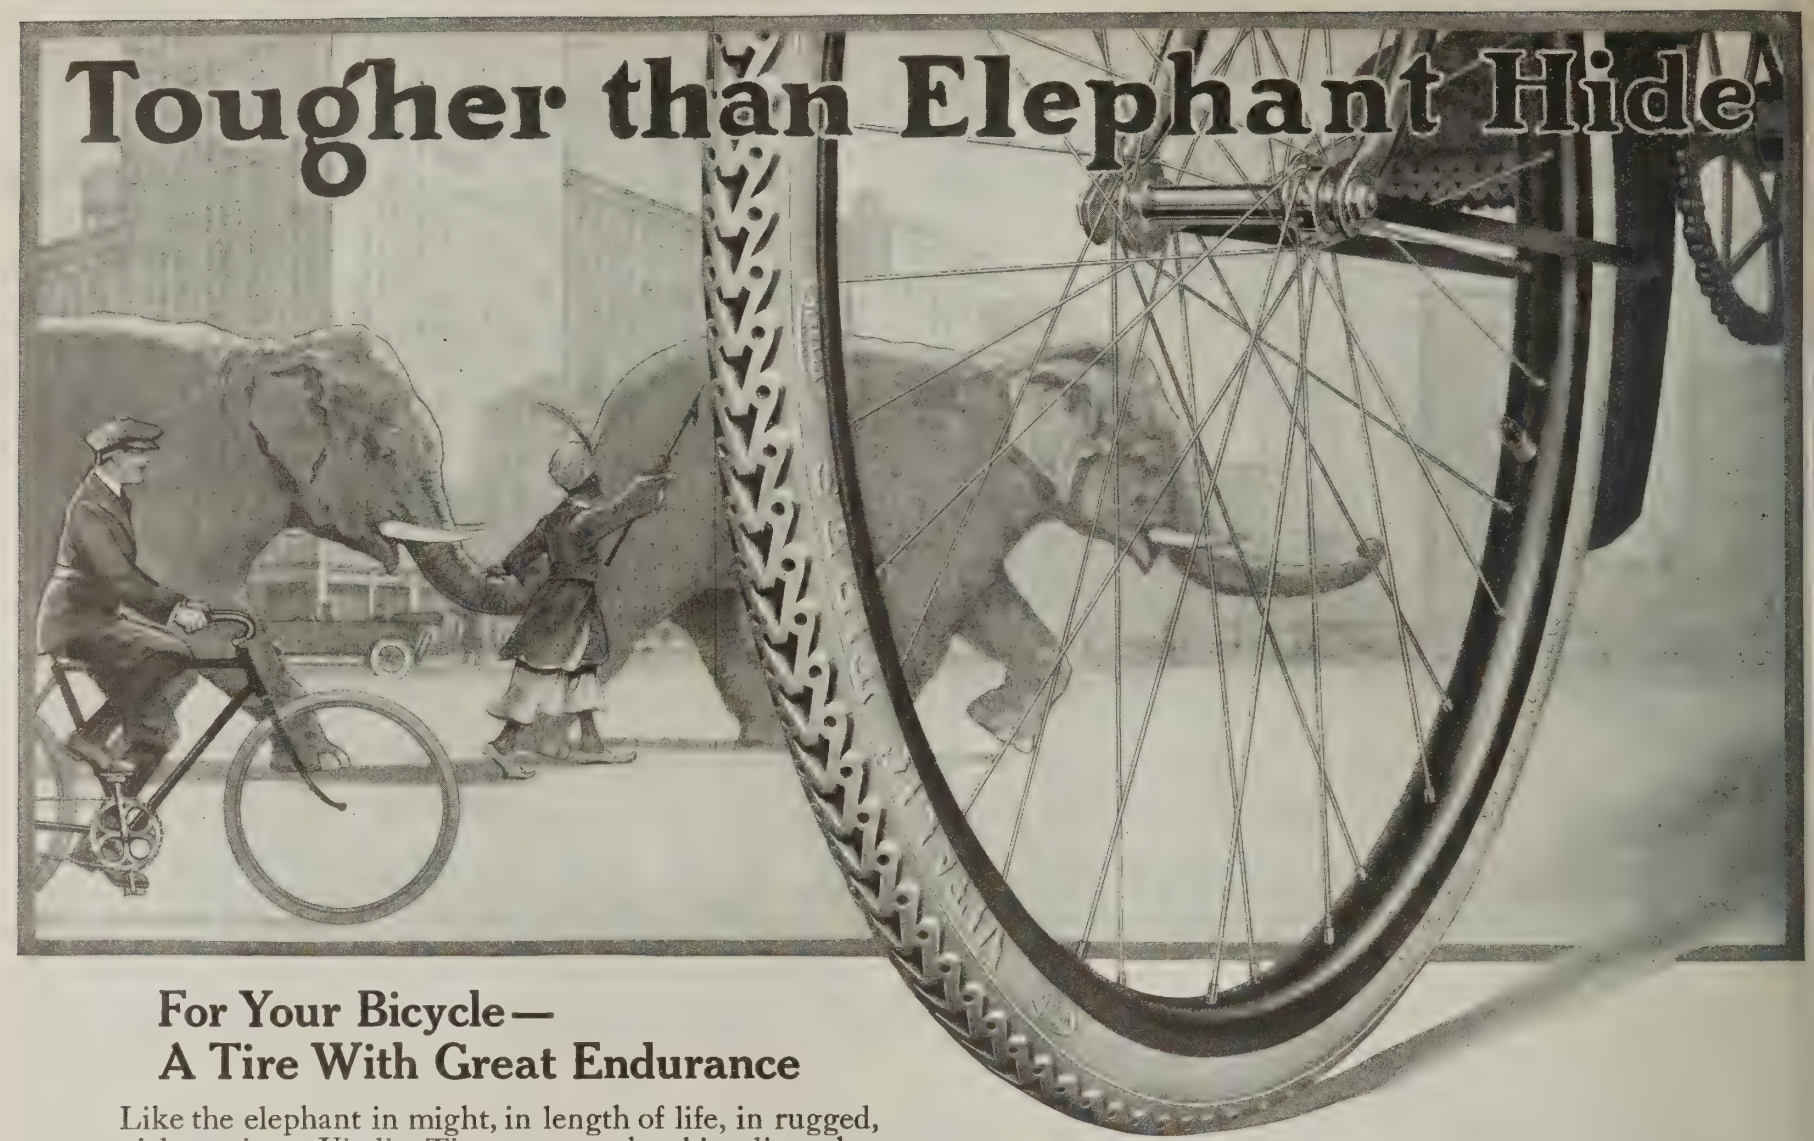
Tougher than Elephant Hide



For Your Bicycle— A Tire With Great Endurance

Like the elephant in might, in length of life, in rugged, genial service. Vitalic Tires are to the bicyclist what elephant hide is to the elephant as he roves the jungle, immune from splintered trees and hostile claws. Vitalic Tires mean safeguarded going over bad roads—a dependable armor against stones, ruts, time and wear. Vigor and value from tread to tube. Resilience blends with resistance in the stern, double-thick, motorcycle tire fabric. Send for testing section—note the triply-twisted thread. Examine each layer of rubber and fabric—thicker than elephant hide.

VITALIC Bicycle Tires

Three great tires bear the great name VITALIC. Each wholly worthy the name. Each sturdy, long-lived—good for thousands of miles. Each easy to recognize. The *Vitalic De Luxe*, with heavy V-shaped suction non-skid all-white tread, brings you enormous friction-resisting tire-vitality—$4.00 each.

The *Vitalic Brigadier* is a stalwart tire with white, heavy, studded tread and gray walls, built for hard knocks for those who prefer a more moderate price combined with staunch service—$2.50 each.

The *Vitalic Cord Racer* is an all-white tire with smooth tread; it's light enough for speed, yet strong enough for endurance—$4.00 each. The Vitalic line, tire for tire, saves repairs, saves accidents, saves jars and jolts, saves time and trouble. By ordering Vitalics, you buy safer and ride longer.

VITALIC Brigadier $2.50 each

Real Foot Ease on Vitalic Pedal Rubbers

Vitalic Pedal Rubbers put new ease—new energy—into pedalling. Best for a quick getaway. Restful on long jaunts.

Vitalic Grips Save Slips and Cramp

Once you ride with Vitalic Grips, you'll never change. Big enough and with just enough yield.

There's Life and Last to Vitalic Inner Tubes

They're without flaw or weakness. Layer upon layer of lively, long-lived rubber. Full of vim and vitality.

VITALIC De Luxe $4.00 each

Vitalic Automobile Tires, Too

(Continued from Page 50)

Bittner tossed the box and he caught it. He was a serious, old-fashioned little chap, but the child nature was there deep underneath.

The curtain rose and the third act began. The play was a fantasy of lights and colors, pretty dancing and tuneful singing. The children were enchanted and so was I; but I pursued the thread I had started.

"It wouldn't take long," I whispered.

"What wouldn't?"

"To be married." I was thinking of Mrs. Gray and her genius for ministering, and of lame little Harold and his genius for modeling; and I thought too of Bittner's evident love for children and of his lonely man's life.

"You thinkin' of it?" he asked, looking at me queerly.

"For you, yes."

There was a scream from the stage and a sudden burst of smoke through the wings, followed instantly by an uproar. Smoke filled the stage, rolled out into the pit, and the red of flames showed through.

Bittner sprang to his feet and pulled me to mine.

"There's an exit to the fire-escape," he exclaimed, turning me about facing it—it was but a few steps away and already the usher had the door open. "I'll go for the Gray boy. He won't have a show with his crutches." Then he disappeared. The smoke was already pouring up into the gallery, and I could hear above the uproar the crackling hiss of flames licking varnished wood.

I was near enough the exit to have got out very easily, but even as Mr. Bittner was deterred by the thought of Harold, so was I by the thought of the children all about me. They were crying, stumbling, choking, pushing and pulling one another in a mad fight to reach the open door. They belonged to the poor, these little gallery children, and were accustomed to looking out for themselves. I tried to prevent the larger ones from trampling on the smaller, but eventually, as the smoke became suffocating, I was pushed with the mob toward the exit and out into fresh air. The fire-escape was packed with those already descending.

I got down at last and a policeman ordered me to move along.

Perhaps Mr. Bittner and Harold had come down when I was not looking and had gone on to the office; they might now be worrying about me. I would go too.

The pavement came up to meet me at every step. The elevator man looked at me enviously. "See the fire?" he asked. I pushed open our door and went in. It seemed such a long distance to the private office—I thought I would never reach it. The girls were closing their machines with funny wavering movements. Miss Krog was carefully powdering her nose with a hand that wavered like a cheap mirror; Mrs. Gray looked up, smiling, from her last problem; William was collecting waste-baskets; they all wavered over their tasks grotesquely.

"Where is Mr. Bittner?" I asked, and my voice seemed to come from miles away.

A Happy Reunion

"Mr. Bittner?" Miss Krog repeated wonderingly, her powder puff arrested. Everyone else looked blank. And then the room swam and the chairs swayed and I knew nothing more.

Miss Krog, Mrs. Gray and I found the two an hour later, coolly playing checkers in the small Gray apartment. Poor Mrs. Gray, happy all the afternoon in the thought that her little boy was having a good time—she had purchased his ticket and left him at the theater after lunch—had gone deadly pale when I came out of the faint and told of the fire. With wild, tearless eyes she had ushed out of the office, Miss Krog and I following, and hurried home on the hope that Harold might have escaped and reached there safely. Seeing that all was well she promptly fainted. Bittner sprang to his feet, upsetting the checker board and scattering the checkers all in one breath, while little Harold laughed in great glee over the figure he cut.

When we were all ourselves again we heard the details: It seems that Mr. Bittner had reached the boy, tossed him over his shoulder, and made his way out by the exit opposite the one I had used. He had pushed through the crowd to a drugstore, got into a rear room and applied restoratives to the nearly suffocated child. A physician had been called in and Harold had come through all right. He had lost his crutch, however, so Bittner had taken him home, thinking Mrs. Gray would be there. He had supposed that I would go directly to my boarding house from the theater. Not knowing much about women, it had not occurred to him to telephone to the office in case word of the fire had reached there.

The most beautiful thing imaginable was Mrs. Gray's gratitude. Miss Krog decided to spend the night with her, as she was still nervous and upset.

The next morning I was at my desk as usual and Mrs. Gray was at hers; but I do not think either of us felt much like work. However, Bittner's appearance a few minutes later started the wheels going as usual. He came directly to my desk, and sitting down began to whittle a new ruler I had recently acquired. The tragedy was pushed to the background, and we, like thousands of others in the mourning city, were off on our own unending game.

"That biography," he began, "has gotta be the rope that'll hang 'im."

"Give me your plan," I said. I knew I was in for it. Whatever it was, the sooner I got at it and got it over, the better. I was now eager only for the end—it mattered not what end. I think I would have rejoiced had he told me that we were to be closed out that day. The suspense had lasted too long.

On the Trail of Mr. Binks

He began to explain, and I began to wonder if he was suffering from the malady he most abhorred, egotism. He wanted me to write his business biography. It was to be the most microscopic thing you could imagine. He told it year by year, devoting a chapter to each year. He began with his life as a messenger boy, and explained exactly what he had done, where he had been, with what firm connected up to the founding of the Bittner & Binks Company. He traced with painstaking minuteness the growth and development of this concern, going into the reason for every act, every change, up to the very moment of Binks' withdrawal. Of that he merely said:

"Mr. Binks left unexpectedly on the afternoon of September the eighth, at five o'clock."

His silence as to the reason for the dissolution of the partnership, his failure to explain this as he had every other change that he had mentioned, surrounded the incident with a sense of mystery. In the next paragraph he again took up the thread, and went steadily on with the history of the concern under the new régime. The very monotony of the details made the one obscure point stand out with startling distinctness.

Day after day we worked on the biography to produce just the desired sense of ascent to the point of Binks' leaving, the feeling of pause, of drop, with his departure, and the steady growth afterward. There was not to be one word in it against Binks, but the interest was to be so centered that the first question a reader would ask on finishing the biography would be "Why did Binks leave?"

On the cover page were two small halftones, one of Bittner, the other of Binks. The picture of Binks was an almost perfect copy of the one he had used in the magazine advertisements. Below the picture, in readable but ornamental type, was the following:

"This is the business biography of Bittner, founder of the first exclusive Business Book Company, author of various business books and of the Fifty Business Principles, the first work of the kind in existence. It is your right to know the detailed history of the business life of any man who sets out to instruct you. It is your privilege and duty to ask for it. If any point in this biography is obscure to you, it is your privilege and duty, as a business man, to ask that it be explained."

As the advertisements of the two concerns were appearing conspicuously in the same publications, any one interested in the subject would answer both. We knew that readers did so, for frequently our inquirers wrote us that after examining the literature of the two concerns they had decided to subscribe with us because of this feature or that; and almost as frequently they wrote asking us to stop our follow-up letters, as they had subscribed with Borrige & Kemp. When the Bittner biography should accompany our catalogue they would have a

The
Manualo
The Instrument You Were Born to Play

JUST as Levitzki thinks of the Baldwin Piano as *his* instrument, so you will think of the Manualo as *your* instrument soon after you begin to play this totally different player-piano. The Manualo is responsive to the natural musical feeling that is born in all of us. Just the instinctive expression of this feeling through the pedals enables you to play the Manualo with the same satisfaction as one who brings to hand-playing especially talented fingers and years of practice.

Built into four standard pianos at four prices:

The Baldwin Manualo — The Ellington Manualo
The Hamilton Manualo — The Howard Manualo

Manualo dealers throughout the country have a very interesting proposition to make to anybody who is thinking of buying a player-piano. Send to nearest address for complete information.

Seedtape affords earlier germination, stronger plant life and better results than seeds planted in the old way.

D. FINLAYSON, F. L. S.
Director The Seed Testing Laboratory, London, England

TO be assured of a better garden this year, plant with Pakro Seedtape—not because of what we *claim* it to be, but because of what others have *proved* it to be.

E. J. Kyle, Dean of the Agricultural College of Texas, tells of results obtained from Pakro Seedtape at the college—"All the Seedtape planted did exceptionally well. The plants made a splendid appearance and the stand was especially good."

George Foster, Springdale, Ohio, tried Pakro Seedtape in his garden. "It came up better than any other seeds I planted," he remarks. Similar expressions of opinion have been received from experts and amateurs all over the country.

Judge for yourself how remarkably sensible and simple the idea is.

Pakro Seedtape consists of seeds selected with the utmost care by experts from the very best of prize-winning strains; they are put in a thin paper tape, spaced exactly the correct distance apart. No thinning out is necessary. Stunted, slow-growing plants, due to overcrowding in planting the seeds, are avoided. The paper absorbs and holds the moisture, and thus produces a quicker and higher percentage of germination. It is more economical to use because only a sufficient number of seeds are planted—with loose seeds there is a great deal of waste. Since you can plant a whole row at once, there is a great saving of time and labor.

Of course this appeals to you as the most outstanding improvement in planting discovered in many years—and facts prove that this is absolutely true.

Use Pakro Seedtape in your garden this year, and you have the assurance of thousands who have tried it that you will have a more successful garden than ever before. And here are the experiences of some of these thousands:

"I never had a better garden with an experience of 35 years." L. C. Arensberg, M. D., East Millsboro, Pa.

"I find that Seedtape grows quicker than any other seed with far less trouble to plant." Miss Ethel Bowman, Troy, Ohio.

"The same amount of seed goes twice as far as other kinds." Mrs. William Behringer, Ann Arbor, Mich.

"Results from Pakro Seedtape came up to my most sanguine expectations." R. J. Chapman, Houston, Texas.

"Without exception, my garden this year—planted with Pakro Seedtape—was the best I ever had. Germination and final results were all that could be desired." H. Holbrooke, Hood River, Oregon.

"Have had remarkable experience in planting Pakro Seedtape. They germinated in an exceptionally quick way and the plants appeared above the ground in absolutely regular order, not one missing in the several rows. I am a Horticulturist and Rancher of some little experience." F. A. Koenig, South Paris, Maine.

"We obtained a remarkable crop from our planting of Pakro Seedtape." Jos. Keenan, Cazenovia, N. Y.

Pakro Seedtape comes in 30 varieties of Vegetables, and 18 varieties of Flowers, and by carefully following the directions printed on each box, your garden will prove a delight and a surprise. Get some from your dealer today.

picture of Binks before them twice—in our pamphlet and in the Binks advertisement. Thus they would have brought home to them without our saying so the fact that the Mr. Binks who was instructor for Borrige & Kemp was the same Binks who had been associated with Bittner, and who left so unceremoniously on the afternoon of September the eighth at five o'clock.

The pamphlet was of a size that could be slipped in easily with the catalogue. We rushed the printer as rapidly as possible and soon it began going out to inquirers. Almost immediately we heard from it. A number asked, when writing a second time to make further inquiries: "By the way, why did Binks pull out?" This was the question Mr. Bittner wanted. We replied, in a carefully prepared letter, that we could answer only such questions as pertained strictly to Mr. Bittner's record. For a rating on any other man we recommended the regular rating agencies.

When a sufficient time had elapsed to obviate suspicion, Bittner wrote under another name asking Binks why he had left the Bittner & Binks Company. We waited tensely for the answer. If Binks should state the matter incorrectly there would be but one course open to Bittner—to make a clear statement of the case, with a reproduction of documents that would prove its truth. This was the trap Bittner had set.

Binks Pussyfoots

But Binks moved cautiously. He answered our tool inquiry with a very wordy letter full of metaphor, saying that it would consume too much of the inquirer's valuable time to go into all the petty details of a minor transaction back before his real life-work began, the revitalizing of the old, safe, substantial firm of Borrige & Kemp. He casually mentioned the fact that a string of enterprises, dating back to the time when as a boy he owned a peanut cart, still bore his name and profited by the connection. "Always," he said, "I have been ready to step out of smaller businesses into larger ones, but I haven't always been able to carry my name away with me. However," he added with good-natured jocularity, "I don't complain. In fact, I still feel a fondness for the businesses—even the peanut stand—that I built up and left to others." He glided over the whole matter smoothly, then went on to his present success which he called "the ripening of a lifetime's devotion to building up and recreating businesses."

It was clever and it was maddening. And in the meantime our advertising was pushed to six pages. It certainly was haymaking time for the publication representatives, who hovered about our office and slapped Bittner gaily on the back and insisted on taking him out to lunch. I could imagine them doing the same with Binks, and I could also imagine the latter's supreme satisfaction over being fed free. But we were not making expenses and the earning season was at its height. Soon the receipts would begin to be on the down grade, while the advertising must go on just the same. Not until Binks slowed down would we dare do so. Binks was running a veritable sweat shop in New York, so Bittner said, grinding the help to the last ounce of strength, working overtime and Sundays. But he had handsome offices which he had inherited with the business, and his easy, talkative manner would further give the impression of prosperity. His establishment must have been a brilliant contrast to our dingy quarters. I did not wonder at Hart's temptation to leave us.

Bittner had effected some sort of compromise with him that retained him in our employ for the time being, but I knew this would not last unless there was a decided change soon. Under the influence of Bittner's dominant personality he had agreed to remain with us, but back in New York the influence would be all the other way.

On top of everything else a letter came in from our bankers, from which I gathered that we were going to find it difficult if not impossible to borrow money. I handed Bittner the letter without comment. He read it, then left the office and did not return for several days. When he did come back his jaw was set and his eyes drawn far back behind their narrow slits. He sat down at my desk, and without other greeting went at once into his plan.

"There ain't no other way," he said. "We gotta hammer hard and steady on that one weak spot till something breaks." Then he proceeded to explain to me the diabolical thing he had thought out.

He had started a chain of questions that would eventually belt the globe if necessary. Our many branch offices made this possible. In every case the question was to come from a bona-fide inquirer on business stationery, and was to be signed by an actual business man. But the question itself was always to be the same: "Why did you quit Bittner, Mr. Binks?"

The thing was to be so managed that every morning this inquiry would appear in Binks' mail. All this would be in addition to the questions that reached him naturally through curious inquirers.

Steadily, systematically, tapping, tapping, tapping, the unanswerable question was to break the man down. It seemed to me the very height of cruelty. I could have shot him more easily. But on the other hand Binks had robbed us and we had no recourse.

I now wished only for the end.

"That March copy," Bittner said, sitting down by my desk with his knife and stick, "has gotta be all punch."

"Have you an idea?" I had none.

"Yes. Talk to the man about himself. Start off something like this: 'Anything you can see in imagination you can work out in fact.' Make it strong on what he can do. We've hammered on ourselves till the public's got it. We don't want to be a bore. Binks never knew when to tack. He'll keep right on booming Binks. Our stuff'll be fresh. Then put the necessary data toward the end in smaller type."

I was soon deep in the new copy, packing it with "punch," reading it aloud to detect any sound of hurry or bombast, reading it to Mr. Bittner, correcting, changing, as no doubt Binks was doing with his copy at that very time in New York. Steadiness was the main thing in our advertising. Mr. Bittner could detect the slightest sign of haste, of nervousness or excitement. "That ain't just the word," he would point out, and I'd have to try others till I found the right one. He rarely knew what word he wanted or what was the matter, and it was up to me to experiment till he was satisfied. He had an acute ear for the sound of soundness.

In the meantime the well-planned belt was lengthening. I could see Binks, thin, nervous, uncertain of himself, rushing to his office each day, jerking open his desk, grabbing his letters, always dropping more than he held, always slipping back and forth in his chair, jabbing at them with his opener, fearing each time the reappearance of that maddening question: "Why did you quit Bittner, Mr. Binks?" Poor Binks! He had been a frightfully nervous man five years earlier—sensitive and subject to suggestion. His very aptitude for absorbing another's ideas, words, personality, bespoke the negative plate on which impressions would be instantly registered.

And opposed to him was Bittner, cold and steady as blue steel, positive, every cell of him. No two armies lined up to kill ever fought each other more mercilessly. None ever used a more murderous weapon than that of Bittner.

Harold Gets a Job

I seized the first March magazine that came in and turned to the advertising pages. There we were, six pages apiece. Bittner sat at his desk, his eyes glued to a duplicate of the magazine I held. Feverishly I read our copy. It sounded as even, positive, steady and strong as the hammer strokes of a mighty machine. Then I turned to that of Borrige & Kemp. Nervousness ran all through it. There were boastful claims, erratic starts at one point with a conclusion at another, and flights of rhetoric that got nowhere. Binks' picture was omitted.

I let the magazine fall from my hands onto the desk and relaxed in my chair, thinking. After months of continuous warfare here was the first sign that the enemy was breaking down. Perhaps no one else would see it. Others would say if they said anything: "Not very good advertising." But I was trained to look for the disease back of every symptom, the man behind the words. Binks was giving way.

Bittner came over to my desk and sat down. He said nothing for several moments, but his face had lost its hard, cold, unrelenting expression—it was human.

"A nice day," he remarked at last; and suddenly there came to me an acute memory of that dark September afternoon five years ago just preceding the departure of Binks when with everything at top tension Bittner had predicted rain. I looked at the man. He was leaning back in his chair, his elbows on its arms, his finger tips together, his eyes dreamily contemplating the neighboring clock. He had very nice eyes when one could see them.

"Keep April along the same line," he went on mildly. "You might start off with somethin' like this: 'We don't keep men in jail for what they've done so much as for what they might do. It ain't the mistake a business man makes that ruins him, but what that mistake tells us of the man.' Then follow along with the usual facts."

"Six pages, Mr. Bittner?"

He smiled a slow smile. "I think five will do us," he said.

I went to work.

He sauntered over to Mrs. Gray's desk. He hadn't talked with her since the fire.

"Boy all right?"

"Oh, yes, Mr. Bittner!" Her eyes shone as if she were looking into the face of an angel.

"Wanta work during vacation?"

"He'd dearly love to."

"I'm thinkin' of puttin' in an office-boy to receive people," he said. "He'd have to sit out there in the reception room and take cards and be polite."

"Harold would love it."

"Then tell him he's engaged. I'll pay him five a week. Some day maybe when he ain't busy we'll finish that game o' checkers."

"Mr. Bittner, how can I thank you? How can he?"

"By makin' good," he said, and went on out.

Steadily we went on with the advertisements for May, reduced to four pages. Steadily the unending question made its way Eastward. Steadily we went into debt and steadily the business grew. The summer days came on. The advertisements of Borrige & Kemp became constantly more erratic, more jumbled, and they dwindled in size issue by issue.

Cock of the Walk

In September the Borrige & Kemp advertising did not appear. We took single pages again. Mr. Bittner now divided his time between the advertising matter for the Fifty Principles and the subscribers' work. He made plans for increasing our field. He got in touch with high schools and business colleges, and offered instructors special inducements to push our course of study.

And the subscriptions poured in and poured in. Miss Krog's hands were full indeed, for the business-book trade began to pick up again with renewed advertising. We caught up with our bills and began to get ahead of them. We raised many of our employees and took on new ones. I began to plan my removal to a hotel suite and actually took a whole day off to go shopping.

"Well, we've covered the field," Bittner said one day, as he sat by my desk and looked with quiet, innocent, open eyes off to the distance.

"No, we haven't," I answered. "There are still the women."

"They're the same as men," he said.

"No, they're not. Try dealing with them as I have and see."

He continued to stare questioningly.

"They need a sort of preparatory course to bridge over the distance between where they are now and where men are."

He seemed revolving it in his mind.

"Women," I said, "are more like your friend Binks—they don't know when they are unethical, the majority of them. Most men know and go ahead anyway."

"Binks," he repeated musingly as he tilted back his chair and put his finger tips together, his eyes on the neighboring clock. "Where have I heard that name before?"

"He may be merely sleeping," I suggested, smiling. "Don't be cocksure."

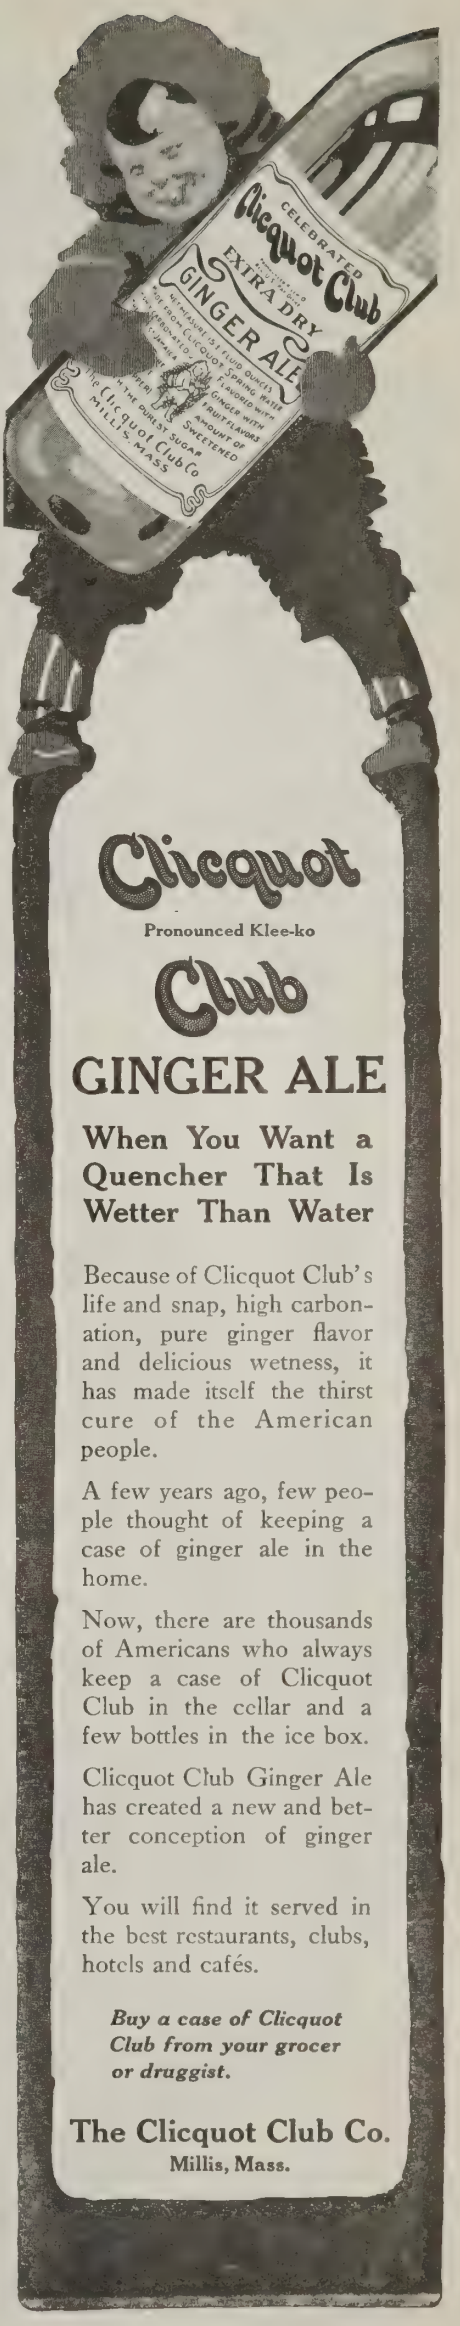
"How'd you like to live in New York?" he asked, his eyes still on the clock.

It was my turn to stare.

"The old Borrige & Kemp firm closed its doors to-day," he went on in a mild, casual sort of tone. "Hart's takin' over their offices. Queer, ain't it, how some men just can't seem to get along."

Then he got up and ambled slowly over to Mrs. Gray's desk. The sun was lighting the gold in her hair, and the look in his face was even more than human. No, she would never know the man that I knew.

Editor's Note—This is the fourth and last of a series of articles by Anne Shannon Monroe.



Top o' the Morning

A blustery wind outside; a snap to the air; and a big hot breakfast steaming on the table—that's the way the Aladdin day starts.

An island of oatmeal, maybe, in a bowl of cream. Then a big pile of flapjacks, with the syrup pitcher handy. As many golden corn-cakes as you can eat. And a big percolator full of aromatic coffee, to top it all off.

And all tasting better because it was a pleasure to cook them—the Aladdin way.

You can see for yourself how well the Aladdin utensils *look*—the Percolator and the Corn Cake Pan; the Sheet Tea Kettle with the Inset that makes a double boiler of it. They're even better than that to *use*.

That's because they're built for *work*. Each of them is made of the hardest, finest aluminum there is. Hard knocks and hot fires don't make the least impression on an Aladdin utensil. And they're all as graceful and as bright as can be.

Best of all they're designed from *your* point of view. Capacities are actually government-tested. Covers fit tight; handles really rest snug in the hand. Rivets are sunk where they can't catch dirt or tear dish cloths. Bails have the notched ear that keeps them away from the hot metal; lips really *pour*—they're shaped right; that's why.

You won't know just how handy cooking utensils can be until you've looked at the silver-shining Aladdin line. Ask at any of the best hardware and department stores. Write to us for catalogue and the name of the nearest dealer.

(Continued from Page 13)

tips touch instep. At the very top of the rise the slim legs snap up, stiff-kneed, feet pointed, and the low, flat curves drop plumb into the water two feet from the end of the board in a perfect jackknife, splashless, like a hot knife sinking into butter. And up on the wharf and out over the springing board in a flying leap the joyous bulldog streaks, and disappears with a splash. Then the white head and the tan one come to the surface together, and there starts that romping hour of the day for which both of them live.

The moment the brown jackknife opened its delicious blade a chuckle broke its way through the senior DeHavin's grouch.

"When I see more of her!" he snorted appreciatively. "So one of the Hawaiian Diving Twins is Miss Nora McDonald! And who, I wonder, will the other of the Kolanankau Sisters prove to be?"

"Who else but Mrs. Kate O'Boyle?" asked KO Pat with an entirely pardonable pride. "Who will not be showin' in vodvil with her sister this winter on account of a more important season's contract she has on her hands."

And Messrs. McDonald and O'Boyle beamed on each other pompously, as though some new thing had come to pass under the sun.

Miss Audrey deHavin protested.

"But, papa," she said, accenting the proper syllable of the paternal title—"a diving girl!"

"Not at all; not at all, Audrey," reassured papa as he folded his napkin and took a cigar from the tray that Jephcott was stiff-arming out to him. "*The* diving girl!" And he looked mildly round his family circle. "At fifteen hundred a week!"—as though he would by no means omit a fact of so great importance.

"Mrs. A. Beckwith deHavin, son and daughter," he continued, "if Beckwith wants to marry Nora McDonald he's got a lot better sense than I ever suspected. And if he can win her he's a lot better son than I had any notion was in our family; and Papa deHavin isn't going to disown him if he does it. If you insist, I might threaten disinheritance—just to help matters along; but I'd like to see if he has sense enough to pick out a woman instead of a doll to marry, without the urge of parental opposition. I should like, more than I can say, to see one of my offspring do something. And if my batting eye is still as good as I think it is the winning of Nora McDonald is that."

"But, Beckwith, dear"—Mother deHavin employed that tone of finality which had closed innumerable family debates in her favor—"she is the daughter of your stable foreman!"

"And a mighty fine foreman, at that!" said Papa deHavin; and Jephcott turned what would have been an inexcusable gasp into a cough, and dropped the cigar tray. "And she has a prize-fighting brother-in-law she'll be proud to introduce to the family."

The family's gasp far, far outshone the butler's very best accomplishment.

"At one hundred thousand a year," added papa, again as though he attached much importance to such information.

It is not improbable that to Papa deHavin such round, mouth-filling figures suggested accomplishment; and accomplishment was not the middle name of any of those who sat at table with Papa deHavin that evening.

As Papa deHavin continued to talk, an unknown speaker appeared suddenly before his family; and the family dropped its several jaws and listened to him.

"Shamus McDonald, my fine stable boss," began this stranger, "looked at our bulldog the other day and said this to me: 'Your dog is going to lose right, boss. I guess it's in a straight breed to lose right when the big call comes. Ain't it a terrible pity he can't win! But he can't; he's too white—the fighting brindle's all bred out of him.'

"Now look at all of us." Papa deHavin arraigned his startled audience under his famous grouch. "We're getting paler-colored every day. I want a son to run the Interborough, and haven't got one brindle enough. I believe, with Shamus, that even Forsythe there, who is perhaps the most worthless of us all, would lose right. He'd take his beating like a man if the big call came. But that's not getting me the natural winning fighter I've got to have to make the Interborough a winning gas company. My offspring are all too white. For the sake of type, the brindle's all been bred out. *I'm* slipping. I'm showing the downward trend. Here I am, looking for a son to turn over my business to at fifty-seven. Great-grandad deHavin was still breaking harness straps at eighty-five. I've some hopes for Becky; but if he's good he'll be our last good one, unless we breed in some of the fighting brindle. And I'm not going to stop anyone who tries to shoot into the DeHavin veins some new, red yeoman blood. Does everybody get me?"

Everybody got him.

Bull deHavin, so known among his friends and enemies downtown—who believed, as many others of his kind believe, in being Papa deHavin after half-past four, even at many sacrifices of ideals and desires—had appeared once, famous grouch in hand, in the bosom of his family, at a crisis; had bellowed a few times, tossed his horns once or twice, and then disappeared forever, metaphorically pawing up the plush rugs of home with a certain secret satisfaction as he stamped back into the fens and fastnesses of the Interborough Gas Company.

Jephcott at last recovered his equilibrium sufficiently to recover the cigar tray; then, with his usual *savoir-faire*, hurried out into the hall for what he thought was necessary to relieve the situation. And when his back was turned to the family a smile of approbation, marvelous to behold, split wide the mask of inhuman imperturbability that ordinarily answered for his face.

True to form, young Mr. Forsythe Wentworth, trying to lessen the tension, put his foot in it up to his waist.

"Since Beckwith cannot go with us tonight, papa," he said very mildly, subtly changing the conversation's drift, "suppose you help to fill our box. Caruso sings Pagliacci to-night."

Jephcott handed Papa deHavin his hat and stick.

"Palyach the wart on your grandmother's nose, Forsythe!" Papa fired a parting shot from the doorway.

"Becky and I will be together to-night—in attendance at a man's entertainment. We're going to a dog fight."

The pit was a very silent, ominous, bright-yellow square, surrounded on all sides by whispering darkness; small—less than three paces on a side; and the low-hung lamps glaring upon it made its surroundings dim and indistinct. Sloping up back of the glare of the lights, there rose a bank of glowing sparks, where the burning tobacco of men ran high into the smoke-laden gloom. Long wisps of the reek undulated gracefully under the lighted hoods. A hush that was not altogether precaution against police interference hung heavily, as though to usher in some deed of awe. More than a thousand men sat, whispering, waiting in the shadow back of the low pit fence; for in the old days of the dog-fighting game the name of Grip, the Gas-House Pup, would fill whatever inclosure staged the fight.

And this night Grip was matched against the menacing unknown—against a dog with, back of him, the legendry of that inexhaustible supply of courage to which could be traced the valor of all the fighting breeds, but which had not known the fighting game since the long years past, when his ancestors had been matched against the savagest bulls of Britain. Had the indomitable bravery lasted through? Would it come out? Or was the tradition of the unbreakable heart of the pure bulldog nothing but a myth—or built upon absolute fact? Had the ancient bull-baiters, when they bred his nose back so that he might breathe while his whole face was buried in the dewlap of the bull, overdone their work, and ruined him for self-protection against attacks of his own kind? These were questions the visible answering of which would have filled Madison Square Garden, had the authorities allowed, with a crowd which would have made the attendance at the annual

What are Dominant Methods of Advertising?

Dominance implies bigness and broadness.

The firm which would reach and maintain a position of leadership in its industry must employ methods which are in keeping.

Its ideals must be high, its policies sound, its dealings broad-gauged.

Its sales force must be able and alert. In every activity it must be represented in a manner that speaks of dominance.

Most important of all, the side which it presents to the public—its publicity—must convey the impression unmistakably.

In each field of promotive effort which it enters, it must employ the medium which is itself dominant in that field.

It must employ that medium with a force and a consistency commensurate with its opportunity and its ability.

Its ambition for dominance, or its assertion of dominance, puts upon it this obligation:

To dominate in the medium which itself is dominant.

In the field of national promotion the dominant medium is The Saturday Evening Post.

Its position is due to these facts:

The Post reaches a major portion of the entire potential market. It reaches most of the trade factors.

It reaches particularly those dominant consumers and merchants in each city and town who influence the demand and the supply for all the rest of the community.

It influences, therefore, practically the entire market for most commodities.

The peculiar strength of the Post, due to its character, its broad distribution, and its intensive methods of searching out the dominant public in each community, has made it, for manufacturers in many branches of industry, the means of attaining dominance.

THE SATURDAY EVENING POST

The medium of dominance

The methods which have made The Saturday Evening Post the dominant medium will be discussed in our next advertisement, which will appear in an early issue.

(Continued from Page 57)

bench classic in that same edifice look small and apathetic.

And that other question, eternal and momentous among men: Was there one created living thing that had no quitting point? And was that thing the bulldog? To the cock fighters assembled there the dog men whispered their ancient answers: that the dog was a thinking animal, and that the gamecock would fight to the death only with his own kind; while there had not yet been discovered on the earth any created thing that the bulldog—bless his gentle heart!—could not be prevailed upon to tackle. Battle to the death did not answer that question, anyhow. Hardly a man gathered there but had seen more than one pit dog lose his battle "right"; but the question still remained unsolved: Did he quit the struggle just before he died—or afterward? Could he have lasted longer, would he finally have reached the point where he could have forced his noble heart to endure no more?

This mystery, however unsolvable, from the very nature of it, in this world, was strong in collecting these hard men into the gloom round that sinister yellow square. How could any bulldog, however nobly bred and grandly made, discover that awful secret? And yet, for the first time in pit history a man had been found rich enough in purse and sporting blood to put a bulldog, with an invaluably long and spotless pedigree, to the test. Many things might be learned before that fight was over. And the whisperings died to bated silence as young Becky deHavin, immaculate in evening attire, came striding across the yellow square.

His face was somewhat drawn, as it might have looked had a dear friend's life been hanging in the balance. He extended his hand out of the light to where his father and Shamus McDonald and Pat O'Boyle were seated together, at the shadow's edge.

"Mr. McDonald," he said in a low voice that reached every strained pair of ears in the whole house, "I want to try to thank you, and Miss McDonald through you, for your help in training Jerry, and for your advice as regards handling him here. I've never met with higher sportsmanship."

Shamus McDonald took hearty hold of the hand.

"What credit for the Grip to stop a dog that's not trained for the gaff or that hasn't a handler for him to fall back on in the pit here? Get hustling back to your pup before somebody slips a hypodermic into him.

"'Tis a dirty game," said Shamus McDonald to the elder DeHavin and O'Boyle as the young man hurried away, "and I'm goin' to quit it."

Pit men seated close about the dean of the dog-fighting game overheard him, and the whisper of it soon reached the farthest corners of the audience. Most men smiled incredibly; but those who were his friends, and therefore white men, shook their heads as though they understood, and spoke gloomily about the future of the savage sport.

"It's no fit game for you and me to play," continued McDonald. "For look—here's you and me, who'd rather lose a leg than play it dirty—and our two dogs being tasted this very minute."

"Tasted?" asked the senior DeHavin.

"In days gone by 'twas the right word; for then your opponent's man rubbed moist fingers through your dog's coat and actually licked them for traces of dope that might fix his own dog. Nowadays both dogs are washed under the other party's watch—the washing to get rid of any poison on their coats; the watching to see that the washer doesn't slip the dog a pill, or pour a few birdshot in his ear, or shoot him with the needle under the washwater in the tub. A hundred visitors at your kennels, a hundred visitors at mine, and a score of trainers, handlers and seconds, all have their dirty money placed so many ways that you can trust no one in the pit; and this thing is getting worse from year to year. Too many see only the money and none of the glory in a dog fight; and I'm gonna quit the game."

And he did. That night's fight was the last one in which Shamus McDonald ever fought a dog. There never lived a greater lover of dogs. He never fought one that did not love the game better than his master. His heart broke when he lost his pets in the pit; but he thought that, given their choice, they would have asked him to be allowed to come to their end in the rapture of deadly combat. Shamus McDonald's dogs were that kind of dogs. But Shamus McDonald, and other white men after him, dropped the pit game; and it died, as all games die, in time, that cannot be kept clean. And so the brutal, savage, bloody entertainments stopped.

And now the quiet deepened about the yellow square, for handlers, trainers, attendants and officials came straddling over the pit fence, out of the shadow into the glare; and carefully wrapped and blanketed bundles, carried in the arms of two of the men, drew all eyes to the two corners, where these wriggling packages were set on the ground.

Dapper Becky deHavin, coached in the dirty trickeries of the game by his opponent, walked beside the man who carried his dog, holding his hands over the black nose that poked out of the squirming blanket, keeping the ears down tight; never taking his hands away from the broad muzzle till the Monarch was on the floor and the blanket off, and all chance of underhand work reduced to a minimum.

A gasp of surprise and delight came out of the smoke. Perhaps there was even a little of awe in the involuntary tribute. Hardly a man there who did not know the superb Grip, peer of all fighting dogs—hardly a man to whom the brindled body and blazed face, and the snowy full-dress collar and shirt bosom, and the four white feet, were not a familiar and magnificent sight. And the splendid, living muscles of him never slipped beneath that scarred brindle hide more tigerishly lithe than on that night. But the indrawn breath of a thousand hard men was not a tribute to the Gas-House Dog; for in the opposite corner to him a blanket whisked away and discovered such a bulldog as neither show ring nor pit had ever seen before.

Dazzling white was the whole of him in the lamps' bright glare. Remained on his mighty body not a trace of the ancient mastiff brindle that had come to be a color dreaded by the bare-calved legions of Rome in the days when his wild forbears had fought at the side of the wilder British tribesmen. Pear-shaped was he—the heavy end of the fruit the tremendous brisket, which dipped so low inside the wide-spread forelegs that it appeared as though swung between and not supported on them. And those sturdy front limbs went straight to the ground, with never the sign of a bow, like little marble columns. The small end of the pear, the hind quarters, narrowed marvelously at the loins, the top arched up distinctly higher than the shoulders in a beautiful roach; the belly tucked up tight beneath; the back of him so narrow that he seemed to be supported at three points instead of four. Never was there such a model of uncompromising and immovable stability as this low, squat, canine battleship. And the sinews of him bulged gloriously, with never a muscle-bound lump or knot, but in huge, smooth, swelling mounds beneath the loose and roomy skin.

But, in spite of the fascination of every dreadnought line of the wide low mass of his body, his headpiece was such a thing as to make men nearly forget that there was any more dog behind it. A study of absolute perfection in massive ferociousness it was, to cause the most inured pit follower to catch his breath. In size enormous, so that none but mastodonic neck thews could hold it up. The skull was ponderous; wide and long and flat, with something snakelike in the contour of it; and the inky nose was set up tight against the almost negligible brow. And, sweeping up from the dewlapped throat to meet black upper lips that went out almost horizontally an inch or so beyond the nose, the prodigious under jaw curved in a wide, loose-jowled line of power and savagery and stubborn wickedness. When his delicately folded ears jerked up on top of his head, alertness and truculent readiness radiated from his face; but when they were laid back, close against the thick bull neck, there was added to his belligerent aspect a look of such indescribable meanness that the backers of the Grip shifted uneasily in their seats. And the wide-set eyes spat wicked fires out of their beautiful clear brown. Who could imagine that in that very incarnation of ruthless battle strength there lived a heart as gentle as a little child's?

Back of the shield of his handlers, so that the Grip could get no chance to size up his enemy, Becky deHavin walked his beloved bulldog up and down, and—impossible as it seemed—the moment he moved, all the impression of the animal's power and vigor

(Continued on Page 62)

"Um-m-m Meat-Treats!"

You'll have to go some to prepare a better Hamburger Steak than the "Meat-Treat Kind," made from selected beef, wonderfully tender and with a brown gravy that seems to force one to say "Um-m-m Meat-Treats!"

Meat-Treats are sold, some in tins and others by the pound. Write to us if your dealer does not sell them. Or, send us his name with 25c for a full four-steak tin of the Hamburger, ready to heat and serve.

FREE: Write for our recipe booklet, "Suggestions," and for full list of Meat-Treats, including such delicacies as Breaded Pork Chops, Ham and Tongue Meat-Treats (potted) and Concentrated Chicken Broth (with rice).

The Truth About Corns

You have read much fiction about corns. Were that not so there would be no corns. All people would use Blue-jay.

Here is the truth, as stated by a chemist who spent 25 years on this corn problem. And as proved already on almost a billion corns.

"This invention—Blue-jay—makes corn troubles needless. It stops the pain instantly, and stops it forever. In 48 hours the whole corn disappears, save in rare cases which take a little longer."

That is the truth, and millions of people know it. Every month it is being proved on nearly two million corns.

So long as you doubt it you'll suffer. The day that you prove it will see your last corn-ache.

It costs so little—is so easy and quick and painless—that you owe yourself this proof. Try Blue-jay tonight.

(Continued from Page 59)

and intrepidity was immediately doubled; for he trotted back and forth with that stiff-legged swashbuckling roll and captivating swagger which makes his breed win into human hearts at a glance. And as he went his muscles leaped and played. A back view of him showed his two hind legs trotting along close together; but the front stilts, with a jaunty flip of paws, moved clear to the sight far out on each side beyond his flanks. And from this interesting prospect could be discovered, at last, the only place where the good nature of the lovable beast broke through its warlike investure; for the small, low-set tail wigwagged continuous messages of camaraderie up to his boss.

"Make ready!"

The square cleared, except for the two handlers and the referee. Becky deHavin went across the pit and took the Grip between his legs. Midway he met Mr. Slugs O'Boyle, crossing in the opposite direction to observe his part of the pit precaution that makes opponents loose each other's dogs at the beginning of the fight. And a look passed between the burly pugilist and the dapper swell that made the audience gloat. It was to be, also, a battle of handlers in type as different from each other as were their dogs.

A grim silence, such as should precede a battle to the death, fell like a dreadful canopy over the pit.

Becky deHavin's spiketail coat hung over the low fence. Habitual evening formality was not his only reason for his incongruous attire. As he crouched behind the Monarch's deadly enemy the white square of his shirt made a very beacon for his dog across the square.

"Let go!"

Becky deHavin could no more help caressing the wonderful brindle beast that stepped out in front of him than he could have forgone to touch his glove against Pat O'Boyle's at the start of each of their wicked bouts.

Out from between the knees of Slugs O'Boyle, across the pit, stepped sixty pounds of perfect bulldog flesh.

"Come on and get 'im, Jerrypup!" coaxed the low voice that he loved.

And he wagged the only amiable part of him and took another doubtful step toward the middle of the pit, cocking his tremendous head in puzzled inquiry as to just where he should come and whom he should get. Then he spied the white shirtfront.

But for a thing that had never happened before, the fangs of the Gas-House Dog had been locked in his flesh long before now. For the first time in his career the Grip hesitated before he dashed into battle. What kind of dog was this great beast across from him? Where was the other pit terrier? In all his stormy existence he had never faced anything like this dazzling snowy dog that made no offer to attack him. Grip lifted an inquiring eye to Slugs O'Boyle and asked him what about this strange new kind of opponent?

"That's him," explained his handler.

To any who might have entertained the thought that, at last, too great a call had been made upon the inexhaustible supply of the Grip's pluck, there came a sudden change of heart. True to his traits, Glenmere White Monarch, advancing toward the gleaming front of Becky deHavin's shirt, at sight of the other dog turned to a little Parian statue where he stood; and, standing thus, his slow brain working out the situation, a brindled thunderbolt, hardly more than half his size, fell on him. It was the first fight of the Monarch's life; and it was for this reason only that he committed the one offense of that titanic battle. Taken by surprise by the attack launched on him so suddenly, the whole trend of affairs not yet clear in his mind, he turned a shoulder to the charging Grip.

"That turn," said Shamus McDonald, out of his perfect knowledge of what was going on before him, "is going to lose the scrap for you."

But A. Beckwith deHavin, II, staring tensely out of the shadow, had his eyes fixed not on the bulldog at that moment, but at the trim, white-shirt-sleeved, pale young man moving coolly and efficiently about the whirling brutes.

The Grip was now clamped fast to the side of the Monarch's throat. Well for the bulldog that he had in generous portion the dewlap of his breed, else the Grip had struck him vitally at the first onset. But the long jaws of the terrier filled with folds on folds of the loose skin and his fangs sought in vain for the life that flowed in the throat beneath. He tried at once the first trick of his trade; and, bracing his legs wide, he gave a toss of his head that would have turned another dog all four legs up beneath him, so that he could have tried for a death-hold with a loosening of his jaws and a new snap of his fangs before his opponent could turn over and get out from under him. Now the surge of his neck muscles only flipped his own hind quarters in the air. He had met with a new thing. The huge body of the Monarch was set upon colossal forelegs twice as wide apart as those of any other dog the Grip had ever closed with; so, jerk and fling as the maddened brindle might, the stout white stilts only dragged stiffly about and would not be uptilted.

"Some wheel base, Becky!" roared the joyful bull voice of Papa deHavin; and a warning "S-sh!" went up from the entire audience. No police interference should stop so great a combat if strained silence could keep the authorities unaware of it.

"Easy! Easy, boy!" coached a low voice as Becky deHavin stepped about the struggling animals, keeping in a position where his dog could see him all the while. "You're not being hurt, boy; you've got the weight," he explained, as though the Monarch would understand. "If you tear yourself loose you'll bleed like a pig. Let him pull, Jerrypup; let him wear his heart out pulling at you, boy. He'll let go without tearing you by and by."

And something in the calm tones reassured the great dog. Something in the handpat that was risked down to him from time to time made him understand after a while that it was part of the game merely to brace his legs and wait; and his snarling efforts to break loose ceased and he began very calmly to endure. It was an hour before Slugs O'Boyle could get his dog to understand that Becky deHavin and the White Monarch of Glenmere were teamworking at the game like veterans. But at last it filtered through the Grip's battle-crazed head that he could never throw his enemy or hurt him with the hold he had; and he let go and struck for a better one.

But by now the Monarch had found out why he had been born. Not for the ease of his kennel at the Glenmere Hunt Club; not for the pleasant adulation of the bench or the proud honor of the judging ring; not for romping afternoons with a slim brown girl who had rewards of sweet hilarious waters to offer him after torturing labor; not even for the noble companionship of men like the tall fair one who stood by him now in his great hour—not for any or all of these had his fierce-featured, soft-eyed mother whelped him into the world. But for this night in the stifling, tobacco-laden air, here on this square of yellow tanbark, he had been bred true to his type down through the long centuries since his fathers had pulled down the great Kentish bulls. For here was battle, vicious, snarling and pitiless, and an antagonist that would clash teeth against his in it to the death. And his mighty heart rejoiced as he came into his own.

So when the Grip finally loosed his first hold he found a different dog from the one on which that hold had fastened.

So now, before that gathering of savage men, there raged a furious grim struggle such as the pit had never seen before. For five long hours there came never a pick-up, or scratch, or turn, except that first turn which the inexperienced Monarch had made. Shoulder to shoulder, breast to breast, brisket to brisket, as they reared up on their back legs, fangs to fangs, those two beautiful brutes fought out there under the yellow light their love and joy of death-battle in a contest of infinite courage against infinite courage, and of speed and punishing jaw against overwhelming weight. All other things were equal: condition to endure; strength of limb and wind; valor—all balanced in the scale. Only the one combatant possessed superior speed and a well-nigh decisive power of true punishing jaw; while the other held the vast advantage of being nearly twice his opponent's weight. And, had these unbalanced forces been added to the level beam that weighed their other attributes, the measuring needle would have scarcely stirred.

Weeks of training on the coonskin had in the end forced the idea through the Monarch's heavy skull that he could never hold a grip unless his jaws were filled clean to the back teeth. And so he plodded through the minutes and the hours with never a thought of clamping his untrue fangs on anything, but of trying stubbornly and endlessly through pain and torture to fasten

his back teeth upon an enemy possessed of such baffling speed that, at the end of hours of hopeless endeavor, a sickening discouragement came over him. Yet he kept steadily on; and at length a reward came—though he never knew it. Once his ponderous underjaw snapped up on one of the Grip's forelegs. Only the fangs closed over it, and he did not try to hold his grip; but the tremendous muscles of his neck gave his body such a wrenching twist that the bones between those inefficient fangs snapped off before the hold was loosened. And after that the Gas-House Pup gave an exhibition of such undying grit that his name survives the game which died, and lives to this day in the legends of the pit. And this is what is said of him: that, with the broken foreleg, the speed of the Grip diminished not a whit, but that he worked on the end of the broken bone as though the leg were a perfect member.

Pity in all that square of men about the pit, there was none. And, in truth, the battle bred no pity—only wonder. The hard followers of that ancient game gathered round those eight-foot squares for another fascination than the acknowledged ones of carnage and utter savagery. They came primarily to see that thing which is perhaps the noblest attribute in dogs and men—unbreakable courage—courage in pain, and exhaustion, and heart-sickening failure after heart-sickening failure; that rose and rose and rose to heights unbelievable within the cruel sides of those old dog-pit squares; and that changed the men looking at it from a combat-thirsty horde of brutes, quiet from police fear and from a sort of shame at what they joyed in, to an awe-stricken audience, whose silence was almost that of worship.

"Three o'clock," announced the referee.

Men snatched a squint at their watches unbelievingly. Five hours had gone by like one.

But now a haze had begun to form in front of the Monarch's eyes, which only would be dispelled at the sound of the low voice he had listened to for encouragement and advice through the rapturous hours. And always that encouragement and advice had been at hand. Not the least fascinating thing presented in the pit that night was the dog-handling of Becky deHavin. Graceful and cool, fearless and kind, fairest and least excited when his dog's case appeared the worst, magnanimous almost to a fault, this dapper and stiff-shirted man won his way into the heart of the meanest thug who had his money staked on the Grip. And his great dog, in his direst straits, always looked up at him asking what should be done next about the situation; and at a quieting pat, that somehow could reach him even through the fiercest turmoil, he would stay quiet and rest himself under a painful but not dangerous grip, or at a fiery word would rage like a lion till he tore himself free from a hold that threatened to develop perilously.

But the flitting brindled pest was becoming harder and still harder to attack. The mist persisted strangely before his eyes despite the clearing voice. The tanbark turned from yellow to red with a flood from his veins that seemed to be inexhaustible; and never a pick-up came to give his handler a chance to try to stanch his wounds. He did not know that the Grip also now swayed and tottered on his legs, and slashed and snapped his heartbreak that he could not find the great dog's vitals, standing, nor could throw him off his feet to seek them out. The charging rushes of this monstrous white enemy had been in the early hours like those battering-ram onsets that used to break through the impregnable guard of KO Pat O'Boyle; and when they had struck the terrier had nearly always broken his hold and rolled him, bruised and battered, over and over till he fetched up with a crash against the pit fence. Well for him that the Monarch had not been fast enough to follow these wild rushes through in time to catch the brindle on his back. As it was, every one had shaken him to the heart; and they, together with his hours of tugging at nearly double weight, had worn him down so that his head swayed weakly and his legs bent under him.

But still he managed to evade the weary bulldog's grip.

But for his education to endure the joyless monotony of the training machine, perhaps even the great-hearted Monarch might have wearied of this ghost-fighting and laid his belly on the sawdust, back legs stretched out behind him, frog-fashion, and rolled up his clear brown eyes good-naturedly, begging to be excused from all the worry of it. But he held to the task with a will to see the brindled body lifeless under him, and to hear the voice of his friend and master call out those four sounds that made all labors worth while: "That's a *good* dog!"

At last came a time when the weary animals, whirling into grips, both missed their holds, and each staggered weakly past the other. And then, all in a moment the tide of battle turned heavily against the White Monarch of Glenmere, for here was the opportunity for which O'Boyle had waited patiently through long hours. He stooped like a flash and snatched up the feebly-protesting Grip just as the dogs were lurching together again. Three or four attendants leaned over the pit wall at the Gas-House Pup's corner and, with broad fans, commenced to stir the air to coolness over the panting dog. Water poured down his throat. Slugs O'Boyle, after five hours of steady fighting, had won a scratch. The action had been so furious and fast that neither handler in all these hours had been able to discover a turn of long enough duration to make a pick-up out of it.

In a cruelly short half minute no attention had been given the Monarch other than those that aimed to stanch his wounds, for mere physical strength was what he should need for the great test.

"Time!"

Appeared now the wisdom of Shamus McDonald's prophecy, spoken at the very beginning of the fight. At one corner of the square swayed a brindled dog whose eyes still flashed desire for battle, but in whose legs there lived not half the strength that still propped up the tottering body of the White Monarch of Glenmere. And yet, because of that inexperienced turn so early in the fight, it was now the bulldog's task to deliver the gage at the white lime mark so many miles across the diagonal of that little square.

"Let go!"

Terrance O'Boyle showed the head and shoulders of his dog between his knees. And no man in that silent mass but knew that, except for the supporting hands under his chest, the Grip would have toppled over where he stood.

But all support was now taken away from the White Monarch of Glenmere except the support of a dim beloved voice that spoke to him some unintelligible words about losing right. And at a kindly pat of a hand, whose touch he knew as well as he knew the tones of the voice, he started bravely on the long journey across the pit toward a hazy sort of tiger-coated dog which would not come half that weary way to meet him.

A great rage filled the Monarch's breast.

So now this wraith of a dog, which was so hard to come to grips with when he was close at hand, would add to all the other vexations of fighting him unwillingness to shorten the long way between them; yet he would stand there at that impossible distance and snarl and snarl as though the combat was still sweet to him! The cruel injustice of it strengthened the Monarch's heart. So be it! If that dim brindled enemy would not come out to meet him, he, Glenmere White Monarch, who had ancestral traditions to uphold and to uphold him, would go the long road himself; for the lust to stand beside the motionless form of the tawny foe was still mighty within his weary heart.

Absolute silence—not even the sound of breathing, for all breaths were held.

Two feet; three—four. The white body tottered and the hind quarters went down.

Terrance O'Boyle picked up the Gas-House Pup.

"Put that dog down!" The voice of the referee cracked like a whip.

For the clublike stilts in the Monarch's front still held the deep chest off the ground and shoved the great savage headpiece forward slowly, dragging the hind quarters along. Whispers of mighty sympathy went up. The air above the bloody pit and the savage men gathered round it filled with a breath that was very much akin to prayer. All wagers were forgotten. All thoughts of greed or gain or trickery or unfairness vanished away before the glory of the thing that was going on before them. And a thousand rough hearts hammered a reverence that was not far from the divine as that broad trail slowly drew its red wet line across the yellow square. None there but knew that if the mighty bulldog reached

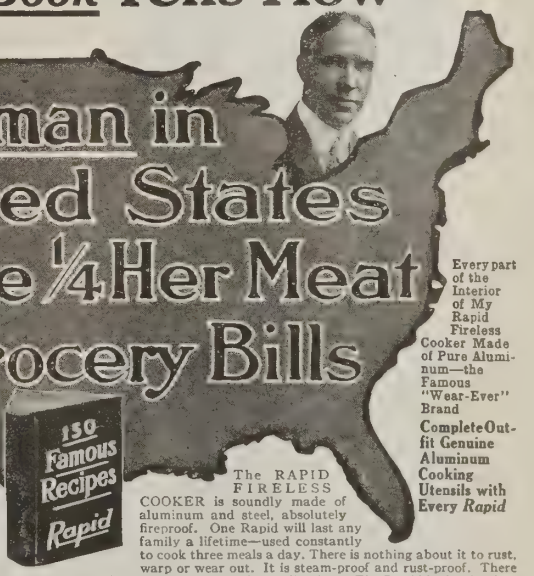
Box 18, New Berlin, Ohio

THE HOOVER *electric* SUCTION SWEEPER

My *Free Book* Tells How

Every Woman in the United States Can Save ¼ Her Meat and Grocery Bills



Every part of the Interior of My Rapid Fireless Cooker Made of Pure Aluminum—the Famous "Wear-Ever" Brand

Complete Outfit Genuine Aluminum Cooking Utensils with Every *Rapid*

Cut Down the High Cost of Living

YOU will save the cook's wages. Pocket three-fourths of your fuel bills. Use inexpensive meats and vegetables. End worry and drudgery with my

Rapid Fireless Cooker

The RAPID FIRELESS COOKER is soundly made of aluminum and steel, absolutely fireproof. One Rapid will last any family a lifetime—used constantly to cook three meals a day. There is nothing about it to rust, warp or wear out. It is steam-proof and rust-proof. There are no ledges, valves, locks or patented complications. The Rapid is the simplest cooker as well as the most practical to make. Splendidly equipped with extra size cooking outfit of the well-known "WEAR-EVER" Aluminum cooking utensils made to our order without seams or ledges so as to be the easiest cleaned utensils the housewife can have. Also a special cake and pie rack—all free—nothing extra to buy. Heavy aluminum sheets form the lining of all cooking compartments and covers—pure aluminum which cannot rust or corrode. Aluminum transmits the heat from the bottom of the utensil up the sides and over the top so that the contents receive the cooking heat uniformly from all sides—hence the extra speed in cooking with a RAPID.

I want you to know how little the High Cost of Living will affect you if you install one of my RAPID FIRELESS COOKERS. If you act quickly enough you can take advantage of

My 1917 Special Factory Price Offer

I do everything I can to help you cut down your living expenses. You always make a big saving in getting one of the RAPID FIRELESS COOKERS because you buy direct from my factory. My special offer goes this one better, but you will have to act right away. The cost of materials has soared so high and so great has been the demand for my cookers that I can continue this offer for a short time only.

Send for My Free Book

It contains one hundred and fifty tested recipes, every one of which delivers a blow to high living cost. It discloses the secrets of preparing the most inexpensive meats, fowl and vegetables with a RAPID FIRELESS COOKER in such a way that they are more delicious and nourishing than the highest priced viands under the old-fashioned red-hot stove conditions.

Write Today Before the Price Advances for 30 Days Free Trial

See for yourself. Try my cooker in your own kitchen for 30 days at my risk—money back if you don't want to keep it. Remember! Act now if you don't want to miss this extraordinary opportunity.

GOODYEAR CORD

GOOD YEAR
AKRON

THE EMBODIMENT OF STRENGTH

Brooklyn Bridge, flung forward span on span across the sky—great towers thrust upward to the clouds—huge ships hurled onward over seas—what is the secret of their majesty?

Not flash of forge or skill of hand, but power of mind—a principle old as engineering; old, almost, as man's inventive urge—the principle of distributed stresses, of many small units to carry a single great burden.

An old principle, yet ever reappearing in new guise, put to new uses, serving in new forms; now the basis for a temple, now a bridge, a skyscraper, a ship—now an automobile tire.

Yes, even an automobile tire, forgotten carrier of modern man's pleasure and errand, preserver of his comfort and celerity awheel—the Goodyear Cord Tire.

For the structure of this tire draws strength from the soundness of this old principle of distributed stresses—endurance from its vitality, broad usefulness from its immense efficiency.

The structure of this tire *embodies* this principle, from beginning to end.

Goodyear Cord Tires are built up of thousands of light, pliant cords, densely strong, cradled side by side in pure rubber, without interweave.

Each cord is stressed precisely to the same tension, that the burden of supporting the load and sustaining shock shall be evenly borne.

But the performance of this service does not depend upon just one layer of these cords.

Nor upon two, or three. It is distributed and redistributed, throughout the entire tire, over *many* layers, established one upon the other.

These many layers are laid diagonally around the tire, expertly brought taut to share their rightful portion of the load, and made fast.

No one of the layers, nor one of the cords, touches another.

For as the cords themselves are insulated and upholstered with rubber, so are the layers—rubber is cushioned around, about, between, actually impressed *into* them.

Contact is wholly prevented; there is never an opportunity for the slightest side-saw or friction.

The cords and layers play freely in their cushioned anchorage; under impact they yield, flex and recover, exercising swiftly to the lift and dip of the road, delivering engine power at its full energy.

Comfort, speed, power-saving and fuel-thrift ride with the car shod with Goodyear Cord Tires.

These are the offspring of resilience, and resilience in the extreme has been accomplished in these tires.

But it has been accomplished in company with the thorough strength that finally determines economy.

Strong as this tire is in its structure, strong with the multiplied stoutness of the thousands of cords—no omission has been made in seeking to carry this strength through to the last detail.

Even the treads upon Goodyear Cord Tires reflect this effort—they are of fine-grained, wear-resisting, amazingly vigorous stock—the big-blocked All-Weather is extra-thick, the easy-steering Ribbed is thicker than the rule.

The tire as it stands costs us more to build than other types—but the extra cost is *in the tire,* in extra material and labor, in value that pays back real return on your investment.

Its quality makes it higher-priced—and *better.*

BRUNSWICK

·ALL·PHONOGRAPHS·IN·ONE·

Unmatchable Cabinet Work

Brunswick master-craftsmen have been long skilled in the wood-working art—in making fine phonograph cabinets.

But they have outdone themselves in the conception and execution of their own-named phonograph—The Brunswick.

The richness of 75 years of experience gives these artisans fresh inspirations—new attainments.

New standards are now set in the wood-working art. Others must follow.

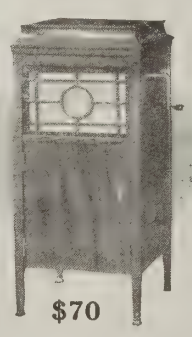
Rare Workmanship

In choosing choice woods, in building cabinets, in carving, in finishing—Brunswick men have never been equaled.

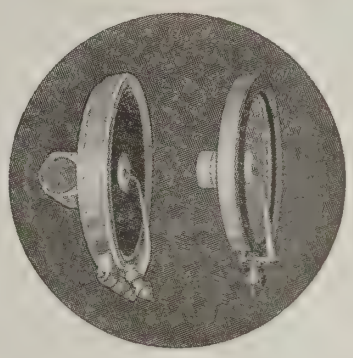
You, with others, will not be slow to applaud their handicraft.

The House of Brunswick invites you to examine carefully the workmanship of its cabinets. You be the judge. Then let the price surprise.

You will be convinced that The Brunswick is in a class of its own.



$70



Lost Tones Discovered

The any-record Brunswick opens a broader field of music—all limitations are removed.

Buy any record you wish—whatever make—whatever artist. Play it on The Brunswick to gain a new appreciation of tonal values.

For The Brunswick is equipped with *two* sound boxes. Use any needle you like—jewel point, steel, sapphire ball, etc.

A sound box is provided for the world-famous Pathé records—hitherto barred from many American homes. All without extra cost.

Faultless Renditions

Another distinct advancement gives The Brunswick first place in reproduction.

This is the acoustically-perfect tone chamber, built like a violin.

In this one feature we gain for you all the previously lost overtones, mellow low notes, the clear, vibrant "high C," and delicate shadings.

Hear this marvel-instrument play your favorite record now. Note the difference.

$175

Muratore—Pathé Star

That great lyric tenor—Lucien Muratore, of the Chicago Grand Opera—sings exclusively for Pathé.

His famous part, "Rise Fairest Sun" ("Ah! Leve-toi, soleil!") from "Romeo et Juliette"—a new Pathé record, when played on The Brunswick, is wonderful beyond description. A gala performance is brought to you.

New Delights

This is merely one of the many new Pathé treats now being offered. Hear it today at the nearest Brunswick store.

Hear also other great foreign artists who have never sung here before. Famous orchestras and bands. Foreign musical novelties. Dance records—instrumental numbers—popular hits—old favorites.

Experts acclaim The Brunswick and Pathé records as the ideal combination.

But remember, The Brunswick is not confined to Pathé records alone.

Whatever artist or rendition you like may be heard incomparably well on The Brunswick. For it truly plays all records as if on their own machines.

$125

THE BRUNSWICK-BALKE-COLLENDER COMPANY

623-633 S. Wabash Avenue, Chicago 130 E. 6th Street, Cincinnati, Ohio 29-35 W. 32nd Street, New York

DEALERS—Write for our unusual proposition covering Brunswick Phonographs and Pathé Records

·PLAYS·ALL·RECORDS·

Pathé

Pathé records—both American and European—have been given first rank. New York, Chicago, London, Paris, Berlin, Milan and Petrograd contribute to the Pathé musical library.

Hear the Pathé master records of such famous artists as Muratore, acknowledged as the world's greatest lyric tenor; Lina Cavalieri, the beautiful soprano; Giorgini; Anna Fitziu, the brilliant young American prima donna, who won such a sensational success at the Metropolitan Opera House; Didur, marvelous basso; Thomas Egan, singer of sweet Irish songs; Ancona—de Cisneros—Muzio—Lenzi—Ober—Titta Ruffo—Slezak—Urlus—Herman Weil—Grace Hoffman.

These are only a few of the world's famous collection of Pathé records of singers. There are also the famous bands, orchestras, choirs, instrumental artists, etc.

(Concluded from Page 63)

the scratch the fight was a draw, for neither dog would be able to stand up another moment after that. And there was none but prayed in his own hard way that neither of those noble beasts should have defeat charged to him after those dreadful hours.

Five feet; six. The scratch line, and the swaying enemy only a foot away. The Monarch's sturdy forelegs slipped and slid out in front. The brisket touched the tanbark. The brindled dog that he could slay, could he but reach him, only a foot away!

The mighty neck stretched forth. The back legs, rested a trifle during the dragging of them, bunched up and moved, and the thick white body crawled along another inch. A weak and eager whimper, with a stalwart heart's primal longing in it, was the only sound. Then, ten inches from the white scratch line, the mighty, mangled head sank down between the outstretched paws, and the breathing and the whimper ceased; the great white form grew very still.

Not a stir of cloth came out of the dark. Terrance O'Boyle, sure now of the win, made no haste this time in lifting up the Grip to claim the battle for him. Had he but thought of what deeds must have been done through the centuries to turn the designation of that quiet white beast's breed into a descriptive so heroic that strong men rejoice to hear it coupled to their names, he doubtless would have hurried. But he found it beyond him to resist the vanity of nonchalance.

And so he never got the Gas-House Dog's paws off the floor; for, as the very last quiver died in the white body, two voices spoke in the quiet. The first was very soft and musically dissonant with the scene. Some altogether different kind of love than that of courage must have brought the owner of it into such a barbarous gathering of men. But the second voice was harsh and rasping and entirely congruous.

"Go swim?" said the musical voice; but the sprightliness of it did not altogether hide the sob.

From some seat high in the surrounding tiers it went down across the reeking air to the yellow rectangle under the hooded lights; and its coaxing invitation won through the mists that were gathering impenetrably about the ferocious, quiet head; for the delicate frayed ears twitched and then came up on top of the massive skull. And the brown eyes, which a thousand men would have sworn had closed forever, opened. At which the second voice, in awed tones that had only reverence, no profanity, in them, expressed what was in the heart of every man watching there.

"That bulldog don't quit when he's dead!" said this grating whisper.

A romping brown-legged pal and the splash of inclosing waters dimly visioned in the White Monarch's parched and weary soul. For a completed task there was always a sweet reward.

A quiver played over the inert muscles. Fronted by stubbornness immeasurable, even disintegration paused—and then retreated; for suddenly, at a mighty summons, there came a great gathering of his passing strength; and the bulldog rose on all four legs at once. He stood—wide-braced, unwavering. That tawny haze of color right before him—was it the brindle of this enemy who would not come to meet him? Or was it the merry, tantalizing flash of beautiful tanned flesh, coaxing completion of his work? Or both? Without a single faltering step, with never a sign of the weakness that the uplifting of a single paw would have betrayed, the sturdy Monarch made one blind lunge at it. And as the big dog crashed down a sibilant exclamation that expressed emotions not to be set down in writing came involuntarily out of every throat. He lay with his forelegs bent stiffly and grotesquely backward along his flanks, and his back legs stretched out flat behind him, frog-fashion. The referee bent over the still, broad body. The noble brute's head had failed to reach the scratch. The sooty nose had fallen short.

But, clear in everybody's sight, just over the white scratch line, upsweeping determinedly out ahead of skull and nose, there rested that very thing which experts had agreed would lose his fight—the prognathous tip of the mighty bulldog jaw.

In deathlike silence the referee stood erect; but when he made his decision no one heard it. Eight or ten blue-coated men, however, nosing round the wrong huge vacant barn, a mile or so off the scent, heard something. An explosive roar of pent-up human voices brought a male chorus to them across the early morning air that sent them scurrying upon a warmer trail.

But long before they reached the right huge vacant barn the best veterinary surgeon in America had ended his instructions to the second and third best of his profession, and had risen up and started to pick the particles of tanbark from his knees. This accomplished, he looked up, and found himself gazing into a very drawn, white, anxious face.

"They both will live," he said, "though I can't tell why. And, by the way, you won't get a bill from me. I've had my money's worth." Which was almost panegyrical, as all will agree who ever came into violent contact with one of his fees.

At once, then, young A. B. deHavin seized the huge shoulder of Mr. Slugs O'Boyle and swung him face about from the little circle that still bent over the two other veterinaries. The ex-light-heavy looked down into steady, pale eyes. Pale eyes looked back steadily; but, as the silence lengthened, they began to gather flame, till at length strong slim fingers closed and supple muscles began to gather inside the right sleeve of a bloody evening shirt. But a graceful boy, whose eyes were still wet with weeping over two dogs, left hovering over them and flung himself so violently upon the bosom of the gory shirt that a cap flew off, and a bushel of blue-black hair tumbled down over the red-splashed cuffs of that same full-dress garment.

Old Bull deHavin snorted his chagrin.

"My luck!" he growled. "That's the first time in history that anybody in trousers ever prevented a fight. And me living all these years for the day when I could see one of my sons with a black eye!"

"Fight, fight, fight!" spoke up Nora McDonald out of the shelter of the gory sleeves. "You men! Do you never get enough of fighting? And do we always get what strength is left for loving after your fights have taken the best of you?"

Her daddy's eyes glinted wisely.

"No and yes to you, Nora machree," he answered, "much to the benefit of the world you're livin' in."

And A. Beckwith deHavin, III, by way of proof that Daddy McDonald's answer was correct, had never stopped the glare he was shooting into the eyes of Slugs O'Boyle.

"This girl has seen enough of male brutality to-night," he said; "but she's going to see some more if it takes you much longer to say it."

And to show that there actually was one thing in the world he would rather do with his arms than that which then kept them occupied, he loosened one of them from about the prettiest shoulders on the big-time circuit.

Terrance O'Boyle looked into the pale hard eyes again. He studied appraisingly the slim, well-knit body, which the will back of those hard eyes was about to drive against his overwhelming bulk; and the curl straightened out of the line of his thin lips. No fear showed in his eyes; only conviction. Gradually a different kind of curl came over his mouth—one that caused that disengaged, tense arm to relax and to go back where it belonged; for the curl became a sure-enough smile that made even the brute face of Slugs O'Boyle pleasant to look at, principally because it brought out the hidden resemblance to Brother Pat, who was standing, an interested spectator, close at hand.

"And if he falls down at the trimmin' of you, Terry," remarked Brother Patrick, "I'll finish the job for him."

But Terrance, with the fine big smile still suffusing his face, stuck out a flipper of a hand to the third Beckwith deHavin. That young man once more disengaged a very busy arm.

"My dope's all wrong," admitted Slugs O'Boyle. "Beg yer pardon! I believe you stiff shirts kin lose right."

A. Beckwith deHavin, II, looked toward his son, and his heart hammered a tune. "Old Bull deHavin," it said in his ear, "what you're gazing at now is a fighter. And look at his arm—not the one shaking hands, but the other; it's wrapped round his woman!" The president and general manager of the Interborough Gas Company stabbed his elbow democratically into the fat ribs of the I. G. Co.'s stable boss.

"I guess the brindle isn't all bred out there yet!" he chuckled.

Shamus McDonald returned the stab.

"Better to play a thing like that safe, A. B.," he said. "But I've the idea in my head that Nora Kolananikau won't be after doin' her divin' stunt alone this winter. It'd be no surprise at all to her Polynesian father if she'd decide to team up with her sister again in a different act entirely."

And he winked at his boss a Brobdingnagian sort of wink, as one who would impart that, by the use of a marvelous worldly wisdom, he has arrived at certain astute conclusions.

Fairy Shoes

THE wee cobbler under the thorn-bush
Tapped at a fairy shoe;
'Twas never a shoe for Katy
To traipse on the bog in the dew;
'Twas a satin shoe, like a lady's,
With a buckle of silvery blue.

Out from the flickering blossoms,
With his tall hat set askew;
With a pipe 'twixt his lips, and a squinting
Of his eyes like the hivin's blue,
You could see for yourself that rascal,
That young rogue, Brian Magrue.

And he heard the tap-tap-tapping
Of the little ould Leprechaun.
"What are ye making, cobbler,
So early past the dawn?"
"Fairy shoes for a lady;
'Tis a shoe for Molly Bawn."

"And what is your price now, cobbler?"
"A kiss from her lips, asthore."
"Faith, 'tis enough," said Brian;
"Faith, 'tis enough!" he swore.
"Bargain I'll make wid ye, cobbler,
Out of my plintiful store!"

The Leprechaun laughed till the thorn-bush
Trembled. "The bargain's thrue!
Go sit by the stile till the moon's out
And the black cat treads in the dew;
When one crosses the stile in the shadow,
I'm laving the rest to you!"

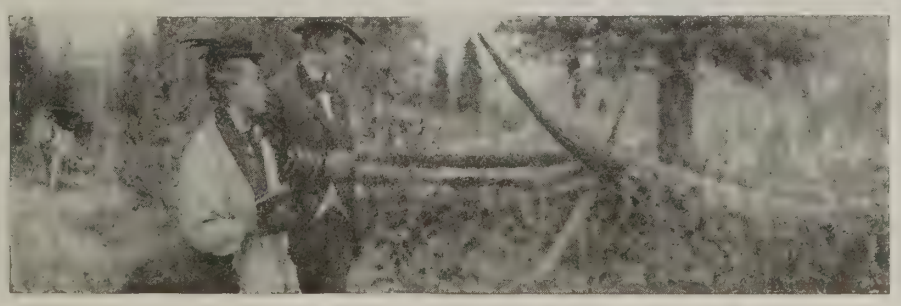
He sat by the stile till the shadow
Came over and touched his own,
And a hand reached out, and he took it,
Where the buds on the whin bush shone;
And he kissed—ould Biddy O'Leary,
That ancient and withered crone!

"Shame, shame on ye, lad, to philander
Wid one whose days are so few!
There's many a young lip waters
For the red, red lip of you.
'Tis my Mistress Molly has sent me
To fetch her her fairy shoe."

"Then back to your Mistress Molly,"
Bould Brian said, "wid the news:
That I'll match her trick wid another,
Where I'm not so likely to lose.
She shall give me a stitch for each stitching
That's set in her fairy shoes!"

Face to face in the market
Came Molly and Brian Magrue;
"There's dark o' the dawn and midnight,"
He said, "in the eyes of you!"
"I'm grieving," sighed Mistress Molly,
"That I wear so small a shoe!"

—Mary Lanier Magruder.



SEE that Mother has Wingfoots for those thousand-and-one steps 'round home. They'll make her heart glad.

Wingfooting will let her smile beam through the evening because Wingfoots lighten household tasks.

Exclusive Features

Nowhere Found, Save in Mitchell Models

The Mitchell extras are not patented. Nor are they features others disapprove.

Some are things which owners buy, at extra prices, to complete their cars. All are things which every owner wants.

But they are costly. We spend $4,000,000 this year to include them on our output. We could not give them—nor can anyone—without factory efficiency. That is what pays their cost.

This model plant, which John W. Bate has spent millions in perfecting, is the reason for Mitchell extras. It has cut our factory cost in two.

The Extra Strength

Our greatest extra is the Mitchell over-strength. But other extras are more conspicuous, of course.

The Mitchell margin of safety used to be 50 per cent. We have never claimed more until this year. But three years ago, after one year in Europe, John W. Bate began to double this margin.

Now our standard is 100 per cent over-strength. Now our vital parts are twice as strong as need be.

Over 440 parts are made of toughened steel. All safety parts are vastly oversize. All parts which get a major strain are built of Chrome-Vanadium. Gears are tested for 50,000 pounds per tooth. The springs we use—Bate cantilevers—have never yet been broken. Not a single one.

We don't mean to say that over-strength is exclusive to the Mitchells. But the Mitchell margins are extreme. And they are costly in these days of costly steel.

For 200,000 Miles

Mr. Bate's object in this over-strength is to give you a lifetime car. Numerous Mitchells that we know of have already run over 200,000 miles. That's about 40 years of ordinary service.

And this over-strength means safety. It means low upkeep, small repairs. It means a smaller cost per year of service than lesser cars can give. Yet it costs you nothing, because we save it through Bate factory methods.

TWO SIZES

Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase and a highly-developed 48-horsepower motor.

Price $1460, f. o. b. Racine

Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase and a 40-horsepower motor—¼-inch smaller bore.

Price $1150, f. o. b. Racine

Also six styles of enclosed and convertible bodies. Also new Club Roadster.

Fifty Distinctions Which You See

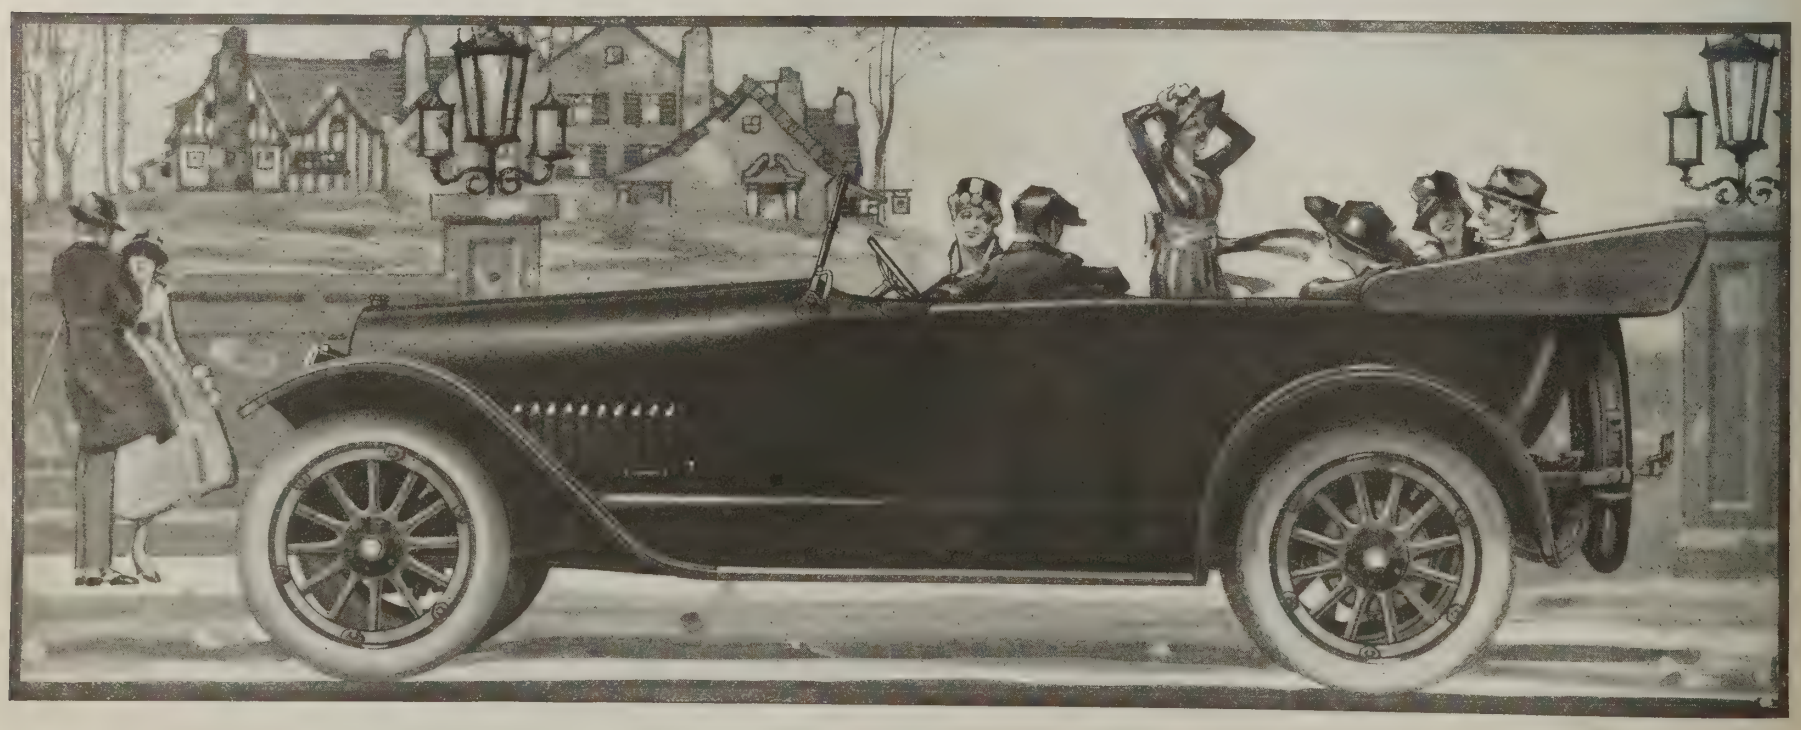
The Mitchell has 31 distinct features which nearly all cars omit. Perhaps no car has more than three or four.

These are things like a power tire pump, a dashboard engine primer, reversible headlights, ball-bearing steering gear, new-type control. Or like a light in the tonneau, a locked compartment, handles for entering, a tool box under hood. There are 31 such extras.

Other extras that you see are luxuries and beauties. This year we occupy our new body plant, which means great additional savings. Our bodies, like our chassis, are now built under Bate efficiency methods. We pay no profits to outsiders.

From this new saving we add 24 per cent to the cost of finish, upholstery and trimming. This makes the Mitchell the handsomest car in its class. The finish coats are fixed by heat, so the lustre lasts. Rare-grade leather is employed, plaited upholstery, deep, wide cushions, and countless dainty touches.

These will seem the chief attractions in Mitchell cars, perhaps. But in years to come the over-strength will mean far more than these do.



31 Extra Features
24% Added Luxury
100% Over-Strength

Mitchell SIXES

Two Sizes
$1150-$1460
F. o. b. Racine

The New $1150 Model

Roomy, Powerful, Impressive—An Amazing Value

This year we bring out Mitchell Junior—a somewhat smaller Mitchell, for those who prefer a 5-passenger car.

But the wheelbase is 120 inches. The motor has 40 horsepower. It is every inch a Mitchell, and nearly every Mitchell extra is included.

Such a car at such a price will give you a new conception of Mitchell efficiency. It seems impossible. Yet the big, 7-passenger Mitchell really gives you equal value.

The Size You Need

Now you can get in Mitchells any size you need. And any style of body. If you want seats for seven, and power for seven, the larger size is needed. Don't stint your room and power.

But Mitchell Junior is just as ample for five. Few cars are as roomy and powerful. So now you pay for only the room and power you need.

John W. Bate's Cars

We owe these two Mitchells to John W. Bate, our famous efficiency expert. He designed and equipped this whole factory to make them—this 45-acre plant.

Every machine, every method is designed to build this one type economically.

His years of effort have cut our factory cost in two. They save us millions of dollars each year. They enable us, we believe, to build cars like the Mitchell for less than anyone else could build them.

All the Mitchell extras are due to those savings. They would be impossible without them, save at greatly advanced prices. Compare the values and you'll see what these Bate methods mean.

700 Improvements

In the cars themselves Mr. Bate has worked out more than 700 improvements. He keeps one department working night and day on new experiments and tests. He has worn out fifty cars in proving needed strength. He spent one year in Europe to study progress there. He drives his own cars over plains and mountains to learn every owner's needs.

He established the standard of 100 per cent over-strength, and brought every part to meet it. He gives his motors 10,000-mile tests, then takes them apart and inspects them. Every part and bearing must remain like new.

He has his own speedway for testing Mitchell cars. His own manufactured hill.

The Mitchell you see now is the final result of 14 years of such efforts.

Our Own Designs

We have our own body plant, our own artists, designers and craftsmen. So Mitchell bodies are distinctive. They are built to Mitchell standards. They embody all the new attractions which we find in any car.

Practically every Mitchell part is built in our own plant. It is built from steel which is made to our formulas. It is built to our strength requirements. Yet, because of our methods, we often build them for half what we could buy them for from parts makers.

Go study the results. See the extras, see the oversizes, see the added luxuries. See the standards which have won to the Mitchell a host of far-famed engineers.

If you are buying a fine car—a car to keep—you will find this the car you want.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

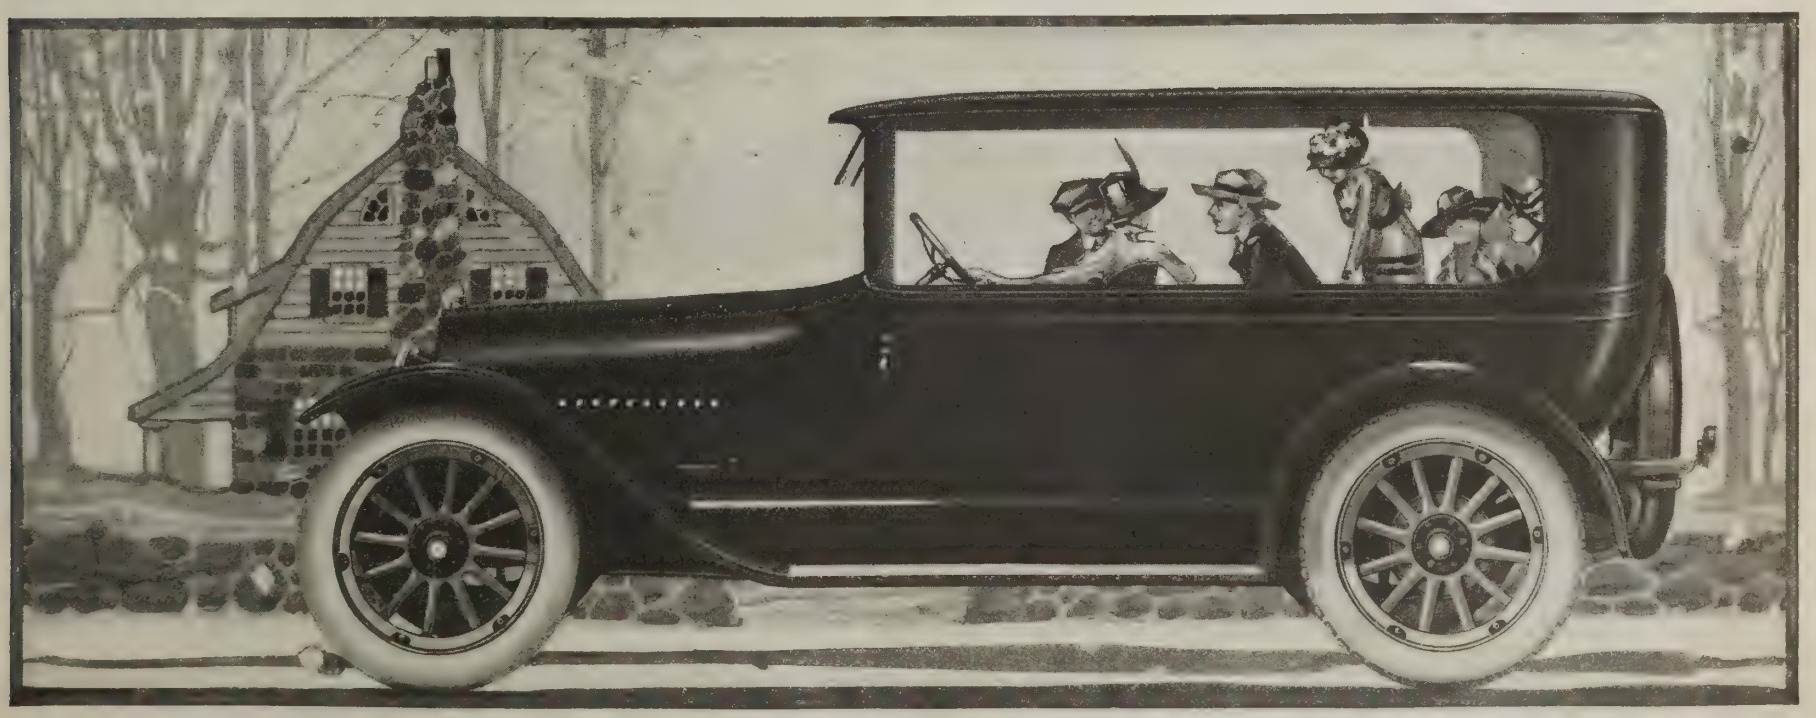
Mitchell Models

The Mitchell is built with eight styles of bodies—

Touring Car	4-Pass. Cabriolet
Roadster	Convertible Sedan
Coupé	Demountable Top
Limousine	Club Roadster

***Mitchell Junior* is built with Touring Car and Roadster bodies only.**

Quoted prices, of course, apply only to open models.



They'll Get You Yet

Hundreds are arrested every day for driving too fast. 12,085 speeders were caught in New York last year. Almost as many were arrested in Chicago for the same offense.

Why take such a chance?

You can't possibly guess your speed. And what you think you were driving doesn't go in police court. It's what you know that counts.

Guesswork doesn't save you from that burning humiliation, the annoyance, the loss of time or the fine caused by arrest.

And remember—the more speed laws are broken the more stringent they become. The more you break the law the harder you make it, not only for yourself—but everyone.

How do you expect to get by without a Stewart Speedometer? Protect your own interests. Put one on your Ford today. See that each of your friends has one too.

You can get it for $10—or, mounted in a handsome enameled special instrument board for $11.25.

There's a Stewart dealer in your town. Better get in touch with him today.

Your Ford also needs a thoroughly dependable warning signal. Most accidents are due to lack of proper warning. Don't rely on a weak little "buzzer" to clear the way for you. Get a Stewart Warning Signal—either hand-operated, or motor-driven. They are the best designed, best built and most used signals in the world.

Stewart V-Ray Spark Plugs have four sparking points. With them in your Ford motor you get four times the service from your plugs—and what's even more important, you are always sure of a big hot spark under all possible conditions.

Don't overlook these great Ford car accessories. Any Stewart dealer has them in stock—all ready to attach.

If you are looking for an automobile accessory of any kind first see if Stewart makes it.

ALIEN ENEMIES

(Concluded from Page 25)

aliens could be sequestered in their districts. Their residences could be examined for arms, explosives, and the like, after the method used by the English Home Office.

The English Government took this step immediately upon the declaration of war.

A rigorous search was at once made by the police in the houses of resident aliens, in their clubs, and in all places where they would be likely to resort, in order to remove at once any destructive devices that might be used against the government.

Effective steps would have to be taken by the American Government to protect all its internal methods of transportation and the productive industries upon which its armed forces would depend for supplies and equipment. The destruction of railroad and telegraph lines, bridges, tunnels, and the like, might effect a great national disaster by preventing a mobilization of national troops or causing the failure of supplies to the army or navy.

It would be well for us to carry in mind the warning which English authorities gave to the Home Office when that department, early in the war, announced that it had discovered no conspiracy on the part of alien enemies to commit outrages of this character. It was very pertinently pointed out that alien enemies would not undertake destructive work of this character until the time should come when such outrages would be most effective. The time to destroy bridges, tunnels, and the like, would be on the day when the government was endeavoring to hurry its troops into mobilization.

We do know how effectively active aliens and foreign-sympathizing citizens in this country have been in the destruction of munitions plants, in obstructing commerce-carrying vessels and avenues of our foreign trade. To such an extent have these depredations been carried that the Attorney General has asked the Congress to pass special legislation to cope with these conditions.

There is another feature of this matter, which the French and English authorities urge us to consider: They maintain that the German foreign policy laid down in their countries by resident alien enemies contemplated the embarrassment of their governments, in the event of war, by the organization of industrial strikes.

Resident aliens, at German direction, are to endeavor by industrial dissatisfaction to cripple the country of their domicile in the hour of a national crisis. The prime essentials for putting a nation on a war basis are efficient transportation and an adequate supply of coal; and after that comes the mobilization of her national resources.

The German Empire took care to see that it could not be embarrassed in these directions. Her railroads were organized with a view to military mobilization. They are controlled by a colonel in the German Army. This officer is at the head of a military division able to operate the whole line. The government has fifty-four military companies of railroad engineers, with trained assistants; so that, no matter what the civil population should undertake to do, the army could at once, and for any length of time, operate all the railroads in the empire.

Having taken this precaution for herself it is her policy, we are warned, to cripple her enemies in this vital quarter.

French authorities say that German agitators undertook to organize the railroad employees in France, with the object of insuring a strike at a time when the railroads might be needed for national mobilization. In support of this contention they cite the Mesnard pamphlet, an anonymous publication scattered all over France. This pamphlet appeared within a short time after the German Government had voted a credit of a very large sum of money "to defray the expenses of foreign publications useful to the policy of the empire."

And English authorities point out that the Agadir incident, which might have precipitated a general European war in the summer of 1911, was precisely coincident with one of the worst and greatest industrial strikes in all the history of the English Empire.

It is suggested that this is a field in which resident alien enemies are conspicuously active. No one is to be permitted to presume that our citizens engaged in our productive industries or in our systems of transportation, or the like, are any more apt to be influenced by foreign enemy agitators, or are in any less degree patriotic, than other portions of the people; in fact, it is from these classes that the effective fighting forces of the nation are recruited, and it is from them that the Government, in peril, always receives its steady, unwavering support.

But it must also be remembered that our productive industries are more easily open to the activities of the resident alien enemy than perhaps any other of our lines of endeavor.

In the face of the present situation the American Government, looking to the national defense, must have the intelligent coöperation of the whole people. And the whole people must realize how matters stand, so that they may be able to make efficient such protective measures as the Government may deem advisable.

A TALK WITH PRESIDENT LI

(Concluded from Page 7)

Well, that was plain enough, to be sure, and entirely diplomatic. There was, as you will observe, no mention of any other nation, by name or by implication. The president said nothing about Japan or Russia, or called the name of any country except the United States. But any man who knows the conditions in China, any man who is honest in his view, will interpret that statement in only one way, and that way is this: If China is to be saved from becoming a suzerainty of Japan the United States must save China; and the sure way to do it is to develop China by American capital, of which the country has so great a supply, and thus prevent the large investment of Japanese money and all the obligations on China that Japanese investment will entail, concerning which I shall write at a later date.

"But, Mr. President," I said, "the investment of capital cannot be made without guaranty of the security of government and the guaranty of its protection. We constantly are told that this government is insecure, and that the Republic of China is merely a shell of a republic, and not long to endure."

"I know that," the president replied; "but I call your attention to the fact that the Republic of China has withstood three revolutions and one attempt to return to a monarchial form of government; and that to-day the Republic is steadily and safely progressing. We are making a constitution. We are reforming our system of government in the provinces. We are extending our suffrage. We have ample security for all our loans. Not a foreign loss was entailed in any of these revolutions that has not been amply and promptly compensated. Our salt income this year has netted sixty-nine million dollars. Our maritime customs are increasing. Our other revenues are being systematized. Intrinsically China is solvent and will continue so; and the Chinese Government has the power to protect and will protect any investment made within our borders. There need be no fear on that score."

I asked him about the domestic political situation—which is mixed, to be conservative about it.

"We have a party system," he said, "and naturally we have party strife. There are many conflicting elements and much partisan bitterness. We are afflicted, like your country, I understand, with a certain press that foments such discord as there is. We have our share of political mendacity. We fight for political advantage; but the government is not threatened. Elements in the government, or outside of it, may fight one another; but, varying as our political beliefs are, and strenuous as is the championship of them, and tortuous as is the intrigue, the republic itself is stable, and will continue so to be. If American capital will come American capital will be protected."

Then we talked of other things—of the army, of the parliament, of the new constitution, of the weather, of the beauties and the wonders of Peking, of Americans the president had met, of American institutions—and had another cup of tea.

KIMBALL BALL BEARING AUTO JACK

Showing Kimball Jack extended ready for use. Can be folded and packed in small space. Note that handle turns—does not pump up and down. No ratchets. No pawls.

Notice that the motorist is at a safe distance from grease and dirt. It's all done from the end of the handle. Turn to the right to raise. Turn back to lower.

A few easy turns on the long handle

Raises and lowers your car without effort—no hard pumping up and down—no dirty work—no trouble in lowering the car

This new invention, the Kimball Auto Jack, is unlike any jack you have ever seen before.

You don't have to pump it up and down. Its long handle *turns*. It raises and lowers the heaviest car with ease.

Avoid inconvenience of old style jacks

You don't have to crawl under your car to operate a Kimball Auto Jack. The long handle saves all that inconvenience. All raising and lowering is done by turning the end of the handle. You never get near dirt or grease.

When you use the Kimball, you avoid bumping your head, injuring your hands, and ruining your clothes.

It is much easier to raise a car with a Kimball; you do only about one-fifth the work you have to do with an old style jack.

And it's no trouble at all to lower your car. You don't have to get under the car and struggle, as you do with the old style jack. You give the Kimball a few easy reverse turns, and down sinks the car without a single strain or jerk.

With a Kimball, a ten-year-old boy can raise or lower the heaviest car.

Exclusive Kimball features

Diamond point hardened steel top with *bull-dog grip*. Holds anywhere, won't slip. Ball bearings carry the lift and thrust, reduce friction and make jack work easily. No pawls; no ratchets. No kick-backs or handle blows. Ball socket holds handle rigid while sliding jack under car. Long handle permits lifting any car without getting under it. Nothing to get out of order. Folds up; comes in small bag; takes up little space in tool box. Raises heaviest car with ease. Simple, positive, dependable.

Now standard equipment on all Pathfinder and Franklin cars. Will be used by other high grade cars as standard equipment in 1918.

Special Truck Jack

We also manufacture a special Kimball Truck Jack that easily raises any size truck. It has an extra long handle and extra wide handle grips, which make it very easy to operate.

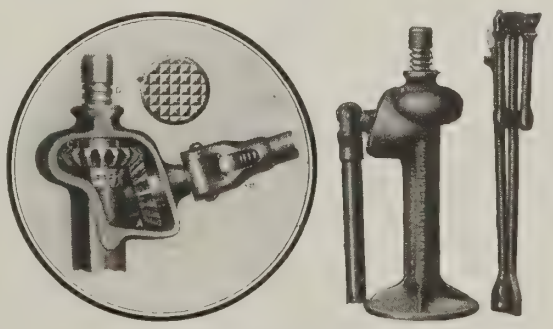
Get a demonstration.

Prices

Size	Minimum Height	Extended Height	Price
No. 1	9″	15″	$4.50
No. 3	11″	18″	5.00
No. 4	12″	20″	5.50
No. 5	Truck Jack		15.00

The diamond point hardened steel top. Grips hard and never slips.

Showing bevel gears, ball bearings and worm.



Folded ready for tool box. A strong bag is supplied with each jack.

Willard STORAGE BATTERY

Don't Starve a Good Battery

We men at the Willard Service Stations often have occasion to make that statement.

For nine times out of ten when a car-owner comes to us with battery trouble it's due to the simple fact that the battery has been allowed to go hungry or thirsty—or both.

I take one look at the hydrometer reading and it shows the specific gravity is 'way down. That tells the story!

The battery hasn't been kept fully charged and filled with distilled water.

If this simple rule is followed, it means battery health and long life.

Neglected, it means repairs by a battery expert.

If your battery is a Willard, you have good value to start with, for over 150 car-builders (the vast majority of all whose cars are electrically equipped) include Willard Batteries in their regular equipment.

Anything with such an endorsement back of it is worth taking care of.

Drop in to see me. I'll tell you how to *prevent* battery troubles—and if you need repairs, I'm the man to make them, for I got my battery education from factory-trained experts.

By the way, I have a rental battery for you, if yours needs repairs.

The Willard Service Station Man

Ask your car dealer for addresses of the 850 Willard Service Stations, or write to the Willard Storage Battery Co., Cleveland, Ohio.

Willard STORAGE BATTERY

"I Always Come Back to Pears"

"I AM through experimenting now. Occasionally I have been persuaded to try other toilet soaps when I read of their wonderful claims, but, disappointed, *I always came back to Pears'*. Pears' is standard in our house now. Whenever the supply happens to run low I immediately get another dozen."

That is the oft-told story of the person who has once known the satisfaction of using

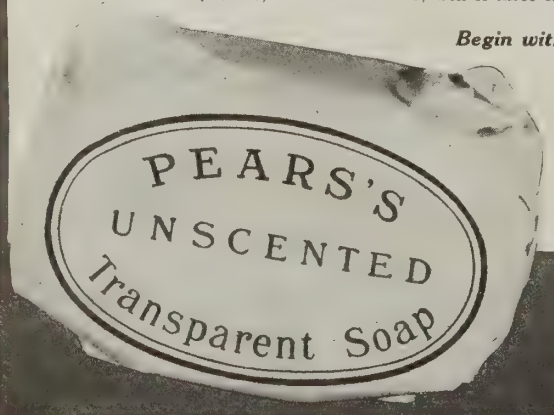
Pears' Soap

Pears' leadership didn't "just happen." Pears' leads because it has all that care, skill and time can put into a toilet soap to make it perfect.

Aged a Year

First of all, Pears' is made of the purest materials blended with all the soap-making wisdom of the largest manufacturers of high-grade toilet soaps in the world. Then every cake is put away to *age* a full year before it is offered for sale. The year-aging rule is never broken. Thus, every drop of moisture is lost and your cake of Pears' comes to you 100% soap.

Pears' (unscented) is 15 cents a cake; box of one dozen, $1.50. Its only odor is the refreshing fragrance of the choice oils of which it is made. Pears' Glycerine Soap (scented) is 20 cents a cake; box of three cakes, 51 cents.



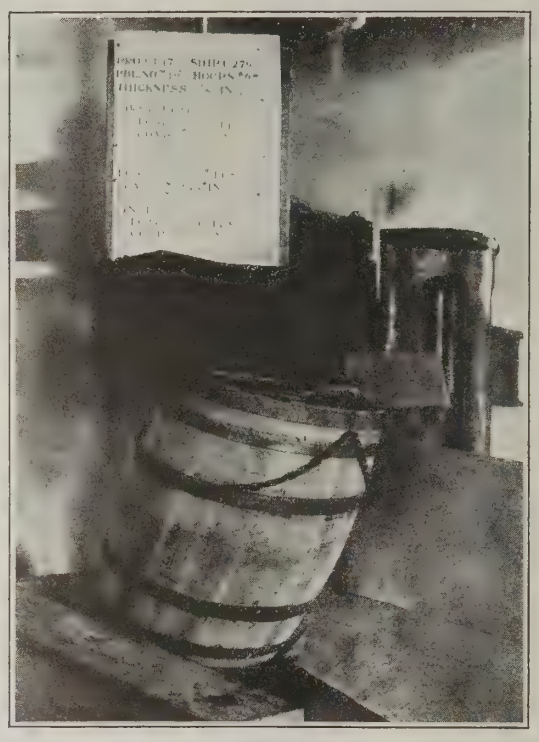
Begin with Pears' today—or are YOU coming back?

Four cents in stamps brings you a Testing Cake of unscented Pears'.

Walter Janvier, U. S. Agent
419 Canal Street, New York

Uncle Sam—Economy Expert—By Forrest Crissey

AT Madison, Wisconsin, is a Government laboratory so alive with the constructive spirit of modern engineering, so intelligently devoted to the practical service of commerce and industry, that its work has won the admiration of Old World specialists engaged in parallel lines of investigation. Its big job is to inoculate America's second largest industry with the thrifty, profit-gathering germ known as the By-Product.



Diagonal Compression Test of Barrel

Perhaps you are unaware that there is a single great industry in the United States which has not yet secured a thoroughly successful culture of this wonderful waste-saving microbe, on which most big lines of manufacture depend for the greater part of their profit. Such, however, is the case; and some time ago the results of this neglect were so serious that Uncle Sam saw he must do something about it himself or witness the swift and wanton depletion of one of his greatest natural resources. So he started into the profession of economy expert, specializing along the line of helping the lumber and timber interests and their customers to stop squandering the splendid fortunes in forests given by Nature to the American people.

The United States Forest Products Laboratory is the largest and most elaborately equipped experimental laboratory in the world for making original investigations in the more economical use of woods. It opened for business June 4, 1910, and, in the words of one of its admirers, "has justified its existence at least once a day ever since." Its field of inquiry is every phase of wood utilization that is of practical commercial importance to-day, or that promises to become so in the immediate future. All its work is done without fee, and it will go to as much pains in teaching an enterprising farmer how to treat his fence posts or silo staves to prolong their service, as to instruct a great timber company in some new means of saving waste. In a word, it will, to the limit of its abilities, give to all reasonable demands the time and attention necessary to satisfy them.

Old Prejudices Removed

It does not sit still and wait for problems to be brought to its doors, however. It has set itself the stint of finding out everything that it can learn about the nature and uses of the woods of the United States and the elements that have a material bearing on their commercial value. Already it has made more than a hundred thousand tests on more than a hundred commercial species of woods, every one of them aimed to answer a practical, sensible question that wood sellers and wood users are asking in order to save waste and prevent wanton sacrifice of this great natural resource. In timber testing alone the laboratory averages five thousand experiments a month.

Another important task this laboratory has performed is that of liberating millions of dollars' worth of woods from the stupid and unfounded decrees of superstition and tradition that have shut them out from certain uses to which they are well adapted. In this field alone the laboratory has undeniably justified its cost many times over, for it has freed to urgent commercial use, through its scientific demonstrations, an annual volume of woods, before neglected and taboo, worth several million dollars.

To-day there are more than a dozen big industrial companies in the United States that have installed large plants for treating their own poles or timbers with preservatives. In almost a literal sense the laboratory has set these great waste-saving concerns up in business. Of course Uncle Sam has contributed nothing to their outfitting in the way of financial capital; but in his capacity as an economy expert he has given them the most important capital of all—the technical knowledge worked out by his force of scientists in the Forest Products Laboratory; the processes that have been tested and proved under the authority of the Federal Government. This part of the work has a very direct relation to the protection of human life through preventing a large proportion of the cave-ins that would occur if the mines throughout the country continued to use only untreated timbers.

Testing Boxes and Cartons

Another notable mission performed by this unique laboratory is that of saving the shippers of merchandise hundreds of thousands of dollars in loss and waste by preventing them from sending their goods in boxes, cartons and packing cases of inferior construction and materials—containers unfit for the service demanded of them.

The breaking of boxes and smashing of packing cases is a science at the great laboratory, and the box maker who attempts to market a new product knows to a moral certainty that some prospective customer will send a small shipment of the containers to be tested by the experts and the special machines at Madison. For all practical purposes this laboratory has standardized the business of box making and put it on a scientific basis. It is impossible to compute, with any reasonable chance of arriving at a fair guess, the annual saving to shippers resulting from the facts established by the box tests at the Forest Products Laboratory; but the sum is surely a big one. Possibly it is several million dollars.

In taking a preliminary look over the varied fields of usefulness preëmpted by the Forest Products Laboratory, however, do not lose sight of the fact that its big job is that of economy expert. It must not only learn how to utilize a far greater proportion of those parts of the forest and of individual trees now wasted but also to make better use of the lumber now produced. By-Product, we all know, is the middle name of every meat-packing concern of any size or importance in America. If the available statistics of the packing industry are to be believed, the burden of profit bearing rests wholly on this secondary product. The main output—just plain Meat—escapes from the packing house without paying its board and leaves By-Product to hold the bag, settle the score and pay dividends.

In the lumber industry this thrifty burden bearer has been conspicuously absent.

Careful investigations established the fact that, in general practice, only about twenty-five per cent of the standing timber of a forest found its way to the commercial lumber pile—the rest being waste.

Lumber in its various forms has not only been forced to carry the whole load but it has been treated with less manufacturing intelligence and victimized by more blundering and abuses in its marketing than probably any other of our important products. Of course, in the end the consumer was the one who had to pay the toll for this criminal waste. While this was bound to be heavy enough to make the consumers of the present day sit up and count their change, it was sure to fall with cumulative weight on the consumer of the second and third generations.

It was a consideration of this situation that moved Mr. Gifford Pinchot and his associates to determine that the second greatest industry in the United States could no longer be allowed to blunder along without a practical, working partnership with By-Product. The clever idea of hooking up the plan for a great Forest Products Laboratory with some state having important lumbering interests was hit on. Coöperation of this kind was thought to be almost certain to bring good results.

The plan was tentatively placed before the state universities of several commonwealths having big lumbering interests, and nearly all of them rose to the bait with cheering zest. The University of Wisconsin was finally selected as the partner of Uncle Sam in this paternal project.

The university furnished the site, built a two-story brick building costing fifty thousand dollars, contracted to provide heat, light and power. Uncle Sam's part of the work is to furnish the equipment and the staff. Considering the fact that of the eighty-five persons regularly on the laboratory pay roll more than fifty are highly trained scientists, and the further fact that about one hundred and fifty thousand dollars' worth of equipment is already in use at the laboratory, it will be seen that the Federal Government is carrying its fair share of the load.

This equipment consists of a strange assortment of devices, ranging from huge timber-testing machines to a "baby retort" for distillation purposes. A perfectly good dungeon, or "rotting pit," is one of the star features of the strange place, which also maintains an official cemetery for the burial of posts, poles and timbers of almost every kind.

The Objects of the Laboratory

Perhaps the clearest idea of the full scope of this fascinating work is to be had from the terse, technical outline given by Director Howard F. Weiss, in these words:

"The Forest Products Laboratory is a laboratory of practical research. Its aim is to promote economy and efficiency in the utilization of wood and in the processes by which forest materials are converted into commercial products. In doing this the purpose is:

"To secure authoritative information on the mechanical and physical properties of commercial woods and of the products secured from them.

"To study and develop the fundamental principles underlying the seasoning and kiln-drying of wood, its preservative treatment, its use for the production of fiber products—pulp, paper, fiber board—and its use in the manufacture of alcohol, turpentine, rosin, tar and other chemical products.

"To develop practical ways and means of using wood that, under present conditions, is being wasted.

"To coöperate with consumers of forest products in improving present methods of using them; also, in formulating specifications and grading rules for commercial woods and materials secured from them, and for materials used in the preservative treatment of wood.

"To make the information secured available to the public through publications, correspondence, and other means.

"Anyone is at liberty to correspond with the laboratory about particular problems dealing with the utilization of wood and will receive whatever information is available on the subject. Such information is, of course, furnished free. The staff of the laboratory is also available for consultation work provided the problem under consideration has some bearing of general interest. Our investigations are divided into the following general lines: 1—Timber Tests—strength tests; 2—Timber Physics; 3—Pulp and Paper; 4—Derived Products; and 5—Wood Preservation."

Most of the visitors at the laboratory are manufacturers or their representatives—men who are seeking the solution of serious and practical problems to be worked out on a big commercial scale. It is likely, however, that no delegation ever visited the laboratory and left so large a feeling of satisfaction behind as the thousand Wisconsin farmers who came to see—as many of them later confessed—just how foolishly the state was spending a part of its tax money.

Large numbers of these doubting delegates from the soil came in their own automobiles, and the procession of machines, standing in close formation, occupied the highway for a distance of almost a mile. The reason why these farmers left such a glowing feeling of satisfaction with the force of scientists at the laboratory was that they had come expecting to see a plant devoted to finespun scientific theories, and poorly calculated to accomplish anything practical for anybody—particularly for a farmer—and left feeling that they had discovered about the most useful government institution in existence.

After the inspection was finished one of the farmers put his impression in these words:

Dividends of Usefulness

"I may as well confess that I came here with a well-grounded notion that I should find almost nothing in the work of the laboratory that had any real, practical, money-saving relation to the business of running a farm right now—to-day. Probably I should have been willing to admit that we might come across some things of use to the big lumber companies. We all know there is a lot of waste in the lumber business, and I was willing to concede that, as the supply of timber began to run out and the cost of producing lumber continued to increase, the lumber industry would have to stop running things with quite so high and loose a hand and find out how to cut the corners a little, and that these young men of the Forest Service might be able to show the way out.

"If anybody had told me that an inspection of the laboratory would show me how I might save enough money on the farm, by putting in practice anything worked out here, to pay the proportion of my taxes that goes to the support of this institution, I should have laughed at the suggestion as being absurd. Now I am going home to put into practice several things I have learned here to-day, any of which will save me more than enough to pay all my state tax for the year. If the United States Government or the state of Wisconsin can show me another investment of the public funds that yields a higher return in dollars and cents every day in the year I should like to see it. Why, to-day I have seen shingles that have been so successfully treated with chemicals that it is practically impossible to set fire to them. I have seen treated posts that refuse to rot under conditions that would have reduced those on my farm to a state of complete uselessness; and I have learned a whole lot about how to pick out the right kind of lumber for certain important farm purposes.

"There is quite a lot of standing timber on a part of one of my farms and I am sure the leads I have picked up here to-day from these young men will result in my making a much more intelligent and profitable use of that timber than I should have made if the laboratory had not done the practical work it has shown us to-day. I'm proud of this institution; it's a paying concern and I'm coming again."

On one occasion a group of young men in the timber-testing department found difficulty in keeping their faces straight when a school-teacher on seeing a timber break under the carefully measured strain of a testing machine exclaimed:

"Oh, dear; it's broken! Isn't that too bad?"

Hardly a week passes that does not bring to the laboratory several visitors from foreign countries. Many of these are scientists connected with government schools or institutions where the technical study of wood is carried on with true Old World thoroughness. The alert young investigators of the laboratory learn much from these guests of the wood products of other lands. Perhaps the visiting chemists from

REX CHAINS For ELEVATING CONVEYING And TRANSMISSION

Rex Traveling Water Screens are used to clear water of all debris, before taking it into the plants of such firms as Commonwealth Edison Co., Chicago; Union Electric Co., St. Louis; Illinois Steel Co., Chicago; Edison Illuminating Co., Detroit, etc. Information on request.

Suppose the big conveyor in your plant broke today

What would be your loss? To some plant owners it would mean thousands of dollars' loss, to say nothing of the delay—and in these days delay means distress.

On every elevator, conveyor or drive—large or small—in your plant there is one all-important thing that determines whether it is going to run or fail you, and that thing is the chain that carries the load.

Firms that realize this specify Rex Chain on equipment they order, and find it dependable under all conditions.

A few of the big firms that use Rex Chain are:

Milford Canning Company, Milford, Ill.
International Harvester Company, Chicago
Holeproof Hosiery Company, Milwaukee
West Virginia Pulp & Paper Co., Covington, W. Va.
Great Southern Lumber Co., Bogalusa, La.
Loose-Wiles Biscuit Company, New York
R. A. Johnston Company, Milwaukee
Buick Motor Company, Flint, Mich.
Paige Motor Car Company, Detroit
Ford Motor Company, Detroit
Presto-Lite Company, Indianapolis
Jones & Laughlin Steel Co., Pittsburgh, Pa.

Over thirty million feet of Rex Chains are now in use in such industrial plants of this country—enough to reach from New York to San Francisco and back again.

We have a distinctive claim to make if you are interested in chains for these purposes: agricultural machinery, canning machinery, saw mills, lime and cement plants, packing houses, pulp and paper mills, ice houses, tanneries, breweries, oil wells, power plants, sand and gravel plants, mining machinery, glass plants, automobile plants, drilling and trenching machinery, fertilizer plants, steel mills, and on all forms of elevating, conveying, transmission and concrete machinery.

It is our great confidence in our product and the great need for that product in every industrial plant that enable us to make a claim of such breadth.

Write us for our literature. Tell us the use you are considering for Rex Chains. Our Engineering Department has had twenty-five years' experience to draw on when advising you about chains for elevating, conveying and transmission machinery.

REX MIXER

For PERMANENCE in CONCRETE

Rex Mixers have made good on jobs of all kinds and sizes—from laying a piece of sidewalk to building the Catskill Aqueduct. They are furnished in all sizes, from the one shown here (4 cu. ft.) up to the larger mixers and pavers. Catalog G sent on request.

Concrete to be permanent must be properly mixed

Proper mixing means machine mixing with an unfaltering, positive, yet flexible drive—the drive that comes from an unfailing, easy running chain.

Several years ago we decided to manufacture a mixer, every part of which would be of a quality equal to that of its Rex Chain drive. The Rex Mixer is all we aimed to make it.

Throughout, it is of the same high quality as Rex Chain, on which our reputation of twenty-five years had been built. Rex Mixers have the design, capacity and durability that answer the requirements of contractors in every branch of their work. Our engineers embodied in REX the qualities that meet the requirements of the largest possible number of contractors; they have eliminated the weak points common in other mixers.

Some of the Contractors using Rex Mixers:

George A. Fuller Company
Smith, Hauser & MacIsaac, Inc.
Raymond Concrete Pile Co.
Chicago, Milwaukee & St. Paul R. R.
Nash-Dowdle Co.

Contractors everywhere acknowledge the superior qualities of Rex Mixers. These firms are constantly using them and will tell you why they meet their requirements.

Rex Mixers are made in sizes of four cubic feet, wet capacity, and up. The Rex has a steel frame, steel truck, cast semi-steel drum, friction clutch, chilled semi-steel rollers and steel housing over the gasoline engine. Every gasoline-driven Rex Mixer is equipped with a Novo Engine.

You can have any capacity. One small Rex Mixer may be the entire equipment of a contractor in a small town. On the big jobs you'll find ten or more mixers, some perhaps of the largest sizes. Get in touch with the nearest Rex distributor. If you do not know who he is in your town, write us now for complete information and interesting booklets about Rex Mixers.

other countries contribute most, in this informal way, to the scientific resources of the laboratory.

Comparatively few foreigners visit the laboratory with whom correspondence is not later exchanged. On returning to their own countries these visitors generally give talks and addresses before technical or scientific audiences, with the almost universal result that their description of the United States Forest Products Laboratory draws out a large number of letters from their hearers who are stimulated to seek at first hand more specific information. On the other hand the laboratory staff finds an acquaintance with technically trained visitors from other lands a distinct asset, as this personal contact frequently opens the way to extend correspondence of the greatest possible assistance along research lines. In this way, as well as by the force of the big commercial results achieved by the laboratory, it has become in no small sense an international institution.

A glimpse into the chemical researches of this laboratory reveals perhaps the most fascinating, though certainly the least spectacular, line of activity carried on there. This work has a wonderful range and diversity, in spite of the fact that a high percentage of its investigations is along the line of wood-preservation work. It touches Paper and Pulp Making; Derived Products; and even Timber Physics. In a word, chemistry cannot be entirely shut out from any phase of industry and commerce, or from any line of wood-utilization research. Like petroleum, it penetrates everywhere. It must be reckoned with in all that touches the work of waste saving and higher efficiency in the utilization of wood and all the products that come from it.

Consequently the chemical staff of the laboratory is an uncommonly able one.

The way work involving chemical research is planned and put through seems to furnish an especially apt illustration of the general policy of the laboratory as a whole. This is: First, find out what are the really worth while problems in the industries using wood and its products; next, work out in the laboratory what appears to be a practical and satisfactory solution of each problem; and, finally, have the broad practicality of that solution thoroughly tested and proved on a commercial scale by securing the active coöperation of manufacturers who will try it out in their own plants.

Enormous Savings Possible

Almost all successes achieved by the chemists of this laboratory—and they are numerous and important—have been scored by following this sound, constructive plan. Always the aim is to make every move pay in a commercial way at the earliest possible moment. To do this means the exercise of sound judgment in picking the problems in which time, money and scientific effort are to be invested; the careful planning of the research work in the laboratory, making haste slowly and with scientific thoroughness; and, at last, a broad commercial test in as many industrial plants as possible.

When the work reaches the stage of being tried out in private manufacturing plants the experts who have worked on the problem in the laboratory are sent out to see that equipments and conditions are right, and to help in making the methods determined in the laboratory a success in the commercial plants.

There could be no better example of the success of this policy than the progress of the work of wood preservation. It is hardly stepping outside the lines of literal truth to say that this laboratory has put wood preservation on the map and made this most direct form of waste saving known and practiced wherever mine timbers, piles, posts, ties and poles are used. Scores of large concerns have gone into timber treating on a generous scale as a direct result of the activities of this laboratory. They apply the methods worked out and furnished to them by the laboratory. Many of them are mining companies or their subsidiaries; the others are either large users of poles and ties or are in the field for the purpose of securing timber-treating contracts.

It has been conclusively demonstrated that cave-ins, due to the breaking of the supporting tunnel timbers, are far less frequent when those timbers have been subjected to the preservative treatment standardized by the laboratory. Under average conditions untreated timbers in mine tunnels should be renewed at least every third year in order to be safe; timbers treated by the laboratory have been in mines for more than nine years and are still entirely sound. They are examined by representatives of the laboratory at regular intervals, and these experts report that there is every reason to believe that they will not require replacement until they have served at least a dozen years.

In a case of this kind the saving in the cost of timbers is perhaps the smallest part of the economy effected; the reduction of labor and operating expenses and the eliminating of frequent interruptions to production are extremely important elements in this phase of economy. Accidents are the costliest kind of waste that a mine may have, and the clear demonstration that accidents may be greatly reduced by timber treating is a service of the highest order.

Treating Plant for Ties, Mine Timbers and Poles

Of course it should be remembered that wood-preservation work was being carried on by the Forest Service in a systematic and scientific manner before the laboratory was built—in fact, the present director was for some time chief of the Office of Wood Preservation in the Forest Service, when the great laboratory was the unrealized dream of a few ardent young scientists and foresters.

The pioneer work in wood preservation done by the Forest Service previous to 1900 had stimulated a few of the most progressive companies in the industry to install experimental timber-treating plants. As early as 1900 there were some eight or ten of these plants in the United States, but all of them together used only a few million gallons of creosote and a small quantity of zinc chloride—the two preservatives most extensively employed.

Since the establishment of the laboratory, however, the business of treating timber with preservatives has gone forward by leaps and bounds, and to-day there are more than a hundred commercial timber-treating plants that each year use in excess of a hundred million gallons of creosote and nearly thirty million pounds of zinc chloride.

In a commercial way comparatively little has been done in treating timbers with preservatives outside of crossties and telephone and telegraph poles. The railroads of the United States, in 1910, for example, put in about thirty million treated crossties as against a hundred and twenty millions that were untreated. This was for both new track and the replacement of old ties. The cost of these ties was more than seventy-five million dollars.

Naturally the results of this work have been carefully studied and checked by the laboratory and its field experts. The opportunities for comparison were highly favorable. The laboratory makes the impressive statement that its estimates indicate that if all the ties, poles, posts, piling and mine timbers used in 1910 and since then had been treated with preservatives according to the best methods known, the annual saving would have been not less than seventy million dollars. Quite a tidy sum and well worth Uncle Sam's special efforts as an economy expert!

A Mining Man's Lesson

In at least one line the big railroad, telegraph, telephone and mine companies do excellent teamwork with representatives of the United States Government; they pull shoulder to shoulder in making extensive experiments to determine the life of treated and untreated wood material under every condition of exposure naturally met with in ordinary usage. This coöperation between private corporations and the National Government is significant and encouraging. More than forty sets of test material—some of them quite extensive—located in various parts of the country where the conditions of exposure are decidedly different, are inspected at regular intervals by members of the laboratory staff, and the results are carefully recorded, analyzed and published in a form intended to be of the greatest possible service to all having a practical interest in the subject of wood preservation. Scores of important conclusions have already been arrived at by this means; but, as a whole, these observations have shown conclusively that the life of wood used in exposed situations, or in contact with soil or water, may be multiplied by at least three through the intelligent use of preservatives.

The head of a coal company became interested in the possibilities of wood preservation and visited the laboratory at Madison, where he was escorted to the "dungeon," or rotting pit, where treated and untreated woods of almost every commercial kind are subjected to about all the agencies calculated to work swift and sure deterioration that science has thus far been able to devise. Then he was shown the outside "cemetery," where pieces of the same posts and timbers are buried for the purpose of placing a check on the results of the rotting pit. In other words, this curious cemetery secures by natural means the destructive results obtained in the laboratory in a much shorter time by artificial agencies.

After the manager of the coal-mining company had been shown the difference in the deterioration of treated and untreated woods and had listened to crisp and pointed explanations of the various experiments, he declared his intention of establishing a treating plant large enough to take care of all the timbers used in his mines. He was surprised at the small sum required to install the plant. In the work of putting up the plant and getting it started he had the advice and active assistance of an expert detailed from the laboratory. This occurred several years ago, and the records show that the consistent use of this plant has reduced the company's annual consumption of timber one-half, though only a part of the timber used has been treated.

This case is cited because it is thoroughly typical of scores of others, many of them showing still greater economy gains.

If the laboratory confined its application of preservatives to the woods commonly

The Maxwell Sedan

$985

THE Maxwell Sedan offers all the advantages and conveniences of two cars—one closed and one open type—with but one investment and one maintenance cost.

It is only a moment's work to raise or lower the windows. When the car is open it is a perfect touring car; when closed, it is as snug and comfortable as the most luxurious electric car or limousine.

This sedan is built on the regular Maxwell chassis, insuring the ease of operation, the sturdiness and the economy in upkeep for which Maxwell cars are famed the world over.

Dealers not now having a demonstrator on hand are advised to order at once. In our opinion, which is based on the attitude and actions of the public, this car is destined to create a tremendous all-year-round demand.

Roadster $620; Touring Car $635; Town Car $915; Cabriolet $865, completely equipped including electric starter and lights. All prices f. o. b. Detroit.
Canadian prices: Roadster $870; Touring Car $890, f. o. b. Windsor, Ont.

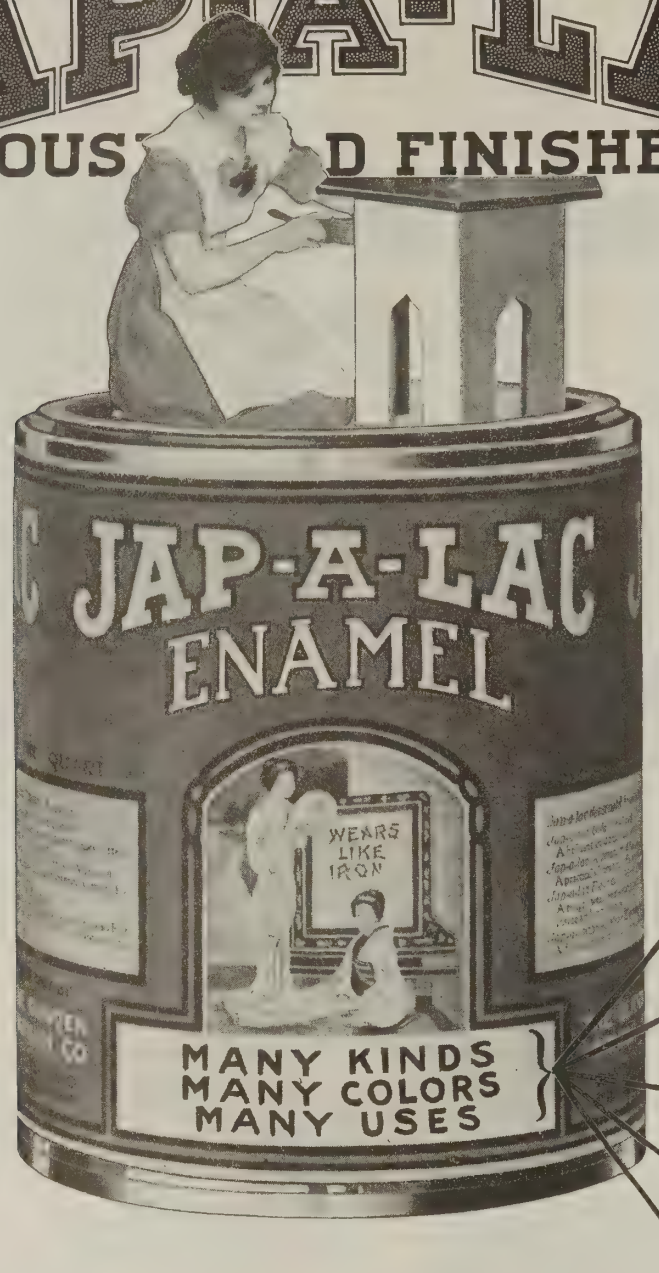
JAP-A-LAC

HOUSEHOLD FINISHES



Why not have clean white enamel in the old bedroom? Put the same finish on chairs and bedstead.

This kind of Jap-a-lac gives new color and durable newness at the same time. Good for floors and woodwork too.

This is the Jap-a-lac Varnish that puts on durable brilliancy without changing the color.

They'll All Come in Handy this Spring

Floors begin to show wear, a chair needs new color, a fresh coat on the baseboards would make them look like new—each month some surfaces, indoors or out, need attention.

Taking these things in hand early is true economy. There's less labor in keeping the home spick and span when floors, furniture and woodwork are not allowed to get run down. Truly here "a stitch in time saves nine."

Jap-a-lac Household Finishes are made for just such up-keep work. There are many kinds. They're all good. Each one does a particular kind of job and does it well.

You can get further assurance of these good wearing qualities from the fact that Jap-a-lac Household Finishes are the most widely used products of their kind. Only true goodness can gain such world-wide use.

Let this list be your spring painting guide.

Jap-a-lac Household Finishes Include—

Jap-a-lac Varnish Stain
Seven attractive, transparent colors; stain and varnish combined.

Jap-a-lac Floor and Interior Varnish
A durable, clear varnish for floors and general interior use.

Jap-a-lac Enamel
Solid enamel finishes. Seven colors. Also flat and gloss whites, and flat and brilliant blacks.

Jap-a-lac Gold Paint
A brilliant gold finish for wood or metal.

Jap-a-lac Aluminum Paint
A practical, silvery finish for wood or metal.

Jap-a-lac Porch and Floor Paint
A weather-resisting paint for both inside and outside use.

Jap-a-lac Screen Enamel
A durable enamel for screens and other metal surfaces. Black and green.

Jap-a-lac Stove Pipe Enamel
A black, heat-resisting enamel, brilliant and lasting.

Jap-a-lac Graining Color
A tough varnish for producing wood grain effects, over Jap-a-lac ground color.

Jap-a-lac Crack and Crevice Filler
A wear-proof filler that does not crack or shrink.

Do the Little Things Yourself—but Call in a Practical Painter for the Big Jobs

If you are building a new home or refinishing the old one in a big way, go to a practical painter and be sure that he uses Glidden Architectural Finishes (Varnishes, Enamels, Stains, etc.).

Jap-a-lac Household Finishes sold by dealers everywhere. Send for color card and interesting, instructive booklet.

Treble the life of your screens. Jap-a-lac Screen Enamel costs less than new screens.

This is a tough weather resisting paint. Ability to stand floor wear makes it suitable for any outside use.

THE GLIDDEN VARNISH CO., CLEVELAND, U. S. A.

GLIDDEN

(Continued from Page 78)

used for crossties, poles, piles and mine timbers, its usefulness as an Economy Expert would suffer a severe handicap. Instead, it has recognized the necessity of finding cheaper woods thus far unsanctioned by tradition as suitable for use as crossties, poles and posts that may be made so through the use of preservatives. Extensive experiments along this line have been made with the loblolly pine of the Southeast, the jack pine of the North and the lodgepole pine of the Rocky Mountain States. These varieties have been found entirely suitable for crossties when properly treated with preservatives. The varieties are abundant in their various sections and have heretofore been very cheap, because considered almost commercially useless save in a very restricted way. In the last five years, however, the use of these pines for crossties has doubled.

No matter in what line of investigation they may be engaged, the scientists of Uncle Sam's Forest Products Laboratory invariably keep constantly in mind the possibility and economic advantage of introducing to a broad commercial use woods that have been generally neglected. This persistent and systematic search for efficient substitutes for woods which have been so extensively used in large lines of manufacture that they are becoming scarce and extremely high in price is undoubtedly one of the best things Uncle Sam does as an Economy Expert. That chemistry, by means of a preservative, should be able to impress several cheap and neglected woods into the substitute ranks where the need for them is acute, must be considered as a distinct scientific achievement. It is another interesting proof of the penetrating power of chemistry considered from the viewpoint of commerce.

Saving Wasted Chemicals

In the field of chemistry a most important part of the work of the laboratory is along the line of standardizing wood preservatives—finding those that will do the work at the lowest cost and preventing waste in their use. A wide range of waste products offered by other industries have been tested by the laboratory to determine their possible usefulness as preservatives. Altogether about thirty preservatives have been elaborately tested with regard to their possible effectiveness in checking the growth of fungi, their penetrative properties, their staying powers after they have once permeated the wood, their effect on the strength of the wood, and their corrosive action on steel, iron or other metals commonly used in connection with wood. Many curious and unexpected results have been brought to light by these investigations.

Perhaps the most important one is that much more creosote and zinc chloride are commonly used in the commercial treating plants to-day than is necessary to get the best results. One of the Forest Service experts puts this significant discovery in these terms:

"If the toxic values ascertained as a result of the extensive tests in the laboratory are correct, there is in present practice from ten to twenty times as much coal-tar creosote and one and a half times as much zinc chloride being forced into the wood under treatment as is necessary to prevent decay. Of course it is well in common commercial practice to be on the safe side in the quantity of the preservatives used, to make generous allowance for leaching, evaporation, or any other changes liable to affect the strength of the treatment; but waste on so large a scale is unwarranted, and the laboratory has done a useful work in showing the users of wood preservatives how they can save a high percentage of their chemicals. In many plants this economy alone will mean the saving of many thousands of dollars a year."

Another interesting discovery is that, as a general thing, highly viscous oils do not readily penetrate wood, while the oils of low viscosity sink in easily. Again, it has been conclusively demonstrated that the best results are obtained when both the wood and the preservatives are heated during the treatment.

In removing one of the most serious objections to the use of wood paving blocks the laboratory has performed a distinct public service. Because of its ability to stand up under heavy traffic, the ease with which it may be kept clean, and its comparative noiselessness, wood-block pavement has come into high favor in many of America's large cities. On the other hand, the tendency of the blocks to "bleed" under strong summer heat has been a serious handicap to the popularity of this otherwise highly desirable form of paving. When pedestrians discovered that they could not cross a pavement of this kind, when a hot sun was beating down on it, without carrying away large quantities of tar on the soles of their shoes, they suddenly developed a most decided sentiment against creosoted wood-block paving. The chemists of the laboratory saw that here was a big, live, practical problem which needed solution.

The Vacuum Treatment

They finally hit on a method of treatment that appears to be thoroughly effective in preventing the blocks from bleeding after they have been laid. This treatment consists in drawing a vacuum on the blocks both before and after their treatment with preservatives. A test pavement of blocks treated in this way may be seen in Quincy Street, Chicago, between La Salle Street and Fifth Avenue. The eastern half of the street is laid with blocks treated in the old way, while the western half is paved with blocks subjected to the improved Forest Service method of vacuum treatment. The eastern half, which was not given the double vacuum treatment, bleeds profusely when the sun beats fiercely on it, while, at the same time, the western half, which did receive this treatment, remains clean.

When the investigations of the Forest Service showed that this country suffers an annual loss of about eight million dollars from sap stain in lumber the authorities of the laboratory saw that here was another opportunity for Uncle Sam to demonstrate in a new way his efficiency as a waste saver. This liability of lumber, after it has been cut and piled, to be attacked by a fungus called blue stain was decidedly discouraging to lumbermen.

At first the laboratory reached the conclusion that caustic soda would probably prove to be effective; but rather extensive experiments with this agent on the part of large lumber companies were not satisfactory. Later, however, the persistent experiments with which the laboratory has assailed this stubborn problem have seemed to demonstrate conclusively that sodium fluoride will not only eliminate the sap-stain trouble but that, because of its strong antiseptic qualities, it is well calculated to assist in checking decay during the storage of the lumber. Fortunately this chemical is comparatively cheap. Though the demonstrations thus far made with sodium fluoride have been clearly successful, they have been on a comparatively small scale; and, therefore, the laboratory is not yet ready to give this treatment its unqualified indorsement until it has been tried out in a big way by some of the large lumber producers. This policy obtains in every activity of the institution.

Active coöperation with individual and corporate concerns was part of the policy of the Forest Service before the laboratory was called into being. The men who have been most active in the work of the laboratory started several experiments many years ago on which the laboratory, from almost the day of its opening, has conducted a long series of searching observations with most important results.

One of these experiments was made ten years ago in coöperation with what is now the American Telephone and Telegraph Company. Sets of experimental poles were placed in lines running out of Buffalo and Poughkeepsie, New York, and Savannah, Georgia. From the studies made of these poles many valuable conclusions have been reached. One is that the poles last longer when used in the region of their natural habitat than when put out to service in climatic and soil conditions which are strange to them. Another is that fewer badly decayed poles were found in the lines running through swamps than in drier situations. Also, it was discovered that untreated poles, charred or set in crushed stone, showed less decay at the ground line than those set in sand. Perhaps the most important general principles arrived at through these observations are that a preservative, to be really effective, must penetrate several inches into the wood and that plain tar coatings have been found quite inefficient in preventing the decay of poles.

Lifting the ban of prejudice from woods that have been shut out from their natural uses is a big economic task and one that only a scientific institution commanding universal confidence could successfully carry through. Regarding this phase of the laboratory's work, Mr. H. S. Sackett, timber engineer of the Forest Service, says:

"The hickory tree produces wood of two colors—red heartwood and white sapwood. For many years most of the users of hickory products excluded the red heartwood from their specifications, for the reason that they thought it was not so strong and resilient as the white sapwood. This resulted in great waste in the use of the hickory tree, as in many cases the heartwood makes up more than fifty per cent of the entire cubical content. In order to determine whether there was any foundation for this prejudice against red hickory the Forest Service conducted, in coöperation with the vehicle associations, a large series of tests and found that the discrimination was largely unwarranted. The tests showed that when the red hickory was as dense as the white there was practically no difference in their quality and strength. As a result of the tests by the laboratory the Isthmian Canal Commission changed its specifications for pick handles, shovel handles and similar products to include a large amount of the red hickory. Many other large consumers have likewise changed their specifications. This has made an immense saving in the sacrifice of this valuable wood. Red hickory is now permissible in a majority of hickory specifications; ten years ago it was rigidly excluded."

Tests for Hardness

"The laboratory has worked out a method of determining the hardness of various woods by pressing a steel ball into them. This is a far more important form of standardization than at first it might seem to be.

"The rapid extension of telephone and power lines in the West makes the question of a pole supply one of increasing importance. This is particularly true in the Southern Rocky Mountain States, an area quite far removed from the source of supply of standard poles. In this territory there are found large quantities of both green and fire-killed lodgepole pine and Engelmann spruce. Users of poles have been backward in making use of these species because they lacked confidence in their ability to withstand severe strain. With the idea of determining their relative strength the Forest Service conducted a series of tests on both green and fire-killed timber of these species and in conjunction with these tests ran a series on Western red cedar, which is one of the standard poles now in use.

"The result of the tests showed that both the green and fire-killed poles were sufficiently strong for pole purposes, and thus opened up for use a vast quantity of timber before untouched.

"Long-leaved pine and Douglas fir have been practically the only woods used for the crossarms of poles. Tests with short-leaved pine and white cedar show them to possess ample strength for use as crossarms.

"Additional tests of softwoods are now contemplated, and no doubt many other varieties will be shown to be sufficiently strong for use as crossarms. The big value of all this test work is to broaden the markets for users of this class of material and to enable them to utilize, to a large extent, those woods that are found nearest the point where they are needed."

Experiments in California

"It is a rather curious fact that nearly all the hardwoods in the United States are found east of the Rocky Mountains. In the state of California, extending from San Francisco north to Oregon, in a strip about thirty miles wide, is the great forest of redwoods containing billions of feet of this timber. Mixed in with the redwoods are a few hardwoods, such as the tanbark oak, the madrona, the laurel and a few minor species. Of these hardwoods the tanbark oak is the most abundant and important.

"At present only its bark is used. The barking outfit precedes the redwood logging operations by about a year. The practice is simply to cut down the tanbark oak trees, take off four-foot rings of bark, let the bark dry, and then haul it away, leaving the peeled tree in the woods. In the course of a year there are millions of feet of magnificent tanbark oak logs left in the redwood forests. This tree is of the white-oak family and if given proper treatment by the lumbermen could be very profitably utilized; in fact, it has been demonstrated that if the redwood lumbermen would log the tanbark oak as they do the redwood the lumber secured from it would be worth much more for each tree than they now receive for the bark. As it is now, the tanbark oak is destroyed; for, after the bark has been hauled away and the redwood trees felled, the lumbermen set fire to the woods to remove the débris in order that they may more easily pull out the large redwood logs. In this process of burning, everything goes up in smoke except the redwood logs.

"In order to demonstrate the value of this oak the Forest Service shipped quantities of it to San Francisco, where it was tried out with satisfaction by wagon makers and cooperage concerns. One of the large hotels recently built in San Francisco had its floors laid with this oak. It is estimated that more than four hundred million feet of this beautiful oak have been wantonly burned in the woods.

"It has long been believed that timber cut from trees tapped for turpentine was weaker than timber cut from untapped trees. Users of long-leaved pine have generally specified that only unboxed timber would be acceptable to them. This discrimination has caused a useless waste of about thirty-seven billion board feet of long-leaved pine timber valued at one hundred and eleven million dollars. Tests made by the Forest Service have shown that the chipping process for turpentine has no effect on the strength of the wood, and now the use of boxed timber is becoming general. Here is where the laboratory has done wonderful work as a waste saver.

"The general practice among wood-preserving plants in this country has been to steam the timber before treatment. Laboratory tests have proved that steaming wood under pressure for long periods greatly weakens the timber.

GOODRICH

THE HOUSE OF GOODRICH: ITS CREED

GOODRICH is RUBBER; RUBBER is GOODRICH.

They are ONE the world round in household and mill; in man-packed city, or wherever civilization touches finger-tips with semi-savagery.

A remarkable domination of an industry by a single institution, this supremacy of Goodrich. A striking imprint of a name on a world product from its raw to its finished state.

Goodrich IS Rubber; Rubber IS Goodrich. *Why is it?*

Look to that frieze of buildings which here frames these pages for your quickest, most compelling answer.

Though it lists but a part of the fifty-seven buildings gathered at Akron on the Goodrich site of 101 acres, it does help picture to you the largest and most complete single Rubber Manufactory in the entire world.

WHAT buildings are shown here *suggest* the great size of Goodrich, but they fail to show you the BEEHIVE of *life* and *industry* they house.

They can but *hint* at the 3,772,329 square feet of floor space inside them with a capacity of more than 20,000 employes.

They say *nothing* about 16,000 horse power from Goodrich boilers, and 10,000 horse power from Goodrich dynamos that drive belts, and wheels, and rollers by thousands, and set the great plant aglitter with 20,000 lights.

Still less do they voice the 350 telegrams and 9,000 telephone calls that pour daily into them from the four corners of the world; or speak of the 18,000 pieces of mail handled every week day in Goodrich's own post office.

And least of all do they tell of the more than 4,000 distinct Goodrich products, a meagre general classification of which is listed in our frieze.

An *excusable* shortcoming, this last, for not even a Goodrich executive officer knows EXACTLY at one time ALL the Goodrich products that go to make up the 160,000,000 pounds of rubber goods Goodrich annually ships to the peoples of the earth.

GOODRICH

HUNDREDS of thousands of you know that Goodrich Tires—*Silvertown Cord Tires, Goodrich Black Tread Safety Tires, Goodrich Wireless Truck Tires, Goodrich Motorcycle* and *Bicycle Tires*—literally bear the automobile industry forward on its path of progress: BUT HOW MANY of you know GOODRICH RUBBER BELTS carry rough diamonds out of the mines of South Africa?

You, and thousands of you, know you walk on Goodrich TEXTAN SOLES: BUT HOW MANY of you know that when you step on rubber mats and matting you are TWICE walking on GOODRICH RUBBER?

To live forty-eight years and be merely big, is to be but *fortunate*. The test of a manufacturing institution is *how much* it has written into the advance of the industry, and what benefits it has given to humanity. The factory that scores FIRST in ideas and NEW PRODUCTS is the true LEADER.

FIRST in the development field by seniority, Goodrich has always KEPT FIRST by learning new ways of the earth's great material mystery—RUBBER—to fulfill the needs of mankind, often *anticipating* the needs.

It was no coincidence that Goodrich made the FIRST clincher automobile tire in America, the FIRST *cord* tire, and the FIRST solid rubber tire for automobile trucks, buggies, and carriages. As Goodrich's business is rubber, its organization has always automatically met the NEWEST need of rubber.

BUT of finer significance this: *While Goodrich builded itself, ALWAYS a leap and a bound ahead of the rubber industry, it builded itself into the confidence of people by integrity of manufacture and FAIRNESS of MARKETING.*

Here is a triumph of the Goodrich CREED, the moral marketing force that rounds out Goodrich scientific knowledge, experience, and skill of workmen trained in the Goodrich way.

It is a creed which avows a *covenant* not to market an experiment till practical test proves it worthy of the Goodrich name.

It is a creed content, *willing*, to give the buyer the benefit of Goodrich's huge purchases of raw material, and Goodrich's secrets of rubber compounding.

It is a creed which backs up a *Goodrich rubber* band with *the same* jealous watchfulness of the Goodrich reputation as a Goodrich tire.

That is ***Why*** Goodrich *is* Rubber—***Honest Rubber***—to the world.

THE · FRANKLIN · CAR

SOME RESULTS OF SCIENTIFIC LIGHT WEIGHT

THE American public seldom fails in the long run to accord recognition where it is due.

It may take its own time about accepting a sound principle in motor-car construction. But the public mind, once awake, is not easily diverted from the issue and does not readily forget *who started it.*

The common-sense American public was bound to turn against the heavy, rigid, complicated car, and demand *lightness, strength, flexibility* —for these things mean *comfort, safety* and *economy.* They mean interpreting car value in terms of service and of *use.* They mean the car as a man's servant: not the man the servant of the car.

* * *

The heavy car is going out of fashion.

Nearly all makers are talking light weight and implying tire and gas economy—but they are *not quoting figures.*

Light weight as a popular talking point is quite another thing from Scientific Light Weight attained by long experience in perfecting fine materials, gaining lightness, strength, flexibility, *consistently* throughout the car.

Franklin *Direct-Air-Cooling* did away with 177 water-cooling parts.

Franklin *flexible construction* did away with torque rods and reach rods and gave the Franklin the *lightest unsprung weight* ever attained.

The latest reports from Franklin owners give the tire-mileage of 215 Franklin Cars well over *ten thousand miles* to the set of tires. And not five per cent. difference between the Open Cars and the Enclosed Models!

You know some Franklin owner, probably several. Many of them, as you know, have owned and driven other makes of fine cars.

Short of driving a Franklin yourself, there is no surer way to get the *motorist's* side of Franklin Scientific Light Weight than riding with a Franklin owner.

You will see him handle his car with *ease* and *safety.*

You will find him taking the *roads as they come*—not humoring his car over the rough spots.

You will note the *comfort,* the freedom from hammer and bump—result of *light unsprung weight* and driving through full-elliptic springs.

Hold a watch on him—he is making *better time from place to place,* a steady, easy gait, miles on end, and no slowing up for hills or stretches of choppy road.

You will see him step out of the car *fresh and untired* at the end of the day's run.

Franklin Scientific Light Weight gives a road ability the motorist can use without working himself.

Check up his gasoline and tires. You will get some new ideas of motor-car efficiency.

* * *

Now, as an *enlightened motorist,* you are looking for *scientific light weight*—its safety, its comfort, its economy. Where are you going to get it? In a car that has had some of its weight taken off to meet the public demand?

Or in the Franklin: the one motor car that is today, as it always has been—a *consistently* Scientific-Light-Weight Car!

FRANKLIN AUTOMOBILE COMPANY
SYRACUSE, N. Y., U. S. A.

(Concluded from Page 81)

Of course this practice is now being abandoned as a result of the laboratory findings.

"It is the general impression that the manufacture of lumber is a comparatively simple problem, consisting mainly in cutting down trees and then running a saw through them. The fact is that lumber is beset by perils in almost every process of its making. One of the most important and precarious operations is the seasoning. In the old days, when the world was not in a hurry, lumber was allowed to season slowly in the open air for a year or two before being used. By that method our grandfathers were able to build houses and barns that withstood the elements for a century or more. To-day we are using lumber in houses almost before it is cold from the saw. In our big mills to-day as soon as the logs are cut into lumber they are rushed to immense dry kilns and there, by artificial means, are dried in a few hours. This is why a modern house is often actually old at fifteen years, so far as the condition of the lumber in it is concerned. To remedy this condition and meet modern high-speed requirements the laboratory has perfected a method of accomplishing Nature's seasoning in a short time. There is hardly a branch of wood using that is not touched by the trouble of poor seasoning."

The Seasoning Problem

"In the vehicle industry to-day the quick curing of high-class wagon stock is a serious problem. A large wagon manufacturer recently sent to the laboratory a number of oak wagon rims that had been dried in his kiln. The manufacturer explained that he was losing a very large percentage of his stock owing to trouble in seasoning. At the same time he sent to the laboratory a quantity of green rims and asked whether these could be cured in a kiln without this waste. They were put into the laboratory's humidity dry kiln and dried perfectly without even a fraction of one per cent of waste—because they were dried from the inside out and not from the outside in!

"One of the most difficult species to season is gum, and its introduction into the world's markets was retarded for many years for the reason that lumbermen could find no quick, effective way of drying it. By keeping persistently at this problem, however, the laboratory and the lumbermen have learned to dry the gum. This means an immense economy.

"The losses in air-drying and kiln-drying lumber range from one to as high as seventy per cent in the upper grades of certain species. The laboratory has demonstrated that this loss may be reduced to one or two per cent, or even entirely eliminated, by the proper control of humidity, circulation and temperature; this is done by a special dry kiln which is being adopted complete or in modified form by a number of large commercial concerns in the United States. This kiln is able, as a rule, to season the lumber intrusted to it with a much lower percentage of loss than Nature's method entails."

Here is a case in point that shows just how the laboratory's kiln works in a commercial way:

The head of a firm using two million feet of hardwood lumber a year decided to check up and learn just what loss was sustained by his company in the holding of a year's supply of lumber in its yards. He found that their losses by checking and "degrading" amounted to seven per cent, or ten thousand dollars. An improved humidity dry kiln of the Forest Service type was installed, blueprints having been obtained from the Forest Service.

The cost of operating this kiln amounted to thirty-five hundred dollars during the course of the year and it effected a net saving of six thousand five hundred and sixty dollars.

The Western larch is a wood in which the loss by air drying of upper grades has been found to be as high as sixty, and even seventy, per cent. The laboratory, in its humidity dry kiln, has reduced this loss to as low as one or two per cent. If this reduction of loss could be applied to the entire cut of Western larch the annual saving would be more than three hundred thousand dollars, so far as the higher grades are concerned.

One of the experts of the Forest Service sums up the situation with respect to the possible saving due to the perfection of this remarkable dry kiln in these words:

"If this process results in a saving over former methods of only three per cent in commercial softwoods cut in the United States, and seven per cent in the hardwoods, this will mean a saving of more than twenty-five million dollars a year on this country's total output of lumber; but it must be remembered that much lumber is used green and to this extent the economy possible through correct seasoning would not apply.

"As nearly as we can estimate it the direct saving made possible by the perfection of kiln drying is not less than fifteen million dollars a year. It may be ten million more than that. If the saving in the cost of transportation were to be considered the total economy would be materially increased."

There is still another extremely important consideration which bears directly on the result of this new seasoning process. This is the removal of a strong commercial prejudice against certain woods of which the Western larch is a good example. As soon as the natural users of lumber of this kind come to realize that they can depend on getting it in good condition the inevitable result will be a material increase in the price that it will command. This will relieve the pressure on other woods. All woods of the interlocking-fiber type—like red gum and tupelo—show an immense loss when air dried or kiln dried by the old methods; but when cured in the experimental humidity dry kiln of the laboratory this loss is reduced to almost nothing. This means far more to the wood users of America than can be expressed in mere statistics. It is a big drive ahead in lifting the ban from tabooed woods!

To the visitor at the laboratory, box-testing is the "big circus." Here hundreds of boxes are wrecked by every sort of strain or smash imaginable. Every year our railroads pay claims amounting to many millions of dollars because goods have not been properly boxed. Until the laboratory took up the problem box making was mere guesswork, while box smashing seemed to be an applied art. As the box bill of the United States is about one hundred and fifty million dollars a year the laboratory determined to find out something definite on this score. What it has learned has revolutionized box and packing case building. A man with a new idea in box making took his product to the laboratory and saw it tested. The results amazed him. He had a portable testing device built and exhibited at a national convention of wholesale grocers. The test was spectacular and drew a crowd. In the crowd was one of the largest food-specialty manufacturers in the country. After securing from the laboratory the scientific records of the tests of this box and of the box he had been using, he placed an order for the new type of box that is believed to have broken all records for its volume. The laboratory had not only taught the box maker the value of his product but had also taught him how to demonstrate it to others! There is no means of measuring definitely how much the investigations of the laboratory are saving the users of boxes and barrels every year, but the sum is a large one.

Alcohol From Sawdust

In the field of Derived Products the investigations of this remarkable laboratory are varied and fascinating. Here is waste saving on a wholesale scale wherever you turn. Official estimates show that about forty million cords of slabs, edgings, trimmings and sawdust are annually wasted. Uncle Sam has done very earnest work as an Economy Expert in this field. Big practical results have been achieved. The laboratory has greatly simplified the reduction of alcohol from sawdust and reduced its cost. It has proved that the distillation of long-leaved pine waste in the South for wood turpentine, tar, pine oil, charcoal and other by-products is entirely practicable. It has developed new methods in the destructive distillation of hardwoods by which much greater yields of methyl or wood alcohol are secured. It has shown the paper makers that the immense volume of waste in yellow-pine slabs, edgings and trimmings is admirably adapted to the making of kraft pulp, the basis of wrapping papers.

About five million cords of this waste is available each year. The pulp and paper industry uses a little more than four million cords of pulp wood a year.

In attempting to provide a substitute for spruce as a pulp wood for the manufacture of "news-print" paper, the laboratory has performed one of its greatest labors. Its experiments in this line have been very extensive, both in the laboratory at Madison, which is equipped with a complete paper-making outfit, and also in the subsidiary laboratory at Wausau, Wisconsin, where it is possible to operate on a commercial scale. This branch laboratory was established in coöperation with the American Pulp and Paper Association.

Spruce has been practically the exclusive pulp wood, for the reason that its fiber is easily secured by grinding, which is altogether cheaper than the chemical method heretofore necessary to separate the fibers of other woods found in the spruce districts. In the earlier experiments it was found that the other woods came from the grinders in the form of wood flour instead of fiber and consequently had no strength when made into paper. On the other hand the added cost of chemical processes has shut these possible substitutes for spruce out of the race.

This has involved a rapid depletion of the spruce forests in the localities where the hundreds of pulp mills have been built. The imminent necessity of moving on to new spruce preserves has not been a pleasant thing for these millowners to consider; and less than a prophet's eye has been required to see the ultimate exhaustion of the spruce supply anywhere near the great centers of news-print paper consumption.

Patiently the laboratory experimented to the end of finding how to separate the fiber of the natural substitutes for spruce by mechanical means. Almost every conceivable form of grinder was used and operated at various speeds and temperatures. What were the results?

Better Methods Coming In

The laboratory has already found how to grind thirteen different woods that make excellent news-print paper and will soon announce several more as entirely available as substitutes for spruce. The woods thus made available for this purpose are far cheaper than spruce—some of them only half as expensive.

Paper from the approved varieties was manufactured in commercial quantities and shipped to daily newspapers in the East and in the Middle West.

Several editions of those newspapers were printed on this substitute stock and gave high satisfaction.

Many other lines of research are going forward at the laboratory that reach far into the future and involve problems immensely fascinating from a scientific viewpoint. The section of timber physics, for example, abounds in these basic investigations that are daily building up a vast and definite store of knowledge concerning the fundamental properties of commercial woods and their products. These results are not yet ready to be divulged.

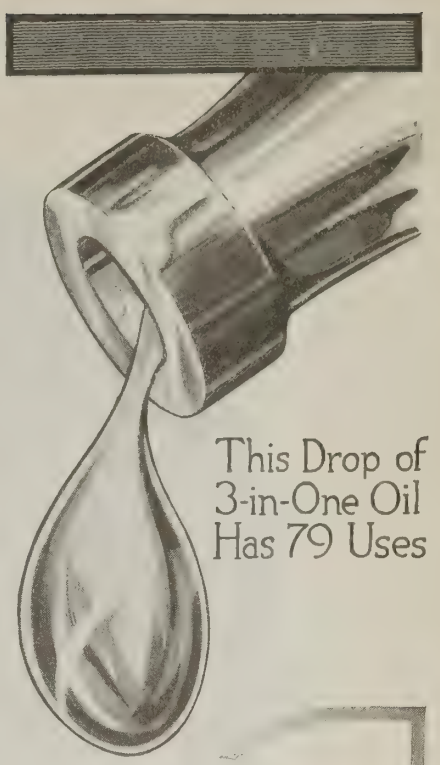
Meantime, however, Uncle Sam is drilling steadily along in his effort to inject By-Product into the lumber and timber industry, and pull the waste of the forest down from about seventy per cent to something within human reason. In tackling this task he recognizes the fact that this industry faces peculiar difficulties, so far as radical economies are concerned. In the words of a Forest Service expert:

"Before you denounce the lumberman as a wanton waster you should consider that his situation is in many respects peculiar. In what other industry, for example, is a man obliged to buy his total supply of raw material for about twenty years in advance? That is practically what he must do in this line in order to insure a paying basis of operation.

"You may show a lumberman that he could make good money by putting in a fifty-thousand-dollar distillation plant to secure by-products. He'll admit it and then explain:

"'I've been at this job for about fifteen years and have practically paid off my bonds and other debts. What comes in after this year will be my profit. I'm tired of debt—tired of this rough, hard, fighting line of work. I want to clean up and get out—and retire.'

"This is an economic situation that cannot be forced; but the splendid work of the laboratory is correcting it in scores of practical ways. Not many years will pass before the lumber business will find itself on an intelligent by-product basis."



This Drop of 3-in-One Oil Has 79 Uses

How Many Ways Do You Use 3-in-One?

Use 3-in-One Oil to *lubricate* all light mechanisms—typewriters, sewing machines, phonograph motors, cash registers, adding machines and other bank and office mechanisms, guns, fishing reels, automatic tools, magnetos, Ford Commutators, bicycles, cream separators. Use

3-in-One Oil

to *clean and polish* all veneered and varnished surfaces—pianos, phonographs, fine furniture, office desks and filing cabinets, hardwood floors, automobile bodies, golf clubs. Use it to polish mirrors, cut glass, automobile windshields. Use it to make dustless dust cloths and polish mops—very economical.

Use 3-in-One to *prevent rust and tarnish* from forming on all metal surfaces—bathroom fixtures, stoves and ranges, metal parts of automobiles. Use it to *stop the squeaking* of automobile springs, door hinges, locks and bolts. Use it on razors, safety and old-style—makes shaving quicker and easier.

3-in-One is sold at all stores—in the Handy Oil Can, 25c, and in 10c, 25c and 50c bottles. *Use it!*

FREE

Liberal sample of 3-in-One Oil and Dictionary of Uses—both sent *free*. Write us a postal.

$100 More April First

Another $100 will be added to the price of Cole Eight Touring Cars and Roadsters April first.

The sales of these two models have increased so greatly in spite of a similar advance in price which became effective January first that we are already forced to put into their production materials which we did not think we would be called upon to use until July first.

And these new materials we have been obliged to buy at the present higher prices.

Consequently, we are forced to increase the prices of our Touring Cars and Roadsters ninety days ahead of the date originally set.

Our contemplated production of 10,000 Cole Eights for 1917 will not be disturbed however.

Cars purchased prior to April first may be had at the present price of $1695.

If our dealer in your locality can supply you, you can save $100 by buying before April first.

FINANCING WAR

(Concluded from Page 28)

the war has been estimated at more than five hundred million dollars—or, say, one hundred million dollars more than the total face value of the currency issued.

But inflated currency prices inflicted a greater loss upon the public at large. A congressional investigation resulted in the conclusion that while commodity prices, from 1860 to 1865, rose one hundred and sixteen per cent, money wages rose on the average only forty-three per cent. In other words, wages, as measured in purchasing power, very decidedly declined and a heavy loss fell upon those least able to bear it.

Greenbacks, of course, went only a little way in financing the war. Secretary Chase persisted in trying to sell bonds at par, and, on the whole, with rather poor success. Early in 1863 the general situation, military and financial, having taken on a somewhat more promising aspect, a new and very picturesque method of selling bonds was adopted. The Government employed Jay Cooke, an experienced Philadelphia banker, as its general agent for the sale of bonds, paying him a commission of one-half of one per cent on the first ten millions and three-eighths of one per cent thereafter.

Cooke then organized a popular bond-selling campaign, very much like that followed by popular-book subscription houses. He got out attractive pamphlets to advertise the merits of government bonds as investments and to urge the patriotic duty of subscribing for them. He employed twenty-five hundred agents, covering every part of the country; and in many cases these agents went from door to door, after the manner of book agents. As a result of this vigorous campaign, nearly four hundred million six per cent government bonds were sold by the end of the year.

But Jay Cooke was also a big banker, and Congress got full of suspicion. Patriots urged that this method of selling bonds gave opportunity for speculators and bank syndicates to operate nefariously. Secretary Chase, therefore, abandoned it. Yet it had proved so effective, as compared with all other methods then employed, that when he resigned—in June, 1864—his successor promptly returned to it. Of course the outlook then was brighter, and by the end of the following year Cooke and his assistant peddlers had disposed of eight hundred million dollars of government bonds.

Meantime the National Bank Act had come into effect. The act was passed in 1863, but in faulty form, and comparatively little progress was made until its amendment in June, 1864. The idea was to supplant state bank circulation by the circulating notes of national banks, which should be secured by government bonds. This would require the new banks to purchase government bonds and so broaden the market for those securities. The national banks, however, had comparatively little direct effect upon the bond market during the war, because an important part of the number chartered up to the surrender at Appomattox had been in existence as state banks, and already held large amounts of government bonds.

In 1860 the population of the Northern States was little over twenty millions, and their wealth was estimated by the Census Bureau at eleven billion dollars. Their total income has been calculated at about three billion dollars a year. Roughly, this is one-fifth of the present population of the continental United States, one-eighteenth of the wealth and, say, one-thirteenth of the income.

In four years these Northern Stat spent some three billion dollars for w two billion six hundred millions of it rep senting an increase of the national del Their net borrowings averaged about hundred and fifty million dollars a ye An important part of the borrowing—l legal-tender notes—was wastefully don That the United States could now borr yearly ten times as much seems high probable.

The big belligerents in this war ha issued an enormous amount of paper cu rency. The Bank of France, at the begi ning of February, 1917, had outstandi three and a half billion dollars of circulati notes, and the German Reichsbank near two billion dollars—taking the franc an the mark at the normal rate of exchang But these are bank notes, resting upo securities, commercial paper and gold. Th Bank of France at the same date held ov a billion dollars of gold, equal to abou thirty per cent of its note circulation, an the Reichsbank six hundred and thirt millions of gold, equal to about a third of i note circulation.

Of course the banks are by no means i an ideal position, but there is a great diffe ence between bank notes of this sort an notes that a government issues on its genera credit for the purpose of paying its debts.

Circulation of the Bank of England ha increased comparatively little, being abou fifty million dollars greater in February 1917, than three years before.

Soon after the beginning of the war th British Government issued legal-tende "currency notes," primarily to meet th banking crisis mentioned above. Thes notes are like the "emergency currency provided for by our Aldrich-Vreelan Law, which our banks resorted to at th same time. They were issued throug the Bank of England, which lent them t other banks against pledges of equa amounts of commercial paper or govern ment securities.

At the last statement six hundred an eighty million dollars of these "currenc notes" were outstanding against which ther was a gold reserve of a hundred and fort million dollars, or slightly over twenty pe cent. These notes are essentially bank note as distinguished from fiat money.

Fortunately the United States now ha a banking system that makes unnecessar any such resort to emergency makeshifts i a panic. The fact that it has such a syste would undoubtedly be a big element o strength in an emergency, for it would in spire confidence.

What confidence means to the bankin and currency situation has been illustrate in this European war. Instead of hoardin gold, the people of Germany, France an England have brought it to the banks, ex changing it for paper money; so that, eve in Germany, cut off from all import the gold reserve of the Central Bank in creased two hundred million dollars in th first seven months of war, aside from th fifty millions which the government con tributed from its celebrated "war chest" at Spandau Castle, where it had been lyin since it was taken from the French indem nity in 1871.

This country's gold stock now amount to two and three-quarter billion dollars which is much more than the stock o England, France and Germany combined Financially the country is as prepared fo war as a country well could be.

COLONEL, when a pie is "like Mother used to make", thar ain't much room for argument. When tobacco is like Mother Nature makes, the debate's just about closed.

Velvet Joe

Velvet Is Bound To Be Mild and Mellow

VELVET is *naturally* mild tobacco—Kentucky's best Burley.

VELVET is made of the choicest and ripest selected leaf.

VELVET is mellow—with real aged-in-the-wood mellowness which only long *natural* ageing in the original wooden hogsheads can bring forth.

VELVET is truly Nature's own pipe tobacco.

Prove this for yourself today!

THE DUB

(Continued from Page 18)

whisky and surrendered himself to emotions of revenge. He had primitive impulses and looked fondly at the old-fashioned revolver that hung over the bar. One day he took it down and cleaned it thoroughly. . . .

Life in the Sentinel office proceeded at its newly accelerated pace. Only Miss Lucy seemed to have escaped the fever of revolt.

She continued to dust her shelf of dilapidated volumes with mechanical thoroughness. But her enthusiasms apparently had gone out of her. There was an untraceable rumor that she was growing old.

Miss Allison, on the contrary, had never been so gloriously youthful. There was no gainsaying her enthusiasms. She wrote one inspirational essay after another, smiled dazzlingly upon the staff, and—walked home with Sandringham Wilson.

He could not explain it. He did not mean to walk home with Miss Allison, at least with such regularity. But the matter apparently had been taken out of his hands. He seemed to be at the mercy of some higher force, an invisible and wholly mysterious force that in some way derived its powers from Miss Allison's attitude. This attitude, so far as it could be defined, was one of protracted expectancy.

The city editor observed these matters with a wondering eye and made pointed comment to his chief:

"The poor dub! He could marry the whole property to-morrow—and he doesn't know it!"

The managing editor said only:

"His work is falling off. He hasn't discovered a new animal for weeks."

And then the inevitable happened.

One afternoon, about three o'clock, there drew up in front of the Sentinel office a closed cab, from which a man emerged. He was a large man with intermittent jewelry and a highly decorative goatee. He wore a sketchy black felt hat and a light-tan overcoat that bulged in the region of the breast pocket.

Crossing the sidewalk he began to mount the stairs to the Sentinel office, his progress being marked by an extraordinary eccentricity of movement. He would go up two steps and fall back one. He would look reproachfully at his legs. He would launch a new assault against the stairs. Finally, by clinging to the handrail and counting "one, two, one, two!" he contrived to reach the top.

A door confronted him. He kicked it open. A negro boy, asleep in a chair, met his roving and slightly bloodshot eye. He drew an enormous revolver from the pocket of his overcoat and prodded the boy awake.

"Mr. John Triggs," said he, "calling on the editor."

The negro boy became imbued with astonishing activity. He rose from his chair like a flushed grouse, and uttering excruciating noises soared into the city-room's ken. The next moment the orderly confusion of the Sentinel office was transformed into a scene of spontaneous panic, largely dominated by a picturesque gentleman waving a huge revolver.

Then the door of the editorial department burst open and Mr. Lance Podderfoot appeared with a distraught countenance, his fountain pen still clutched in his hand and his eyeglasses askew upon his nose. As though by some prearranged signal, quiet fell upon the room. Only the telegraph instruments chattered on, like gossip at the grave.

Mr. Triggs slowly raised his weapon and pointed it at Mr. Podderfoot.

"I have come, suh," he said in a voice of studied politeness, "to shoot you. Provided, suh, that you are the editor."

Mr. Podderfoot's thin figure straightened. An expression of incredulous horror overspread his scholarly features. But unconsciously his head came up. He was no coward. Behind him Miss Lucy half rose from her chair, her hands clenched against her breast. At that point a diversion occurred. Miss Allison began to have hysterics. It was as though she had never been to college at all.

Mr. Triggs frowned and made supposedly soothing gestures with his artillery. Miss Allison had hysterics worse than ever. And then the staff became aware of Sandringham Wilson strolling out of his corner, his hands in his pockets, a trustful smile quirking his lips. He walked straight toward the visitor, who turned, in some bewilderment, to face this new complication. Perceiving that he had secured Mr. Triggs' attention, Sandringham Wilson stopped and moved his fascinating ears.

"Shoot me," he said. "I'm the editor!"

"Ha!" said Mr. Triggs, and pulled the trigger.

There was a flash, a roar, and a swirling cloud of smoke! The next instant Mr. Triggs was struggling in the combined embraces of half a dozen persons who had charged at the shot. Mr. Podderfoot himself rushed forward and wrenched the revolver from the gambler's hand. Mr. Podderfoot's negro boy stood about and shrieked.

Then suddenly the whole mad picture became focused upon the figure of Sandringham Wilson. He stood, faintly smiling, his left arm hanging limply at his side, and looked at the maudlin Mr. Triggs.

"Very — interesting — old — goat!" he said, and slipped quietly to the floor.

Miss Allison gave a cry and moved forward; but she was too late. Without a sound, Miss Lucy crossed the room and, flinging herself to her knees, took the fallen man's head in her arms.

"Mine!" she said.

Mrs. Tuthill's boarding house had taken on a new air of importance, a new dignity of demeanor. Pedestrians passing in the street stopped to gaze up at it with gaping curiosity; small boys gathered in throngs before its weather-beaten stoop, to rehearse, in imaginative pantomime, the drama that had distinguished it from other houses. It was many a long year since Kingstown had had such an eminent shooting.

There was, moreover, an element of the miraculous in the fact that John Triggs' bullet had gone slightly astray. Never before had the gambler been known to miss his mark. This enigma was explained eventually by Mr. Triggs himself, who spoke from the confines of the local jail.

"It was his ears," said Mr. Triggs. "He waved 'em at me! Spoilt my aim!"

Meanwhile Sandringham Wilson lay in Mrs. Tuthill's second-floor-front room with an impressively bandaged shoulder and enjoyed to the full his measure of publicity. He had always rather wanted to be a hero.

There were innumerable visitors. Colonel Allison called in person and thanked him for saving Miss Allison's life. It was generally understood that Sandringham Wilson had saved Miss Allison's life. Why else should he have taken upon himself the wrath of Mr. Triggs? Why else should he have invited the leaden messenger of death?

This romantic hypothesis was strengthened by the attitude of Miss Allison herself. She came bearing fruit and flowers, regardless of convention, regardless of the gossips' tongues, determined to ease a hero's bed of pain. Her desire to uplift humanity had been superseded by a thoroughly feminine yearning to do things to a sick man's pillows.

Yet despite these ministrations, despite even his aura of publicity, Sandringham Wilson was not happy. His wounded shoulder was nothing. He could forget it for hours at a time. But he could not forget Miss Lucy's cruelty—she had not come once to see him; she had not so much as thrust her head in at his door.

It was the evening of the third day of his convalescence. The room was dim with twilight. He dozed off and dreamed of Miss Allison's face, lifted with serene expectancy through an eternity of rose-scented misunderstandings. He sat up with a jerk, and moved by an impulse of unreasoning panic reached for the large dinner-bell that Mrs. Tuthill had placed at his bedside. This he rang vigorously.

Mrs. Tuthill came at last, stout and puffing, one large plump hand pressed to her ample bosom.

"Is Miss Lucy in?" he asked with the simplicity that was his nature.

"Upstairs," said Mrs. Tuthill briefly.

"I want to see her," said Sandringham Wilson, looking hard at the ceiling. "I want to talk to her. Ask her to come down, Mrs. Tuthill."

"Certainly," said Mrs. Tuthill. "Anything within reason."

She disappeared, gathering her breath for the ascent. There were ambiguous

(Concluded on Page 93)

JOHNS-MANVILLE

Service in Fire Prevention

FROM the sidewalk, most towns look satisfyingly safe. On every hand we see evidences of it, in regulated traffic, police on duty, adequate street lighting, fire hydrants and fire stations that house modern extinguishing apparatus.

But a balloon view of that town might look different—less safe. And this is the point of vision that fire takes when it looks over a town and figures out a raid. Fire sees the town above the cornice line and plots its course from one inflammable roof to the other.

So it is the community's roof that determines its safety from fire and it is largely the individual's choice of a roofing that determines the fate of his property in a community fire.

All over the country people are using J-M Asbestos in Roofing form. As individuals they realize the danger of the community fire—that every house is a menace to every other house.

Selfishly, if you please, they cover their own roof with J-M Asbestos, but collectively and in effect they do so for the common good—for public safety. There is a Johns-Manville Asbestos Roofing for every type of building as the list below will show:

For flat roofs, J-M Asbestos Built-Up Roofing; for sloping roofs, J-M Flexstone Asbestos Roofing; for skeleton framing, J-M Corrugated Asbestos Roofing; for homes, J-M Transite Asbestos Shingles.

J-M Asbestos Roofings are examined, approved and labeled by the Underwriters' Laboratories, Inc., under the direction of the National Board of Fire Underwriters

JOHNS-MANVILLE SERVICE COVERS THE CONTINENT

One Smith Form-a-Truck every four minutes

Deliveries Guaranteed—Any Quantity—On Time—To Meet Your Requirements

Smith Form-a-Truck production is now at the rate of one every four minutes, made necessary by an unprecedented demand—the result of the faithful fulfilling of every promise. 13,500 Smith Form-a-Trucks are already in service, individual purchases ranging from one attachment to several hundred on a single order.

Every Promise Kept

Careful buyers are choosing Smith Form-a-Trucks on past record of every promise kept—every claim lived up to—prompt deliveries—highly satisfactory service—remarkable efficiency results. This is your basis for selection, proved by the experience of thousands of users.

New Hauling Economy Established

$8 in repairs in three years of service—22,000 miles of operation—average load of 2050 pounds is record of first Smith Form-a-Truck sold. 8c per ton mile, exclusive of driver's wages, is average hauling cost. 13,500 now in use. Twice the load hauled by horses over three times the area is the new efficiency standard.

In Use Everywhere

Smith Form-a-Truck has demonstrated itself adaptable to every line of hauling and delivery.

Choose Your Own Power Plant

From an attachment to be used with Ford cars alone, Smith Form-a-Truck has been developed until now it is readily installed on Maxwell, Dodge Bros., Buick, Chevrolet or Overland cars.

Choose your own power plant. Convert it into a fully guaranteed, permanently constructed one-ton truck in a few hours.

Select your loading platform—9 feet to 12 feet.

Trained Efficiency Experts

Our trained efficiency experts are ready to analyze your hauling and delivery problems—to show you just how many Smith Form-a-Trucks you need to displace your present hauling or delivery equipment—how much money you can save—how you can increase your delivery efficiency and economy. Our dealer organization covers the entire country.

We Have the Materials

Materials for over 30,000 Smith Form-a-Trucks are in our warehouse, ready to be made into one Smith Form-a-Truck every four minutes. Future demands have been anticipated a year in advance. We stand alone in the motor truck industry in having material on hand for this enormous production.

We Have the Factory

Ranking among the largest manufacturers in the motor truck industry, we have the financial strength to maintain our production schedule—to maintain the quality standards that have made Smith Form-a-Truck reputation enviable—to enable us to secure materials fully a year in advance—to take care of any future increase in demands.

Name Your Delivery Date

We can meet every delivery requirement—every order, large or small—deliver Smith Form-a-Trucks on the date you specify. There can be no delay—no hold up. What we have already done for users almost staggers belief; what we are prepared to do now will dim even past performance.

A Real Truck Construction—Built for Truck Service—Thoroughly Proved

Smith Form-a-Truck utilizes proved power plants to do truck service. All the load is carried on the Smith Form-a-Truck. The completed construction is covered by the same guarantee that covers any motor truck you can buy. It is not a converted pleasure car. It is a real engineering development to meet motor truck requirements. And you get the low price made possible by the enormous production of the power plants you use and of the Smith Form-a-Truck itself. You cannot buy motors more adapted to truck service than those you use with Smith Form-a-Truck. You cannot duplicate the service value of Smith Form-a-Truck combined with these power plants in any truck construction at anywhere near the price.

sounds overhead. Sandringham Wilson lay frowning upon his pillows. Occasionally he glanced at the clock on the table beside him. It was almost time for Miss Allison to come with her frank smile and her succoring grapefruits.

He turned suddenly and saw Miss Lucy standing in the doorway.

"Ah!" said he.

At the sound of his voice she came forward swiftly—and then checked herself—and then came forward again.

"Well?" she asked, striving to speak naturally. "Well?"

"I wanted you," he said. "I wanted you most damnably."

She sank down abruptly into a chair.

"I didn't know," she faltered. "You see, I thought . . . there were so many others ——"

"There is only one," said Sandringham Wilson.

Her face became very white in the shadow.

"Yes," she whispered, "only one. There is never more than that. Of course I have understood ——"

He made a gesture of protest, but she went on blindly:

"I have understood for a long time. And when it happened, I knew that you had realized how much you cared. . . . Men do not offer their lives—like that—unless they care."

"Unless they care," echoed Sandringham Wilson.

His hand fell upon hers. "Dear Miss Lucy!" he said.

At that moment footsteps sounded in the hall belowstairs; then came a voice, obviously in response to Mrs. Tuthill's greeting. It was a firm, modern voice; a voice suggestive of world uplift and grapefruits—especially of grapefruits.

Miss Lucy sprang to her feet with a little startled "Oh!" But Sandringham Wilson clung to her desperately.

"Wait!" he cried. "You mustn't go! I've been having dreams . . . grapefruit! Ugh! I did it for you, I tell you. For you. He was aiming straight at you—through Podderfoot. And Podderfoot is so thin! So dangerously thin! He has always reminded me of a stork. You would have been killed. I did it because I cared—for you. No one else. No one else ever—dear Miss Lucy!"

She looked at him through the bright chaos of a universe gone mad. There was tumult in her brain, and a mighty crashing of dark castles before her eyes. Then everything became as clear as crystal, and clean, and right, and good. She knelt down beside the bed, and put her arms about him, and cried very happily, not caring who should see.

And Miss Allison stood in the doorway, with her bag of grapefruits, and resolved to abandon humanity forever to its own devices. Six months later she amended that resolution in part. Which is to say that she married Mr. Podderfoot.

Public opinion is still divided upon the subject of Sandringham Wilson's abilities. His wife, whom he will always call Miss Lucy, considers him a genius. The managing editor of the Sentinel, viewing the paper's increased circulation, is inclined to agree with her. The city editor, on the other hand, has come definitely to the conclusion that the gentleman in question is a dub.

Sandringham Wilson himself is unaware of these divergencies of view. He is completely, preposterously happy. He goes about peering into the souls of his fellow men and drawing animals for the Sentinel.

It is entirely relevant to our story that we should quote a brief poem that he did toward the latter part of his first married year. It ran as follows:

There is a little Pink Frog in my bedroom.
It hopped in the other day from the great
  Swamp behind the Stars
And looked at me with its wise blue eyes—
It has miraculous noises in its throat,
And hands so small it seems ridiculous to
  trust one's heart to them.
I have closed the window of my room
And put a guard upon the door—
For I do not want my little Frog to hop
  away again.

BRINGING OUT BARBARA

(Continued from Page 23)

"No—he never promised to begin carrying out his orders here; but, of course, everybody assumed he would. No manners! . . . Doesn't know how things are done. . . . Hasn't any breeding. . . . The orders will stand, but this thing will kill him socially, of course!"

At the risk of mother's displeasure I made my escape while yet no cocktails were in sight. I had no defense of Randall to make. He had been frightfully rude to me. He must have heard further rumors regarding my relations with Allan. And he had cared rather magnificently—enough to get himself in bad with the high-muck-a-mucks who could have made him. I could not be very angry with him. He was free to get out. I, alas! was bound—by my promise, by my pledge—to "see the thing through."

The walls closed in on me that night, shutting the vistas out. How silly I had been to imagine that I could have my cake and eat it too—play both ends against the middle! Life was not like that. You had to stand for one thing or another. Out on the links that day, looking into Allan's eyes, I had renounced my rebellion—decided to accept present conditions. That, not this, was my true moment of choice. From that moment on I threw my hands up and drifted with the tide. The die was cast.

In the mornings the sea was so blue and it was such fun to have a merman to swim with, and in the afternoons the golf course was so green and it was so stimulating to have a partner to play with, that I swept all the disturbing thoughts into the back of my mind, where they lay in a disordered heap, inviting dust. There was no doubt that having two grown-up men show interest in me had gone to my head a little. None of the other girls of seventeen had anybody so old to bother about.

My nerves were keyed too high. By September I started at every sound. If a door slammed it seemed to slam in the top of my head; the slightest stimulus was sufficient to set in motion the vibrations of my emotional reaction. One night I caught a look in Allan's eyes—those eyes so supremely blue, so heavily fringed; and his hand pressed mine. He whispered the three fateful words, and our lips met. . . . Nothing else was possible; for I was in love with him—madly in love!

Straight from his arms I went to mother, unafraid to break in on her privacy, bold with the boldness of a messenger who brings welcome tidings, to be delivered anywhere, anyhow—even, like this, in the middle of the night.

She was in bed, with her hair strewed all about the pillow. By the shaded bedside light she looked very beautiful, yielding and young. Eager and smiling, I approached and took the hand that lay, slender and very white, against the soft whiteness of the blanket.

"Oh, mother!" I whispered. "It's come!"

I expected she would understand at once; so I was surprised when she returned blankly:

"What do you mean? What has come?"

Embarrassed, but still confident, I let her hand fall and returned shyly:

"Can't you guess? I'm engaged!"

At that she gathered herself up in bed as an animal gathers itself for a spring, and I stepped back in terror.

"What are you talking about?" she demanded in a voice that cut like the lash of a whip.

Only one thing could account for it; she suspected that John Randall was the man. Her tone, her manner, hurt just as much as though he had been.

How could any older woman make any young girl shrink and quiver away from her like that?

I wanted to gather this big thing that had happened to me to my breast and run away with it; but it was too late.

"It's not the man you think," I said painfully. "It's—Allan Denning."

To my amazement, the name did not placate her.

"Nonsense!" she retorted sharply. "I never heard of such nonsense in my life!"

I could not believe my ears.

"I thought you'd be pleased," I said. "I thought you were crazy about him! You've always thrown him in my way."

"To give you social confidence!" she cried. "To bring you to people's attention!

How We "Salt to Taste" With Accuracy

WHEN we first began making Beech-Nut Peanut Butter, we used to season it by hand. But we soon learned, as all cooks learn, that hand seasoning is not always uniform. Hand seasoning would not keep Beech-Nut Peanut Butter up to the Beech-Nut standard of excellence.

Therefore we devised an ingenious machine to crush the nuts and salt them at the same time. This machine does the seasoning with the brains of a chef but with unfailing mechanical *accuracy*. You, yourself, know that you have never tasted any Beech-Nut Peanut Butter that was not salted *just right*.

In Beech-Nut Peanut Butter, we use only No. 1 quality peanuts—the choicest grown. We take the two varieties—rich Spanish and highly flavored Virginia peanuts. These we *blend*, just as the best coffees are blended.

Then the nuts are roasted under a steady North light to make sure of the exact brown color which indicates the proper degree of roasting.

By special processes we remove all grit, skins, and the bitter little hearts. Beech-Nut Peanut Butter contains *absolutely no grit*.

The crushing and salting machines feed the butter in steady streams into glass jars, filling them *from the bottom upward*. This excludes air.

The last process—vacuum-sealing—keeps Beech-Nut Peanut Butter always sweet. It is never rancid.

Is it any wonder that Beech-Nut Peanut Butter is so smooth and full-flavored? Or that children like it spread on bread or crackers—just as well as they like candy?

And mothers should know this, too: that a Beech-Nut Peanut Butter sandwich is highly nutritious. It gives a child the same amount of *Strength*, *Heat* and *Energy* as a glass of full cream milk.

Have Beech-Nut Peanut Butter on your table at every meal—grown-ups and youngsters both love it. Serve at your card parties and teas. Order a jar today.

HOW ARE *YOU* USING PEANUT BUTTER?

Housewives everywhere, we find, are on the lookout for tempting new uses for peanut butter. We wish to tell them of all the new uses we learn of. Cooks are now using Beech-Nut Peanut Butter in fillings for cakes, in muffins, soups, stuffed dates, fudge, etc.

Have *you* any new peanut butter recipes? If so, we will gladly pay you for any that are original and thoroughly practical. Write us.

BEECH-NUT PACKING COMPANY, CANAJOHARIE, N. Y.

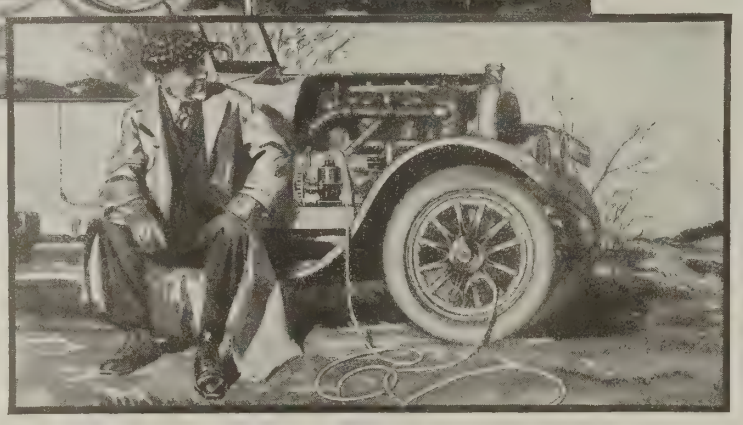
Beech-Nut Peanut Butter

Pumping the old way—hard dirty work



With a Cassco Tire Pump your engine does the work

No More Back-Breaking Work

Your Engine Does Your Pumping

Ever get out into the boiling sun or pouring rain to pump up your tires with a hand-pump? You have to take off your coat and labor like a slave for ten or fifteen minutes. That ruins your clothes and your temper.

It's not efficient either. You cut the job as short as possible, and so your tires are not properly inflated. Tire manufacturers state that tires will give 25%, 50% and even 100% more mileage if kept properly inflated; that short mileage due to underinflation costs you $30 or $40 a year.

You don't need to do back-breaking work with a hand-pump every time your tires need pumping. For little more than the cost of a hand-pump, for a small fraction of what underinflation costs you every year, you can buy a Cassco Engine-Driven Tire Pump.

Saves energy, time, tires

The Cassco Engine-Driven Tire Pump saves your energy, your time and your tires.

It pumps up your tires to standard pressure quicker and better than you can possibly pump them by hand—or with any other engine-driven tire pump. This means about 50% extra mileage.

99.2% factory built; not assembled

The Cassco Pump is *not assembled;* it is actually *built*. 99.2% of the pump is manufactured in the West Side Foundry Co. shops. We save more than 25% because we do not have to pay profits on various parts to several manufacturers. You get the benefit of these savings.

Designed by expert engineers

The Cassco Pump was designed by expert engineers. Simple and scientific in design. Takes up little space. Easy to install. Always ready for service. With one easy motion of your hand you can mesh or unmesh the gears. Never out of order.

Dry air; no oil spray

The air from the Cassco Pump is dry and clean. The new Cassco design of piston and cylinder prevents oil spray. Oil ruins tires.

The Cassco Pump will inflate a 34x4 tire to 80 lbs. pressure in 1½ minutes. Smaller tires take proportionately less time.

In ordering specify make, year and model of your car.

Put a Cassco Pump on *your* car today.

ENGINE DRIVEN

That was what he was for! To insure you a start!"

Something turned to iron inside me at these words. I no longer shrank; I had lost all sensation of timidity.

"You expected me to work him for all he was worth—to squeeze him dry, and then to throw him over!" I summed up. "I see!"

"You won't gain anything," she warned, "by distorting my words. I didn't say anything about working or squeezing. Those graphic expressions are your own. Allan Denning has done just exactly what he wanted to do. And in the end he's amused himself by flirting with you a little. If you make anything more of it than that," she concluded disparagingly, "it's because you know nothing whatever about life; you, a mere schoolgirl—a baby."

"I'm not so much of a baby," I replied slowly, "as you think. And I know a good deal more about life—than I did. If you imagine that you can start things going and then—then—make them stop—by just putting up your hand, like a policeman regulating traffic—why, then, it seems to me it's you who don't know about life—that's all!"

From the silence which followed I saw that my words had begun to carry conviction.

"How far," she asked at length in great agitation, "has this actually gone?"

"I've just told you," I answered. "We're engaged. He's going to speak to father tomorrow."

Her indignation found a new channel.

"We'll see about that!" she declared ominously. "I can't believe it of him! To play upon a young girl's ignorance! To impose upon her lack of knowledge of the world!"

I smiled bitterly.

I had heard such words before. First it had been John Randall and now it was Allan Denning who was imposing upon my inexperience.

"You wouldn't let me have the man I wanted," I cried; "and when I take the one you substitute you're not satisfied, either! You'll never be satisfied, no matter what I do!"

"Now, Barbara," she almost begged, "be reasonable! It never occurred to me that you wouldn't know that Allan Denning is no match for you. He's good-looking and well connected and convenient to have about, and all that; but he hasn't got a cent. And as for marrying him —— Why child, you haven't even begun to look round! Wait till after next winter. What sort of time do you think any girl who was engaged would have when she came out?"

"I needn't come out—now," I suggested, though I recognized the futility of the suggestion.

Mother's face turned to adamant and her eyes to steel.

"Whatever happens," she announced, "you are coming out!"

She said it as though she were registering a vow before heaven.

For her manner of receiving the news of my engagement I had been totally unprepared. I had run to her with it, expecting to be praised—and had been incontinently rebuffed. I was less upset on my own account than on Allan's. How would he take her unflattering estimate of him as a parti? Hard, I was sure. In counseling me to acquiesce in her program for the coming months he had obviously not realized, any more than I, that his name was not to appear upon it. Perhaps he would not feel so convinced now of the advisability of being a sport, playing the game, seeing the thing through.

What was my astonishment, not to say chagrin, when he took my information quite easily, and was all for compromise! You had to be tactful with women like my mother, he said confidentially. They must always be made to think that they were getting their own way, whether they actually were or not. Nothing was to be gained by antagonizing them.

The following was the policy he outlined in council before the concert of Powers: Not a word concerning what had occurred between us was to be breathed until after the close of the New York season. Only we four were to know of it. If at the beginning of March next I should have changed my mind, I was to call the whole thing off. Thus mother's arrangements for the winter would not be in any way jeopardized. To all intents and for all social purposes I was free.

Mother and father expressed themselves as satisfied and took my silence for consent.

As a matter of fact, I scorned trial engagement as I would have scorned trial marriage. Like every other girl of seventeen, I was firmly convinced that I knew my own mind and would never change it. My word was my word—not a mere near-promise, subject to the statute of limitations. The more they said that I was not bound, the more securely bound I felt.

I justified Allan's willingness to make concessions to mother upon the ground of his faith in me. In staking his life's happiness upon his belief in my fidelity, he was paying me the highest tribute in his power. Still, I felt that an open rupture with my parents would have been the more honorable course to pursue. Never before had there been the smallest reservation on my part in my relations with mother. I had argued with her, burst into tears, shown temper, done all sorts of exuberant and childish things; but I had never for one moment allowed her to remain in any doubt as to what I meant. I had carefully refrained from being tactful with her.

Now I was letting her infer one thing while I intended another. Curiously it was a man who had urged upon me this method of dealing with her. And I had always been led to suppose that a man's sense of honor had a finer edge than a girl's!

Of course I had no business to fall under this or any influence that was at odds with that something inside which had always kept me straight. This was what I had got by drifting. I had drifted so far and so fast that I could not make up my mind to turn about and put up a fight. The alternative was just to keep on going wherever the wind and the tide chose to take me.

The weather was so mild that it was October before we returned to Long Island. Once arrived there, we spent our days in the city as before, going back to the country only to dine and to sleep. In preparation for what was to come my wardrobe was being amassed. Mother concentrated upon this task enough energy to have run a dozen Bureaus of Serbian Relief. If I was expected to attend all the types of function for which garments were being provided I thought I should be a rag before the end of the first six weeks.

She didn't buy me a variety of dresses, hats and coats, and let it go at that. No; every costume was an equipment by itself, a symphony of nuance—a tone poem. Each afternoon gown, for example, had its accessories of hat, veil, gloves, coat, fur neckpiece and muff, shoes and stockings. Even gloves were not interchangeable. Attention to these details consumed an exorbitant amount of time. I remember we went into nine shops one day before we found enameled hatpins of the exact shade of mauve to harmonize with a certain hat.

There seemed to be no end to what mother could do when she was doing what she wanted. The vitiated air of the shops stimulated her. If at first she didn't succeed she asked nothing better than to try, try again. Yet there were things that tired her. If she walked for half an hour along a country road she became so exhausted that she had to lie down. When her secretary was ill one day, and she was obliged to write her own notes, she could not eat any lunch. Loud or abrupt talking was painful to her—for instance, mine. When I laughed "right out" I often saw a little frown come between her brows, as though I had given her a headache.

Many of her friends shared these idiosyncrasies. There was Mrs. Fiske Wyman, for one, a "confirmed" invalid; yet she had just risen from an almost permanent bed of pain, with an alacrity hardly decent, to go yachting in the Bahamas; while Miss Julia Endeman, who had weighed two hundred undismayed and had never exercised in her life, had recently rolled her hips away by turning over and over fifty times each morning on her bedroom floor, and "gone in" for golf.

Everybody was planning to skate this winter on the Radmore roof—even those whom the blackest ice had not tempted in youth, the natural skating time. Wabbly legs could be strengthened by practice, weak ankles propped; and she who was unable to attain balance by herself might always hire somebody to hold her up. From the dictates of fashion no infirmity excused. Fashion made its puppets dance to any tune. During that autumn, in and out of shops, I estimated that we must have walked a hundred miles. We never left off until the wax ladies in the windows were being covered with sheets and the blinds drawn down.

THE WONDER POWER OF THE WORLD

Electricity! It is *the power* of powers. The mighty super-dreadnaught that commands the sea, the trans-continental train that wings you from coast to coast, the elevator that whisks you twenty stories high in the drawing of a breath, after experimenting with many powers have found in *Electricity* the perfect power.

This is the power that makes possible the modern Detroit Electric. So safe and so simple a car to drive that your wife or daughter feels no uncertainty even in thickest traffic. So powerful a car that it mounts steepest hills, and pulls thru heaviest going without apparent labor or strain. So economical a car that costs of operation become nearly negligible when compared to those of a car of any other type.

So dependable a car that it is at your service every minute, every hour, every day. And so capable a car that a single charge carries you 80 to 90 miles. Owners report cost of current for charging averages only $5 to $7 per month of use. Prices, $1775 to $2375, f. o. b. Detroit.

You Should See This Famous Home Furnishing Book

Here's a book said by thousands of home owners to be the most remarkable work of its kind in print—a book that has brought comfort, completion, refined atmosphere, to homes without number—a book whose single mission is to prove to admirers of the beautiful and artistic in furniture that their dreams of harmony, and good taste can at last be realized. Thousands of homes have been comfortably and *most economically* furnished from this great book, now easily seen at the store of *your local dealer selling*

Peck & Hills

Furniture and Home Furnishings

Highest Award Panama-Pacific Exposition

In dependability, quality and artistic merit P. & H. Furniture meets the demands of the most critical. Yet due to our enormous output and economical distributing facilities, it is amazingly LOW PRICED. So, next time you buy home furnishings, visit your P. & H. dealer. He will show you what you want. You will save money on what you buy. But should he happen to be sold out, ask to be shown the big book! Here you will find illustrated—

A Million Dollar Assortment

—everything conceivable for the home—from the most trivial chair to the most impressive suite. Over $1,000,000 worth! And from this remarkable assortment you can make your selection, your dealer ordering and guaranteeing satisfaction.

Another Saving P. & H. Way

is to use the famous P. & H. Card of Introduction. Signed and given you by your dealer, this card admits you to our impressive Exhibition Rooms in the cities below, where you can see all that is illustrated in our catalog.

You may buy here if you wish, having your purchase charged to the dealer signing the card and paying him later on terms mutually agreed upon.

Get This Sample of P. & H. Furniture Polish

Used by us for 20 years. P. & H. Dependable Polish gives a smooth, clear, rich tone to all finishes and will not become sticky or cloudy after application. Different, and we believe superior, to all other polishes. A sample, enough to polish a table or dresser, sent on receipt of 4 cents in stamps for postage.

No extra expense—no red tape, delay, inconvenience. No credentials, other than the card. And satisfaction guaranteed. See the Big Book at your dealer's. Use the "Card of Introduction." But first, write us for our valuable BOOK explaining all.

(Continued from Page 94)

We spent and were spent. What for? That I, too, might be made into a waxen manikin, set in a window for one season for exhibition purposes, and then carried away to make room for fresh goods. There was a career for you!

I was becoming surfeited with clothes. Every girl loves clothes, but she does not love a superfluity of them. I had once eaten all the caramels I wanted, and for years thereafter had not been able to look at a caramel. As a child I had always approached the park by the Seventy-second Street entrance on my way to the Mall. Now I sedulously avoided that approach. Fifty-ninth Street was all right, or Eighty-fifth, or Ninetieth; but Seventy-second I was done with forever.

One disadvantage of owning a costume for each occasion was the anticipation it involved. It was bad enough to have to go to functions at all, without focusing one's attention upon them for hours beforehand. Oh, for my old rough serge, which had served me all day and every day at school for as many seasons as I could get wear out of it!

Sometimes I remembered, with a sense of loss, the things in my experience that had been uncomfortable. I had grumbled as loudly as anybody else, at the time, at having to pile out of bed half asleep on a dark winter morning to close my own windows and stand shivering on a chilly floor; but now I thought that I should have welcomed any hardness to relieve the eternal softness of my life! My bed was soft; my food was soft; the people about me spoke in soft voices; there was no edge to anything, no sparkle, no snap.

My engagement had been so qualified and bereft of the natural attributes of an engagement that it afforded me but little satisfaction. Allan lunched with us occasionally, and that was about all I saw of him. Things would be different in the spring, but I was not so old that spring did not seem to me a long way off. And there was much to come, between now and then.

In preparation for the great event, my coming-out ball on December twentieth, we closed the Long Island house much earlier than usual, and found ourselves just after Thanksgiving, as mother said, "alone" in New York; by which she did not mean, of course, that there was not the usual quota of people in the streets. I was satiated with that ball long before it occurred, for it was the only topic of conversation. I had always supposed living in the future to be a prerogative of youth; but no young person I had ever seen lived so much in the future as mother.

She took precautions against the possibility of everything's not being perfect in every detail by stocking up with commodities, as though the sources of supply were presently to be forever cut off. Even an awning was ordered to be specially made, instead of being hired from a caterer for the evening. She showed me samples of awning cloth and looked reproachful because I had no preference for green and white stripes over red and white, or vice versa. She got another French maid, to supplement Yvonne, so that the two might work in shifts like a night nurse and a day nurse in illness—one being always on hand. A second butler was likewise procured, that coattails, instead of mere livery, might still be in evidence before guests when the butler in chief was out or sleeping.

As it was assumed that, once launched upon my social career, I should keep to my bedroom until noon, yet another housemaid was added to the staff.

As a result of this forethought the servants now outnumbered the family in a ratio of five to one. I ran into them at every turn, stumbled upon them in every corner. It was like living at a fashionable hotel on the Normandy coast while waiting for the season to open—storm-lashed waves; empty casino; band playing to the echoes. Everything ready, and nothing doing. How could one settle down to normal accomplishment with this abnormal fever of anticipation permeating the atmosphere? If mother found me reading she would order me to close the book, for fear my eyelids should become reddened. Painting was out of the question, for painting took time, and I could never count on more than half an hour.

It wasn't an evening's pleasure that was being planned; it was the opening move in a systematic campaign. So far as I could make out, pleasure didn't enter into it. After the first of December mother's activities narrowed down to the desk in her sitting room, where she and a strange woman, who came every morning, pored all day long over sheaves of papers and marked off names in the various lists with little crosses. The strange woman seemed to know exactly who should be invited and who should not. They managed it all between them, without once consulting me. I suggested only one name, with much diffidence—John Randall's—which was received without comment and written down.

Time and much cogitation had brought me to the conclusion that Randall's sudden departure from Newport had been due wholly to delicacy. If he had retired in favor of another man it was because he had believed that I cared for that other. Once convinced of this, his sole consideration had been to remove the embarrassment of his presence as speedily as possible. The fact that in failing to seize his unprecedented opportunity he was jeopardizing his future of worldly success and running the risk of losing a score of orders was a matter of supreme indifference to him, if it occurred to him at all. Poor as dirt, he was, nevertheless, a royal spender. Honor to whom honor is due.

Unfortunately, instead of flashing me the true explanation at once, my woman's wit, or intuition, or whatever it is that constitutes our superiority to man, had been extremely slow upon this occasion in getting to work upon the situation. It had, in fact, remained in a state of suspension during some weeks. In the interim Allan Denning had obtained my promise. I was morally bound by it now, hard and fast, hand and foot. But to Randall's behavior I had at last found the key. Therefore, the invitation.

When we had first moved to the city Allan had begun again to present himself with frequency, but, upon a hint from the authorities, had obediently fallen off in attendance, and had since reappeared with the utmost circumspection only upon rare occasions. I sometimes wondered whether it was not a case of shutting the barn door after the horse had trotted forth. After all, we had afforded ample opportunity for comment that summer, having been almost never apart. Not everybody's sight was as peculiar as that of mother, who went through life believing that only such things existed as she wished to see.

John Randall, for example, had been "on" long before I was.

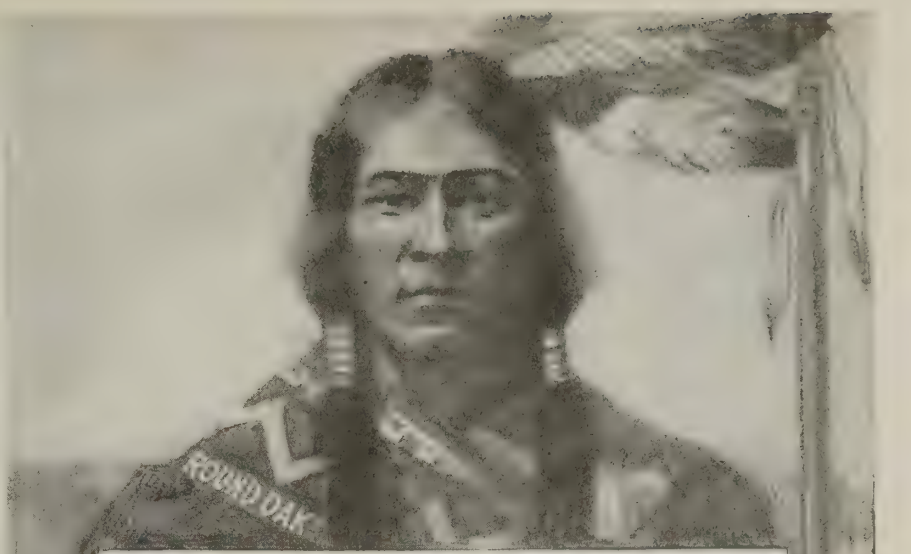
The approach of my eighteenth birthday, which filled me with a shy sense of mystery and wonder, was acclaimed by mother solely as affording a good excuse for a theater party. This occasion was to be a farewell to subdébutantism, consisting of girls only—thirty of them—and those younger ones who were not coming out this year. It was quite in order, mother explained to me, to invite girls of that age without boys. The most fashionable dancing class in the city—that which preceded the Cosmopolitan dances for girls not yet out—excluded the other sex, except for an evening dance at Christmas and an Easter *thé dansant*.

After much deliberation, ten names were selected from the list of this dancing class. Nine out of those bidden accepted, as the girls were only fifteen and had not many engagements as yet. Alas! The very one who declined was the one mother most wanted—the little Bolton girl.

The remaining twenty were asked from the year's Cosmopolitan list. The Cosmopolitan dances, colloquially known as the Mops, were the only official peepholes into the social arena. To be eligible a girl must be sixteen—and much besides. It was excessively easy for some girls to be invited to join and insuperably difficult for others. The dances were subscription affairs, but it was not only money that had to be subscribed. Those who failed to get on the list organized consolation dances of their own, with limited membership, and patronesses, and all the proper accessories, so that the newspaper accounts of them sounded just as good. A few of those who attended the Mops went to these also, if they were particularly enthusiastic about dancing.

Boarding school had deprived me of my three legitimate years of Mops. By means of them I should have gained experience. The next best thing, according to mother, was to tap them—to keep in touch with the members; so that when my sun should be setting, a year from now, I might still have points of contact with those whose luminary was drawing toward its zenith.

The party, when it occurred, came perilously near being a frost, for mother was not accustomed to young people and did not



How to Shun the Dry Air Danger!

Warm Your Home the Moistair Way

When the still, dry, *cold* settles down and the nails snap in the rafters, *mere* warmth in your home is only a snare and delusion—too often a source of sickness and sorrow!

With that warmth must be *moist air*—must be *fresh air*.

In the hot, stuffy air, dry as a bone—air heated the *ordinary* way, disease germs congregate and breed by the *millions*—a constant hidden *menace* to health. They include the microscopic refuse of human lungs, *come to life*. They attack when least expected. The alarming prevalence of coughs, colds, headaches, lung trouble and sickness proves how rarely they *miss their mark*.

Shun this common danger and save money by installing the

ROUND OAK

Moistair Heating System

The Only Heating System that Automatically Ventilates and Humidifies

Five Star Points of Round Oak Supremacy

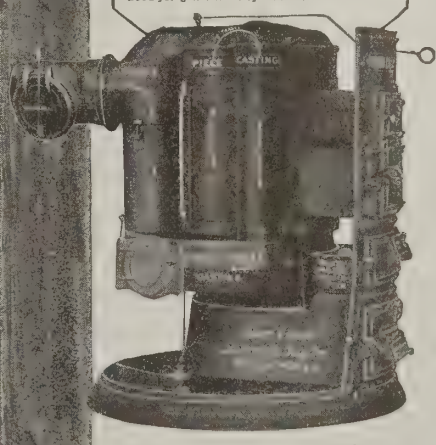
***Health** Only Heating System that automatically ventilates and HUMIDIFIES.

***Comfort** Delivers pure, warm ever-changing moist air, free from dust, gas, smoke—fitted with gas-tight doors and dampers.

***Economy** Longest fire travel all inside casing; improved hot blast *Ring;* extra deep fire pot; extra large combustion chamber affords perfect combustion; most heat on minimum of fuel.

***Convenience** Simple regulator controls entire system. Self-cleaning. Ashpit dust-proof—seamless; fitted with sprinkler. Non-leak door frame cast on—not bolted. Easy to operate.

***Durability** Materials used stand highest physical tests. All hinge pieces *drilled*, not cast. Never a bolt, where a rivet will do! Tight fittings guaranteed. *Good for generation of service.*



The Round Oak Moistair Heating System keeps a *constant current of delightful warm fresh air* circulating throughout the house. It also automatically *humidifies* this air—keeps it *moist* and *healthful*—free from dirt, dust, gas and disease germs!

Operates by a single regulator, convenient, cleanly, durable, dependable—and

Saves Coal by the Ton

Properly humidified warm air at 68 degrees, is more comfortable than *dry* air at 75 degrees. The saving of 7 degrees thus made possible by the Round Oak Automatic Humidifier and other exclusive features listed opposite, literally means a fuel saving of *one ton in every nine.*

Round Oak Moistair Heating Systems are backed by over 46 years' experience. Although more than 60,000 Round Oak Systems are now in service, we have as yet to learn of a single dissatisfied customer. Wherever Round Oaks are used, they SATISFY.

If building or replacing your present system, make a *Quality* decision, for *Service* determines *Value*. Insist on getting a *Round Oak*.

know how to put them at their ease. The little girls arrived earliest, not having yet acquired the smart habit of keeping other people waiting. From the maturity of eighteen I leaned down toward them with a reminiscent wistfulness for the childhood forfeited during those three years. They were so sweet, several of them, and came into the room shyly, their bodies tenderly curving, some inward, some outward—like flowers blown lightly this way and that in a breeze. Their recently uprolled hair rested unfamiliarly against their heads, creating new outlines; a few of the coils seemed too heavy for the soft necks to bear. What a sin against Nature to mold them—to make them conform; to point out to them what was what and who was who. Youth was receptive enough; it would not take long.

Meantime they were standing about, some with hands folded patiently across their stomachs, others with their satin slippers scrunched inward, wide-eyed, expectant and dumb. This would never do! In desperation I managed to corral the whole group into a corner, tell them little jokes and whisper little confidences until their laughter bubbled up like geysers out of the ground.

Each newcomer heard it as she came in and joined our elastic circle at once; it offset mother's formality and the situation was saved. Soon there was a twittering like that of swallows under eaves. Everybody was natural, as the sexes are apt to be in the absence of each other.

Against mother's advice I had chosen Henry the Eighth instead of the musical comedy she proposed. It was a superb production and the girls were crazy about it. Any puppy will eat meat if you throw it to him, and like it just as well as lollipops.

That was a happy evening for me—a sort of female bachelor dinner, dedicated to pure, spontaneous gayety, before assuming the bonds of wedlock to the social world.

As the twentieth drew nearer, the atmosphere grew more and more oppressive and hushed. I became, day by day, increasingly apprehensive of not carrying out my part in the affair in the right form. The thought of it weighed on me as though it were a presentation at court, or even a ceremony of coronation. I might say or do something that wasn't on the program—I never could tell just what I was going to do or say.

I wasn't used to pomp, and doubted whether I ever could get used to it. It sat uneasily upon me, and hampered my movements in much the same manner as did my delicate clothes. Yet I wanted so earnestly to do my best that I even sent up a little prayer about it, and intended neither triviality nor irreverence thereby.

Personally I did not attach the least importance to this or any function; but mother cared terribly, and that was enough. I had sacrificed much to "play the game," "see the thing through." I wanted the climax to occur in a burst of glory. That much I could do toward the success of the crowning achievement of the life of her who had borne me, whether my ideals were hers or not.

"I wonder," she said reflectively one day when we were out in the motor together, "whether you'll be a success!"

I smiled, and uncomfortably felt her eye on the spot where I'd forgotten my dimple was.

"I'm not going to worry about that," I returned gently. "You're doing the best you can to make me one, mother. It doesn't depend on me."

"Oh, yes, it does, in large measure," she asserted. "I'm just deliberating what tactics to advise. This spring I believed your—er—outspokenness and your blunt manner would offend. Now, from what I've observed at Newport, I'm inclined to think that they take. People are tired of the usual thing, probably, and looking for something different. On the whole, I think I'll have you push your individuality."

The color surged over my face and neck in wave after wave.

"Oh, mother!" I protested. "Don't you see that you're going to kill whatever it is that's me by talking about it? Please—please don't!"

Nevertheless, I was a little relieved to think that I need not behave like an automaton at the ball.

The result of the invitation to Randall was a note from Mrs. Winslow next day asking mother to allow her to take me to the studio for some music that evening. Of course permission was not withheld. With Mrs. Winslow I should have been allowed to go anywhere!

The minute I stepped out of my own house I began to feel the breath of a keener air. Snowflakes, light as thistledown, were falling; I can feel their tiny pricklings of perforated frostiness now on my cheek. In the motor I touched the fur-edged sleeve of Mrs. Winslow's wrap with cautious finger, to make sure that she was real. There was an illusion of fitfulness and shadow about her, and I wanted to dispel it, for my love went out to her there in the night. Daughterless mother and motherless daughter that we were, our natures had hailed each other long since, at the first handclasp.

That evening brought Randall out of the void for me—put a background behind him and earth under his feet.

The studio was a big room in a downtown street, up several flights of stairs. Somebody was singing when we got there. The room was full of people who made no sound. Toward the back I caught sight of Mr. Winship's face, appreciative and intent. It was my first contact, save at public concerts where tickets were to be bought, with a gathering that dared show itself serious. No one was ashamed of being serious here!

Randall was sitting motionless, chin forward, hand on knee. He must have heard us; but he gave no sign. We were spared the variety of "manners" that would have forced intrusion upon us. In the arch of the old-fashioned doorway, her breast rising and falling under her pearls, the folds of her train coiled about her feet, Mrs. Winslow was allowed her fair share of enjoyment, standing unnoticed until the song was at an end. Then Randall sprang toward us with a glad face of welcome, all his boyishness loosed from the spell.

"You!" he said, turning to me when he had greeted Mrs. Winslow. "In my house!"

That was all; but he said it as though some Presence had crossed his threshold, and I trembled, incapable of reply.

Hour after hour they made music for the sheer joy of it. On and on they went, without order, sequence or brevity. During intervals Randall scrambled eggs, we ate, and I met everybody. There was plenty of jollity; and when people laughed, they laughed! They were no more afraid of laughter than of seriousness.

The guests included painters of both sexes, musicians, sculptors, stage folk, two playwrights, several readers for magazines, editors and their wives—people who did things; and people who, like Mr. Winship and Mrs. Winslow, loved to see things done. Some were word artists, who chatted familiarly of subjects that, where I came from, were kept imprisoned between the covers of books. Everything they touched upon they clothed with form and color. They brought dead history to life. They discussed philosophy and metaphysics. It was almost too rich, that meal, after a starvation diet of such long duration.

"You're coming to my ball?" I whispered to Randall as we said good night.

He nodded.

"Really, this time!" I enjoined.

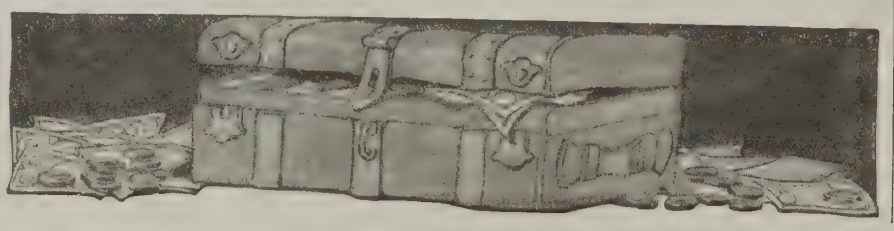
"Yes—really!" he promised with a flitting smile.

It was the only reference that was made by either of us to his late defalcation.

In the interval I tried not to think of him. My intelligence must be of a very limited order, I reflected ruefully, since I seemed incapable of thinking of more than one man at a time.

At Newport, Allan had crowded Randall out; now Randall was crowding Allan out. And this was not as it should be. I was a little annoyed with Allan for his tame acquiescence in the rôle of absentee landlord. He should have been keeping a closer watch on his preserves.

(TO BE CONCLUDED)



"Goodbye, Corns"

"WHAT'S the use of limping—what's the use of suffering, from corns and corn pains? It seems so foolish to endure pains and soreness, when you have such a corn remover as 'Gets-It,' easy to use, simple in its application, thorough in its work!"

"GETS-IT"

2 Drops Used in 2 Seconds

One might say it's almost a pleasure to have corns, just to see how "Gets-It" makes them shrivel, then loosen from the toe so you can peel them right off with your fingers. "Gets-It" forms an invisible coating on the corn, it stays right on. There is nothing to press on the corn, or hurt the surrounding flesh. It makes cutting and "working" over corns unnecessary. Walk in comfort while your corn dies—use "Gets-It."

Endurance

is simply sustained power. The ability to sustain power does not depend upon mere size or weight. It springs from an even distribution of weight—a perfect co-ordination of parts.

Scripps-Booth

endurance is the product of concentrated strength, plus lightness, plus co-ordinance, plus control. It is the highly specialized, synchronized strength of Science. Excess-weight in a motor car is an effort to secure ease by weighting the car down on the road. Scripps-Booth attains ease by a perfect and scientific balance. Scripps-Booth lightness is actually converted into luxury. Every ounce of Scripps-Booth energy counts every minute it is on the road. It is not wasted in overcoming the inertia of dead weight. Scripps-Booth is like a perfectly muscled athlete—its lightness conserves energy. It always has energy to spare.

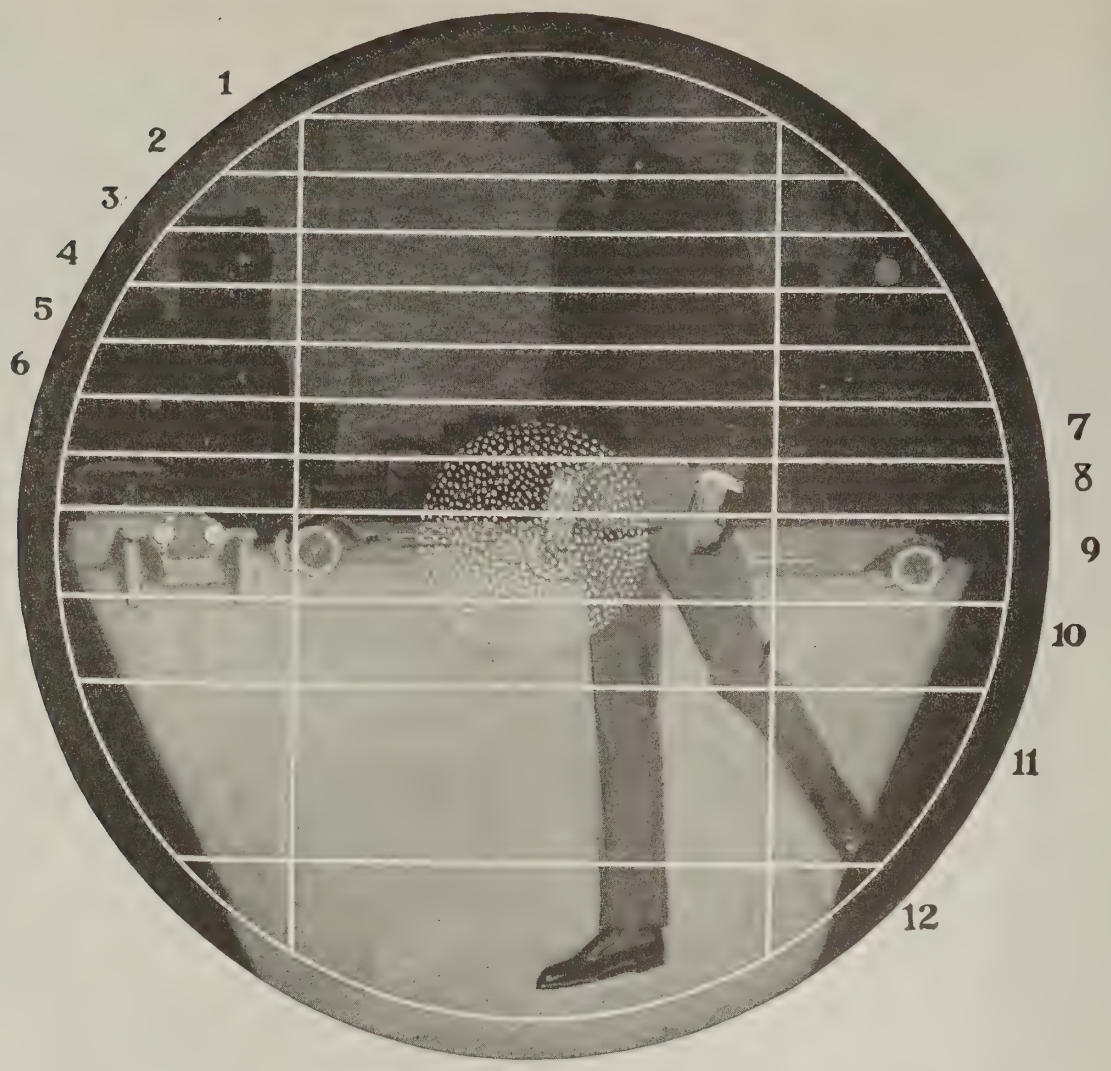
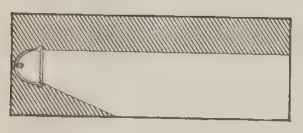
Four-Cylinder Roadster



Twelve Shafts of Light That Stream as One

74% Greater Road Brightness—Ray Thrown One-Third of a Mile —Not More Than Waist High—No Glare!



Professor E. H. Freeman of the Armour Institute of Technology, Chicago, has made some interesting tests with the New Osgood Lens.

He finds that the New Osgood Lens increases the average apparent candle-power below the axis of reflector over seventy-four per cent, as against a headlight equipped with a plain glass lighting the same width of road.

This is due to the fact that rays which ordinarily are thrown into the air, are here thrown onto the road, as shown by the small illustration heading this column.

Compared with a lens of *ground* glass, he finds that the average candle-power of the beam from the New Osgood Lens is *910% greater* below this horizontal plane.

This is light *control*, by which the light is passed through prisms which direct all rays where they are most needed.

Light control must not be confused with light *diffusion* by which light beams, passing through irregular surfaces, are merely broken up at the expense of lighting distance.

And where there is *light control* there can be no dangerous, law-breaking glare, because all rays are kept within bounds—below waist height, and not in the eyes of other motorists or pedestrians.

JAMES R. CRAVATH, one of America's foremost authorities on illumination, has done a wonderful thing with light for motorists.

He has designed in the New Osgood Lens one which concentrates all of the power of the light on the road, free from glare, and complying with headlight laws—the lens of courtesy and efficiency.

Here is an improved non-glare lens which wonderfully increases the useful driving light. Gives 74% more candle-power toward the road than does a plain lens, due to the fact that light which is ordinarily directed above the horizontal axis of the reflector is thrown *downward* by the New Osgood Lens.

The New Osgood Lens is a one-piece lens consisting of twelve prisms, each of which selects and then delivers its particular beam to its particular, predetermined objective point, while merging with the other eleven beams to form the one shaft of light which so completely illumines *all* the road.

You have a long, bright, broad, direct stream of light of ground-hugging tenacity for the full distance of one-third of a mile. Not more than waist high. Always where you need it as *light*—not where others condemn it as *glare!* No dimming necessary. Read to right and left the official story in detail.

Sizes and Retail Prices

The New Osgood Lens is made in all sizes for all cars of whatever make. Sizes and prices:

7 to 7¾ inches	. . .	$2.50 a pair
8 to 8½ inches	. . .	3.00 a pair
8¾ to 9½ inches	. . .	3.75 a pair
9¾ to 11 inches	. . .	4.50 a pair

Prices quoted on special sizes.
25 cents a pair higher west of Rockies.
20% higher in Canada.

In ordering: Give diameter of old lens; diameter of opening in door frame; model and make of car.

Osgood Lens & Supply Company
1241 Michigan Avenue Chicago, Illinois

Dealers: Write for complete data. By official test the New Osgood Lens throws a light for a third of a mile—not more than waist high—74% greater road brightness—no glare! What other lens does all this?

The following results were observed in official tests made with the New Osgood Lens by L. A. Hillman, technical representative of the American Automobile Association.

Date of tests, November 27, 1916, Standard lighting equipment used with New Osgood Lenses.

At 50 feet the spread of concentrated rays was 15 feet. At 75 feet, spread of rays was 18 feet.

At 150 feet, spread of rays was 35½ feet. Height of concentrated rays 24 inches.

At 250 feet, spread of rays was 60 feet.

At 1,800 feet there was a considerable strength of light, sufficient to cast a shadow. Illumination of road, and to each side, was good at this great distance.

Observers standing before the car in various places and positions could find no glare.

During one of the settings the rays were passed through a film of smoke which showed plainly that the rays of light from the lenses sloped *downward* at a very gradual angle.

The smooth outer surface of the lens was found to be fully as claimed. Note: There is nothing about the New Osgood Lens to catch dust. It is as easily cleaned as a window pane.

DEEP MINING FOR BRAINS

(Concluded from Page 20)

streets incorrect, undercharge or overcharge, items not shown on sales checks, amounts wrong, wagon calls wrong, giving out wrong parcel, omission of name or address on check, transfers not promptly collected, charge-office slow in "will take" purchases, wrong carriers sent through pneumatic tubes—and a host of similar blunders, exasperating to customers and expensive to the store.

A record of mistakes was then installed. In the department handling wrappers and negligée gowns one Annabelle had a persistent habit of altering saleschecks; but when this fault began to be visualized day by day, and grouped in weekly tables for comparison with the mistakes of other salesgirls, Annabelle sat up and took notice.

The error analysis showed something like this:

Saleswomen with bad records for altering checks: Annabelle, of the wrappers; Florodora, of the wash dress goods; Clementine, of the ready-to-wear hats; Maryjane, of the patterns; and Dorothea, of the art embroideries.

Salesmen with bad records for not showing names on transfer checks: Jackson, of the upholstery and draperies; Jones, of the boys' clothing; Olson, of the rugs and carpets; and Steinberg, of the pictures.

Salespersons with unsatisfactory records for not getting charge-takes O.K'd: Sophronia, of the flowers and feathers; and Jixon, of the office furniture.

You may be sure that Sophronia and Jixon, for instance, did not relish being called upstairs together and constituted a special infants' class in the art of getting charge-takes O.K'd; and after this had happened once neither of them ever made the error again.

On the other hand, the groups of employees who made the fewest mistakes were disclosed in similarly tabulated reports, and rewarded with increased salary or bonus, or with special holidays. Commendation cards were issued. The number of errors began to come down just as soon as this work was begun; and now instead of fifteen thousand errors a month there are less than fifteen hundred.

Similar methods were adopted in analyzing the different kinds of work done in the store. It was found that there were more than three hundred so-called jobs in the house, and the duties of each job were analyzed and reduced to typewritten form. This gave a great leverage in the specialized instruction.

Johnny, Bobby, Jacky, Joey and Willy, for instance, were messenger boys. Maudy, Claudy, Petty and Louie were stock-girl helpers. Each group was supposed to do certain things; but before the establishment of development work these duties had never been picked out of the vast conglomerate mass and set apart to be studied. When they began to be studied it was discovered that these boys and girls had been doing many things in a slipshod, indifferent way. Thus, it was found that in certain routine messenger work a time-schedule collection of packages and papers enabled the store to eliminate Johnny altogether and promote him to higher-grade work.

The store also found that all the messengers were of a low-grade type except this boy Johnny. It was amazing to contemplate that, for years, promotions had been made from among these unanalyzed store boys, who had continued to pass on and up through different channels in the store until the organization was dotted with them, some holding important positions.

An example was that of X, a floorwalker. He was thirty-nine years old, and had been walking the floor for sixteen years, for a time at fifteen dollars a week, and then at twenty. He was regarded chiefly as an animated guidepost, had no share in any profits on increased business and no part in any scheme of advancement.

An analysis of X showed that he came to the store as a messenger, became a shoe salesman, and was then made an aisle man. He was never rated in any way on paper, or studied, so far as the records revealed.

His mental status was of a low type. He had little knowledge of current events and practically no conception of the problems of merchandising. He was never called into a conference of the higher executives, and his brain was that of a child in nearly everything that had to do with management. Analytical salesmanship in its varied ramifications was to him *terra incognita*. Yet for sixteen years he had been given supervision over a part of the salesforce!

The floormen are now developed for their responsibilities, the aim being to give them the qualities of keen observers and teachers, capable of grading salespersons intelligently and playing other rôles in the development work. In return they are given a financial interest in the larger profits of the departments they serve.

The reduction of the selling work to definite gradings and standards has brought with it mathematical methods of measuring the efficiency of individuals and groups. It was demonstrated to me how Mary H., of the umbrellas and parasols, might have been considered, under the old way of fixing valuations, to be worth less to the store than any of twelve clerks in her group. The true method shows her to be worth more than any of nineteen!

Delia J. and Alice L. were considered in the old days to be of almost equal value to the store; but when measured by the new arithmetic Alice was found to be forty-one per cent more valuable.

In another department Maud earned in wages round eight dollars a week, and Roberta ten dollars; yet when properly measured Maud was found to be eighty-odd per cent more productive.

These are rather complicated matters, and I refer to them merely to indicate that in mining humanity for brains it is necessary to use one's head and pencil.

A STORY WITH A HAPPY ENDING

(Continued from Page 10)

than ever, Price decided that it was time to stir things up; to give a few hints that he might be persuaded to consider a new position.

He called on an acquaintance who had formed an aëroplane company. He was received with heartiness and a cigar. The aëroplane man acted as though he considered Price a genius, but he didn't make any suggestions about acquiring the genius; and Price could not bear to get down on this cheap rug—it was so much cheaper than the Iran in his office at Pistoflash—and beg for employment. He pretended that he had merely "dropped in," and awkwardly went away.

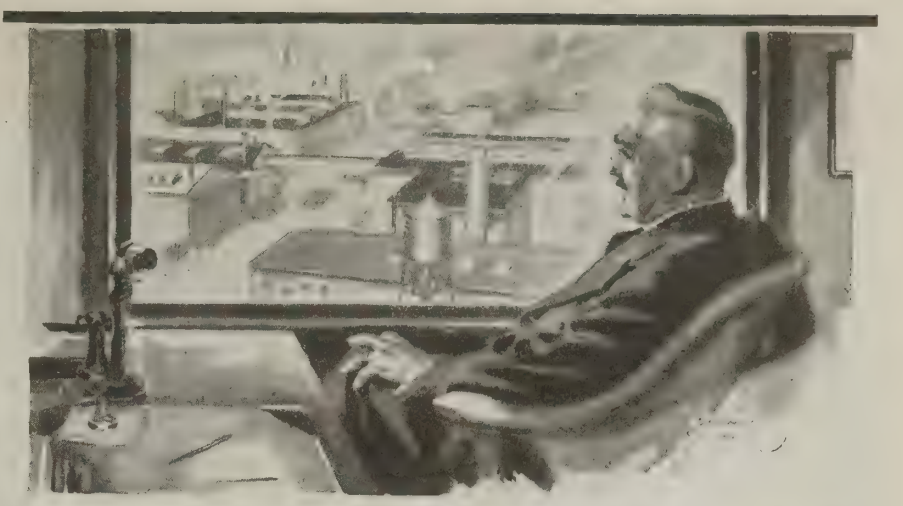
For a month more he could not get himself to ask for work; but this month saw him becoming haggard, and he began to economize, to recall the systematic, frightened saving of the days when he had been a cub salesman, and to try to stretch his inelastic middle-aged dignity to this mean carefulness. He had only twenty-two hundred dollars left now. He had spent about five thousand dollars in a few months; had lent five hundred to the club tattler—a man he had to keep in the belief that he was still prosperous.

He gave up his apartment, sold or stored his furniture, took a two-room suite in a family hotel, and cooked his own breakfasts over an electric stove. He was a rather pathetic, blundering figure—this solid official personage in tailored clothes and a silk shirt—endeavoring to fry an egg and getting the yolk all over his fingers.

He sat in the silence of his room, trying to read library books, and longing for the days at the Magnus Company when, to himself and to Mrs. Arroford and all his young men, he had been busy and secure. When he could no longer stand the seclusion he would go and sit in the lobby of a Broadway hotel, one of the line of intruders and loafers and pompous failures in the big chairs.

He had at last come to a real humility; and he started a campaign to get a job—not a position, but a job. He made out a list of all the motor firms he knew and offered them his services. He even planned to see Magnus.

But he read in a trade paper that Mrs. Nancy Arroford had been made general manager of the Motor Accessories Department of the Magnus Company. The paper commented that she was the first woman to



Builds city of 65,000

There is a busy town in the Middle West that has been described as being literally intoxicated with an all-pervading prosperity.

In a short time its population has increased from 13,000 to 65,000. It boasts of 182 men who have made fortunes from $100,000 to $6,000,000.

This boom—this city and fortune building—is the work of one man. Yet, big as this work is, it is only one phase of this man's gigantic enterprises.

Today, he is master of several industries representing an organization of $175,000,000, employing 36,500 men.

This man started in a humble way as an employé in a lumber mill. At twenty-one he said he had mastered the business and was ready for something else.

A cigar factory required bolstering. He gave it new life.

The town water-works were in a bad way. He put them on a sound basis.

Later he organized a carriage company. Then a motor company. In ten years he was a multi-millionaire and was building fortunes for other men.

He knew the underlying principles of business success

Some men will tell you his success was due to a series of "lucky breaks." Others will say he is one of the men who get all the opportunities.

But the fact is, this man started at scratch—he was born with nothing more than most of us are born with.

It was an unusual mastery of big business laws and principles which gave him his advantage—and this grasp of business principles is within the reach of all who have the determination to learn.

The laws of business success do not vary

This man had to master the laws of business before he could become a success. His text book of business knowledge was the experience of others and the facts of his own daily experience. He was able to crystallize these experiences into working principles.

The knowledge he finally gained in this way was the same knowledge that has stood behind every big business success. It is the same knowledge that, when acquired, needs only the personal qualities of determination and energy, to make success sure for anyone. The difference was in the method of learning. Unlike this man most of us need to have these principles crystallized and set down in writing before we can absorb them.

It is this business knowledge, this crystallized experience of thousands of America's most successful men that the Alexander Hamilton Institute is giving to more than 50,000 business men today.

Based on the actual experience of thousands of successful business men

The Institute collects, classifies and transmits to you thru the Modern Business Course and Service, the best thought and practice in modern business. It will give you a thoro and sound training in the fundamental principles underlying all departments of business—it will give you a knowledge that could otherwise be obtained *only* by years of bitter experience—if at all.

The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young men in their employ. Among the 50,000 subscribers are such men as H. C. Osborn, President, American Multigraph Sales Co.; Melville W. Mix, President of the Dodge Mfg. Co.; Geo. M. Verity, President of the American Rolling Mills; William H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Company, and scores of others equally prominent.

In the Standard Oil Co., 242 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the General Electric Co., 282; in the Pennsylvania Railroad, 87; and so on down the list of the biggest concerns in America.

Advisory Council

Business and educational authorities of the highest standing are represented in the Advisory Council of the Institute. This Advisory Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Jeremiah W. Jenks, the statistician and economist, and Joseph French Johnson, Dean of the New York University School of Commerce.

"Forging Ahead in Business"

A careful reading of this 135-page book, "Forging Ahead in Business," a copy of which we will send you free, will repay you many times over. It will help measure what you know, what you don't know, and what you should know to make success *sure*. This Course and Service will fit you to grasp the opportunities that are bound to come to those who are prepared.

hold such a position in the accessories world, but that her record as salesman and her invention of the Magnus Bumper had "so splendidly qualified her for the position that there is no man in the business who does not heartily approve of her appointment and wish her good luck."

So Price could not go to the Magnus Company. He could not contemplate working for a man who had worked for him—especially when that man was a woman! Take orders from a person whom he had taught the very meaning of an office memo.? That was asking too much, he decided; and his remembered affection for Mrs. Arroford was inescapably dulled by envy as he began to bombard the motor firms with written applications for a job. He received a number of chatty replies, but not one single offer.

Where now was the born executive? At last he was considering details—details of cutting down the cost of breakfast by a nickel and of making a collar last two days.

He was in actual want. True, he still had eighteen hundred dollars; but he who has eighteen hundred dollars and no prospect of ever getting any more is as much in need as he who has nothing. So at last he turned back to the Magnus Company, to beg for any sort of chance to start over again.

There was a certain exultation in throwing away all his burden of pride, in attacking the world like a youngster for whom the future may hold anything. He felt twenty instead of fifty when he went swinging, head up, eyes front, not ashamed to be shamed, to face Magnus. . . . And he had a secret excitement in the fact that he would see Mrs. Arroford again. It was three years since he had been near the Magnus office or her.

VII

THERE was a new office boy in the outer office at the Magnus Company, one who knew not Joseph and didn't want to let Joseph go in to see Mister Pharaoh. He stared at Price's spats and piped: "Whacha wanna see 'im 'bout—heh?" But Price's old filing girl was passing through and cried:

"Oh, Mr. Price! It's so long since we've seen you. My, you're looking fine! Eddie, you beat it right in and tell Mr. Magnus that Mr. Price is here."

As Price passed through the inner offices to Magnus' coop, it was through a lane of smiles and handshakes. He was home, and glad to be home; and his old friends were glad to have him. But Magnus himself wasn't so flattering.

"Magnus, I'm on the rocks!" Price felt the luxury of absolute frankness and confession. "I was a damn' fool ever to leave here. I want to come back."

"Well! Well —— Just a moment, Price. Forgot to tell ——"

So, in the rush of his gallant self-exposure, Price had to wait while Magnus telephoned. Chilled, uneasy, he tried to start again; but he could only mumble:

"As I said, I'd be glad to make a connection with the firm again, Magnus."

"Yes, yes; 'course we'd be glad to have you back; but—uh—I don't know just how you'd fit in now, Price. You see, we've completely reorganized the department. The big business now is in direct appeal to car owners—they're getting educated now. You're trained to handle big consignments to manufacturers; but Mrs. Arroford—she's boss now—I told you she was a bright little woman. Hee! Hee! Lord, a small-car owner can't go ten miles in his bus without her coaxing him into some local garage to buy a speedometer, or maybe a whole electric starting-and-lighting system. I don't know how you'd be ——"

Price wanted to say "All right, then. Go to the devil!" But he couldn't afford even this first, most valuable privilege of an executive. He said uncomfortably:

"I'd like to look over the situation."

"Then you go see Nancy Arroford. She's boss now, Price. She's boss! 'Fraid I can't do anything for you; can't go over her head, you know—hee! hee!—though, of course, personally ——"

Price saw that Magnus was looking at him with a fuzzy leer of amusement; but he said nothing. He stalked out and took the elevator to the next floor—to the Motor Accessories offices.

Mrs. Arroford herself came fluttering out to greet him; but it was the flutter of a cordial woman, not of an embarrassed girl.

"So nice to see you! Won't you come right in?" she said.

Her new office was solid and masculine, except for a huge bowl of roses on her flat-top desk and a Canton hourglass chair for visitors. To Price, after a certain hardness of the chair hitched up beside old Magnus' desk, the Canton chair was comforting. As they sat down Mrs. Arroford's secretary poked her head in the doorway and remarked:

"Hubbard wants to see you, Mrs. Arroford."

Mrs. Arroford stared blankly at the secretary; looked worried, fidgety—feminine. Price watched her closely. "She can't make decisions like a man," he concluded. He had wondered whether he would be stirred by her, and he found only a tired, busy everyday woman; pleasant, smartly dressed, and with more character now to her prettiness; but with none of that lingering magic that had, in his memory, seemed to melt about her. And she wasn't even a decisive boss! But Mrs. Arroford's face cleared and she spoke very concisely:

"Tell Hubbard he's to go to Buffalo. Let him fuss, and listen sympathetically, but tell him I can't see him—and sympathize with him about that, too—and get him started off. That's all."

In her voice was shown a perfect understanding with her secretary and a perfect readiness to fight with this invisible Hubbard person; but she dismissed her interest in the problem and turned on Price a smile of real welcome.

"I'm so glad you came in! I think you'll be pleased with your old pupil. We've increased receipts thirty per cent this past year; and we —— But tell me about yourself, first. I heard somebody say you'd retired from Pistoflash to look after a mine of your own. That's awfully exciting! I knew you wouldn't always be working for somebody else."

It was hard, but into the lamp of her enthusiasm Price had to throw a brick:

"No; I'm not working for anybody else—or myself either. I'm broke! Flat! I'm a failure! I'm through pretending. I want a job—from you. Anything from twenty a week up. I haven't admitted to anybody but you and Magnus ——"

"Oh, I am so sorry! But it doesn't really matter. You couldn't be a failure even if you are broke. You'll be back where you belong—soon."

Mothering pity gave color and warmth to her voice. Price hastily decided that business women excelled men in one thing, at least—they could show compassion without seeming weak. He burst out. He confessed that he had made a botch of Pistoflash, and of job-getting since.

"Probably I'm a fool to tell all this when I ought to be making an impression on you; but I've needed somebody—no; needed you!—to buck me up."

"I'm glad you told me. I ——"

She walked over to the window and stared out. When she turned back to him he saw that her eyes were teary; and as she passed his chair she patted his shoulder—just once, shyly and delicately.

"Of course I'll do anything in the world to set you going again," she said quietly. "We've been reorganizing here and I'm not satisfied with my new sales manager. Sooner or later I'll have to let him out. Would you like to try that? It's only five thousand a year, because —— You won't be offended, will you? I'm really sales manager myself—and all the rest of the managers too. And, oh, you'd have to—well, I'm afraid it would almost be taking my orders."

"Dear lady, I'll take them without questioning. I mean it! I ——"

"Don't! I know. I just wanted you to understand the situation. It's —— It will be wonderful to have you here again. We all loved you. . . . I'll let you know in just a day or two about when you can start in. Leave me your address."

Then she waited for Price to go—she who had so often awaited his permission to go! At least, she hadn't been so crude as to rise as a sign that the interview was over!

He thanked her with mingled affection, gratitude and an unavoidable resentment that he should have to come and sponge on her pity.

"I'll make good," he vowed in the elevator; "but it will be a stiff fight. To get myself to take orders from my own secretary—Lord, that's the last slam for a failure! . . . But Nancy—poor, sweet kid! It will be just as hard for her, I suppose."

VIII

THERE were many differences between Mrs. Arroford and the typical man chief. She was at once more impatient and more

A Real 10c Cigar for 5 Cents

YOU men who have been accustomed to smoking ten-cent straights and two-for-a-quarter cigars will find my J. R. W. cigar a most delightful smoke.

The rare leaf I use in my cigar is selected for me from the choicest tobacco raised in the Vuelta district in Cuba. In my 40 years experience as a smoker I have never found a cigar with the smooth, mellow, delightful taste of my J. R. W. cigar.

Real Tobacco Value

When you buy my J. R. W. cigar you are paying for straight tobacco goodness—nothing else. My cigar goes direct from me to you.

And besides, J. R. W. cigars are always fresh. No standing on shelves until they lose that smooth, fresh taste. I make only enough to fill immediate orders.

Try Five Free

I don't want you to buy a box of these cigars until you are sure you will like them. Send me your name on your business card or letterhead together with 10c to partially cover packing, postage and revenue and I will send you these cigars to try free.

Smoke five of them. If you like them send me $2.60 for the full box of fifty. Write me today and try this really delightful cigar.

Some are Misled

By Seeming Likeness to the

HUDSON SUPER-SIX

Don't judge cars, or choose between them, by a half-hour demonstration. Nearly any new car, without competition, seems an excellent performer. But the paramount question covers years to come. And that cannot be settled in that way.

Mark These Great Distinctions

The Super-Six motor, in outer aspects, seems like a hundred light sixes. The cylinder size is common. The type doesn't look unique.

Clever salesmen, unchecked by proofs, often class other sixes with it. Or even depict an advantage.

But remember that Hudson long built the finest light Six produced. And the Super-Six invention, as proved by common, standard tests, increased its efficiency 80 per cent. That's a very wide difference, you know.

Salesmen of V-types—Eights and Twelves—often call them the newer type. But we built both for testing long before the Super-Six. And we quit them only when the Super-Six proved its vast supremacy.

Mark how this invention stopped the trend toward V-types. And returned the sovereignty of Motordom to a light and simple Six.

What of the Future?

The question is, What will five years show? Or perhaps one year, or two? That must be shown by long, hard tests, under a fearful strain.

It has been shown with the Super-Six.

It was shown by driving 3,000 miles, at speed exceeding 80 miles per hour, without evident wear on any part or bearing.

It was shown by driving 1819 miles in 24 hours—breaking all like records by 52 per cent.

It was shown by driving from coast to coast in by far the record time. Then turning around and breaking the records back.

It was shown by beating—again and again—the costliest racers with a Super-Six. Simply by keeping going.

The Beauty Question

Standing alone, many a car looks handsome. But their beauty pales beside a Super-Six. The latest Hudson models were first molded in wax. Then sculptured by artists to utter perfection. Then built by master craftsmen. Then finished and trimmed and upholstered as cars never were before.

Hudsons are not merely handsome, but right. These styles will endure. That is one reason why Hudsons now outsell any other front-rank car.

Remember These Facts

The Hudson Super-Six, in the past year, has won all the worth-while records. It has shown itself the supreme performer in every sort of feat.

That fact is recorded in a hundred records, many of them official. Let no mere claims outweigh them.

And all those records prove super-endurance. Its speed tests, its hill climbs, its long distance records—all were won by that.

The whole advantage of the Super-Six lies in minimizing friction. Motor wear is almost nothing. That was ever the chief aim in motor car engineering. It is, by all odds, the chief thing to consider.

The Super-Six is a Hudson patent. That's why every ruse and scheme is used to minimize it. To choose that motor means to choose the Hudson. And you'll do that when you know.

Go see our newest models with the shutter on the front.

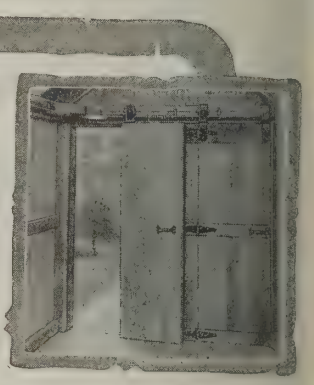
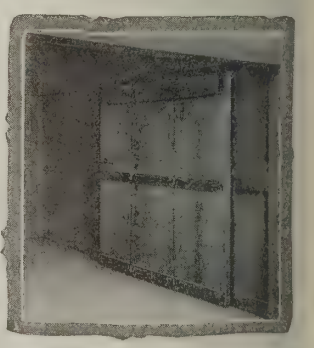
HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

The Most Convenient Garage Door Hanger Made

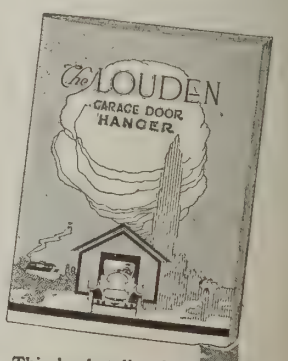
LOUDEN



The swinging section of the door is used as an individual entrance and exit door.



When open, the door lies flat against the wall, out of the way.



This book tells the whole story. Ask for it.

$6.00 Complete Outfit

Here's What You Get

No. 1. Track (supporting brackets riveted on) for 6, 8, 10 or 12 foot door, as specified.

No. 2. Three swivel-jointed, roller bearing trolleys.

No. 3. Six durable strap hinges.

No. 4. Two adjustable floor stay rollers to guide the door and hold it in place at the bottom.

No. 5. One wall stay roller to keep the door from binding on the side wall.

No. 6. Two well shaped door handles.

No. 7. Special barbed nails for putting up track.

No. 8. Screws for hinges, handles and stay rollers.

No. 9. One hasp and staple.

No lumber is furnished

Complete directions for building and erecting door accompany each set of hangers.

Dealers Attention!
Hardware dealers, automobile supply dealers and general stores will find a ready and continuous sale for the Louden Garage Door Hanger. It is now extensively used and our national advertising campaign will give a tremendous impetus to the demand for this hanger. Don't miss sales by failing to stock it. Write us today.

It Meets Every Condition Perfectly—Convenience, Safety, Space Economy, Beauty of Design, Ease of Operation, Permanence, Cheapness.

The door is made in three panels, stoutly hinged together, supported by swiveled, roller bearing trolleys which operate on a continuous steel track.

The track extends across the door opening, inside, and along the adjoining wall, curved at the corner. The door slides smoothly around the corner—doesn't cut off an inch of valuable space—and when open lies flat against the side wall, out of the way.

When closed, it fits snug and tight. Everything is inside out of the weather, and free from obstructions of all kinds.

Swinging garage doors are inconvenient and clumsy. They are sure to sag sooner or later, and frequently they are whipped open or shut by the wind, damaging doors or car. The outside sliding door requires a post in the yard and takes up much valuable room. It is awkward and unsightly. The one-piece inside sliding door cuts off a big corner and creates from three to five feet of waste space in the garage.

The Louden-Hung Garage Door overcomes the disadvantages of clumsy swinging doors and posts in the yard, and solves permanently the problem of the inside sliding garage door.

A DOOR WITHIN A DOOR

An extremely valuable feature of the Louden-Hung Garage Door is the hinged section, which makes a separate foot entrance unnecessary. A small door for the man and a large door for the car, all in one, is an exclusive, Louden-patented feature—absolutely new in garage door construction.

The convenience, safety, and handsome design of the three-panel Louden Equipped Garage Door make it popular with wealthy owners of fine garages. Its inexpensiveness makes it popular with those who wish to economize.

Because of the room it saves, the convenience it affords, and the lasting satisfaction you will derive from it, you will find the Louden Garage Door Hanger a highly profitable investment.

(Continued from Page 102)

generous; more interested in the fortunes of everyone who worked for her or encountered her. She overworked too frequently; like a girl grind in college, she couldn't put away her work and go jovially off to loaf. She talked too rapidly; she was rather too insistent on the fact that she played no favorites. But for details she had real genius; and her "big decisions" didn't have to be undecided afterward, because they were not flip-a-quarter guesses, intended to bluff a waiting subordinate.

She never hesitated to reprove savagely anybody who came to her with a "Well, my little woman, I will give you my masculine advice" manner; but for the clerks she had a never-exhausted tolerance that made them adore her and give her the loyalty which enables executives to succeed.

In all this she was not so very different from the girl secretary Price had known—merely a little surer; a little more independent. Two things, however, kept warning Price that she was a very different, an enormously larger person now: She had a certain luxury of living; his position of inferiority was crudely but clearly indicated by the fact that she could spend more than he could now. Like most business women, she decidedly retained a love for pretty things—flowers; frocks; charming apartments; a woman's club as elaborate and self-dependent as the most exclusive man's club; her own car; her overnight bag, with silver fittings. But more important than her luxuries, as a hint of how completely she had passed him, was the fact that he had to take her orders.

Price was sincerely trying to accustom himself to the new methods in Magnus' distribution; to organizing data about garages and hardware dealers and small jobbers; to advertising not just for technically trained minds, but for amateur motorists. It was hard for him to skip quickly over a million details and be an authority on them when Mrs. Arroford called on him for information—and it was harder to realize that he mustn't be giving her advice all the time. When he noticed her using an old-fashioned desk calendar instead of a box tickler, when someone was impudent and she was unnecessarily aggressive in her resentment, Price would catch himself giving her suggestions as though she were his secretary.

She listened impatiently. They grew dangerously polite in their conferences. He began to doubt himself, and felt useless. In this frame of mind he couldn't get up the energy necessary for that most demanding of tasks—starting over again.

Oh, he knew it; he blamed himself as savagely as any boss could have done; he sat and watched himself, unable to originate ideas, to put any fire into his salesmen—even to keep decently busy. He descended to the sordidness of pretending to be busy; of rustling papers and looking up abruptly when somebody came into his office. Before even small office girls he played out this shameful game. He could not get his mind to take hold. He glowered through the window at a chimney-potty sky line, and hated it. He did want to get to work; but there was no force in him.

In his nervous idleness he felt himself becoming irritable. He was irritated by Mrs. Arroford's tricks as manager—the tricks she had learned from himself, but which she presented as her own. Because he was ashamed of that irritation it was the harder to go to her for orders; go to that small pretty woman behind a bowl of roses! And always he had the fear—which every delinquent clerk has in the presence of every chief—that some day she would "blow him up."

But she did not blow him up; and for months he wavered between that fear and a slight contempt of her because she allowed him to go on merely marking time, and a bitter contempt of himself for everything.

Suddenly, one evening just before closing time, she sent him a memo.:

"Please see me before you go home."

He ambled into her office rather patronizingly and sat down beside her desk. She called in her secretary.

"Please don't let anyone disturb us," she said. "You can bring my letters in to sign after Mr. Price has gone."

Her voice was very weary. Price felt as though she was turning to his masculine strength. But as she faced him she seemed not a woman to be petted—neither man nor woman, indeed, but merely a brain behind cold eyes.

"Mr. Price, we must come to an understanding now; and let's get it all threshed out at this one conference. What are we going to do? I've tried my best to give you an opportunity and not be bossy, and you haven't responded. Do you realize that you are making it harder than ever for me because I've been doing most of your work? What can we do?"

"You've been doing ——"

"Yes; I certainly have."

"Then, in that case, my dear Mrs. Arroford, I suppose there is nothing further desired from me, except my resignation."

"As you wish—though I really am sorry. I had hoped ——"

"And so I do resign. Now!"

"Oh, please don't be so stiff and dramatic. Can't you see I'm not talking in any unfriendly way? But I can't—oh, I can't, just can't go on carrying any more work. I'm overworking now. I thought you would take some of the burden off my shoulders. Please understand. I'm not talking like a boss, am I? I don't feel like one, but like an exhausted woman. And yet I am the boss and have to take the responsibility. But I can't if my courage goes smash. What am I going to do?"

His stiffness was gone then.

"I know," he said. "I've been rotten! Now I resign again—but this time for your sake."

"No; I won't accept your resignation to-night—not for at least a week. See, oh, please see if you can't think of some way of getting hold of your job, so that you can help me. Good night."

He stood up. He took her hand—a small, tired, relaxed hand—and smiled down at her, not as the naughty boy who has been scolded but as a man does smile at a woman.

"I'll try—dear," he said.

He sat at dinner, alone, for two hours; and suddenly he threw overboard his whole philosophy. He saw that he had been working for himself first; for the firm second—a far-distant second; and for her, who needed him, he had not been working at all. Now he would work for her first; then for the firm; and as for himself—oh, his self had become confused, useless, and he would forget it entirely. Her presence in his plan made it not an impulsive desire for reformation, but warm, thrilling, human. He went to her next morning and said:

"I want to work for you. And please give me the devil whenever I need it."

"I will!" She smiled.

What he had to do was simple enough—he had to work! . . . The same being a solution of many complex problems in life. . . . He had to attend to every detail; have information on which she could depend ready for her; not let his desk get choked with papers; not delay his assistants nor give them snap judgments. But to get himself to do this work required some change in himself. His new determination was a fine, earnest, youthful little determination; but determinations to reform are generally worth about as much as the "never again!" of next morning. He had to change.

So, at fifty and more, he began to make an art of so living that he should again have fire and joy in his work.

It is possible that he recalled the régime to which young Mrs. Arroford, of Mt. Vernon, had once subjected herself. He gave up ease and the precious routine comforts of middle age. He was up at six-thirty; took a cold bath, though every square inch of his sleek skin protested; walked before breakfast, and then cut out most of the breakfast, omitted the waffles and lamb chops—just as later in the day he shook off his lunchtime habits of a cocktail, coffee, cigars, and familiar gossip with the male old women at the club. He lunched when he could with small-garage men, with his salesmen, with men from the factory; and their close-to-the-machine energy enlivened his dull office view of business.

He was too busy now to stop to consider whether he was a born executive or not.

IX

BETWEEN failure and success there is, sometimes, only a thin partition; an inconspicuous difference in system or in not having headaches, in philosophy or in not smoking too much, in will power or in not forgetting to sign letters. Leonard Price knew a great deal about business; and, once he was willing to use that knowledge not to glorify himself but to serve the world—and a woman, it was not very hard to come back.

FLavo FLour

Nature-Flavored

HERE is the new flour, containing the entire food values of the wheat berry. The essential aromatic flavor oils of the wheat are not milled out of FLavo FLour.

This—FLavo FLour—is made only on the AMERICAN MARVEL self-contained roller mill, a system which has been in successful operation in hundreds of communities throughout the United States for the past seven years. This system of milling is very short and direct, quickly turning the wheat into the whitest patent flour. There is no opportunity to destroy the volatile oils, or the rich, natural flavor of the wheat berry, which, in our process and flour, is imparted to the bread.

Millions of flour users know the superior qualities of FLavo FLour and are wanting to get it. It is used with enthusiastic satisfaction by housewives in over one thousand communities, where it is made only by each COMMUNITY MARVEL MILLER.

Flour users in hundreds of other communities are wanting these mills started at once to supply FLavo FLour.

FLavo FLour is made locally only—not by ordinary big flour mills.

This is a great opportunity. A splendid, clean-cut, permanent money-making business can be yours if you have as much as $2000 to invest.

I invite millers, bankers, or any business man to write us for full information. We make it easy to start, and great success is assured by our special, helpful methods.

L. Freeman Lotte
President

AMERICAN (Midget) MARVEL Self-Contained MILL

This is the wonderful mill which is doing so much in the Nation-wide FLavo—better flour—Movement. Previous milling experience is not necessary. It is self-contained, easy to run, takes only one man, little power, no new building.

Watson E. Coleman, *Patent Lawyer,* **Washington, D. C.**

In a little over a year he was making so much of his position that Mrs. Arroford herself insisted that he ought not to be merely an inferior of hers. They had a two-day conference—Magnus and Mrs. Arroford and Price; and the department was again reorganized, with Price in charge of negotiations with manufacturers and in possession of independence equal to hers.

He had come back; and now he had a far more puzzling problem to study.

x

WHEN she had been his secretary Mrs. Arroford had turned all her femininity into discreet loyalty; when she had been his chief she had turned it into kindness, complicated by a resolve that no one should walk over her. But, now that she was his equal, now that she was day by day his more quickly responsive companion, sharer in his every ambition and enthusiasm, he began to see her as a woman, with vanities and petulance, and a smile that was dearer than laughter; with ridiculous little hands, and mystery not to be deciphered. A woman—but a business woman, iron rigid in system, who laughed with him, but was swift to resent any undue familiarity in the office from him or from any other man!

He seemed never to get nearer to her. If his hand fell on hers as they said good night at the elevator she would respond with a casual grasp, but instantly withdraw her hand and speak with an impersonality that was harder to pass than scorn or hate.

He had to pass it, he told himself. She was necessary to him. When he spent an evening at the club he was equally lonely for her illuminating shop talk and for her woman's gentleness.

But if she was determined to be business-like about everything—very well, he would be businesslike in love-making. He made a plan of which he was just a bit proud. Never, he told himself, had any staid middle-aged lover had the genius to think of being businesslike. He would discount all this romance stuff, as Mrs. Arroford had done, and make a regular campaign of selling the attractions of Mr. Leonard Price.

On a winter afternoon, when the streets were irritating with squalls of dirty snow and the office was a warm refuge, Price sat beside her desk in conference.

"See here," he said prosily; "I know you're tired, but there's one other matter I must bring up and get all threshed out. There's one feature you've been neglecting."

"Go ahead."

"Nancy, you're always evading me when I want to talk about—well, about us ——"

"Heavens! Is that your neglected feature?"

"—— but I'm going to make you take it up systematically. If you're so darn' businesslike, then I'll simply have to be a good salesman for the Price line."

"Very well. What goods are you showing this season?"

"A very nice line of heart and hand—heart tobacco-marred, but very warm."

"I'm afraid we're all stocked up."

"Well, madam, how about heroic male protection?"

"No; we don't deal in male protection—or any windshields at all. We prefer open cars, so that we can drive right into the rain and feel it on our cheeks. Sorry!"

"No lady's car can be sold with just a bare chassis, though—no upholstery or anything. How about something neat in an upholstery that you can simply jump on if you want to—and it won't complain?"

"No; no upholstery, Mr. Price. I've got so used to riding down next to the crank-case of life that I like the heat and smell of it—even the spattering oil. Business has made me afraid of all the upholstery that most women start out riding on, and find themselves sunk in, lost in ——"

"Will you stop evading my attempts to propose to you! I'm so terribly afraid you'll get away from me again. And I do want to give you the chance to rest, to work for you —— Oh, hang it, I say—will you marry me, Nancy?"

"Business has made me so ——"

"Confound business! Nancy, you make me go back to my old belief that women don't belong in business. You business women ruin yourselves for love."

"No! That isn't true! It's you business men that ruin us for it. When we go into offices you expect us to be either flirts or nuns. If we aren't obviously nuns you keep bothering us. So we have to freeze out all the habit of love. No! I'm sorry. I am glad to have you for friend; but—that's all! Ever! You see, we're both being practical and frank, and—decisive."

"Nancy"—he hesitated—"I wish I could kiss you—just once!"

She smiled; but:

"No," she said; and he unhappily ebbed away.

xi

UPON his birthday old Magnus gave a Company dinner at his big house on Riverside Drive. The businesslike Mrs. Arroford was radiant and soft and utterly feminine in a cloud of silver and pearl; and Price stared at her all evening.

"Walk down the Drive with me on your way home," he had the chance to whisper. "There's moonlight on the snow."

"Moonlight?" she said. "Oh, yes; I remember—that's what they used to have on spring evenings when I was a girl."

They came chattering and laughing out of the orange glow of the doorway. They crossed to the river side of the Drive.

A yacht was fleeing up the Hudson, its lights red and yellow and vivid green upon the water, its searchlight shifting over the snowy heights of Weehawken. They stopped to watch it.

"It's so startlingly beautiful by night," she sighed, as they stood there.

He watched her, in her white furs, become hypnotized by the river's shining light; saw her grow tender with that faint sadness which is at the heart of all solemn beauty. Without a word he put his arm about her, felt the warmth and softness of her furs. He was not shy of her now, nor did he plan to seem businesslike. To be close to this dear woman comrade was as natural as that most ancient naturalness of snow and moon and wide, listening sky.

She shivered a little and leaned against him. She said no word. Deliberately he smoothed her cold cheek and kissed her.

"Oh!" was all she said; her hand slowly slipped into his and stayed there.

He had the inspiration to keep silent for a time before he whispered:

"I shouldn't have asked you, before, if I might kiss you."

"No!"

"And I shouldn't have been so practical in making love. Always it's you who are the wise executive! I should simply have been a plain human, and—and made love!"

"Oh, yes; yes! A business woman wants to be just a woman when it comes to love. Oh, we're so old-fashioned, we practical modern women! Like you men! I want moonlight and romance, and a chance to cry a little because I'm happy; and, oh ——"

"And lumbering old me?"

"And gentle old you, my dear!"

DEAF?

BREAKFAST ROOM *of the* BARONESS de MEYER
in her Venetian Palace, the Palazzo Balbi-Valier

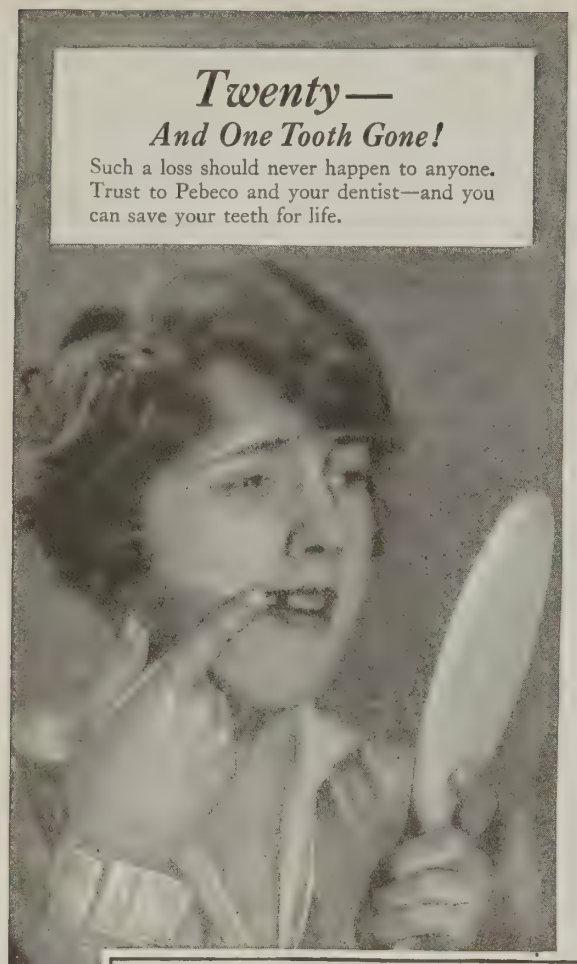
When it comes to silverware, even the staunchest American is an aristocrat at heart. Surely no one could resist the charm and distinction of the Patrician design in Community Plate. A chest containing a complete outfit for the table can be bought at prices ranging from $50.00 to $300.00. Or in individual sets; for instance, teaspoons $5.50 the dozen.

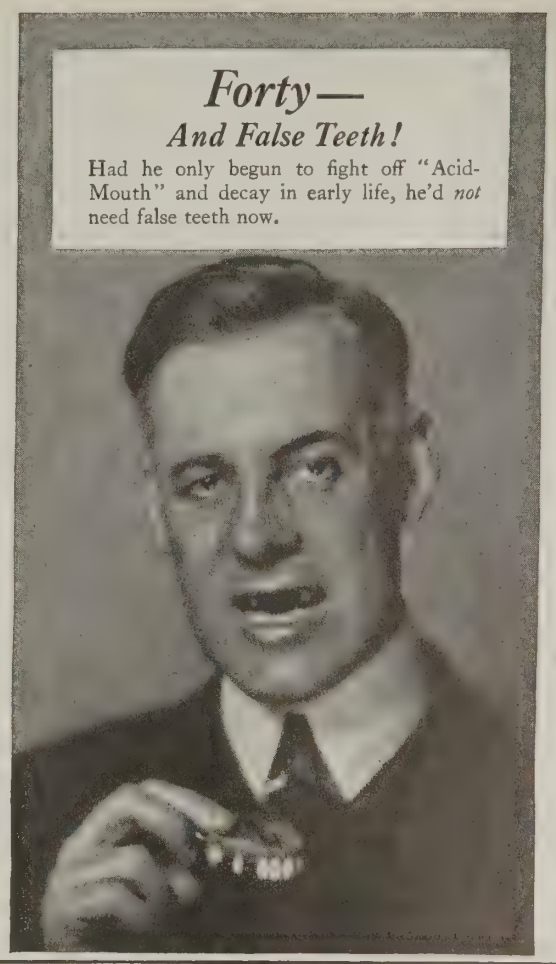
At your service for 50 years

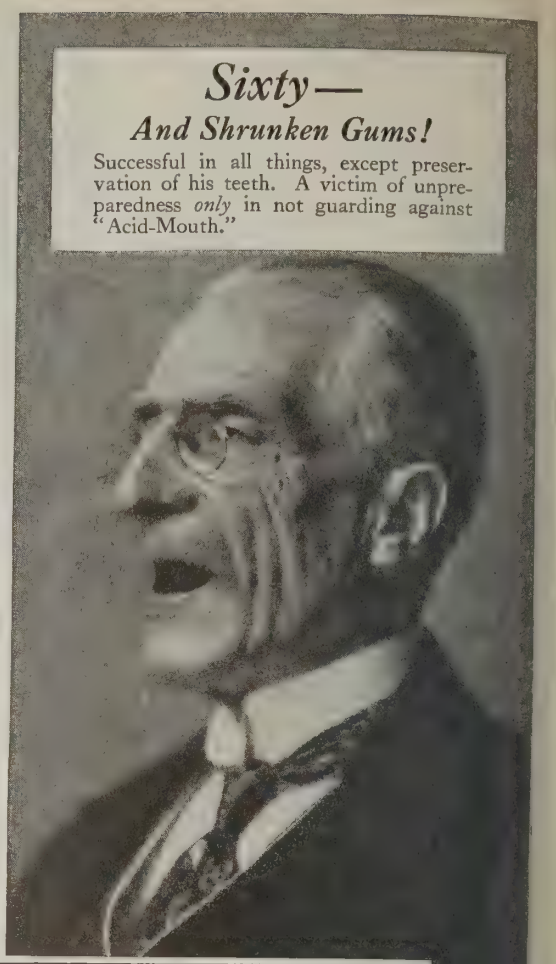
ONEIDA COMMUNITY, LTD.

Also makers of other lines of silver plate at lower prices—each worthy to bear the Oneida Community name.

PATRICIAN ORANGE SPOON







Tragedies Pebeco Helps You Avoid

WHY *will* some men and women fail to protect their teeth—fail to *guard* them against decay? It is beyond comprehension.

Millions know that "Acid-Mouth" works like a thief in the night to rob your teeth of goodness. Practically everyone is subject to "Acid-Mouth" and *needs* a preventive.

"Acid-Mouth" is said to weaken and soften the hard exterior of your teeth. Unless checked, it opens the way to germs of decay. The first *you* know about the havoc it is doing is when you discover a cavity—or several. Or when a swift, sharp ache shoots the knowledge to your brain. Use a scientific test in time. That's the one certain way to tell.

Millions now use Pebeco because they know it counteracts "Acid-Mouth." By using Pebeco these millions are doing something to *preserve* their teeth as well as keep them white and clean.

We have prepared a scientific test that detects the presence of "Acid-Mouth." We'll send it to you *free*—accompanied by a ten-day Sample Tube of Pebeco. Just write for both—on a penny postal. We want to show you how to save your teeth.

The use of Pebeco is mighty *pleasant*. Its after-effect is keen, refreshing, invigorating. If "pep" has a *taste*, it's the taste of Pebeco.

If your gums are sore and prone to bleed, apply Pebeco with your *finger-tip*, massaging the gums gently. When your gums are better, use Pebeco on a tooth brush—brushing up and down. Whatever you do, turn to Pebeco in time.

Send for Free Ten-Day Trial Tube and Acid Test Papers

Test Papers enough for a family test to show how many have "Acid-Mouth," and how Pebeco counteracts it. The FREE Sample of Pebeco will show you how a real dentifrice tastes and acts.

Pebeco is sold everywhere in extra-large size tubes. Write for FREE Sample today.

Pebeco is made by **LEHN & FINK** *Manufacturing Chemists* **122 William Street, New York**

KENTUCKY TURNS

(Continued from Page 15)

"Jedge," he whispered, "I wish you'd come down to my house for a little spell. I want to tell you somethin'."

IV

THE sun had just gone down behind the distant blue haze of the Coast Range. Kentucky gave Judge Navlett a seat outside the house upon the only chair he possessed. It was a clumsy affair, constructed of odds and ends of old boxes. Kentucky sat upon the wash bench, with his back against the house. Beside him was the water barrel, on one hand; on the other side was the door.

"Maybe you better smoke, Jedge?" he suggested. "This thing I've got to tell you may take a good while; I don't know."

Judge Navlett filled his pipe and handed his pouch to Kentucky. The man hesitated; but there was an avid gleam in his sunken eyes that betrayed him. It had been long since he had tasted tobacco.

"Obleeged to ye, Jedge," he said finally. "But I think I'll not smoke with ye—yet."

Judge Navlett lighted his pipe and looked about him. Beside the water barrel, and close against the miserable hovel, a sickly morning-glory vine strove with adversity. Through all that followed, Judge Navlett's mind kept coming back to that poor, weak vine, struggling for life in the midst of desolation. All about it there was no other green thing indigenous to the country where its ancestors had lived. The yard was torn desert sand; in the encircling clumps of low greasewood brush scraps of soiled paper clung and fluttered drearily. Inside the shack a woman moaned. Kentucky lifted his head and listened. After a while he began speaking in a low, monotonous voice.

"I'll have to begin way back," he said. "If I seem to say too much, Jedge, or if you feel yourse'f gettin' weary, just try to remember that I'm talkin' for my life. You can forgive a man a heap when he's talkin' for his life, I reckin.

"Ever since I was a boy I've wanted a home. Not a grand mansion, you understand, with half a dozen rooms and maybe an organ in the settin' room, but just a place of my own where I could live in peace. From the time I was twelve years old until I was twenty-one I worked in the tobacco fields, savin' money for my home.

"When I was twenty-one I married. Marthy and me bought a little place, payin' down what we could and givin' a mortgage for the balance. For nigh ten years we slaved and starved, payin' off that mortgage. But we didn't mind. We was slavin' and starvin' for our Home. That made it easier to bear.

"Then came the trouble among the tobacco growers. I never did understand the cause of it; but one night the Riders raided us and hoed up our tobacco beds. So then there could be no crop. The mortgage took our little home and all the money we had put in it—all that I had worked for since I was a boy.

"I thought a right smart of that little home, Jedge. . . . There was a morning-glory over the kitchen window; and every evenin' when I came in from work I'd see Marthy smilin' through the blue and green vines, when the sun went behind Ole Turkeytop and made our place all cool and shady an hour or two before it was real sundown. . . .

"We left Kaintucky. The Riders kept pesterin' us. Besides, we hadn't anything left to stay on there for. We crossed the Ohio and took another farm, way up in the Wabash Valley. We worked that place for several years, and we paid in on it every cent we could spare and still keep from starvation. Then they discovered coal on the place. Again the mortgage was foreclosed. I don't know how, but I did know that the man wanted the farm back because there was coal on it.

"That was two year ago. We managed to get hold of a team and wagon. We put a cover on the wagon, took the children and our dog and started West. We didn't know what the West looked like, but we just set out same as you would start out into the dark wonderin' what would happen to you at last. There ain't any call to bother you with everything that happened to us on that trip. But you saw us come in. One horse had died on the way, and the other died the night we made camp on the Lizard's head.

"When my horse died I saw that I was to the end of things at last. I couldn't go back and I couldn't go on. I *must* make a home here or my wife and children would shorely die! So I done the best I knowed. You saw what we done—me and the little woman. We done our best. We hadn't the learnin' of most people and the chances was plumb against us—us not understandin' the country and knowin' nothing at all about minin'. The country was strange and the people was strange; and sometimes, lookin' up, it 'most seemed as though God wa'n't there any more. But we done our best. Ever since we located the Lizard we've slaved. My wife stood it until a few days ago, and then she broke. I've stood a heap in my time; but it was only when I saw my wife layin' there lookin' like a ghost of her old self—it was not till then that I really walked right down into hell. I—I ain't complainin', Jedge; I'm jest tellin' you.

"That day the Ryker gang came and found that something was wrong with my location. Not with my right to the property, you see, but with the way I had described it on the piece of writin' I stuck up on the Lizard. They jumped me."

Kentucky was silent for some time and his eyes were gazing far across the desert, where the moon was beginning to show its rim above the dark outline of the Panamints.

"Ain't it strange?" he said finally. "All my life I was that tender-hearted I couldn't kill a hawg at butcherin' time. I never even shot a crow. Once I walked round a hornets' nest all summer instead of chunkin' a club through it as most fellers would 'a' done. God had made 'em. I figured that they had a right to live, somehow.

"Well, when the Rykers jumped us my wife went clear to the bottom, as you might say. It was the last straw and she couldn't stand no more. You see, we had put just a little more than the last drop of our hearts' blood into the claim when this happened. And when it hit us something inside of us seemed to snap, and we went all to pieces, like. We both knew this was the last time. We couldn't stand another long siege. Something inside of us quit! I wish I could explain it better. I kain't; but maybe you'll understand.

"The Rykers gave us until six o'clock this evenin' to get off the claim. They promised to shoot me if I didn't—just as I told you before. I couldn't go. My wife —— Did you ever have a wife, Jedge?"

Judge Navlett did not move, but his voice came thickly in the moonlight:

"Yes. She died on the Overland Trail. There was no water. That was a long time ago." Again there was a silence.

"When I came back from your office yesterday," went on Kentucky, "I found my dog layin' under the washbench here, shot through the lungs. I done what I could for him; but he died. Just licked my hand once and died. I found where he had dragged himself down through the sand. I follered the trail back to the Lizard shaft. There's where he was shot. The tracks of three men was there.

"Now, Jedge, it's a cur'ous thing—a mighty cur'ous thing; but it wasn't until they killed my dog that I changed. As I done told you, I never was a killer. And I've stood a lot. The Rykers done a lot, from first to last, to destroy my peace o' mind; they robbed us and insulted us all that most mortal flesh an' blood could stand, and I tuck it meek—me lovin' peace thataway. But when they killed my dog it seemed the very last thing that was needed. I reckin I'd have done it, anyway; but that gave me the final shove.

"Last night, after my wife and children was asleep, I went up on the Lizard's head and climbed down in the shaft. I couldn't sleep, you see, and I wanted to get away from my troubles. Ever have that feelin'? But you kain't do it. There's no hole so deep that your troubles don't find you. I guess maybe you've found that out sometime yo'se'f.

"So down in the bottom of my shaft, a hundred feet below the surface, I done figured it all out. And this is the way it come out in my mind:

"If the Rykers was to pry up my window and come into my house and steal my property, I could shoot 'em; and every law of the land would uphold me in the act.

"If they came in the night and tried to rob me of everything, so that my wife and

The Man Who Succeeded Where Herbert Spencer Failed

SEVENTY-THREE years ago, in Derby, England, lived a young man who had a new idea in watch-making.

He was Herbert Spencer, then an inventor, later one of the world's greatest utilitarian philosophers.

His idea was "a rearrangement of the works with a view to greater flatness."

Although his principle—that a practical thin watch could be accomplished only through a rearrangement of the works—was correct, Herbert Spencer failed. "My model," he writes, "proved to have no superiority; indeed it was a bad one."

Another man's ideal

In Cincinnati, Ohio, thirty-three years later, another man conceived the same idea. Like Spencer, he saw that *all* watches were not only too large, but too *thick*.

Herbert Spencer, Philosopher

This man was Dietrich Gruen, a Swiss watch manufacturer who had learned his trade under one Martens, among the most renowned horologists of his time.

He had founded his business in America with the idea of producing a watch of exceptional merit. For its production his thoughts turned naturally to Switzerland, where from time out of mind the finest watches have been produced.

There he gathered together a group of the finest craftsmen and established his first factory for producing watch movements, importing these and fitting them to their cases in America.

The smallest watch then made was what was known as the "18" size. But Dietrich Gruen planned and experimented until he produced the watch known as the "16" size—for many years the popular size watch and the size made today by all manufacturers for railroad use. But even this did not satisfy the ideals of Dietrich Gruen. He started then from the bottom, striving to find a new arrangement of movement parts, which, without weakening any individual wheel or pinion, would *build up* a watch of exceeding thinness.

Then came success!

In 1892 his son Fred, who had been studying horology both in America and Switzerland, took up the problem with his father.

It was not until 1902 that Dietrich Gruen's thin model was brought to the high standard of accuracy and durability which the name Gruen Verithin stands for.

It was an invention of Fred, who today personally supervises the manufacture of Gruen Watches, that made complete success possible. What his invention is, and what it does, is shown by the wheel train illustration below. In the old way the wheels were one above the other, like steps. In *his* way he took the smallest wheel and reversed it, placing this small wheel on a line with the larger wheel, as shown.

This enabled him to make the Gruen Verithin only *half as thick* as the ordinary watch without reducing the strength of parts, and thus retaining the highest accuracy and durability.

The Watch of Herbert Spencer's time — *The Gruen Verithin*

Most beautiful watch in America

To appreciate the exquisite charm of the Gruen Verithin, one must see it.

With cunning fingers the watchmakers of Madre-Biel, Switzerland, adjust and finish the machine-made parts by hand after the original model. In Cincinnati, located on "Time Hill," is the beautiful *American Service Plant and Gold-Case Factory*, where the gold cases are made and the watches receive their final adjustments. Here, too, duplicate parts are kept always on hand.

The demand for these watches during the past seven years being greater than the production, obliges us to limit their sale through about 1,200 jeweler agencies, but those who want a watch for long service, a watch in whose accuracy and beauty they will always take pride, will find among the best jewelers in every locality one or two who are proud to display the Gruen agency sign.

Fixed prices: $27.50 to $200.00. Highest perfection attainable in grades marked "Precision." If your jeweler cannot supply you, write us naming the kind of model you are interested in, and we will arrange for you to see it.

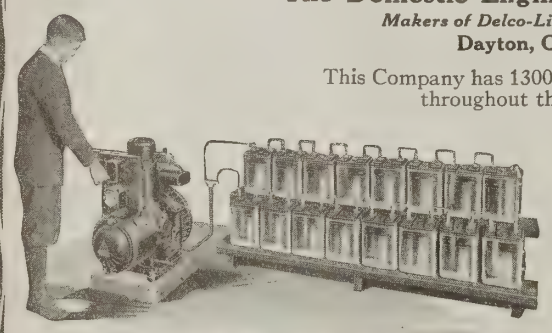
The Domestic Engineering Company
Makers of Delco-Light products
Dayton, Ohio

This Company has 1300 salesmen at work throughout the world.



Delco-Light is a compact electric light and power plant, for farm, village, and suburban homes—Betters living conditions and pays for itself.

Fill The FITALL With Whatever You Wish

Put in your own brushes, shaving outfit and favorite toilet articles, as many or as few as required. It wastes no space and you've no extra weight. This is the great advantage of the FITALL Kits; you needn't buy or carry useless fittings.

Adjustable self-locking straps hold all articles securely. There are three extra pockets for wash cloth and other conveniences.

FITALLS are equally serviceable for both men and women. Come in flexible leather and specially prepared water-proofed fabrics at $1.00 and up. May also be had fitted.

We also make FITALL Brief Cases of FITALL water-proofed fabrics. They are superior to leather, and sell for $2.50 to $5.00.

Your dealer should have FITALLS—write us if he hasn't. *Descriptive booklet free.*

fambly would die, the law would uphold me in slayin' them. The law would say I done right.

"So I says to myse'f: 'Where is the difference? They're doin' the very same things—only they're usin' the law for a mask, just as a robber would use a black handkerchief. Would it be the same as shootin' a burglar if I killed them?'

"Seemed to me it would. But, anyway, it didn't matter. I was at the end of things. All my life I been lettin' the world walk on me and starve my fambly and take away my property, just because I been lovin' peace.

"But way down there, in the silence of that hole in the ground, I turned. I could seem to hear my wife moanin' and my children cryin' for something to eat. I thought of the long years my wife had followed me over the world, for better or wuss. I thought of all she had suffered. So, suddenlike, something shot through me that was shame and sorrow and hopelessness, and a lot of other things. I clenched my hand and hit the rock wall of my shaft, and said to myse'f: 'By God, I've turned.' The blood ran all over my hands; but it done me good. I felt that the time had come for me to get used to the sight of blood.

"I went up the ladder and carried down all my stock of powder. There was fifty pounds of it.

"When I quit work yesterday I had three holes drilled into the bottom of my shaft. I had been workin' on the fourth and had it nearly done when I quit.

"I took a stick of powder and put a cap in the end of it. But I didn't put in the fuse. I let the stick down into the bottom of the unfinished hole. Then I lowered the drill down on top of the cap—mighty careful and easy; for a cap goes off at a touch sometimes, you know. So there the drill stood, with about ten inches of it stickin' up out of the hole. I set the fifty-pound box of powder beside it—open. On top of it I left an open box of caps.

"When I'd done all that, I laid my singlejack down alongside the drill hole. It looked as though I had just quit work and dropped my hammer beside the drill.

"'Now,' I says to myse'f, 'when they come they'll all come together; for they think I've struck rich ore and they'll be crazy to see it. They'll come down together—shore! And while they're foolin' round down here one of 'em will pick up that old singlejack and tap the head of that drill—shore! It's human nature.' I don't know how the idee came to me; but it did.

"And that's what they must 'a' done. One of 'em tapped the drill sort o' carelessslike, and shot the powder. The whole fifty pounds went along! . . . You saw the rest.

"That's all, Jedge. I killed the Ryker gang. I done it unfair; but it was the only way. They always traveled together. What would 'a' happened to me in a man-to-man fight with three gunmen? And what would 'a' happened to my fambly when I was dead? If it had been only my life I wouldn't 'a' done it. But, Jedge, a man don't study much about polite ways of killin' when he's fightin' for the lives of his wife and babies."

Kentucky fumbled in the breast of his ragged shirt and brought out a piece of rock.

"I did strike rich ore," he said, handing the rock to his silent auditor.

Even in the uncertain moonlight it smiled up with the rich gleam of much free gold. It weighed heavy in the hand.

"And there's three feet of it," went on Kentucky—"right from the grass roots. But it's not in the shaft where the Rykers are. It's way down yonder at the other end of the claim; at the very tip of the Lizard's tail. But it strikes this way—the pay chute does. I opened it up across; but when I saw what it was I raked the sand over it; and nobody knows—nobody but my wife and me.

"That's my case, Jedge. I haven't held back anything—not even about my big strike. I wish you'd give me your verdict to-night—now!"

Both men had risen and now stood facing each other—the Kentuckian standing limply, his shoulders sagging as though under a heavy burden; Judge Navlett with the lump of rock forgotten in his outstretched hand, his rugged old body erect under the stars.

For a long time there was silence. The rising wind caught and rustled the sickly morning-glory vine, clinging to the swaying strings hung on the side of the house. Somehow that poor, pathetic vine would persist in twining itself through Judge Navlett's thoughts. It seemed to carry his mind back over the thousands of weary heartbreaking miles along which the under dogs had journeyed, carrying always the seeds of green things, even as they carried the germs of hope, cherishing them against the time when they should find, somewhere in the earth, a place for the loved things to grow.

"Kentucky," said Judge Navlett in a queer whisper, "if—if I were you I'd —— It's moonlight now, and you could see to do it, easy. If I was you I'd take that amended location right over and post it up on your claim alongside the original which wasn't exactly according to Hoyle. You do that—so this Court decides—and that little technicality will be straightened out. You can get witnesses to sign it tomorrow. I'll record it. It won't cost you a cent. And I've got a few dollars hidden away in the corner of an old sock that I'll split with you until you get going ——"

Kentucky collapsed upon the bench, his wasted body heaving with silent convulsive sobs.

"And," continued the old judge in a controlled, casual voice, "I wouldn't tell a soul what you have told me. It wouldn't do any good. The Ryker notice was posted on the windlass. It's blown into a million flyspecks, and the wind has carried them clear across Old Baldy by now. Just post your amended location and bring me a copy to-morrow."

Inside the house a woman called feebly. Kentucky rose and hurried awkwardly within.

"It's just Jedge Navlett, mother," the listener heard him say. "The jedge is our friend! He's folks, mother—think of it—*folks!* And he says we won't have no more trouble! The Rykers have gone away for good and we can have our home now. . . . Why, mother! There, now! . . . There, there, honey girl! . . . There, there, there!"

Judge Navlett stole quietly away and plowed up through the sand to the Lizard's head. By the side of the wrecked shaft he paused and looked down into the ugly hole.

"You deserved it!" he said grimly. "You deserved it—and you got it!"

Inside his poverty-stricken little office the judge lighted an old candle and set it before him on the rough table that served him as a desk. Calmly and unhurriedly he opened the District Records at the last written page. For some time he sat, leaning back and regarding that last page, abstractedly filling his blackened corncob pipe. Presently, with grim, steady old fingers, he tore the page from the book, twisted it into a spill and touched it to the flame of the candle. His hand was still steady as he applied the flame to the bowl of his old corncob and puffed serenely, meantime watching the sheet burn to a cinder in his fingers.

A sudden gust of wind eddied into the room, putting out the candle. It whirled the charred ashes from the judge's fingers and scattered them out into the night.

For a long time the old man sat on, smoking his pipe in the darkness and watching a pale light, far down on the Lizard. A feeble light it was, reminding one of some lives that struggle with the immensity of a world which to them is all mystery and night.

The wind rose and warred across the desert; but Judge Navlett sat and smoked on. There was no night tempest worrying his soul; for his conscience looked beyond the petty things called Written Law and discerned the clear light beyond.

Teeth Are Not Cleaned

By Ways You Use Today

By Wm. M. Ruthrauff, A. B., A. M.

All Statements Approved by High Dental Authorities

That Film Remains

And, Despite Your Brushing, Teeth Discolor and Decay

This is not to discourage you. It is simply to prove, at our expense, that this film can be ended. You can have white teeth, clean teeth, just as easily as not.

You were taught to brush teeth often—twice a day or more. And no doubt you do it.

But with what result? Has decay been prevented? Do the teeth stay white? Does tartar never form? Or must you periodically visit a dentist for cleaning and repair?

There is one universal answer. The brushing you do removes débris, but it doesn't prevent tooth troubles.

Every dentist knows that, just as you do. He has sought in many ways to remedy the fact. He has tested, probably, a dozen methods which claimed to solve the problem.

All those methods failed. Teeth still discolored, still decayed. There came a time when most dental advice was, "Use any dentifrice you like."

The trouble lies in a slimy film—the film which you feel with your tongue. That is what clings and hardens, especially in crevices.

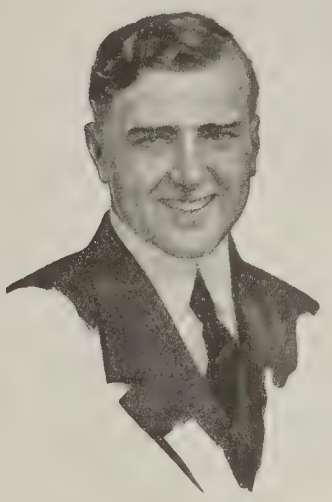
It absorbs stains, and holds them. It catches the food particles which ferment and form acid. It holds that acid in contact with the teeth until it destroys the enamel.

It hardens and forms tartar. Above all, it breeds germs, for the film is albuminous. And, with nine folks in ten, those germs eventually lead to pyorrhea.

That film is the cause of all tooth troubles. It is as stubborn as it is destructive. It has taken fifty years to find a remedy for it. *But it has been found.*

You can prove in one week that Pepsodent ends that film. You can prove it at home just as dentists have proved it.

The purpose of this ad is to ask you to do that. To do it now, at our cost. And thus to learn that there is now a way to keep teeth white, safe and sound.



A Week's Free Test

Will Prove That Teeth Can be Kept Really Clean

We offer here a One-Week tube of Pepsodent. That's a new-day dentifrice on which five governments have already granted patents.

It has now had three years of clinical tests. It has won by those tests supreme endorsement from many high dental authorities.

The time has come when everyone should know it. So we take this means to spread the use as quickly as we can.

Pepsodent is based on pepsin, the digestant of albumin. As that film is albuminous, pepsin is the right way to dissolve it. But pepsin alone is inert. It must be activated by an acid, as it is in all digestion. That has been the trouble. Acids in general are harmful to the teeth.

The invention lies in a neutralized acid, made from elements used in tooth construction. This activates pepsin without harming the teeth, as our patents certify.

This discovery has made pepsin available in attacking the film on teeth. It has given us a way to keep teeth free from film. When that is done teeth can't discolor or decay. Tartar cannot form. And germs can't breed around the gums, as now, to lead to pyorrhea.

We urge a one-week test, and we supply the tube. We say one week, because on old film the action isn't instant.

You will find Pepsodent delightful. In a few days you will note results which old methods never brought.

Mark how clean your teeth feel—as though you just came from a vigorous dental cleaning. Note how they whiten. Feel your teeth and note the absence of the film.

You will wish to keep them that way, and you should. Three years have proved that Pepsodent will do it.

Send this coupon for the One-Week Tube. Please don't delay. You know that other methods fail in doing what you want. Let us prove that Pepsodent will do it.

Selling You the Secret of My Success

Why I Left a Prosperous Retail Business to Become a Burroughs Salesman

My evolution from retailer to Burroughs salesman ought to be interesting to every small retailer from Maine to California.

I'm now selling something that I know, by personal experience, is a wonderful help in making a retail business a success—and no store is too small to profit by it.

In my grocery at Newnan, Georgia, I learned how to run a small business on *knowledge* instead of *guesswork*.

I found it paid to analyze charge and cash sales slips, to get facts about my business.

But to get those facts I had to add long columns of figures, and this is something the average retailer cannot find the time to do, and cannot do with sufficient accuracy, by pencil-and-brain methods.

With my Burroughs I found I could get those facts in a small fraction of the day's working hours.

It enabled me to put my business on a systematic basis—to obtain totals of charge sales, cash sales, collections, bank deposits and expenses.

It helped me greatly in taking stock, it was always saving time on odd figuring jobs.

I used it to check each customer's account every month and thus prevented overcharges and undercharges.

It enabled me to present a complete statement of my business in twenty minutes for the mercantile agencies. It stopped profit leaks and gave me the knowledge that is power.

Naturally, I passed the good word along to other retailers—and it did for them what it did for me.

Finally I decided to give up my grocery business, and spend all my time selling Burroughs Machines.

My own experience as a user had given me the best possible preparation.

To carry the message to retailers of what a figuring machine would do for them was an opportunity—not only to sell something that I knew the retailer really needed, but to win his friendship because I was helping him to a more profitable business built on accuracy and knowledge.

From experience I know that a figuring machine is a good investment for any retail business.

It will detect many small losses that otherwise would get by.

For instance, every invoice you pay must be added correctly, or you may lose.

Every cash sale you make, every charge slip you record must be correct, or you may lose.

You must know your income and your outgo, your cash and your credits, your assets and your liabilities, or you may lose. And the easiest way to get these facts is with a Burroughs Machine.

Analysis of figures made me a successful grocer and a Burroughs booster.

Do you wonder that I am urging you to buy a Burroughs?

Paul Manget

Burroughs salesmen are always personally interested in the business success of their customers. They are qualified to tell you which of the 98 Burroughs models will best fit into your business, and to help you make a good profit on the investment.

Your telephone book or your banker will give you the address of the nearest of the 170 offices of the Burroughs Adding Machine Company in the United States and Canada.

A Burroughs Figuring Machine helped Paul Manget build a successful retail business. He passed the good word along to other retailers—and it helped them as it had helped him.

FIGURING AND BOOKKEEPING MACHINES PREVENT COSTLY ERRORS-SAVE VALUABLE TIME

PRICED AS LOW AS $125

Burroughs

Any retailer can adopt the same business-building methods that formed the basis of Paul Manget's success.

THE THRILL SHOOTER

(Continued from Page 5)

idea about using her in a picture. I took her name and her telephone number because it struck me as a shame that she should be working for a director like Towne. You know his system; everybody knows it. It won't be long before he'll be telling her that she's got the makings of a star, but she needs a love affair to 'develop her latent dramatic instinct' and 'bring out her powers of expression.' Bah! If I had anything she could do I'd give her a job just to keep her out of his hands!"

"Towne has worked that scheme on a lot of girls," said Gabby, "and he always plays the other end of the love sketch. There's nothing to him but his looks and his line of talk, but gee, how the dames do fall for him!"

David was silent for a moment.

"This one won't," said he with an air of conviction. "She sees through him already."

"Fine!" exclaimed Gabby. "If she's that sensible, why not grab her anyway? I wish we knew whether she can drive a car or not. I tell you, Davy, sure as eggs is eggs, Arlington will never go through with the big punch in this next picture. She's not game enough."

"She'll have to go through with it," said David, and his mouth closed like a trap.

"All right, Simon Legree, you crack the whip and see if she does! Confound it, Davy! If it wasn't for your stubbornness you might learn something once in a while!"

It was early dusk when MacWade whisked through the gate of the Mammoth plant and pointed the nose of his two-ton runabout toward Los Angeles. The road, a ribbon of asphalt smooth as glass, twisted upward into the hills, a temptation and, when the motor-cycle policeman lurked in hiding, a snare. David thought well of his car and of his skill as a driver. He carried one passenger, Gabby Trozier, with whom he shared his bachelor bungalow in Hollywood.

"Let her out a little," urged Gabby. "The speed cop has gone to supper."

"No hurry," was the reply. "If we loaf along we may scare up a race."

From the rear came the rapid throb of a motor, and David checked to a modest twenty miles an hour—an invitation and a challenge. Gabby peered over his shoulder and blinked at the approaching lights.

"Coming like a streak, Davy. Give her the gun—step on her!"

The throb swelled to a sudden roar, and MacWade's toe fell heavily on the foot throttle. The big car leaped as a thoroughbred leaps to the spur, but David had delayed an instant too long. A small, striped roadster whizzed alongside, drummed in their ears for a brief space, and then drew swiftly away up the grade, disappearing round a curve with a scornful flirt of its tail light.

"No can do!" grunted MacWade, at the end of a mile. "Too light. Too much speed. What do you suppose he's got under that hood?"

"He!" cried Gabby. "It was a girl—the girl you was chinning with this morning over on Towne's set! Your little blond friend!"

"The deuce it was! Well, she's got quite an engine in that old wreck. I'd like to hook up with her on a ten-mile straightaway ——"

"Oh, forget your confounded car for a minute, Davy! This kid can drive! Do you think Arlington would have tried to pass us with only a foot or so to spare? Not in a million years! This dame could make the stunt stuff loom up big in the next picture. Why not use her to double Arlington?"

The director shook his head obstinately.

"If I begin doubling Eileen now," said he, "there'll be no end to it. She'll insist on a double for everything in the stunt line. No, she'll have to go through."

"You make me sick!" grunted the camera man. "A mule has got you cheated for legs, Davy, but that's the only place he wins from you!"

III

"NOW, little girl, be reasonable! You know I wouldn't ask you to do anything with a real risk in it."

Thus spoke David MacWade, in whipcord riding breeches and pigskin putties, his remarks being addressed to a beauteous blond creature sulking at the wheel of a shiny new six-cylinder roadster. Seated beside the blonde, and obviously bored and unhappy, was the handsome youth known to motion-picture patrons as Gerald Fairfax, MacWade's athletic leading man. Even the extra men addressed him as Jerry—a certificate of character not to be despised. He was bareheaded and wore a soft white shirt with a flowing collar—certain proof that he was about to assist in putting the punch in a MacWade thriller.

The scene was a railroad crossing on a branch line near Los Angeles, and in the distance an express train was waiting, the same having been hired by the day. Behind the director stood Gabby Trozier, fiddling with his camera, on his honest countenance an expression which said "I told you so." On each side of the road were the extra people—a score of them. The fat, swarthy man, known as Sam, appeared in the garb of a locomotive engineer, his face smeared with oil, a bunch of waste in his hand.

"There isn't a bit of danger!" asserted David.

"Not for you!" snapped the beauteous blonde. "But suppose I should go too fast—and bump into that engine?"

"I won't start you until the train is almost in the clear. All you have to do is back your car straight down the road, and keep on backing till I tell you to stop. And be sure to turn your head a little, so it will look as if you are watching the train."

"A little!" shrilled Miss Arlington. "How do you expect me to back this car unless I look behind me?"

"You mustn't do that," said David patiently. "Better rehearse it once—without the train."

Now there are tricks in every trade, but when it comes to making thrillers the trade is in the tricks. Motion-picture actors do not always take their lives in their hands. MacWade was attempting to secure a very common effect, but one which never fails to deliver its thrill. The picture, as thrown on the screen, would show an automobile fighting with an express train for the right of way, racing it to the crossing, and barely slipping across the track a few feet in front of the engine—a fearsome thing to watch in a darkened theater, but ridiculously simple in the making, and practically devoid of danger. The spectator is tricked, and in this case the trick lies in reversing the action as shown on the screen. The scene begins with the automobile standing still in front of the camera. The train, tail first, backs rapidly over the crossing. At a signal from the director the automobile backs away from the camera, and crosses the track as soon as the way is clear. The camera man, grinding slowly and with the reverse motion of the crank, photographs the scene backward on the film—and the trick is done. Reverse the action, and you have a hairbreadth escape from sudden death.

Miss Arlington finally consented to a rehearsal, and crawled cautiously down to the crossing at a snail's pace, showing nothing but her back hair to the camera. Jerry grinned and shook his head, MacWade groaned, and Gabby chuckled in an extremely irritating manner, whereupon the beauteous blonde entered a vigorous protest.

"If you insist on my doing this," said she, "I shall certainly watch the road behind me!"

"That's what comes of a movie queen owning her own car," muttered Sam. "She's afraid she might scratch the paint on it!"

Gabby whistled cheerfully and looked at his watch.

"Forty or fifty scenes yet to come," said he, "shooting light going fast, and she's holding us up on an easy stunt. What do you think she'll do when it comes to the real punch in the picture? Think she'll drive that varnished cozy corner up alongside an engine running forty miles an hour? If you do, you're daffy! How much does it cost to hire a train by the day, Davy?"

"That's right—rub it in!" David was beginning to show exasperation. Tiny beads of moisture appeared on his brow, but he still addressed the blonde in even tones: "Now then, Eileen, we'll try it again. A little faster, please. Jerry can watch the road for you ——"

"I wish he wouldn't speak to me!" scolded Miss Arlington. "It makes me nervous to have anybody talk when I'm driving." Jerry sighed and rolled a cigarette. It had been his fortune to play many love scenes with Eileen; he knew the lady well and detested her most cordially.

After wasting a precious half hour, MacWade announced himself as ready to shoot.

Your floors—are they worthy of your home?

Well-kept floors are an essential part of the beautiful home. They provide the right setting for fine rugs and furniture, and give an air of taste and refinement.

Good varnish is the most beautiful finish a floor can have—rich, lustrous, and sanitary. Its smooth surface repels dust and dirt and is easily kept clean with a moist cloth or mop.

But be sure of *good* varnish. Poor varnish may look nearly as well in the beginning, but it doesn't last; it must be continually replaced.

Murphy Transparent Floor Varnish

"the varnish that lasts longest"

reveals the delicate grain and beauty of the wood and covers it with a strong protective coating that resists moisture, the wear of passing feet, and the friction of heavy furniture.

Besides this, Murphy Varnish has the one greatest virtue of fine varnish—length of life. It lasts, and lasts, and lasts. It saves money because it requires so little care and doesn't have to be replaced frequently.

Your painter or dealer can supply Murphy Transparent Floor Varnish or other Murphy finishes that protect and beautify wood surfaces.

ATHENA Underwear Ordinary Underwear

WOMEN who wear ATHENA Underwear always say to their friends—

"YOU must buy

ATHENA UNDERWEAR"

for Women and Children

(reasons shown in illustration)

ATHENA is the underwear that fits women and children comfortably and perfectly, without being stretched into shape.

Contrast ATHENA Underwear with ordinary underwear, and the result will be as shown in illustration above.

THEN you will realize why women who know ATHENA Underwear always buy ATHENA Underwear and tell their friends to do the same.

All sizes, weights and qualities at the prices you have been accustomed to pay.

Ask for ATHENA Underwear at your local dealer's.

Burpee's Seeds Grow

This assortment of seeds comprises a careful selection of Burpee Specialties.

For $1.00 we will mail a complete Collection of Fordhook tested and proved Vegetable Seeds, suitable for a medium size garden, together with booklets "Food Value of Fresh Vegetables" and "Vest Pocket Guide on Vegetable Culture," as follows:

Bean—½ pint Burpee's Stringless Green Pod
Bean—1 pkt. Fordhook Bush Lima
Beet—1 pkt. Burpee's Extra Early
Carrot—1 pkt. Danvers Half-Long
Sweet Corn—1 pkt. Golden Bantam
Cucumber—1 pkt. Burpee's Extra Early White Spine
Lettuce—1 pkt. Wayahead
Lettuce—1 pkt. Iceberg
Peas—½ pint Gradus
Parsley—1 pkt. Dark Moss Curled Radish—1 pkt. Long White Icicle Radish—1 pkt. Rapid Red
Tomato—1 pkt. Chalk's Early Jewel Turnip—1 pkt. Petrowski

The above assortment of choice Vegetable Seeds carefully packed and sent postpaid to any address on receipt of $1.00.

Burpee's Annual for 1917

The Leading American Seed Catalog is bigger, brighter and better than ever before. We have added twenty-two pages, making in all 204 pages, and, best of all, you will find thirty Burpee's Specialties illustrated in color. Burpee's Annual is mailed free upon request. A post card will bring it. Write for your copy today and mention The Saturday Evening Post.

W. ATLEE BURPEE & CO., Burpee Buildings, Philadelphia

The engineer obeyed the flag and did his part, but Miss Arlington backed her car twenty feet, looked behind her, screamed and jammed on both brakes, stopping short of the crossing. MacWade raved up and down the road, the fair Eileen shed real tears, Jerry maintained a disgusted silence, and of those most vitally concerned, the camera man alone remained cool, calm and collected.

"What in the name of crime did you stop for?" demanded David.

"Because y-you started me t-too soon—y-you know you did!" sobbed Miss Arlington.

"Too soon! Why, you couldn't have hit that engine to save your life!"

"Y-you wouldn't c-care if you k-killed me, so long as y-you got a picture of it!"

At this point David abandoned repression and emptied his mind freely. It was a great treat for the extra people, and especially for Sam.

"Never heard the little boss squawk so loud before," said he. "Just shows that no man's goat is safe when a fool woman goes after it!"

"An engine—an engine and seven cars," sputtered the agitated director, fairly skipping in the road; "a mob of extras, everything hired by the day, a lot of scenes to shoot—and you're gumming up the entire parade! You said you could drive a car, and so help me, young woman, you'll drive one if I—if I ——"

In the midst of David's tirade a small, stripped roadster slithered up to the crossing and halted close to the camera. A young girl sat behind the wheel, and when MacWade saw her the words died in his throat. He paused in the middle of a sentence, gulping. The girl stopped her engine and bowed to the dumfounded director.

"Good morning, Mr. MacWade!" said she with a smile.

David mumbled something under his breath and walked slowly over to the side of the car. His eyes were fixed on the girl's face with a peculiarly intent and disconcerting stare; they seemed to see through and beyond her.

"You don't remember me," she began. "Well, no matter. When I saw you last I was atmosphering with Mr. Towne—three-dollar-a-day atmosphere in a seven-dollar evening gown—my hair was up on top of my head, and the orchestra ——"

"Was playing Hearts and Flowers," interrupted David with the brusqueness of one anxious to dispose of unimportant matters. "Your name is Jean Campbell. I remember everything, young lady, everything; but when you drove up here just now, it—it—well, it set me to wondering about a little thing they call Fate. What good angel brought you along this road?"

"It isn't an angel at all," laughed the girl as she patted the wheel of the roadster, "but it behaves like one."

"Do you think you can back a car down that road without looking behind you?"

"Why not? It's a perfectly straight road."

"And a train of cars doesn't frighten you?"

"Not when I see it first."

"Bully for you!" David settled his cap on the back of his head and rammed both hands into his pockets—sure signs that he was once more the thrill shooter on the job. His voice took on a brisk, business-like tone:

"Here's where you break out of the atmosphere class! Just come with me a moment. Miss Campbell, allow me to present Miss Arlington and Mr. Fairfax. Eileen, this young lady will double you in the auto stunts."

Miss Arlington examined the younger woman with a calm and supercilious air, registering disdain.

"Oh, indeed!" she sniffed. "She won't double me in my car!"

"But your car is already registered in two scenes!" protested David.

"That makes no difference to me. This car is my own personal property and no stranger is going to drive it!"

"Oh, I say!" murmured Jerry. "There's no occasion to be nasty, is there?"

"Mind your own business!" Miss Arlington settled down in the cushions and took a firm grip on the steering wheel. David's face turned purple and his neck began to swell. He was on the verge of a final eruption, when the invaluable Trozier took him by the elbow and led him out of earshot.

"Get your noodle to working, Davy! Arlington has only been in a few scenes so far, and they can all be made over. Here's your chance to tell her to take her curling iron and go. This kid is younger, nervier, and has got her cheated a city block for looks. Put her in and let her play the lead!"

"But she's had no experience."

"That's one reason why she'll do just what you tell her to do!"

Again the strangely intent stare came into MacWade's eyes.

"It's Fate, that's what it is!" said he. "Fate! She turns up here just at the right time ——"

"And speaking of time," interrupted the practical camera man, "we're paying for this train by the day, not by the week. Action, Davy! Atta boy!"

Director MacWade removed his hands from his trousers' pockets, shrugged his shoulders once, and strode back to the group.

"Miss Campbell, you will use your own car," he announced crisply. "Jerry, you help her with the make-up, that's a good fellow. Somebody flag that engineer and send him back down the line. Hustle!"

The fair Eileen, finding herself overlooked entirely, began to be a bit nervous.

"I suppose she will have to wear this hat and coat," she pouted. "They were registered in the other scenes."

"So was your car," said David sweetly. "It's out of the picture now, young lady, and—don't let us detain you!"

The sun was dipping toward the Pacific when MacWade made ready for the scene which was to put the big punch into the picture. A platform had been erected on the tender of the engine, projecting some six feet over one side, and it was from this elevated perch that Gabby was to film the punch at close range. A stretch of track had been found, without embankments, culverts or fences, closely paralleled by a paved road.

At one point it was possible for an automobile to leave the paving and swerve in toward the rails. For two hundred yards the ground was practically level and free from obstructions; beyond that was a succession of brush-covered gullies and tiny ravines.

"Now, Miss Campbell," said David, "you've done wonders all day, and I'm proud of you. I tell you this because now I'm going to ask you to do something hard. There's no reverse motion about this stunt—it's the real thing. This is where you put Jerry aboard the runaway engine—the finish of all the pursuit scenes we've been making. You'll have to swing in so close to the track that he can do a jump from the seat of your car to the running board of the engine. I've marked a line for you to follow that will give you a clearance of two feet, and I want you to see how fast you can drive over that smooth patch outside the ties. Don't forget that when you come to the end of it you must make a quick stop, or else a sharp turn to the left and get back on the road. Run over it easy once, just to get the lay of the land, and then you can try it for speed."

As the roadster jolted slowly off the boulevard Jerry Fairfax stole a sidelong glance at the girl.

"Nervous?" he asked.

"Not in the least," was the reply, "but I should think you would be."

"Don't worry about me!" laughed the youngster. "It's all in the day's work. The worst I can get is a fall—and this ground doesn't seem very hard."

"Or very rough. Can't I make it easier for you by keeping the car inside those marks? I shan't need all that clearance."

Jerry stared at her with undisguised amazement and admiration.

"It's bully of you to suggest such a thing!" said he warmly. "Just bully, and I appreciate it, and all that! But please, Miss Campbell, forget my part of the show and keep as far away from the engine as possible. There's a handrail up above the running board, and if I can hook two fingers over it I'll be all right. I'm used to this sort of thing—a fellow has to be if he works for Davy MacWade."

"But I can do it just as well as not!"

"And I insist——" Jerry paused to laugh. "It's rather like Alphonse and Gaston, isn't it?"

On the second trial, which was for speed, the roadster bumped along beside the ties at an honest thirty-five miles an hour.

"I might go even faster," the girl told MacWade, "but it might jolt Mr. Fairfax out of the car."

(Continued on Page 117)

"Hello Huck!"

RECALL that golden day when you first read "Huck Finn"? How your mother said, "For goodness' sake, stop laughing aloud over that book. You sound so silly." But you couldn't stop laughing.

TO-DAY when you read "Huckleberry Finn" you will not laugh so much. You will chuckle often, but you will also want to weep. The deep humanity of it—the pathos, that you never saw as a boy, will appeal to you now. You were too busy laughing to notice the limpid purity of the master's style.

MARK TWAIN

25 Volumes — Novels — Stories — Humor — Essays —Travels — History

When Mark Twain first wrote "Huckleberry Finn" this land was swept with a gale of laughter. When he wrote "The Innocents Abroad" even Europe laughed at it itself.

But one day there appeared a new book from his pen, so spiritual, so true, so lofty, that those who did not know him well were amazed. "Joan of Arc" was the work of a poet—a historian—a seer. Mark Twain was all of these. His was not the light laughter of a moment's fun, but the whimsical humor that made the tragedy of life more bearable.

A Real American

Mark Twain was a steamboat pilot. He was a searcher for gold in the far West. He was a printer. He worked bitterly hard. All this without a glimmer of the great destiny that lay before him.

Then, with the opening of the great wide West, his genius bloomed.

His fame spread through the nation. It flew to the ends of the earth, until his work was translated into strange tongues. From then on, the path of fame lay straight to the high places. At the height of his fame he lost all his money. He was heavily in debt, but though 60 years old, he started afresh and paid every cent. It was the last heroic touch that drew him close to the hearts of his countrymen.

The world has asked, Is there an American literature? Mark Twain is the answer. He is the heart, the spirit of America. From his poor and struggling boyhood to his glorious, splendid old age, he remained as simple, as democratic as the plainest of our forefathers.

He was, of all Americans, the most American. Free in soul, and dreaming of high things—brave in the face of trouble—and always ready to laugh. That was Mark Twain. Here you see the title page of Mark Twain in many languages. He is loved and read around the world. Can you, as an American, be without these books?

The Price Goes Up!

This is Mark Twain's own set. This is the set he wanted in the home of each of those who love him. Because he asked it, Harpers have worked to make a perfect set at a low price. Before the war we had a contract price for paper so we could sell this set of Mark Twain at half price.

Send the Coupon Without Money

The last of the edition is in sight. The price of paper has gone up.

There never again will be any more Mark Twain at the present price. Get the 25 volumes now, while you can.

Every American has got to have a set of Mark Twain in his home. Get yours now and save money.

(Continued from Page 114)

"Thirty-five is a great plenty," was the ry response. "It's about ten more than I xpected. All ready, Jerry? Then let's go!" MacWade hoisted himself into the engine nd took his stand on the platform beside he camera. "Back her up the track for alf a mile," he ordered the engineer, "and hen come down here between thirty and hirty-five miles an hour. If you go any aster I'll rap you over the head with a nonkey wrench. And be sure you keep out of sight when we're shooting! That cab is supposed to be empty."

Side by side the big passenger locomotive and the little automobile rolled down to the point where the scene was to be made. The imperturbable Gabby was grinding long before the roadster swung off the boulevard and crept forward into the focus, perilously close to the great driving wheels.

"Hey! Watch those marks!" bellowed David. "Now, Jerry!"

Fairfax rose, steadying himself with one hand on top of the wind shield.

He glanced up at the handrail, then down at the distance which separated engine and roadster.

"Too close! You're too close!" he yelled.

"Jump!" cried the girl.

"Out! Keep out—please!"

"Not till you jump!"

From the platform behind them came an angry roar.

"Watch those marks! Come on, Jerry! Quick!"

The leading man put his right foot on the seat cushion and sprang high in the air, half turning his body as he did so. One clawing hand found the rail, fastened on it, and just as Jerry drew his feet up on the running board the roadster reached the end of the level stretch, swerved abruptly to the left, crashed into the brush and came to a halt.

"Whee!" squealed Gabby, still grinding, for Jerry was creeping along the running board toward the cab window. "That was some punch, Davy, some punch; and I got all of it, even the car when it pretty near turned over! Ain't that girl a peach?"

"Some punch is right!" said MacWade. "I feel as if it had landed a couple of inches under my heart! She forgot all about her marks. I thought sure she was going to hit the engine! Lord, I'm glad it's over!"

Later he offered his congratulations to his agile leading man, who appeared a trifle pale, even through his make-up.

"Great stuff, boy!" exclaimed David as he eased himself into the cab. "Wonderful stuff—but what the devil made you wait so long? You nearly wrecked her—she had to take that turn on two wheels!"

"I was trying to make her pull out a little," panted Jerry. "I yelled twice, but she wouldn't do it."

"She lost her head and forgot about the marks," said David.

"You think she did? I tell you, she got in close on purpose—to make the jump easier for me. That's class, I guess! Somebody give me a cigarette quick! I'm all in."

When the engine returned, MacWade was the first man on the ground. He found Miss Campbell coolly examining her car.

"It's scratched up a little," said she, "but that doesn't matter much. Did the scene suit you?"

"It did and it didn't," was the stern reply. "Why didn't you keep on your marks?"

"Because I thought it would be easier to make the jump if I kept in closer to the track. Did it spoil the scene?"

"Spoil it! It made it twice as strong; but the next time I set marks for you I want you to keep on 'em, understand? I'm too old to be scared this way. I haven't got my breath back yet. How do you expect I'd finish this picture if anything happened to you?"

"Finish the picture!" The girl's eyes widened. "Am—am I going to be in the rest of it?"

David whistled.

"And you've been in three close-ups and half a dozen stills!" he ejaculated. "Don't you know what that means, young lady?"

She shook her head.

"I—I thought it was just for to-day," she faltered. "You said something about doubling Miss Arlington ——"

"She's doubled, all right," said David. "Doubled the way a runner gets doubled in baseball—doubled out. She's on the bench now, Miss Campbell, and you're in the game, and—and if you stick with me I'll make a trouper of you yet!"

"Are you offering me a place—in your company?"

"Offering it to you! Why, you've got it already! You backed your little car straight into a job as leading woman!"

"Oh!" said the girl. And then again, "Oh! But I've never had any training! You'll be terribly disappointed in me! It—it takes talent ——"

"No," said David, "only obedience and willingness to learn. I won't bother you much with talk about art and dramatic instinct, but from what you've shown today I'll guarantee to teach you to act—and that's more than most of these leading women know. They only make faces at the camera. And now"— he paused to push his cap back over one ear—"if anybody tells me there's nothing in Fate I can call him a liar—and prove it!"

IV

THE General Manager of the Mammoth Film Corporation was a slender, sandy, blunt person, with a memory as reliable as a card-index system and an auger-like eye which he used to bore holes in his fellow man. Directors suffering from an overdose of self-appreciation, and motion-picture stars afflicted with temperament, found the G. M. an extremely cold proposition and left him reasonably chilled themselves. In the picturesque phrase of the big lot, he never gave anybody a cheer. He had a most disconcerting trick of saying the very things which other people feared he might think, and the knack of laying his finger squarely on the main point at issue and holding it there until the matter in hand was settled to his liking. Incidentally, no matter was ever settled until it was settled that way. It was commonly believed that he had eyes in the back of his head, and though his job was a tremendously big one the G. M. was a glutton for detail. He liked to know what was going on, and as a general thing he found out.

It was by appointment that he joined MacWade in one of the projecting rooms to witness the first run of a railroad thriller. During the first reel the G. M. spoke but once, as follows:

"Who's that new girl? Gimme a smoke."

David grinned under cover of the darkness, for everyone on the Mammoth lot knew that the G. M. never borrowed a man's cigarettes unless he was pleased with him or his work. The request for a smoke was almost the only mark of personal esteem bestowed by this singular gentleman, who never by any accident purchased cigarettes for his own use. Once, in a rare burst of confidence, he explained this matter by saying that a man who did not buy the wretched things could not, in fairness, be accused of the cigarette habit.

The G. M. borrowed seven of David's cigarettes before the final reel came to an end. Then the lights went up and the spectators strolled out into the sunlight, Gabby Trozier lingering within earshot of his chief.

"Well, boss?" asked MacWade.

The G. M. almost smiled.

"Good story," said he, "good photography, unusually good acting. Where did you find that girl?"

"That's a queer story," answered David.

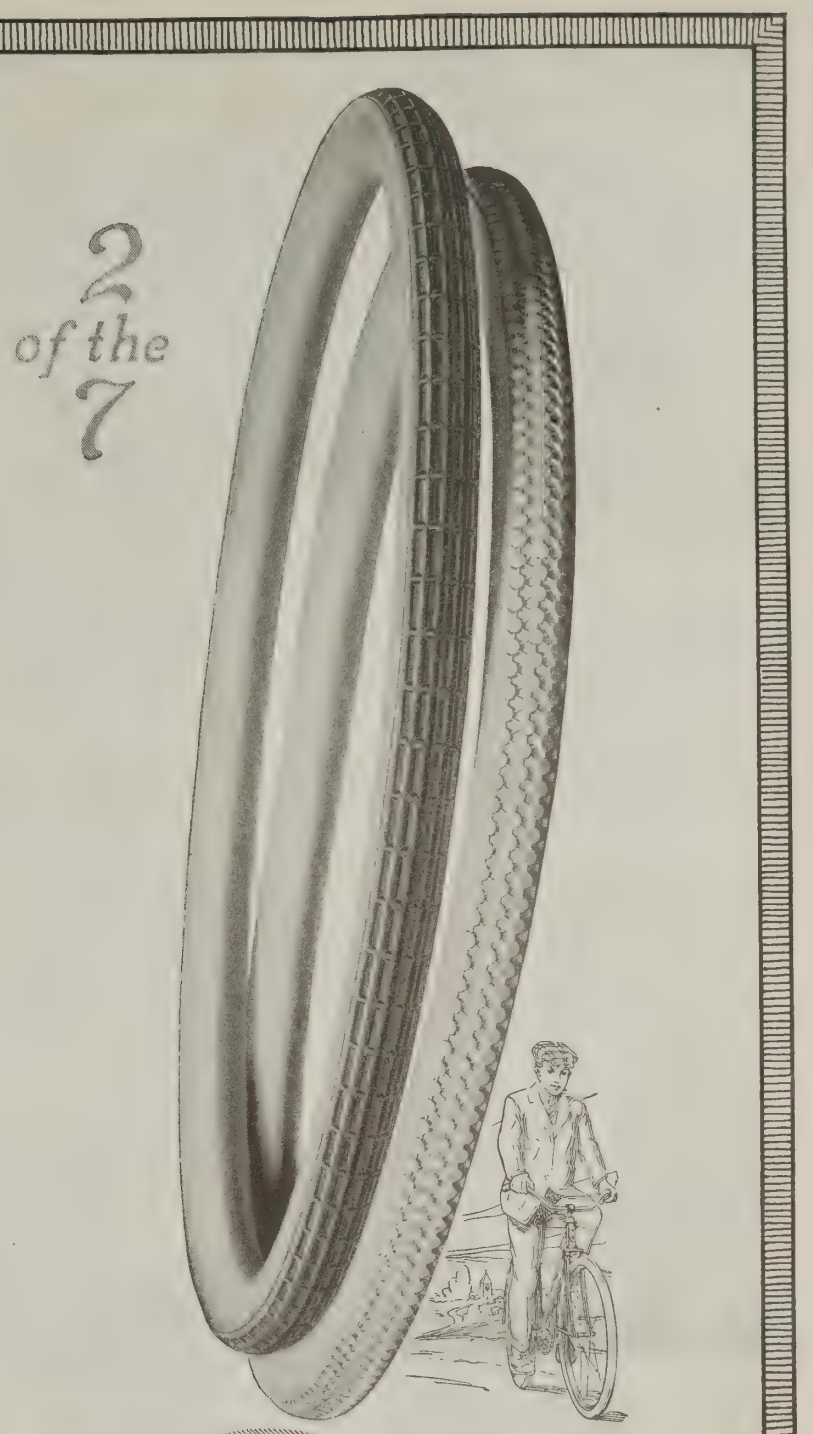
"I like queer stories," said the G. M., "and I have a minute to spare. Shoot!"

"I discovered her," was MacWade's modest beginning. "I spotted her the first day she ever came on the lot. Towne had her working extra, and I got her name and telephone number. I didn't know when I might have something for her—no definite plan, you understand; but—well, it struck me that she didn't belong in Towne's company. Seemed to me that there was—er—er—something fine in her—the germ—the spark—whatever you want to call it, and she had the look of a real trouper. You know how it is—an old-timer can spot a natural born trouper a mile off."

"I can't," grunted the G. M. "Speed the film a little; the introduction drags."

"Right! Now, Arlington was cast for the lead in this railroad picture, and she was to use her own car in the stunts. She'd been giving me a lot of trouble one way and another, and this time she quit cold. There I was, up against it, a special train on my hands, nobody to double her, and the whole parade gummed up tight. It was a tough situation, boss. Then at the last gasp, when I didn't know which way to look or how I was going to put that punch stuff over, down the road came this girl, Jean Campbell—driving her own car, mind you. Well, sir, you could have knocked me down with a feather ——"

"'The time, the place and the girl,'" quoted the G. M. "Proceed."



LONG-LIFE
Kokomo
BICYCLE TIRES

THERE'S a bicycle tire that will please you—at a price that will please you—among the seven splendid tires that constitute the KOKOMO line.

Every KOKOMO Tire is the best tire we know how to build at its price.

So, for example, we can recommend Kokomo OXFORD as a wonderful $2.50 tire, with the same confidence that we endorse EVERLASTER and Kokomo KORD as top-notch $5 tires—top-notch in quality, as well as in price.

KOKOMO Tires are *still selling* at their established prices. There has been no advance—and there will be none if we can avoid it. When buying a new bicycle, see that it has KOKOMO Tires. When buying *tires*, ask for KOKOMO.

Choose:

EVERLASTER	each $5.00
KOKOMO KORD	each $5.00
No. 13 SPECIAL	each $4.25
STICK TIGHT	each $3.75
DEFENDER	each $3.25
OXFORD	each $2.50
PIONEER	each $2.25

KOKOMO RUBBER CO., Kokomo, Ind.

LEWIS-BUILT HOMES Cover America

The Modern Method of Home Building

Thousands have found **The Lewis Ready-Cut Method** the true solution of building better homes at money-saving prices. Thousands have endorsed our plan because it cuts out all waste material, labor and time, and does away completely with all these "extras" that are the bugbear of home-builders.

Mr. W. S. Proud, Vermont, writes: "*Everything worked like clockwork.*" N. R. Harrington, Attorney, Ohio, says: "*The carpenters were enthusiastic in praising the quality of material—we saved hundreds of dollars over the old way.*" S. S. Bearse, Mass., writes: "*The material left Bay City July 1st, and we were living in the house August 16th.*" J. M. Heald, Mass., writes: "*Your advertisements do not exaggerate in the least.*"

Direct From Factory At The Inside Price

The secret of our high-quality homes at low prices is this: All the planning has been done and all the work finished in our big, modern, efficient factory, without waste of material, time or labor. This big saving is our customers' gain.

You get your home complete with all material cut-to-fit by machinery, saving 40% carpenter labor. All hardware, paint, shingles, even nails, etc., included and delivered to you at lowest possible cost of production.

100 Selected Designs To Choose From

Our 1917 catalog shows 100 selected designs of houses, cottages and bungalows, the cream of the country's best building knowledge; every one a masterpiece. Catalog shows real pictures, accurate plans, full specifications and prices far below present market. Our mills, warehouses and lumber yards are stocked with materials at 1916 costs. Buy direct from the producer.

SEE BEFORE YOU PAY—No chance to be disappointed. Our plan allows you to actually inspect all material before you make payment. Write today for catalog, enclosing 4c postage.

GLIDDEN AUTO FINISHES

"Exactly! The time, the place and the girl! Boss, I don't know yet what to make of her coming along just at that time. You can call it luck, call it coincidence, but to me it was nothing in the world but Fate. There I was, stuck; and there she was, and the car and everything. I ——"

"Too many cut-backs," interrupted the G. M. "Never mind the rest of the scenario—you put her in and she saved the picture. Now, I'm not like you, Mac. I can't spot a trouper a mile off, but I can most generally spot one on the screen. Properly handled, this young woman may develop into a star, and a star is a valuable asset. She puts her personality over, and that's the secret of success. Keep her in your company for the time being, and we'll have the scenario department wrap a couple of stories round her. What's her salary?"

"Forty a week," replied MacWade with a trace of defiance in his tone.

"Too much for a beginner—too much. Better get her tied up with a long-term contract. Send her in to talk to me about it."

"Just a second before you go," said David: "Don't you think it was a remarkable thing—her showing up on that location? How do you figure it?"

The G. M.'s sober countenance split into a dry grin. "Somebody tipped her off to the time and the place," said he. "Yes, and the props too."

MacWade scowled as he watched the G. M. out of sight.

"Gabby, my boy," said he, "beware of commercialism! The boss is commercialized clear to the backbone. There's about as much romance in him as there is in—in a Bismarck herring!"

"An owl," remarked the camera man, "wouldn't get many cheers in a chafing dish, but he's an awfully wise bird just the same. Ever think of that, Davy?"

That night as Gabby was preparing to retire he heard strange noises proceeding from MacWade's bedroom. A series of grunts and gasps drew him to the door of his friend's sleeping chamber, where he paused, transfixed by an amazing spectacle. David, sketchily attired in heliotrope pyjamas, was earnestly endeavoring to bring his fingers and toes together without bending his knees—a form of physical torture much recommended to girthy gentlemen. The plump little director was making hard work of it, hence the gurgling noises.

"Well, what d' you think of that!" exclaimed Gabby. "I thought you were rehearsing a trained seal or something. Why the setting-up drill?"

"Because," gasped MacWade, "I want to get rid of some of this awning effect." He mopped his brow and regarded Trozier anxiously. "I'm too young to be carrying all this weight. Don't you think so?"

Gabby laughed uproariously.

"When did that notion strike you?" he demanded. "And where do you get that bunk about being young?"

"I'm only forty-two," mumbled MacWade, flushing. "You can't call that old."

"Of course not, Davy. You're a mere child! If you ever grow up ——"

"Oh, cut the comedy!"

Gabby sat down on the edge of the bed and began to whistle softly.

"Stay with it, little cutie," he chuckled. "You'll soon be fit to play Romeos, you will! Who is she, Davy?"

MacWade grunted as the shot went home.

"Don't hold out on a pal," urged Gabby. "When a fellow forty-two years of age starts taking off weight and talking about being too young to carry a little suet, there's only one answer. You don't think I'm blind, do you?"

"Humph!"

"Don't you look at me like that, Davy. Don't you do it. I'm your friend. I'm with you and I'm for you. After all, there's nothing new in the situation. Other directors have done it before you."

"Done what?" snapped MacWade.

"Why, fallen in love with the leading lady! It's all right, perfectly natural and human ——"

David walked over and wagged his finger under Gabby's nose.

"That'll be about all for you," said he. "Just about all, young fellow. From now on ——"

"You're not getting over with it," interrupted the camera man critically. "You forget that I'm a tough audience and hard to fool. In the first place, you should have laughed. In the second place, you shouldn't have mentioned romance when you pulled that line about the G. M. this afternoon. You tipped all five cards to me right there. Davy, old boy, I love you like a brother, but you've been kidding yourself ever since that day on location. If you keep on you'll wind up by believing the lies you told the boss to-day."

"Lies? What lies?"

"Oh, about how you picked this girl out of a crowd—discovered her. And that stuff about Fate. Davy, would you be sore at me if I let the sawdust out of your dolly?"

"What do you mean?"

"I mean that you're too good a fellow to go wrong—to let a mistaken notion run away with you. At heart you're just a mushy sentimentalist, and you're in danger of getting your feelings hurt. Davy, old hoss, it wasn't Fate at all. It was me."

"You!"

"Please don't get sore. I'm going to be like a surgeon and hurt you now to help you later."

"Cut, then!" said MacWade.

"Well, you see, I felt reasonably certain that Arlington would gum us up. I knew you'd be too damn bullheaded to provide a double for her. Davy, I frisked your memorandum book and got Miss Campbell's telephone number. I rang her up the night before."

MacWade's jaw dropped.

"I'm sorry," said the other gently, "but that's all there is to your romance thing. It was cut and dried in advance. I told her to pretend that she happened along by accident. It never struck me that you might take another slant at it."

The little director stood still in the middle of the floor, reflecting deeply. At length he reached the sort of conclusion which permitted him to smile. He fell to his back-breaking exercise again; and Gabby, nursing one knee in his hands, watched him narrowly, wondering what would come next.

"Twenty-three—twenty-four—twenty-five!" gasped MacWade. "Wow! You think you're quite a bright young man, don't you? Quite a loud cheer—you've been handing yourself—understudy to Fate—all that sort of thing. Why, you hopeless hash-hound, you, what difference does it make how she happened to turn up that day? The main thing is ——" And there he stuck, breathless.

"Well, Davy, what is it?"

"That I'm going to make a big star of her!"

"Atta boy!" yelled Gabby, leaping to his feet. "And I'm going to help you!"

Editor's Note—This is the first of a series of stories by Mr. Van Loan.

A Spark Plug Without a Flaw

Manufactured for 16 years—used by millions—the SPLITDORF Plug is the plug that stands supreme after years of test.

It cannot leak oil or gas
It cannot score cylinders
It cannot short circuit
It will not break
It will not burn out
It will not wear out

Do not confuse SPLITDORF Spark Plugs *"the Plug with the Green Jacket,"* with *porcelain* cored plugs. The green porcelain jacket is merely a covering—an outer garment for the ruby mica insulation. This mica is wound *lengthwise* around the core—in such a manner that every explosion tightens it anew and makes it absolutely leak-proof.

The green jacket adds finish—no more. It may be cracked or broken—or entirely missing without affecting the insulation of the mica-wound core or the efficiency of the plug.

Any SPLITDORF *Spark Plug will outlast any engine*

Price $1 each. You can get them wherever motor accessories are sold.

SPLITDORF ELECTRICAL CO.
NEWARK, N. J.

A Size and Type for every engine

Splitdorf Plugs are made in all sizes and in types to suit every car, motorcycle, motorboat, aeroplane, tractor, stationary engine

The Plug with the Green Jacket

Consider This Certain and Positive Proof of Saxon "Six" Supremacy

Let us dispense with fine phrases and seek facts.

For facts alone form a stable basis upon which to adjudge motor car values.

And further, we believe you are more interested in actions than in adjectives.

First of all turn your attention to the Saxon "Six" motor.

Compare it with the car of less than six cylinders that stands highest in your estimation.

Though that "less-than-six" may be developed to the full limit of its possibilities you still will find lapses between its power impulses.

These lapses you know produce the vibration and friction that are the bane of motor life. And they exert considerable injurious effect upon the parts, too.

Gear-shifting becomes more and more frequently a necessity. Acceleration slows up and pulling power lessens.

Finally we see them revealed in growing repair and replacement bills. And shortly the car has reached the end of its usefulness long before it should.

On the other hand, the Saxon motor, with its six cylinders, develops a continuous flow of power. Vibration has been reduced to a minimum. Uniform torque, the ambition of all motor designers, is attained.

Briefly explained, in the "less-than-six" you find a **less number** of explosions at any given speed, and each explosion **more severe.**

In the "Six" you get far **more** explosions and each **less severe** in its application to the bearings.

Take for example a certain well-known car of less than six cylinders, tested under the same prevailing conditions as Saxon "Six."

At a speed of 20 miles per hour, the Saxon "Six" motor developed 98% more impulses per minute than did the "less-than-six."

This 98% greater percentage of impulses is vitally significant.

And its significance is concretely expressed in the fact that when this "less-than-six" and Saxon "Six" were tested for acceleration, Saxon "Six" revealed 22% faster pick-up.

Nor is it in acceleration alone that this smoother power-flow gives the advantage to Saxon "Six."

Its value is revealed similarly in greater pulling power and flexibility.

In every phase of performance Saxon "Six" must be considered supreme among cars costing less than $1200.

Under the most drastic and gruelling conditions of public and private tests it has earned top place.

Probably you may never feel the inclination or necessity to call upon Saxon "Six" to the full limit of its speed and power.

Nevertheless it is re-assuring to know that should that time come you have the extra speed and power at your command.

On the other hand, you will probably delight many times a day in the pick-up of Saxon "Six" and in its greater flexibility, which relieves you of gear-shifting to an amazing extent.

And further satisfaction accrues to you from the knowledge that Saxon "Six" wastes not a particle of gasoline.

Its average established by 206 stock model Saxon "Sixes" in a 300 mile non-stop run is 23.5 miles per gallon.

Over 2000 dealers have this car on their show room floors. We urge your early inspection, for first come will be first served, and it evidently will not be easy to get Saxon "Sixes" quickly a little later in the season.

Saxon "Six" is $865; "Six" Sedan, $1250; "Four" Roadster, $495; f. o. b. Detroit. Canadian prices: "Six" Touring car, $1175; "Six" Sedan, $1675; "Four" Roadster, $665. Price of special export models, "Six", $915; "Four", $495; f. o. b. Detroit. (861)

THE FORTUNE MAKER

By WILL PAYNE

ILLUSTRATED BY CLARENCE F. UNDERWOOD

THE fire was discovered at six minutes to five o'clock. A girl employed in the mailing department opened the door to what they called the stock room and smoke rolled out, enveloping her. She had the presence of mind to run immediately to one of the fire-alarm boxes with which the place was equipped. The alarm she turned in registered six minutes to five.

This was on the thirteenth of January, a raw, lowering day, pretty dark at that hour. The plant spread over an irregular tract of ground equivalent to three or four ordinary city blocks. About eight thousand hands were employed there. At five o'clock employees were pouring out of it—the day shift in the mechanical departments and many of the office hands quitting work for the day. A lot of them ran to look at the fire, choking up the approaches to it until they were cleared out. This hampered the firemen; but in any case the building would have gone.

It was a ramshackle, two-story frame affair, about thirty feet broad by forty long, which the old wagon company had used for its general offices. It should have been torn down long before; but there had been no time. The huge plant of the Sarum Automobile Company had sprung up round it in only nine years. They were always building something there—often rushing construction by night, under electric light, as well as by day. In the giants' race to get the necessary structures up fast enough they had let the old office building stand. The public street on which it fronted was now only one line in a complicated pattern of runways between immense new shops of concrete and steel, as fireproof as money could make them.

The mailing department, an adjunct of the company's big printing establishment, was housed in this old building. The basement was full of printing materials. A freight elevator ran from the basement to the stock room on the first floor. Smoke had come up the elevator shaft. When the firemen got a look into the basement it was all ablaze.

When She Finished With Poor Little Sol the Boys Were Almost Sorry for Him

The fire was undoubtedly incendiary. No one had any legitimate business in this basement storeroom oftener than two or three times a week. No one who had legitimate business there had been in it that day. There was an outside door—a big, two-leaved affair opening to a stairway that led up to an alley behind the building. It seemed clear that the incendiary had gone into the basement through this outside door.

John Turner, president of the Sarum Automobile Company, had been through part of the plant that afternoon. He had a habit of doing that every now and then—striding through one shop after another, perhaps nodding to a workman here and there, or stopping to speak if he saw any occasion. So he went through several shops that afternoon, returning to his office about twenty minutes to five.

His office was in the second story of the company's main office building—a comparatively new structure directly down the street about the distance of a city block from the old frame mailing department. The presidential suite comprised four rooms. First there was the anteroom, the windows of which looked down the street toward the mailing department. Back of that was a somewhat smaller room called the library, containing letter files, reports, and like matter, which the president might wish to consult. The room behind that, of about the same size as the library, was occupied usually by Whipple, the president's private secretary. It contained a desk also for Wade Waggoner, who was a sort of personal attaché of the president, with no very strictly defined duties. Last of all was the president's own room. These four rooms were flanked by a hall, on the other side of which was a blank wall, which served no purpose except giving access to the rooms of the presidential suite.

The situation in the presidential suite at the time of the fire has been checked up in every detail. It was as follows:

Returning from his round of the shops at about twenty minutes to five, President Turner entered the anteroom and walked straight through the suite to his own room, where a couple of reports and the outgoing mail—important letters to be signed by his own hand—lay on his desk.

He was busy with them when the fire was discovered.

At that time Miss Weston, a stenographer; a youth named Timmons, who was a sort of superior office boy; and a young man named Arthur Weeks, an assistant to the secretary of the company, were in the anteroom. They saw the fire and ran to the windows to look at it. Wade Waggoner was in the library. He heard the exclamations in the anteroom and joined the group at the windows to watch the fire.

Whipple, the president's secretary, had gone downtown on a business errand. There was nobody else in the suite.

The doors between the several rooms were open and Mr. Turner evidently heard the commotion in the anteroom, for he came striding in there, with a pen in his hand, and stood for a moment with the others looking at the fire. He said:

"Glad the old shed's burning up!"—or something like that.

Then he turned on his heel, spoke to Waggoner, and walked back to his own room, Waggoner following, as Mr. Turner had bidden him do. On the way back he said over his shoulder to Waggoner: "Shut the doors!"

Evidently he wanted to shut out the noise in the anteroom that had distracted his attention from the work in hand.

In his own room he seated himself at his desk and rapidly signed the last of the two letters that lay before him. Then he handed Waggoner a wire basket containing all the signed letters, looked at his watch and said, rather impatiently:

"Send Stimson up here right away."

Waggoner understood, as a matter of course, that he was to carry the basket of letters to Miss Weston, the stenographer, in the anteroom, who would fold and mail them. This he did. Stimson had been employed by the company several years in the financial department and recently had been elected treasurer. To reach his office Waggoner had only to pass on through the anteroom, after handing Miss Weston the letters, step into the hall, go directly down the stairs and walk perhaps thirty feet along

the lower hall to the treasurer's office. He acknowledges frankly that he didn't go so directly as he might have done. When he reached the anteroom flames were bursting from the old frame mailing department and the whole tindery structure was burning. It made an exciting spectacle in the dark. He thinks he may have lingered two or even three minutes looking at it.

But between the time Waggoner left the president's room and the time Stimson entered it certainly not more than ten minutes elapsed—probably not more than five or six. Stimson, entering the president's room, found Mr. Turner stone dead at his desk, with a bullet wound through his heart.

This was the time of the great war in Europe. Mr. Turner had been decidedly pro-Ally. He was the aggressive, positive sort of man who wouldn't have halfway opinions on any subject, or any opinions without expressing them boldly and acting on them if occasion came. His sympathies had been with France and England from the first. Then one of the company's young men, for whom Mr. Turner had a great regard, went to England on the company's business, sailing on the Lusitania and going down with her.

The hot-blooded president took that a good deal as though the young man had been deliberately assassinated. It was not in his nature to take it out in talk, either. He was already making military trucks for the Allies, though he declared there was more money in making automobiles for the home market. The Allies were having difficulty then in getting a sufficient supply of time fuses for shrapnel shells. Mr. Turner took that up.

Near the automobile plant was a factory engaged in turning out cheap typewriters, but not making a great success of it. Mr. Turner discovered that this factory, with some rather expensive alterations, could make time fuses. In his headlong way he bought the plant overnight for a quarter of a million dollars, and equipped it to make fuses. It was his reply to the Lusitania.

Then a commission of English and French bankers came over here to borrow five hundred million dollars. Mr. Turner influenced the banks at Sarum to subscribe to the bonds and bought two and a half million dollars of them himself—telling the newspapers about it; in fact, he acted all through as though he wanted the Kaiser to know just what he was doing.

There was a good deal of bitter war feeling then. Newspapers were full of stories of plots by German sympathizers to burn or blow up plants that made munitions for the Allies and to cause strikes in them. Mr. Morgan, the New York banker, had been shot by a crazy man for his part in buying war supplies.

Naturally, then, the immediate theory was that a German sympathizer had assassinated Mr. Turner. That the fire was incendiary seemed quite beyond doubt. That the fire and the assassination were planned together looked highly probable. In these circumstances the murder stirred the whole country; for several days, in fact, it overshadowed all other events. Newspapers in every state printed pages about it. At that time John Turner was a national figure, with a name familiar to newspaper readers everywhere. If such a man had been shot down in his own office for making war munitions it was a national affair.

I was then in the United States Secret Service and I arrived in Sarum the day after the murder. The usual points had been covered by capable detective talent before I got there. However, I hope I knew enough of my trade not to jump at conclusions, and I went at the mystery quite as though there were no plausible theories in sight. The first point was the character of the chief witnesses.

Stimson, the treasurer, who discovered the murder, was plainly a man to bank on—stocky, middle-aged, partly bald, rather phlegmatic, cool, clear-headed, quick to think; certainly not a man to lose his wits for a moment or let his emotions play any tricks on his brain; nor yet a man, when an emergency of that kind exploded in front of him, to take anything for granted. He knew in a moment there'd been murder and every instinct in him bristled against it. While others ran and telephoned and exclaimed, he stayed right there, never budging from the president's room until there had been a thorough examination of the premises.

In the first place, then, there was no firearm and no weapon of any sort in the president's room. There wasn't the least trace of a struggle. Mr. Turner, when Stimson entered, sat upright in his chair, dead. The bullet had pierced his vest, but not his coat, the latter having been thrown or brushed back at the time, as often happens with a man at work over a desk. Microscopic examination showed no trace of powder on the vest, as there would have been if the shot had been fired at close range. Evidently it had been fired across the desk. No one had heard a shot, but there had been the commotion of the fire and three closed doors between the president's room and the persons in the anteroom.

There was a door from the president's room to the hall. For a good while, as far as anybody knew, this door had invariably been locked, Mr. Turner entering and leaving through the other rooms of the suite. A key to this door was found on the key ring in his pocket. But another key was found sticking in the lock on the outside. Where this key came from no one could say. Two keys to the lock had been furnished by the builders. No one about the place had ever seen the second key until it was found sticking in the lock. That the assassin had used it to enter the president's room from the hall seemed clear enough. Where he got the key was a mystery.

There was another difficult point: The hall from which the assassin must have entered was brightly lighted at the time. As I have said, it served no purpose except giving access to the rooms of the presidential suite, its opposite wall being blank; and it contained no object behind which a man could conceal himself. If a stranger, or anyone for that matter, had been standing in this hall when Waggoner went downstairs to summon Stimson, Waggoner would quite certainly have noticed him. This implied that the assassin must have run upstairs, done his work and run down again in the two or three minutes that elapsed between Waggoner's going downstairs and his return with Stimson. But how could he have known the exact minute when the coast would be clear?

That, like the duplicate key, hinted at treachery on the inside. Even with treachery, the feat was difficult enough. How could the traitor have known just the minute when the coast was clear and given the assassin a signal? The fire was discovered at six minutes to five. The murder could hardly have been later than ten minutes after five. In the intervening quarter of an hour the lower hall was unusually busy—clerks going home or running to look at the fire. How could a stranger, or anybody else, have rushed up the stairs and down again without somebody having seen him?

Altogether it was the most improbable assumption I had ever been called upon to accept. But every other assumption was still more improbable. So we had to take the hypothesis that the assassin, lurking below somewhere, somehow knew just the minute when the coast was clear, went upstairs, did the murder and got away.

Now if there was treachery on the inside the most obvious object of suspicion would be the man Wade Waggoner, who had gone downstairs to summon Stimson and who knew that Mr. Turner was then alone in his room.

Waggoner gave his age as forty-one. He was a tall, spare man, somewhat round-shouldered, his head commonly hanging forward a little on his lean neck. His face was thin and sharp, his eyes greenish gray, his complexion a dead ashen hue. His right leg was stiff at the knee; so he walked with a slight limp, usually using a cane.

Several years before this he had been employed as a mechanic in the plant and one day had happened to attract Mr. Turner's attention. Waggoner made what had every appearance of being a candid statement. He said when he attracted Mr. Turner's notice he was in bad health—inclined to tuberculosis he himself thought at the time. He really wasn't fit physically to do the work at which he was engaged—grinding crank shafts. But the company wanted men very badly and he wanted a job very badly; so there he was, doing his best.

Now Mr. Turner, by every account, was a generous, open-handed, impulsive kind of man. There seems no doubt that his compassion was moved by this ailing workman. Waggoner, except when on this very serious subject, was a most amusing fellow to talk to—with a lively, native sense of humor and a talent for mimicry. No doubt Mr. Turner quickly found this amusing trait in him, the result being that Waggoner was transferred from the shop to the president's anteroom, where he had an easy job as a kind of doorman and valet. Mr. Turner evidently liked him and presently made of him a sort of personal, confidential attaché, with no very clearly defined duties. Mr. Turner frequently had him to dinner, took him along as a companion on his trips of business and pleasure, had him elected to the Country Club and the Sarum Club in town—made of him, in short, a social equal; but with some implied reservations, no doubt.

The Wabbling Old Man Wanted to Fight or to Wrestle

At the time of the murder Waggoner received a salary of ten thousand dollars a year—and about managed to keep out of debt, as he expressed it. As it happened, the peculiar relationship between these two men was fully illustrated only three days before the murder. At that time Mr. Turner insured his life in Waggoner's favor for two hundred and fifty thousand dollars, payable not in a lump sum but in an annuity as long as Waggoner should live.

This was somewhat unusual, and Mr. Turner's explanation to the life-insurance agent, as repeated by the agent to me, was substantially as follows:

"I am fond of Waggoner. I consider him a dependent on me. I want to make sure that he will be comfortably provided for as long as he lives. Of course, so long as I live there will be no trouble about that, and I might leave him a competence by my will. But he has no business sense. If he had a competence to-day very likely he'd make ducks and drakes of it within a year. No doubt I could leave a sum in trust for him, only the income to be paid him; but wills are sometimes thrown into litigation. Who knows what my estate will be worth when I die, which I'm hoping will be sometime in the next century! It strikes me that the simplest and surest way is just to insure my life in his favor, the benefit to be paid him, if he outlives me, not in a lump sum but in an annuity."

That was entirely reasonable and the companies wrote the insurance without hesitation. This illustrated the relations between the two men. Incidentally it showed that Mr. Turner was in perfect health only a few days before his death. That Waggoner betrayed his benefactor to an assassin seemed quite incredible. He was generally regarded, I found, as an amusing fellow—rather biting and malicious at times with his funny tongue and his mimicry, yet with no real harm in him. None of those who knew Mr. Turner best could suggest personal

enmity as a motive for the assassination. He had been an aggressive, confident, imperious kind of man. There had been business clashes, and all that; but that any enmity thus engendered could have risen to the point of murder was regarded as absurd.

As to the town's general attitude toward him, it was clear that all the more solid, responsible citizens regarded his death as a public calamity, and with good reasons. The common expression was:

"Why, John Turner made Sarum! He put us on the map!"

When he came there, nine years before—with very little capital, it appeared—and took over the bankrupt automobile business of the old Sarum Wagon Company the town had about fifty thousand inhabitants. At the time of the murder it had a hundred and fifty thousand. The great automobile business which Turner built up, and the accessories that sprang into being round it, were the cause. If the assassin had been discovered the day after the murder I believe the business population of the place would have turned out cheerfully to lynch him.

And Mr. Turner gave liberally to local improvements, bearing nearly the whole expense of the handsome Country Club, a fine club building in town, putting up a splendid hotel, and so on. He gave the city a considerable tract for a public park.

The dead man had been a bachelor. Quite naturally Breyfogle and I, and probably some of the other detectives—with the cynicism born of our trade—looked for the trail of a petticoat. But we did not find one. Mr. Turner lived in a large, open-handed, free sort of way. He made money royally, spent it royally, projected his business on a royal scale. The gossip was that formerly he had been somewhat royally inclined in the petticoat line too; but there had never been any open scandal about him.

Whatever basis there might be for the town's gossip of amorous adventures elsewhere, it did not seem worth while to inquire, for of late he appeared to have adopted a decidedly conservative mode of living; in fact, the whole country—or as much of it as took any interest in such affairs—knew he was engaged to marry Mrs. Wyndham, of New York, and the wedding was only three weeks off. The engagement had been announced in the fall, attracting about as much attention because of the lady's social vogue as on account of the gentleman's eminent business position. Even somewhat before that Mr. Turner had begun to lay out a whole new residence district for the wealth that had accumulated in Sarum these last nine years.

The district was called Hillcrest, lying along the gently rolling wooded slopes, some three miles beyond the city limits. His own place was to comprise over a hundred parked acres, with a splendid mansion; the foundations were already going up. Breyfogle and I drove out there one afternoon from a curiosity merely personal and not professional.

Though it was dead of winter, an army of men was still at work, with teams, cutting out small trees and underbrush, and even doing grading, for the season had been mild and there was little frost in the ground. Nobody as yet had got round to stop them. That, by all accounts, would have been John Turner's way—having made up his mind to do it, not to wait for time or tide or seasons, but to rush at it headlong and get it done.

With a very little looking round we could see what the plan was. The foundations of Turner's house suggested a palace. There was to be here a miniature Versailles, springing up out of the cow pastures overnight at the fiat of this imperious American millionaire, even as the other one sprang up at the fiat of the Grand Monarch. Of course there were to be all the palatial accompaniments of pictures, tapestries, servants. In this splendid setting he was to sun himself and take his ease, and display his opulence to the world, in company with a lady who apparently was everything the mistress of such an establishment should be—just turned thirty, beautiful, accomplished, and experienced in all the social graces.

Looking down on the foundations with beady eyes, Breyfogle tipped his derby hat to the back of his bullet head, jammed his pudgy hands into the pockets of his baggy trousers and moralized thus:

"Just a little over forty, in perfect health, handsome, famous, worth forty million dollars and getting richer every minute, duke of a city, engaged to a beautiful woman, building this—then along comes a greasy scoundrel with a five-dollar pistol—biff!—and there's nothing left but just a hundred and seventy-five pounds of mud to be tucked underground. I'm damn' glad I'm homely and broke, and got a lot of bad habits! What's the use, anyhow?"

There was no trail of a petticoat, but another barely possible motive immediately turned up. Mr. Turner had been a good employer, paying high wages, giving short hours where the work was hardest, as at the drop forges, building a clubhouse for the hands, putting up some model cottages, establishing the well-known Turner Fund for

Madeline Seized Her Coat and Made Tracks for the Station

workmen's benefit, and so on; but he did not propose to have any interference in the plant. Men had been discharged for taking part in unionizing movements. With the swift increase of Sarum's industrial population, labor agitators and socialists had come in.

That fall there had been a bitterly contested local election, which turned principally on the office of prosecuting attorney for the county. The socialist candidate—though I believe the word "socialist" was not used on the ticket—was a man named Hiram Dent, whom respectable citizens described by such terms as socialist, anarchist, professional labor agitator, demagogue, blackguard, blatherskite. He had attacked Mr. Turner venomously, saying that he bossed the town, evaded his taxes, seized public alleys and streets that ran through his plant, tyrannized over his employees, and a whole lot more of the same sort. Mr. Turner had undoubtedly resented all this very deeply. Presumably he had exerted himself as best he could to defeat Dent.

Yet Dent had won by a narrow margin, and on taking office the first of January he had charged his opponents with bribing voters. So far as I looked into this thing, it did seem pretty clear that considerable money had been used to bribe voters. A grand jury of Dent's choosing had indicted several men for bribery—among them Walter Hayes, who had been associated with Mr. Turner in the automobile business from the beginning, being treasurer of the company at the time of the election.

Directly after the election Mr. Hayes had resigned from the automobile company to become president of the Arcum Company, which made electric lighting and starting appliances, and some other automobile accessories. Dent's charge was that Walter Hayes had drawn fifty thousand dollars in cash out of two banks the day before election and that this money, or some of it, had been traced to the pockets of bribed voters. It isn't necessary to go into this very extensively, as Dent himself did not charge Mr. Turner with personal responsibility for the bribing.

A theory was advanced that the heat engendered by this election might have furnished a motive for the assassination; but that hardly bore examination. In the first place, everybody knows that American people get up a great excitement now and then over an election, but it doesn't last after the votes are counted. They take the result and go about their business. In the next place, Dent had won. His followers were not disappointed. Some half-cracked, unbalanced fellow might have been wrought up by Dent's denunciation to the point of murder, but this wasn't the work of that lunatic type of assassin.

The war motive seemed the most plausible one. Of course that was the only motive in which the Government was interested. We set out to look for a pro-German, sane or otherwise. I had been four days in Sarum and was as much in the dark as ever when Hiram Dent telephoned me, in my room at the Inn—as the fine hotel Turner had built was named—saying he had something important to communicate to me if I cared to step round to his office and hear him. I had never met the man, but my presence in town was well known by that time. I judged I might as well hear what he had to say; so I went round to his office in the County Building, a new and handsome structure.

He looked oddly out of place in the fine office, for he was a big, shambling, carelessly dressed man, and one of the ugliest I have ever seen—with beetling brows, a straight gash of a mouth, and a nose pinched into a wad in the middle of his face. I hadn't been there two minutes before I understood why conservative citizens hated him. He hated them. He spoke in a high-pitched voice and made the most violent statements with a grin.

"I asked you to come over here," he said, "because I thought you might really want to know who killed John Turner. I was taking a chance that you were square." He laughed over that agreeable statement. "These other detectives are all crooks and grafters. I see they've got the great Breyfogle working on the case. I know the great Breyfogle like a book. He's worked on some labor cases where I was interested on the other side. If he'd been in town on the thirteenth I'd think he shot Turner himself in order to get a fat case. There'd be no use my telling those fellows what I know. They'd just use it to shake down the murderer and then frame up some evidence against a janitor or a teamster.

"I can't do much with it myself, either," Dent went on, with his peculiar style of sociability. "I've got only a little appropriation for detective work and I've used that all up on my bribery investigation. There's no use in my going to the city police force. They're against me, and rotten anyway. Besides, the people who elected me to this office aren't worrying much over who shot our gasoline duke. They've got real troubles to worry over. This murder spoils a lot of my work by knocking the stuffing out of my bribery case, which is more important than fifty John Turners; but, the way I'm situated, I can't do anything about it, so I sent for you.

"Walter Hayes killed John Turner. He was a sort of tail to the Turner kite. Seems, from what I hear, they grew up together; boyhood friends, college chums, and so on. Anyway, Hayes came here with Turner and did all a good, industrious tail could do to help get this vast automobile graft going. He made a lot of money out of it too. But the men split up. A woman came between them. They tell me Turner tried to get the girl Hayes married. Whether he got her or not I don't know. Understand, I'm not insinuating anything against the lady, because I don't know anything. I don't care anything, either. That's one of their little class amusements that's no affair of mine.

"But this wasn't any woman case—at least that was only part of it. If John Turner had lived two weeks longer his testimony would have sent Walter Hayes to the penitentiary. Get that? I've got the testimony right here in my office. But, of course, Turner is dead now and Hayes will swear it off on the dead man. Now that Turner's dead the other big guns up there at the motor company will help Hayes do it. They'll trot out records and vouchers and all sorts of things to prove it. What's the use of their wasting anything on a man that's dead when one that's alive, and worth ten millions or more, and can do a lot of nice favors for them, wants their help?"

Pausing to grin over that proposition, he went on:

"Walter Hayes drew fifty thousand dollars out of two banks here the day before election and charged it on the motor company's books to what they call the president's account, which seems to be an account they charge all their dirty work to. Some of that money can be identified. The numbers on the bills are known. I've got the evidence. And some of that same identical money was used next day to bribe voters with. And John Turner swore before the grand jury he never saw that money or knew anything about it. That left it square up to Walter Hayes to show where the money went and why he drew it on the president's account without the president's authorization.

"And Walter Hayes couldn't show, because he used the money to bribe. I tell you, with the evidence I've got here and John Turner on the witness stand, I'd have sent Walter Hayes to the penitentiary as sure as the sun rises."

He drew his face into a scowl and banged the arm of his chair with a big fist.

"It was as sure as sunrise," he repeated, "and Walter Hayes knew it. Now, mind you, I'm not drawing any lily-white conclusions about John Turner. I'd just as

FIRST AID TO AMERICA

How Civilians Must Get Together and Get Behind Strong Leaders

By WILL IRWIN

THIS interview I give anonymously. It is with a man in official position who knows, better perhaps than any other American, the larger situation in Europe, having studied it in many nations and with exceptional facilities for observation. Moreover, he has had wide experience in industry. He understands, as most Americans do not—in their bones—that modern war is a matter of organizing a whole nation back of an army; and he is more interested in civilian organization than in the military or naval aspects of war. Though our Defense Boards and our Preparedness Societies have studied this question in spots, he is the first man I know to offer with authority a general constructive program.

It was a chance remark of Jones'—as I shall call him—dropped at a dinner party which set me on the trail. He said:

"A war of any size in this country would strain our respected old Constitution until it creaked. When it was adopted the convention, realizing that a period of warfare must be a period of dictatorship, provided that the President should be commander in chief of the army and navy in time of war. They did not foresee—almost no one except the Germans foresaw before 1914—that the army and navy might not be of first importance. Modern warfare is about one part army, one part navy, two parts economics, one or two parts moral forces, and one part finance. Further, they made the Constitution very hard to amend—it can't be done in a hurry. We might have a hard time in getting round the laws that would stand in the way of national efficiency. And aside from the law, we are very imperfectly organized to meet this crisis."

All this, heard under that seal of secrecy which general society imposes on any journalist who does not want to be a pariah, caused me to visit Jones and ask him for publication what, in view of his experience, had to be done, and how we might do it.

The Needs of Wartime Governments

"I HAD better hang out my flag at the beginning," he said. "I am a pacifist, but not a peace-at-any-price pacifist. I believe that war should be the last resort, but that sometimes it is better than the alternative—national extinction or lowering of national respect, for example. The ultimate goal of the world is perpetual peace and disarmament; but we may not reach it for a long time, and meantime we sometimes have to face the possibility of war—as now.

"Democracy is a form of government born of peace, constructed for peace and maintainable only in peace. To carry on war successfully requires a dictatorship of some kind or another. A democracy must submerge itself temporarily in the hands of an able man or an able group of men. No other way has ever been found. Lincoln was virtually a dictator in the Civil War. France, the most democratic nation in the world, is under a system of central committees which makes her government almost as much a dictatorship as that of Germany.

"The actual work of day-by-day government in most modern nations is done by a bureaucracy. This serves very well in time of peace, when government, in the ideals of democracy, is after all not the most necessary function of a nation. The experience of all European countries in this war has shown that the old bureaucracies will not do at all. Not one of the belligerent nations got even partial efficiency until it put in control of the extramilitary activities, so supremely important in this war, the best brains of the country—which means its industrial brains. Germany, well as she was prepared for this war, had to call her industrial brains into government positions in the autumn of 1914; France did the same thing when she formed her War Cabinet; England never began to get out of the muddle until she adopted this idea.

"A bureaucracy tends toward mediocrity. Industry does not. There are two reasons for this: In the first place, the attractions of bureaucratic positions in a democracy are not such as generally to attract first-class talent. The pay is secured, but comparatively small. Outside the army and navy no great prestige attaches in most democracies to government appointments. In the second place, promotion in a bureaucracy must generally be by seniority. It is the only way to prevent corruption and undue 'pull.' The men at the head, then, are there simply because they have been in the service a long time, and because they have made no mistakes. In consequence the aspiration of bureaucracy is to commit no error, and, it follows, to take no initiative or responsibility.

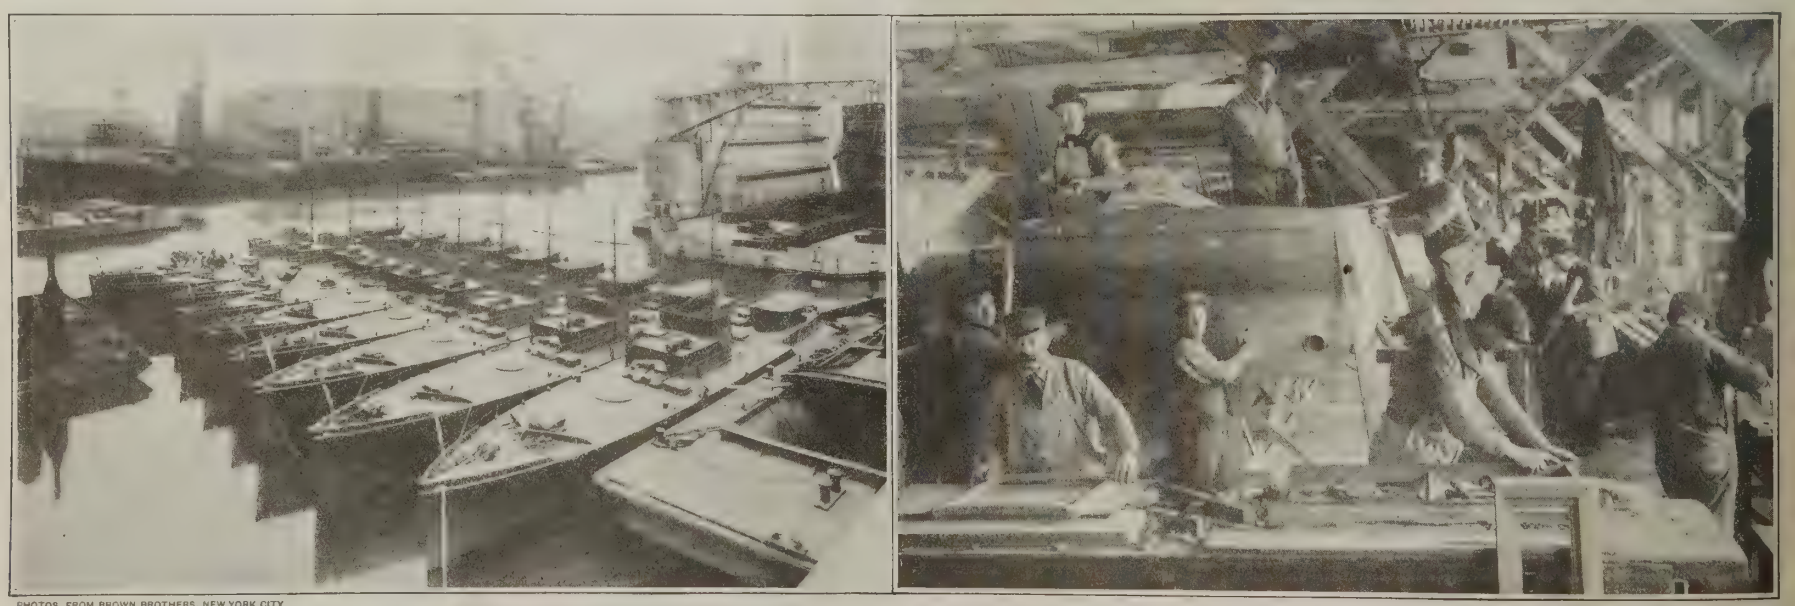
"Industry—I use that term in the broadest sense to include commerce, manufacture and finance—allows full play to the struggle for existence, and tends to get better men in the first place and to shove the ablest men forward. Promotion, there, is not by seniority, but by the hard law of merit. The aspiration of industrial organization is power, initiative and responsibility. A really efficient head of a bureaucracy finds it very difficult to make any subordinate take responsibility or display initiative; whereas the problem of an industrial leader in a live concern is most often to keep his rising, ambitious young heads of departments from taking too much responsibility, displaying too much initiative. Another factor bearing on the inefficiency of bureaucracies in time of war is the undue percentage of lawyers in their personnel. Law produces a qualitative mind. War is a quantitative thing and requires a quantitative mind."

Lessons From England

"IN TIME of peace you cannot draw such men into the government. It is not necessary. In time of war patriotism makes them available. The first difficulty of democracy at war is to transfer the direction from the hands of the bureaucracy to their hands—to make them available.

"How hard this is the experience of England proves. Her management of munitions, railroads, transport, finance, control of the civilian population, are very efficient now; but she was the last of the Western belligerent nations to get that efficiency. The trouble was that in the beginning she took half measures. Realizing dimly this principle, the British drafted some of their best industrial heads into the service of the government. These men made little headway. Everywhere they ran against the immobility of bureaucracies. The two elements could in instinct, mind and method mix no more than oil and water. The bureaucrats spent half their time rendering ineffective the efforts of these men to do the work they knew better than anyone else in England. The bureaucrats were not unpatriotic in this matter. They really believed that their way was the only way to save the nation.

"Things did not go forward under this system. They couldn't. England never got her supply services on a real war footing until Lloyd George went to the Premier and asked for a new Department of Munitions, with an office and a force all its own, and with powers independent of the army and navy. Having a clean slate, he installed a



PHOTOS. FROM BROWN BROTHERS, NEW YORK CITY

Thousands of Fast Submarine Chasers are Being Built in the United States and Could be Delivered in a Short Time

ersonnel composed of those industrial leaders and specialists who would have been unavailable in time of peace, but ere available now. In short, he put the industrial activities of the country on the only efficient war basis, as rance and Germany had done before.

"Lloyd George is not an industrial expert, but he is pen-minded. He called together the big men in every epartment of industry that touched the war, and asked em to name the most efficient experts they knew in their wn trades. From these he picked his chairmen of departents and committees, who usually picked their own staffs. hen he gave these men their heads. And England began o emerge from the muddle.

"We should have such a department. If we don't prepare its skeleton, ready to clothe the instant war breaks ut, then it will have to come after war—and muddle. nd if this be neglected, any government that attempts war ill fall, regardless of fixity of tenure; for the wrath of nation at war is abnormal and terrible.

"It should stand as a link between the army and navy epartments, with officers of the two arms represented in s councils, but independent. It is enough, in all conscience, or the army and navy to run a modern war. Moreover, rmy and navy officers, especially in this country, have no xperience of industrial organization. How could they? ll this mobilization of a country back of an army is a new hing. The ratio of munitions used in the war to the mount used in any previous war is about a hundred to ne. An army officer handed in at Washington last month n estimate of the supplies eeded for a million five undred thousand men. No ne in this country has any dea how this quantity of upplies could be found; nor hould anyone be expected o know.

"It is not the business of n army officer to know, n any event. He should nerely tell what the army vants and let somebody lse find the ways and neans to get it. That is he business of the Munitions Department—if you vish to name it after the British institution."

A Beginning

"THAT," I broke in, "was the trouble with the early régime in England. When Kitchener made his Sudan campaign, for example, he wired: 'Send fifty locomotives'; and it was only necessary for Parliament to vote the money. The fifty locomotives were already in being. When they had to create industrial machinery to make the fifty locomotives, and a million things more, they were at sea."

"Exactly. Fortunately, we have made a start, as England hadn't at the beginning of the war. Our Council for National Defense is doing a lot of the rough, preliminary work. The canvass of the nation's manufacturers to find just what and how much each can do in time of war is invaluable. It is a good beginning, but no more.

"Understand, in any contingency I can at present foresee, the United States will incur no such strain as England. She has drawn into the army and navy probably one-ninth of the population. We should probably draw in no more than one-fiftieth—two million men. But we are even less prepared than they, even if we have made a few preliminary plans. We think a great deal about shells, because that need of a modern army has been widely advertised. But we shall need a thousand things, from canteens to cannon, from buttons for uniforms to motor trucks, and in enormous quantities.

These Shops Can Turn Out Many of the Arms Needed in War

"However, shells and what shoots them, guns and what goes into them, are the first consideration. Let us take the subject of shells: Gauges by which they are tested, and automatic 'jigs' by which they are weighed and passed or thrown out, according to whether they meet the tests, are of prime importance. Most of the other tools necessary for shell making our manufacturers have in sufficient quantities for actual needs. These are tools peculiar to shell manufacture; and they take time to make. It takes time, also, to draw and distribute the designs to the manufacturers who make the separate parts. This is the first thing. It will cost comparatively little; it can be done before we begin open preparation; and it will clear the way. The designs should be sent to the manufacturers listed by the Council for National Defense, so that they and their directing subordinates can acquaint themselves with the job."

Two Methods

"IT'S all very well to talk about handing plans and specifications to these manufacturers," I said; "but how can we make them work?"

"I'll get to that indirectly," said Jones. "Roughly, there are two ways of mobilizing the resources of a country for making munitions and equipments. The first I'll call the British method; and the second, the French.

"The British, under the Defense of the Realm Act—a blanket law that gives the government the right to do almost anything—took control of industrial establishments which could make articles for military and naval use. They put the workmen under government control—half-mobilized them, as it were. Then they said to the manufacturer: 'We'll attend to your workmen, seeing on their behalf that they are not paid too little and on ours that they are not paid too much. Go ahead and manufacture, and we'll pay you a profit of so much per cent—no more, no less.' Of course that fixed percentage isn't clear profit, owing to the war tax. As a general rule, the British try to have each article—a shell, say, a gun carriage, a rifle or a belt—turned out complete in one factory.

"The French applied a different system. They found what parts each shop in France, from a huge automobile factory to a little country blacksmith shop, was capable of making. They furnished these establishments with plans and arranged depots where the parts could be assembled into a complete whole. The government had eminent right to commandeer these shops, but it was not necessary to do that. The Munitions Department simply told the manufacturer where he could find the raw materials, and then said in effect: 'We'll pay you such-and-such a price; we think you can make a fair profit at the figure. If, when the goods are delivered, general experience with the making of this part shows that the price is too low, we may adjust it upward; we reserve the right, in the contrary case, to revise it downward.'

THE HOLD-OUT

By Ring W. Lardner

ILLUSTRATED BY M. L. BLUMENTHA

THREE people, not countin' myself, think I'm the greatest guy in the world. One o' them's my first and last wife, another's Mr. Edwards, and the other's Bill Hagedorn.

It'd be hard to pick three that I'd rather have cordial. If a person is livin' with their wife, it makes it kind o' pleasant to have her like you. Mr. Edwards, o' course, is the man I'm workin' for, so it don't hurt me at all to be his hero. And I'm glad to have Bill added to the list, because it means he'll play the bag better for me this year than he's done yet, and with a little pep on first base we're liable to be bad news to George Stallin's, Wilbert Robinson and John J. McGraw.

But listen: If Mr. Edwards ever got hold o' the truth o' the Hagedorn business, him and I'd be just as clubby as Lord George and the Kaiser. If he didn't drop dead when he found it out, he'd slip me the tinware, contract or no contract, and I wouldn't have the heart to fight it in the courts, because I admit I gave him a raw deal. My only alibi is that I left my feelin's get the best o' me, and that excuse wouldn't be worth a dime with him; they's no excuse that would be, where his pocketbook's concerned, like in this case. He just simply hates money!

The worst of it is that Hagedorn didn't deserve no consideration. I like to see a fella get all that's comin' to him, provided he goes after it in the right way and puts up a real fight. Hagedorn made a hog of himself and was tremblin' all the time he did it. If he was as yellow on the ball field as when he's makin' a play for more dough, I'd take away his uniform and suspend him for life; he wouldn't be no more use to me than a set of adenoids.

He's just as game a ball player, though, as you'll find. The minute he trots out there in the old orchard he's a different guy, afraid o' nothin'. All he's lacked so far is ambish, and I figure he'll show some o' that this year. He'll give me his best out o' gratitude. If he don't, it'll mean his finish on the big time, family or no family.

It's part o' my agreement with Mr. Edwards that I stick on the job all the year round, goin' to the league meetin's with him in winter, helpin' him sign up the boys, and so forth. Well, after we was through last fall, he called me up in the office and begin crabbin' about finances.

"Frank," he says, "we lost $18,000 this season. I pretty near wish I didn't have no ball club."

"You've pretty near got your wish," I says. "If some o' those bushers don't come through next spring, or if we don't swing a couple o' deals between now and then, the clubs that play against us won't even get good practice."

"Bad as we are," he says, "I bet we got the biggest salary list in the big leagues. It looks to me like not only one or two, but several of our men were bein' overpaid."

"Yes, sir," I says; "and on their showin' the last few months some o' them would be overpaid if they drawed a dollar a day."

"Well," he says, "I'm goin' to do some trimmin'. The boys'll kick, I suppose, but I'm dependin' on you to show 'em they deserve cuts."

"That's a nice little job for me," I says. "It's just as easy to convince a ball player that his pay ought to be trimmed as it is to score twelve runs off Alexander."

"I'd just as leave pay good prices for good work," he says, "but I'm not goin' to maintain no pension bureau. These ridic'lous Federal League contracts have all run out, thank heavens, and from now on my ball club'll be run on a sane basis. Look at Lefty Grant!" he says. "He got $7000 and pitched pretty near eleven full games, winnin' three o' them. And look at Hagedorn! A $6000 contract and no more life in him than a wet rag! What do you suppose ailed him?"

"Federalitis," I says. "He was gettin' soft money in the Federal, with no incentive to win and nobody to try and make him hustle."

"A $6000 salary," says Mr. Edwards, "for a man that hit round .220 and played first base like he was bettin' against us! Maybe we'd better just let loose of him."

"If I was you," I says, "I'd see what the recruits is like before gettin' rid o' Hagedorn. I'll admit he's been loafin', but he's a mighty good ball player when he tries."

"Maybe it'll wake him up to cut him," says he. "I'm goin' to send him a contract for $4000."

"Suit yourself," says I. "He'll holler like an Indian, but if he sees you're in earnest I guess he'll come round."

"He lives here in town," says Mr. Edwards. "I'll have the girl call him up sometime and tell him I want to see him."

So we discussed a few others that was gettin' way more than they earned, and the boss says he wouldn't play no favorites, but would cut 'em all from ten to forty per cent. I knew they'd be plenty o' trouble, but I didn't care a whole lot. I figured that if everybody on the pay roll quit the game and went to work it'd strengthen the team.

Well, Hagedorn accepted Mr. Edwards' invitation to call and I was in the office when Bill come in.

"Mr. Hagedorn," says the boss, "Manager Conley and myself's been talkin' things over and we come to the conclusion that several o' you boys was earnin' less than we paid you. What do you think about it?"

"Well," says Hagedorn, "some o' the boys maybe deserve cuts. But I don't see how I come in on it."

"Why not?" says Mr. Edwards. "The unofficial averages gives you a battin' percentage o' .220."

"I can't help what them dam scorers do to me," says Bill. "I never did get fair treatment from the reporters."

"But when you was in the league before," says the boss, "you always hit up round .280, and it's a cinch the scorers didn't cheat you out o' sixty points."

"They'd cheat me out o' my shirt if they had a chance," Bill says. "But even if I did have a bad year with the wood, that ain't no sign I won't do all right next season."

"That's true enough," says Mr. Edwards. "Anybody's liable to have a battin' slump. But Manager Conley and myself wasn't thinkin' about your hittin' alone. We kind o' thought that your work all round was below the standard; that you was sort o' layin' down on the job."

Hagedorn began to whine.

"Mr. Edwards," he says, "you got me entirely wrong. I wouldn't lay down on nobody. I've give you my best every minute, and if I haven't it was because things broke bad for me."

"What things?" I ast him.

"Well," he says, "for one thing, I felt rotten all summer. My legs was bad."

"Well," I says, "you can't expect Mr. Edwards to pay $3000 apiece for bad legs."

"But they're all right now," he says. "I haven't had a bit o' trouble with 'em all fall. And I'm takin' grand care o' myself and next spring I'll be as good as ever."

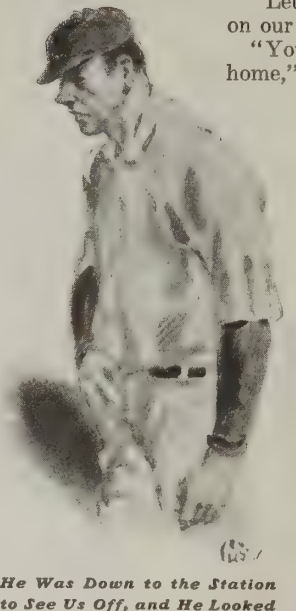
"Why didn't you tell me about your legs?" I ast him. "I'd of let you lay off. You certainly wasn't helpin' us much."

"I'd of told you only I don't like to quit," he says. "And besides, my legs wasn't the whole trouble."

"What else was it?" I says.

"Well," he says, "the Missus was sick and in the hospital, and I had to pay out a lot o' money and it kept me worried."

"When was she sick?" I ast him.



He Was Down to the Station to See Us Off, and He Looked Like He Was Ready to Cry

"Let's see," he says, "it was while we w on our last Eastern trip."

"You never ast me to let you co home," I says.

"No," he says, "I didn't kn nothin' at all about it till we g back."

"That's why you worried, I su pose," says I, "and I guess yo wife's illness in September was wh worried you in June and July."

"She was sick on and off all se son," he says.

"I noticed," says I, "that s done most of her sufferin' in a gran stand seat. Her ailment," I say "was probably brought on watchin' you perform."

"She's full o' nerve," he say "She wouldn't miss a ball game she was dyin'. And besides, her sic ness wasn't all of it."

"Let's hear the whole story once," I says. "The suspense fierce."

"Her folks kept botherin' us says Hagedorn. "They live Louisville, and they're gettin' o and they wanted that she should come down there an stay with 'em."

"Couldn't they come up here?" I ast him.

"No," he says, "they got their own home and their ow friends and everything down there."

"Well," I says, "that'd probably be the square thing f you to do, just pack up and move to Louisville and liv with 'em."

"We'd only be there in the winter," he says.

"No," says I, "I'll fix it so's you can be there all th year round."

"What do you mean?" he says.

"I mean that if you don't want to sign at our figure Louisville'd be the ideal spot for you," says I.

"What's your figures?" he ast.

"I'm willin' to give you $4000," says Mr. Edwards.

Hagedorn swelled up.

"If you think I'll take a $2000 cut, you got me wrong," he says.

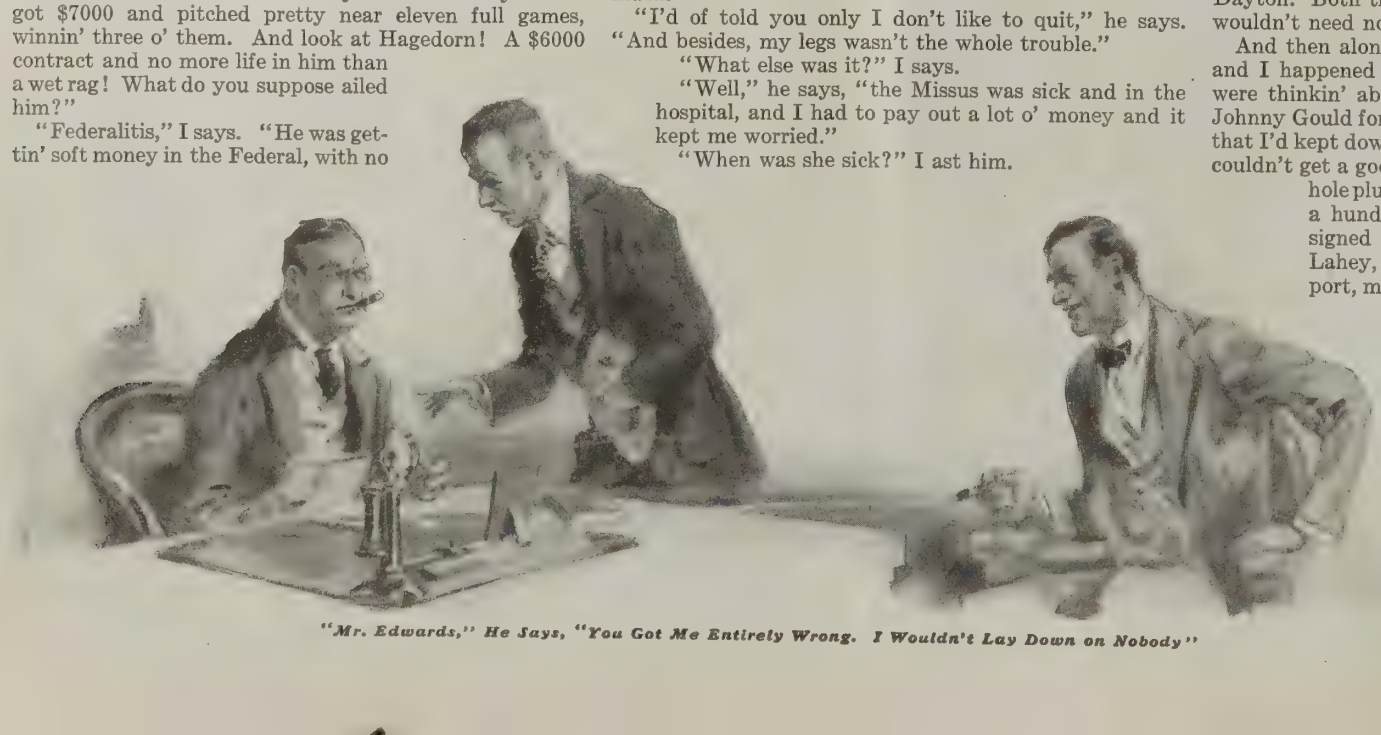
"All right," says I, "and I hope the Kentucky climat agrees with your legs."

We sent Lefty Grant a contract for $5000 and after little crabbin' by mail he signed. Joe Marsh stood for $1000 cut, and Bones McChesney, shaved from $3500 t $3000, refused to sign and got himself sold to Toronto. didn't cry over losin' him; he'd always been fat from hi neck up, and in the last two seasons the epidemic ha spread all over his body.

Now it don't often happen that a seventh-place clu begins lookin' like a pennant contender between Octobe and February. But that's what come off with us. Ou worst weakness last year was at shortstop and third bas and back o' the bat. Well, I talked to a lot of Associatio men durin' the fall, and they told me that I had a secon Schalk in this young Stremmle from Indianapolis. And got swell reports on Berner, the shortstop we drew from Dayton. Both these guys, I was told, were ready. They wouldn't need no more seasonin'.

And then along come the league meetin' in New York and I happened to catch the St. Louis gang when they were thinkin' about somethin' else, and they traded me Johnny Gould for Hype Corliss and Jack Moran, two guys that I'd kept down in the bull pen all summer so's the bugs couldn't get a good look at 'em. There was my third base hole plugged up and the ball club was bound to be a hundred per cent better, provided Hagedorn signed and give us his best work, or that young Lahey, the first sacker we bought from Davenport, made good. I wasn't worryin' much about him, as I figured right along that Hagedorn would take his $4000 when he seen we were in earnest.

O' course he had a little bit the best of us in the argument—that is, he would of had if he'd knew enough. Him and Lahey was the only candidates for first base, and no matter if he played the position in a hammock, he'd be better than an inexperienced kid from the Three Eye. Even if he wasn't never worth a nickel over $4000, here was a



"Mr. Edwards," He Says, "You Got Me Entirely Wrong. I Wouldn't Lay Down on Nobody"

grand chance for him to hold us up. All he had to do was lay quiet at home, and when it come time for us to go South we'd of looked him up and met his demands. But no, he didn't have the nerve or sense to go at it the right way.

Instead o' keepin' us guessin', what does he do but hunt up excuses to come and hang round the office and try and get a hint o' whether we were goin' to stand pat or back down. I was alone the first time he showed.

"Hello, Bill," I says. "Did you bring your fountain pen?"

"What for?" he says.

"To sign that $4000 contract," says I.

"Oh, no," he says, "I wasn't thinkin' nothin' about the contract. I come up to see if they was any mail for me."

"Not now," I says, "but you may be hearin' from the Louisville club in a few days."

"What would they be writin' me about?" he says.

"Maybe they'll hear about you wantin' to move there," I says, "and they'll probably be askin' you if you'd care to take a job with 'em."

"Well," says Bill, "you won't catch me playin' ball with Louisville."

"Who was you thinkin' about playin' with?" I ast him.

"Nobody," he says. "I've decided to quit."

"That's fine, Bill!" I says. "Somebody left you money?"

"No," he says, "but I got some o' my own saved up."

"How much?" I ast him.

"Close to $2000," says Bill.

"Fine work!" says I. "You must of lived pretty simple to save $2000 in seven years."

"I never skimped," says Bill.

"Well," I says, "I don't know how you managed. But it's nice to feel that you won't never have to skimp again. If you can get six per cent for your money, that'll mean $120 a year or $10 a month. That puts you on Easy Street. All you'll have to get alongwithoutisfood, clothes, heat and a place to live."

When They'd Come to Me for the Dope, I'd Rave to 'Em About What a World-Beater Young Lahey Was, and They Ate it Up

He paid us another visit Christmas week, thinkin', maybe, that Mr. Edwards would be runnin' over with holiday spirits.

This was a bum guess. The old man's got more relatives than a perch, and when he was through buyin' presents for all o' them he wouldn't of paid a telephone slug for the release o' Ty Cobb.

"No mail yet," I says to Bill when he come in.

"I wasn't expectin' no mail," he says. "I was just wonderin' if I left a pair o' gloves here last time."

"A pair o' tan gloves?" I says.

"Yes," says Hagedorn.

"I didn't see 'em," I says. "I found some gray ones."

"How is everything?" he says.

"Fine!" says I. "It looks like we're goin' to have a regular ball club."

"Well, I hope you do," Bill says.

"Gould's goin' to help us a lot," says I, "and they tell me Stremmle and Berner's both good enough for anybody's team. And then, o' course, we got young Lahey."

"Who's young Lahey?" ast Bill.

"Can't be you never heard of him," I says. "He's the first sacker from Davenport that everybody was after. They say you can't hardly tell him from Hal Chase when he's in action. And he cracked the marble for about .340 last season."

"Hittin' .340 in the sticks and hittin' it up here is two different things," says Hagedorn.

"Not so different," I says. "A bird that can hit .340 anywhere can hit pretty good."

That's right, too. But the truth was that Lahey's figure had been eighty points shy o' what I credited him with. And from what I'd learned from some o' the Three Eye boys, Lahey was the eighth best first baseman in their league.

"Well," says Hagedorn, "if he makes good, you won't have no use for me."

"No," I says, "but I'd hate to see you go back in the bushes."

"Don't worry!" he says. "I'm goin' to stick right here in town."

"And live on your savin's?" I says.

"No," says Bill. "I'm just about signed up to play with the Acmes in the semi-pro league."

"How much are they givin' you?" I ast him.

"Fifty a game, and they only play Sundays," he says.

"Yes," says I, "and they're doin' well if they play twenty games a season. That nets you $1000, and you'll have somethin' like six days a week to spend it in."

"I can work at somethin' durin' the week," he says. "Maybe sell automobiles or somethin'."

"You could do that in the winter, too," I says, "if you didn't waste so much o' your time comin' for your mail and lookin' for your gloves."

"How's Mr. Edwards?" says Bill.

"Fine and dandy!" I says. "Want to see him?"

"What would I want to see him about?" says Bill.

"You might be able to sell him a car," says I. "He's right in the spendin' mood now. His nieces and nephews and Mr. Wilson's peace note has relieved him o' the few hundreds he had left after last season. I wouldn't be surprised if he'd reconsider cuttin' your contract—maybe give you a bonus just for the devil of it."

While we was talkin' Mr. Edwards come out from his private office.

"Hello, Hagedorn," he says. "Ready to sign?"

"At my own figure," says Bill.

"That's good," says Mr. Edwards. "Conley and myself was afraid you might accept the cut, and we couldn't hardly afford to keep an extra first baseman at $4000 a year."

"It's best all round," I says. "Bill's goin' to make more dough than we could possibly give him; he's goin' to sell cars durin' the week and play semi-pro ball Sundays. And maybe he can master the barber trade and pick up a few extra hundreds Saturday nights. But even if he don't make a nickel, he's got $2000 hoarded up."

"That's fine!" says the boss. "I like to see thrift in a young man. And it always seems like a pity that so many boys squander their earnin's and have to keep on slavin' as ball players till they're thirty years old and past the prime o' life."

For three or four days early in January they was an epidemic o' lockjaw in Washin'ton, and the market come up enough for Mr. Edwards to take a trip to New Orleans. He left me in charge o' things, and my job consisted o' makin' up stories for the newspaper boys and entertainin' Hagedorn about once a week.

Once he dropped in to find out Joe Marsh's address; it'd of been impossible, o' course, to inquire by telephone. Another time he just happened to be passin', and happened to remember that he was carryin' a letter that his wife had ast him to mail, and wanted to know if I had a stamp.

I entertained him every time with dope on Lahey and what a whale of a man he was goin' to make us. But one day he come up loaded with some real facts about the guy I'd been boostin'.

"I thought you told me Lahey hit .340 with Davenport," he says.

"I did tell you that," says I.

"Well," says Bill, "somebody was stringin' you. I seen the Three Eye records the other day and they give Lahey .262."

"That don't mean nothin'," I says. "The scorers probably had it in for him."

"And he made more boots than any first baseman in the league," says Bill.

"That shows he was hustlin'," I says. "The more ground you cover, the more you're liable to kick 'em round. Besides," I says, "he was so perfect that the scorers probably thought he'd ought to make plays that would be impossible for a common first sacker."

"Another thing," says Hagedorn: "I happened to run acrost Jack Wells that played in the league with him, and he tells me Lahey's a left-hand hitter. Well, Gould's a left-hand hitter and so's young Berner, and you already had two left-hand hitters amongst the regulars. Your club's goin' to be balanced like a stew on a wild broncho. McGraw andthem'llleft-hand you to death."

"What do you care!" I says.

"It's nothin' to me," says Bill.

"Well, what do you suppose we better do about it?" I ast him.

"If I was you," he says, "I'd try and get myself a first baseman that hits right-handed."

"It's too late to get anybody," says I. "I guess we're just plain up against it. I wisht you hadn't made up your mind to retire."

"I'd play for you," says Bill, "if you'd meet my price."

"That's up to the old man," I says, "but I know he won't back down. He wouldn't give in to one man when he's stood pat on all the rest o' them."

"It won't be just one man," says Bill.

"What do you mean?" I ast him.

"He'll be lucky if he's got anybody when the showdown comes," says Bill. "The fraternity's give orders that nobody's to sign till you hear from them, and you won't hear from them till the leagues meets its demands."

"That don't affect our club," I says. "We got every man already signed up except yourself."

"Yes," says Hagedorn, "but signed up or not signed up, they won't report till the fraternity tells 'em to."

"You've been playin' long enough to know better'n that," says I. "If you think any ball player's goin' without his prunes to help out some other ball player, you got even less brains than I figured."

"They'll have to strike if the fraternity says so," says Bill. "They're goin' into the Federation o' Labor and be like any other union. And if they don't strike when they're ordered to they'll be canned out o' the fraternity."

"Well," I says, "suppose you was Ty Cobb, draggin' down a measly $16,000 a year, or whatever he's gettin'. Which would you do if the choice come up, go without the $16,000 or go without the fraternity?"

"I'd certainly stick with the fraternity," says Hagedorn. "If I didn't, I'd be a traitor."

"If I make you out a contract for $6000, will you sign it?" I ast him.

"Sure," he says. "I always told you I'd sign for my price."

"Well, Bill," I says, "I won't give you the contract. I'd hate to think I'd made a traitor out o' you."

"I don't want no contract anyway," says Bill. "I'm through. I'm goin' into business."

"What business?" I says.

"Somethin' pretty good," he says. "I and a friend o' mine's goin' in partners in a garage."

"That's a great idear!" says I. "You won't have no competition, and it won't cost nothin' to start, and besides that, it's a game you know more about than any other, unless it's dressmakin'."

"My friend knows all about it," says Bill, "and I can pick it up from him."

"You better stick to pickin' up low throws," I says. "It takes years to learn the mechanism of a car when you don't know nothin' to start, not even what makes the front wheels run. But o' course you won't be the only one in the garage business that has to learn, and so long as it's other people's cars you wreck while you're learnin', why what's the difference!"

"They's good money in a garage," says Bill.

"I know it, and a whole lot of it's mine," I says. "They's good money in any business like that—smugglin' or counterfeitin' or snatchin' purses. But it must be hell on a man's conscience, even worse'n drawin' $6000 per annum for takin' a six months' nap on the old ball field."

The first thing Mr. Edwards ast me when he got back from the South was what was the latest dope on Hagedorn.

"He's surprised me," I says. "I thought he'd give in long before this. But nothin' doin'."

"What will we do about it?" says the boss.

"Mr. Edwards," I says, "you're the man that's payin' me my money, and it's my business to look out for your interests. If Hagedorn had of kept away from here all winter, if we hadn't heard nothin' from him from the day he first turned down the contract, I'd say give him his $6000. But him comin' round here once a week shows that he needs us as much as we need him, and that he'll stand for the cut if he's got to. Besides, he's showed a mighty poor opinion o' me by expectin' me to believe all that junk about him goin' into business, and so on—stuff that was old in the Noah's Ark League. He couldn't earn a dime a day in anything outside o' baseball. If he had a factory that made shells out o' lake water, he'd be bankrupt in a month. Now they's probably four better first basemen than him in the league, but I doubt if more'n one o' them's drawin' $6000. O' course with him on the ball club it looks like we'd be somewheres up in the race, and we ain't got a chance with a busher playin' the position.

"If it was a case o' givin' him his dough or gettin' along without him, I'd rather see him get the money even if it's a holdup. But if I'm any judge of a ball player, he'll come round here on his hands and knees the day before we start for the Springs, and he'll sign at whatever price you offer him."

"It's a shame," says Mr. Edwards, "when everything else looks so good for us, to have to be worryin' about a man like him, that loafed on us all last summer and that I'd get rid of in a minute if I had somebody in his place. I suppose they's no chance o' tradin' for a first baseman at this stage."

"Oh, yes, they's a chance," I says. "I suppose Matty'd let us have Chase if we'd give up our pitchin' staff and half a dozen infielders and $40,000 or $50,000 in cash. Then we'd have Chase and nothin' with him."

"Maybe young Lahey'll surprise us," says the boss.

"It won't hurt us to hope," I says, "but from what I can learn Bill Doyle was mad at you when he recommended him. And besides," I says, "Lahey's a left-hand hitter, and that'd mean five o' them in the game every day. We'd be a set-up for fellas like Schupp and Smith and Tyler. Take Hagedorn, and he can murder a left-hander even when he ain't hittin' his weight against a regular pitcher."

"Well, all we can do is wait," says Mr. Edwards.

"And I don't think it'll be long," I says.

But when the night come for us to start South, Hagedorn was still a hold-out, though he did show one more sign o' weakenin'. He was down to the station to shake hands with the boys and see us off, and he looked like he was ready to cry. I called him off to one side.

"Would you like to be goin' along, Bill?" I ast him.

"Oh, I don't know," he says.

"Why don't you take your medicine and hop aboard?" I says. "Your missus can pack up your stuff and send it after you."

"I'll go if you say the word," he says.

"You're the one that must do the talkin'," says I.

"Why couldn't I go along without signin'?" he says. "Maybe the old man would meet my figure when he seen how hard I'd work to get in shape."

"No," says I; "this ain't no charity excursion we're runnin'. We pay nobody's fare that ain't signed up and a member o' this ball club. If you want to sign at $4000, they's a contract right there in my grip. If you don't, why you can spend the rest o' the winter countin' snowflakes and cursin' the coal trust."

"Well," he says, "I'll freeze to death before I'll be robbed; starve to death, too, before I'll let old Edwards bull me out o' what's comin' to me."

"I'm sorry, Bill," I says. "But anyway, good luck to you."

"Good luck to you too," says Bill. "You'll need it."

"Oh, I don't know," I says. "I got a hunch that it's goin' to be a great year for everybody in baseball."

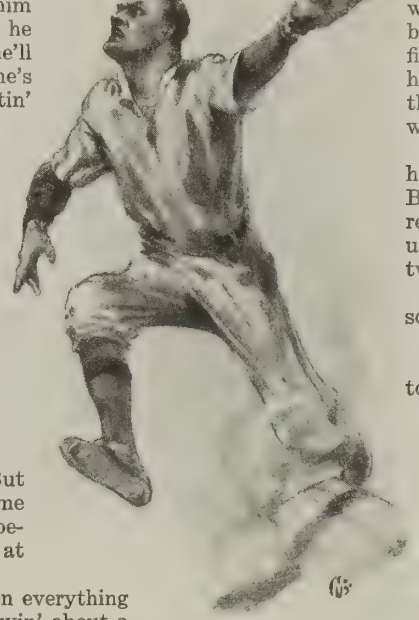
"Well," says Hagedorn, "I know some fellas that'll have a great year."

"Who do you mean, Bill?" I ast him.

"All the left-handers that pitches against your ball club," he says.

About half the baseball reporters on our papers know somethin' about the game. The other half's kids that can write cute stories, but don't know a wild pitch from a hit and run sign. This was the half that went on the spring trip with us. The old heads was sent with the Americans, because they'd made a fight for the pennant last year and the public was strong for 'em.

Well, I took advantage of our gang bein' green and made 'em perjure themself to their papers every day. When they'd come to me for the dope, I'd rave to 'em about what a world-beater young Lahey was, and how he'd burn up the league as soon as I'd learned him a few o' the fine points o' first-base play. If they'd been wise they could of told with one look that Mr. Lahey wouldn't do. But they were just kids and they ate it up. I bet if any o' the fellas that had played with Lahey read what I was sayin' about him in the papers they must of thought I was crazy.



Lahey Found Out Where First Base Was by Trippin' Over It

My idear, o' course, was to worry Hagedorn. I knew he'd be readin' everything he could find about us, and I didn't want him to get the impression that the ball club was goin' to bust up without him.

I thought Mr. Edwards would have sense enough to get this. But no; he fell just as hard as the reporters. And when he joined us after we'd been at the Springs two weeks, he was all smiles.

"Well," he says, "I been readin' some mighty encouragin' news."

"What news?" I says.

"About Lahey," says he. "I told you he might surprise us."

"He's surprised me in one way," I says. "I'm surprised that he ever had the nerve to come on this trainin' trip. I always thought pretty well o' the Three Eye League till I seen him," I says.

"You're jokin'," says Mr. Edwards. "I've read nothin' but good reports of him."

"I'm responsible for the reports," I says, "but I thought you'd guess that I was fakin' for Hagedorn's benefit."

"Well, if you've fooled Hagedorn, he's got company," says Mr. Edwards. "I thought our troubles was all over."

"Our troubles won't never be over if Hagedorn don't give in," I says.

"But Lahey must be some good, the way he was recommended," says the boss.

"Doyle probably seen him just once," I says, "and that must of been the one good day he had. But even at that, Doyle couldn't of never watched him handle his feet and thought he was a ball player."

"Is it just his feet that's the trouble?" ast Mr. Edwards.

"No," I says, "but they'd be plenty without outside help. We've had infield practice about nine times since we been here, and that means he's got nine hundred self-inflicted spike wounds. And they must of kept first base in a different place down to Davenport. Anyway he can't find it here. And when he does happen to stumble onto it, it's always with the wrong foot. Besides that, every time Gould or Berner makes a low peg Lahey loses a tooth. Gould ast him one day why he didn't wear a mask. But you ought to see him field bunts! If experience counts for anything, he'd ought to be the most accurate thrower in the world, from a sittin' posture."

"How about his hittin'?" the boss ast me.

"He's a consistent hitter," I says. "They's a party from Kansas City stoppin' at the hotel. They come out to every practice and always set in the same place, right back o' t plate, behind the grandstand screen. Well, every b Lahey's hit so far has made 'em duck."

"Does he act like he had stage fright?" says the boss.

"Not him!" says I. "Nobody but the gamest guy the world could cut off a few toes every day and come o the next day for more. And nobody without a whole l o' nerve could keep diggin' after low throws when he know that they're goin' to uppercut him in the jaw. No, si You can't scare Charley!"

"Charley!" says Mr. Edwards. "I thought his nam was Mike."

"Gould's nicknamed him Charley," I says, "aft Charley Chaplin."

Well, the boss wasn't what you could call tickled t death with my dope on Lahey, but he cheered up a litt when I told him about Gould and the rest o' them. Goul was goin' even better than when he was with St. Loui He was hustlin' like a colt and hittin' everything the throwed up there. And he kept coachin' young Bern like he'd been hired for that job. He put real pep in th infield, and I knew it was tough for him to keep it up whe Lahey gummed pretty near every play that was pulled.

Berner cinched his job the first day out. He's the kin of a kid that just won't stay on the bench, as lively an full o' fight as little Bush, at Detroit, or Buck Weaver, o Rabbit Maranville. And Stremmle come up to everythin they said about him. Then Joe Marsh seemed to of go over the Federal League and acted five years younger tha he is. And our outfield was workin' hard. O' course thi young Sheppard showin' up so good helped a lot and mad the rest o' them hustle.

I told Mr. Edwards, I says:

"Outside o' first base, I wouldn't trade this ball club fo McGraw's. These boys have got more spirit than an team I ever managed. They're the kind that's liable t upset the whole league. If we only just had a good reliabl man on that bag, I'd almost guarantee to finish one-two three."

"And do you still think Hagedorn's goin' to join us?" the boss ast me.

"I certainly do," I says. "I wouldn't be surprised t get a wire from him any day."

But we went along another week without hearin' fron Bill. Mr. Edwards kept gettin' more and more nervous And I guess I was beginnin' to get nervous too.

About the second day o' the third week down there, letter come to me from Hagedorn's wife. It hit me right i the eye.

Bill, she told me, didn't know she was writin' and woul probably kill her if he found it out. She'd been beggin' an beggin' him all winter to take what we offered, and she' just about had him coaxed when the papers begin printin the swell reports about Lahey. Those reports had took al the zip out o' Bill. Instead o' frightenin' him into signin at our figure, they'd convinced him that he wasn't wantec on our club. And Bill was worse than broke. He was ove three months behind with the rent and the meat bill an so forth, and coal was a hundred dollars a ton, and they wasn't no coal even at that price, and she was afraid he' do somethin' desperate. And she thought if I'd just send Bill a wire and tell him that we'd carry him as an extra man, or if I'd try and trade him somewheres where he coul make some kind of a salary, he'd be so tickled that he' come to us or go wherever we sent him at whatever price he could get. And she begged me to not tell anybody tha she'd wrote.

Mr. Edwards had just left us to run down to Dallas fo a few days. O' course I wouldn't of let him know about the letter anyway. But him bein' away give me the idear o keepin' Bill's comin' a secret. I was goin' to surprise him by havin' Bill blow in unexpected, because it was a cinch the old man'd be back before Bill could get there. So I didn't wire Dallas, but just sent a telegram to Bill, sayin', "If you'll sign for $4000, first-base job is yours. Answer."

The answer come the same night. It said all right, that he'd join us the followin' Thursday.

On Wednesday Mr. Edwards come back to the Springs. And that afternoon Charles C. Lahey give the funniest exhibition I ever seen on a ball field. The whole practice was a joke, because Gould and Berner and Marsh and the rest o' them was laughin' so hard they couldn't do nothin'. But the wind-up come near not bein' a joke. It'd of been a tragedy if Lahey wasn't the awkwardest guy in the world.

We was tryin' the double play, first base to second base and back. I hit a ball pretty close to the bag and it took a nice hop, so they wasn't no chance for Charley to boot it. He pegged down to Berner, and then turned round and started lookin' for his own bag. Berner took the throw and sent it back as fast as I ever seen a ball pegged. Well, sir, Lahey found out where first base was by trippin' over it. But just before he tripped he turned his head to look for the throw. If he hadn't tripped and went sprawlin', that ball would of cracked him right in the temple, and if it had, good night! To show you how much Berner had on it, it hit the grandstand on the short hop and made a noise like somewheres in France.

NEVER AGAIN!

By GEORGE PATTULLO

ILLUSTRATED BY GORDON DINGWALL

IT IS the height of folly, m'sieu, to act the part of a Good Samaritan. That way lie pitfalls and the suspicion of your fellowmen. I know, for I have had experience. When a man of feeling starts out to aid those in distress he will, like as not, end up in suits for damages and with a painted eye. As Madame Patsy aptly phrases it, the Good Samaritan always gets it in the neck.

You have doubtless read in the papers of what befell me? The notoriety is sufficiently galling to a sensitive nature; still, it is as nothing to the misunderstanding that has arisen in my home. As though the derision of a ribald press and the coarse jests of one's friends were not enough, Madame Giraud has seen fit to misinterpret my actions. Yes; she affects to believe that there was more to the affair than the innocent aspect my version gave to it, and the sinister innuendos so plentifully besprinkled throughout the newspaper accounts have found ready lodgment in her heart.

"Because you see a hussy powdering her nose, it's a good excuse for going up and offering to help her, I suppose?" she demanded to-day.

Therefore, m'sieu, I am going to narrate to you the whole terrible episode, in order that you may judge for yourself of the guilt or blamelessness of my intentions. And when you shall have heard all—when I have fully recited every happening—I desire that you shall go straightway to Madame Giraud and tell her exactly what you have heard, as though you had been a spectator of it. Only in that way will harmony be restored in our household. You will do that for me, m'sieu? You will not fail a friend? Ah, I thank you! A thousand times I thank you!

"What Seems to be the Trouble, M'sieu?" I Inquired Politely. "You Appear Agitated"

Eh bien! I had been down the street to purchase a bottle of paregoric for the twins, and was standing on a corner when who should come along but a young lady in a machine. Just as she arrived opposite me an expression of frozen horror mantled her flowerlike face and she leaned back, with all her lithe body taut, to put on the brakes. But the urchin on the crossing, for whose safety she had displayed such poignant concern, remained seemingly indifferent to his danger; in fact, he did not even deign to hurry, but placidly watched the car slide, with locked wheels, and then remarked:

"Don't get scared, lady. I won't hurt your little flivver."

The fair driver gave a gasp of relief and relaxed. And the engine promptly went dead. Yes, m'sieu; the machine bucked a couple of times, sighed, and then came to a stop.

"Damn!" said the charming creature, with the fervor of an ardent spirit, and proceeded reluctantly to alight.

Under the pretense of studying a display of hot-water bottles in a shop window, I delayed to watch. She stepped out into the roadway and walked round to the front of the car in order to crank it.

I now had ample opportunity to observe her. She was truly charming. Have you ever seen a young blue quail, m'sieu? It is an extremely beautiful bird, proud and alert and tender. The young lady reminded me of a blue quail. She was of medium height and plump, but adorably so; her skin was of a delicate freshness; she had long brown lashes, and deep blue eyes that seemed ever to beckon. Her nose was delightfully short and retroussé, and the sheen of her hair was like sunlight on bronze.

Eh bien! The adorable young thing moved slowly to the front of the car, where she paused to powder her nose. Then she glanced up and down the street with a hopeful and expectant air, meantime trifling with the crank.

I could feel that she was keenly alive to my presence. It would have been strange indeed were she not.

Though my duty as a married man and the father of two noble boys prompts me to maintain a studious indifference to feminine charms, I could not be blind to either the lure of her features or the grace of her form. The dress she wore set it off to perfection. It was of blue serge, and yellow China silk with a dragon in it; and on top of her head was a small yellow hat.

She took hold of the crank then, with a daintily gloved hand, and gave a half-hearted turn. Of course there was no response, inasmuch as the lady had completed about an eighth of one revolution.

"Oh, dear!" she murmured with a bewildering pout.

At this opportune moment a gentleman came bowling along in a big touring car.

"How do you do, Mr. Moore?" she exclaimed, bowing eagerly.

To my stupefaction he ignored her. I am positive, m'sieu, that he saw the lady; but for some mysterious reason he chose to pretend that he did not. Instead of responding, he affected to be busy in an inspection of his air pump, and went whirling past without so much as a glance.

The enchanting creature watched him out of sight with a peculiar gleam in her starry eyes. Then she bent down and made a feeble attempt to spin the crank. It was so faint that I was moved to pity. Evidently she was little accustomed to such heavy tasks.

"Pardon me, madame," I said, hastening forward with my best manner. "Could I be of any assistance to you?"

"Yes, you could," she admitted. "Thank you so much!"

Her voice was indescribably soft and appealing. It was more like a coo than human speech. Involuntarily I concealed the bottle of paregoric in an inside pocket of my coat. Somehow it seemed out of place.

"It is a pleasure to be of service," I replied gallantly, and grasped the crank.

Heavens! What a weight it was! The engine was so stiff, my friend, that it required my utmost strength to turn it over. As for spinning the thing, it was out of the question.

"A—new—car, is it—not, madame?" I panted.

"Sometimes it doesn't give so easily as others," she gayly confessed.

I tried again.

"This, unfortunately," I remarked, "is one of the times."

As she did not answer, I resumed the task. I pulled and tugged and heaved; the result was a few slow revolutions of the implement. Then suddenly it gave easily to my hand, and I spun with right good will. M'sieu, I might have spared myself the effort. There was not the faintest pop—not even a gurgle.

"You have no gasoline," I said, straightening my cramped back.

"I bought five gallons just an hour ago!"

Satisfied on this point, I took a deep breath and grappled with the devilish contrivance again. It had limbered up considerably. I whirled and whirled the crank until my arm ached.

"Is your spark right? And the throttle?" I inquired.

She seemed to resent my tone.

"Take a look and see for yourself," she suggested; and I found that both were as they should be.

Several persons now arrived from nowhere in particular and gathered round us. You are a busy nation, m'sieu, but I have noticed there are always people with ample time to watch a breakdown, or a new building in course of construction, or a gentleman in a shop window, whittling rocks with a razor.

They eyed my efforts with a lively interest, nobody saying a word. And I went on cranking. At last I could stand it no longer. My head was reeling.

"Madame," I said, stopping for breath, "did M'sieu Moore—the gentleman who went by a few minutes ago—did he ever have occasion to start this car?"

"Only once. Why?"

And then, in a flash, the explanation of his conduct was revealed to me. The scoundrel had pretended not to see her on purpose.

"It must be so nice to be a man," she cooed. "They're so strong!"

Her words stimulated me to renewed courage. Never shall it be said of Henri Giraud that he was deaf to a woman's plea. Turning sternly on the machine again, I seized the crank in an iron grasp and spun it with the fury of despair.

There was a muffled explosion and the car started forward, knocking me down. The spectators scattered in all directions, but not rapidly enough to prevent the fender from grazing an individual who had been sweeping the pavement with a broom and a pan. I am positive, m'sieu, that it did no more than touch his leg. Yet guess what the unprincipled rascal subsequently did! He entered suit against me for nineteen hundred and ninety-nine dollars and ninety-nine cents damages, alleging that my wanton carelessness had been responsible for serious injury to him. Also, a lady, who was present out of curiosity, filed a claim for one thousand dollars, for nervous shock sustained in being a witness of the accident.

Luckily for all concerned, the engine quickly stopped. Yes; a few snorts and it grew silent again, the car bringing up against the curb.

"Oh, I'm so sorry!" cried the beautiful owner. "I must have forgotten and left it in gear. You have to be so careful about these things."

While I was dusting my clothes and endeavoring to put as cheerful a countenance on the situation as I could contrive, a person with a notebook moved about among the bystanders, taking names and addresses. He demanded mine and obtained it.

"What," I inquired, "is the purpose of all this?"

"I am acting for the injured party," was the brisk reply; and he went on collecting witnesses.

At the moment I was totally ignorant of the significance of his words, m'sieu, else I would have assuredly taken prompt action to dispossess him of his memoranda. Had I suspected in the slightest degree, I would have fallen upon the fellow in righteous wrath and given him the chastisement his conduct so richly merited, thereby obtaining a measure of recompense for the money it cost me later. However, I did not know; and so I said nothing.

Blissfully unaware of his perfidious intent, my whole concern was for the lovely creature who owned the flivver. She seemed now almost overcome with despair, and drooped like a broken lily.

"I guess we'll have to let the darn thing stay where it is," she said. "This is one of its bad days, and there's no use in fooling with it."

But she did not know Henri Giraud! Opposition and difficulties serve only to whet my fighting spirit. It might humiliate me—it might even lay me prostrate—but no flivver on earth could conquer my invincible determination. I gritted my teeth and advanced upon it once more.

"Do be careful!" she entreated. "I'm so afraid for you."

The tone, the look in her eyes, set my blood to racing. Impervious though I am to such things, there could be no mistaking the note in her voice. I would not go so far as to assert that it was yearning, but certainly it manifested

a warm interest in my welfare. And that is reward enough for a gallant man.

With confidence restored I took hold with both hands and whirled the crank. It kicked with tremendous power and had I not sprung backward in the nick of time must have broken my arm.

"I swan!" ejaculated a young lady in the crowd who was industriously chewing gum. "That's the meanest one I ever did see."

Suggestions as to what I should do now came thick and fast. Apparently the spectators were unanimously of opinion that the flivver belonged to me and that the lady was my wife, though some of the older and more thoughtful seemed frankly puzzled by the courtesy with which I treated her.

In the forefront, clinging tenaciously to his position through every shift of the throng, was a colored boy of about six years of age.

"Boss, I got a idea, sure enough!" he whispered hoarsely.

The chance of a respite was too attractive to be overlooked, for I was rapidly tiring, m'sieu.

"Let us have it, by all means."

"When our ol' Jinnie mule does us this way," he piped, "Pa up and lights a fire under her, and then she goes fine! Maybe that would start her, boss."

"It would be apt to start something," I conceded, and bestowed a nickel on him for his manifest desire to be of assistance.

Then I walked all round the flivver for the twentieth time, the crowd at my elbow. They peered into the engine when I did; they stooped to peep underneath when I did. In the midst of our reconnoitering I heard the blast of a siren, and here came M'sieu Sam Field in his new roadster. He pulled up in front of us.

"Why, Henree," he cried in astonishment, "what're you doing here? Oh, I see! Maybe I'd better move along—what? Naughty! Naughty!"

His arrival, and especially his cynical air, vexed me to a degree.

"Not at all, my friend," I assured him crisply. "Nothing could be more fortunate. A lady has had the misfortune to break down, and you can aid me in getting her off again."

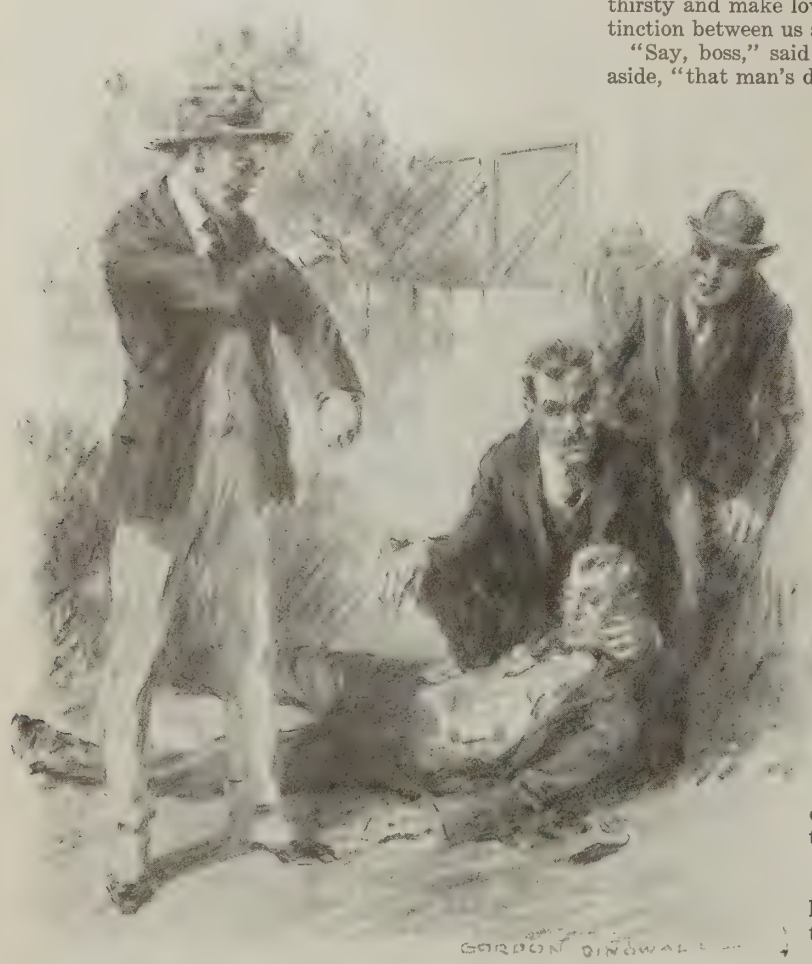
"The original little fixer!" he exclaimed, alighting leisurely. "Always on the job!" Approaching closer, he added in a lower key:

"I got to hand it to you, Ol' Settler! As a poultry fancier ——"

"Enough, m'sieu!" I returned, nettled at the sinister import of his words. "If you desire to help, do so without further joking. Wits have a place in good society, doubtless—but it is the lowest."

Probably the reproof was far over his head, because he did not resent it, but strode to the machine and pushed me aside.

"Got a balky Lizzie, hey? Here," he said in a loud voice and with a killing glance toward madame, "let a man try it."



"Charlie's Knocked Off Work for the Day!" Said the Druggist. "Some Wallop—Believe Me!"

The implication was humiliating, to say the least; but I reflected that I should soon be amply avenged, and accordingly stood aside without protest. M'sieu Field grabbed the crank, braced himself with his feet wide apart, and gave a heave that shook a grunt out of him; but the Lizzie, my friend, did not grunt. It remained passive under his mightiest assault. He took hold again and spun the thing with the velocity of a flywheel. All to no avail; there was not the slightest indication of movement. Perceiving which, M'sieu Sam paused and mopped his brow.

"This one's a female," he announced with conviction.

"A female!" I echoed. "What do you mean, m'sieu?"

"Sure Mike! Didn't you know that? They've males and females in this species. You can tell 'em by their dispositions."

Of course I was aware that he but jested; still, the notion was decidedly diverting.

He now turned and inquired of the drug-store proprietor, who had come out to the sidewalk:

"Got any highlife? No? Then I'll have to take a shot in the arm. This is no job for an invalid."

All the while he was grinning amiably at madame; and madame, I regret to say, m'sieu, was not indifferent to him. Probably she could not help smiling. M'sieu Field's appearance is sufficiently ludicrous, and he can assume a naïveté that disarms suspicion.

Perceiving, with the promptitude of his kind, that the lady was not displeased by these pleasantries, M'sieu Sam instantly took advantage of it. He advanced toward her, hat in hand, and said, with a sort of manly frankness:

"This is mighty hot work, isn't it? What do you say if we go in and get a chocolate ice-cream soda?"

"I'm just dying for one!" she assented. "And I feel so useless standing round here."

"Do you mind if I leave you?" she added, turning to me.

What could I say, m'sieu? She was smiling softly; and, after all, she could accomplish nothing by her presence. Consequently it only remained for me to accept the situation with good grace. So they went, babbling like two old friends just met after a long separation, and I was left alone to wrestle with the flivver.

It was like him. Without any principles of fair play, M'sieu Field was only living up to his character. I might have expected as much; and I could not help murmuring, as they disappeared inside the store:

"*Boire sans soif et faire l'amour à tout temps; il n'y a que ça qui nous distingue des autres bêtes*"—it is an old saying, but it fits the fellow, my friend—"We drink without being thirsty and make love at any time; that is the only distinction between us and the other animals."

"Say, boss," said the colored urchin in a confidential aside, "that man's done gone off wif your wife!"

Nothing would be served by assuring him he was mistaken, so I proceeded about my self-imposed task. It now loomed gigantic. Having baffled my utmost endeavors, the flivver stood supinely against the curb, with a look of quiet stubbornness on its face.

"Won't she start?" inquired a fellow just arrived to swell the crowd of onlookers. Dolt! Simpleton!

"If she would," I rejoined bitterly, "why should I be here, sir, instead of at home with my family? Do you suppose I am engaged in this exercise for pleasure? Your query is ill-timed."

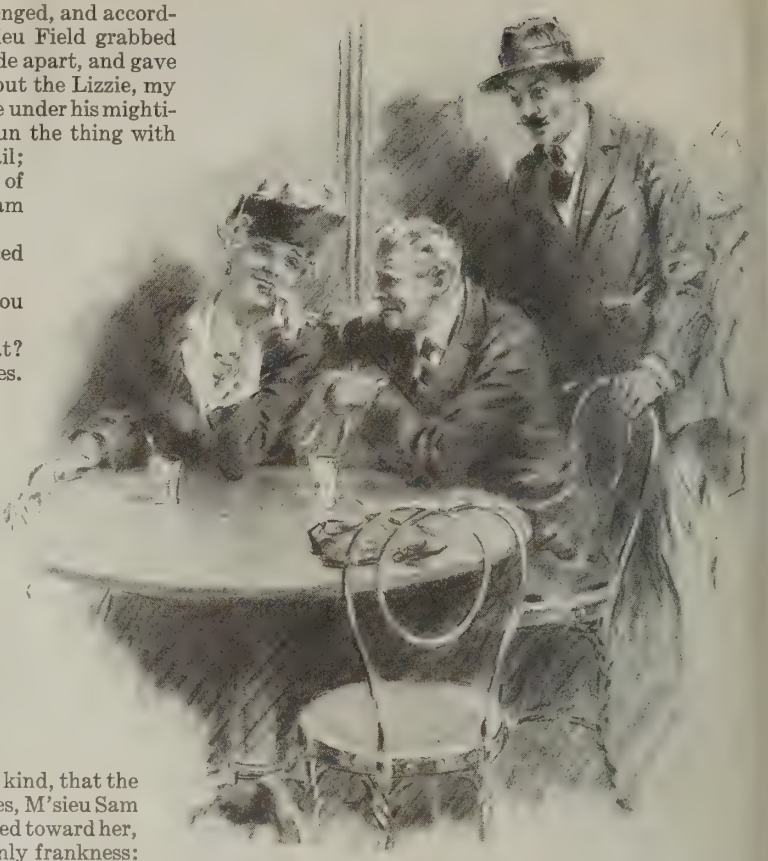
"Well, I was only askin'! So you needn't roar. Why don't you jack up the hind wheels? Sometimes you can coax 'em that way."

It was about the hundredth suggestion that had been advanced, none of which had proved of the least value. Still, there could be no harm in trying. When a man is desperate he will grasp at any chance. Aided by a couple of zealous volunteers, I jacked up the hind wheels.

"Still, she doesn't start," I said.

"Of course not! You can't make her go by just lookin' at her! Give that wheel a spin."

This was more easily said than done. The only method by which it could be accomplished was by standing on



"Are You Aware, Madame, That Your Companion is Married?"

a spoke and imparting a vigorous shove, a feat attended by considerable peril, as I speedily ascertained.

Indeed, had it not been for the friendly arms of the bystanders I must inevitably have been propelled across the sidewalk and possibly through a shop window; for the treacherous Lizzie, m'sieu, did not appreciate our excellent intentions. No sooner did she feel the pressure than she back-fired, and the whir of the wheel hurled me through the air.

"She'll do that now and agin," remarked the fellow who had incited me to it. "Better luck next time. All you got to do is keep your eye peeled and jump when you feel it's coming."

But I was firm.

"There'll be no next time, sir," I told him. "If that is the only way to persuade this accursed contrivance to perform its functions somebody else may try his hand. I have had enough!"

"Shucks! You ain't quittin', are you? You surely don't aim to go home and leave a one-candle-power flivver git the best of you?"

Deaf to his insidious argument, I now bethought me of the duty the fair owner owed in this crisis. I could see her through the window of the drug store, comfortably seated opposite M'sieu Field at a table. The spectacle stung me to rage.

Why should they remain in happy communion while I toiled and perspired in her service?

Abandoning the crowd, I entered the store. So engrossed were both in their conversation that neither noticed my approach until I stood over them. M'sieu Sam was leaning forward in the act of telling a story, and the captivating owner of the flivver held a handkerchief to her mouth, half convulsed with enjoyment.

"Pardon me," I cut in sternly, "but I have an idea."

M'sieu Field broke off his narrative as though thunderstruck.

"Anything gone wrong, Henree?" he inquired anxiously.

"No, my friend. But it has occurred to me that this lady can easily obviate a repetition of this painful experience."

"How?" she inquired.

"If you would use a limousine, madame, instead of the flivver outside, you would be spared the trouble and risk you have run this morning."

It required a minute or two for my idea to sink in, but when it did I could see she was impressed.

"Do you think so?" she asked seriously.

"I am positive of it, madame. M'sieu Sam here will tell you the same. We both own such machines, and our drivers have never been tormented by the maddening obstinacy your car has displayed. Is it not the truth, m'sieu?"

"Surest thing you know, Henree! The only thing that occurs to me is, Which of us shall give Bertine this limousine?"

"Bertine!" I repeated, no little amazed.

"Sam, you're a case!" giggled madame. "Just because I told you my name is no reason you should use it. I'll never tell you another thing!"

Here was a fine state of affairs! Sam! Bertine! And tly had known each other about ten minutes! I leaned fcward and asked, slowly and distinctly:

'Are you aware, madame, that your companion is nrried?"

'I haven't got anything on the rest of you, at that!" ed M'sieu Field with a derisive chuckle.

Madame blushed prettily.

'Now don't get mad!" she pleaded. "What's the matter vh you anyhow, Henree? Sit down and be clubby."

'The car is not yet going."

"Well, let it wait a while."

"Sure!" agreed M'sieu Field heartily. "Let the bunch otside do the worrying."

But I was not to be beguiled.

"If you have no immediate need of me, then, madame," eplied with dignity, "I'll bid you adieu."

"Got to hike home with the paregoric?" guffawed M'sieu Jeld, and his beautiful companion went into a paroxysm.

For some reason the thrust angered me out of all proprtion to its insolence. Why, I cannot explain, since it as an explicit statement of y purpose; but somehow, 'sieu, I resented his dragng my family affairs into e conversation.

"He will have his little ke, madame. *Eh bien!* I ust be going. Perhaps 'sieu Field will come to the scue when you wish to art."

She got halfway out of her air in dismay.

"Oh, please don't leave e all alone!" she begged. You're the only one I can ly on; and if you go I just now I'll be stalled here all ay."

I could not repress a look f triumph at M'sieu Sam. he had urged me to remain; he had plainly stated that ay departure would leave er alone and helpless! It as a stab at him; but so hick was the fellow's hide hat he did not even wince. Jo, my friend; M'sieu Sam rinned good-naturedly and ulled out a cigar.

At this juncture a hulking erson issued from the crowd ngaged in tinkering with the livver and shoved his head nside the doorway.

"Say!" he boomed. "Who wns this roadster out here?"

"I do, Pansy," responded M'sieu Field. "Why?"

"Because we want you o come out and give us a ull. Get me? Hitch on and drag me a little ways. Maybe if I throw her in gear she'll start."

Though abandoning such agreeable company cost him a woeful pang, M'sieu Field could not well refuse; and so he followed him reluctantly into the street.

No sooner had he turned his back than the beautiful Bertine motioned me to the vacant chair.

"I'm so glad he's gone!" she whispered with a sigh of relief. "Now we can talk. Mr. Sam's a dear old man, but ——"

"But when you've said that, you've said everything—eh, madame?"

She did not deny it, and greatly encouraged by so propitious a start I accepted the proffered seat.

"Ah, madame," I went on meaningly, "the young sometimes flatter old people, but they never love them. Is it not so? And then, his figure—his embonpoint!"

"I never thought of it like that. You mean—below his chest? I got you, Henree! Sam's a little too far forward—that's a fact. Sort of Gothic style."

The proprietor now interposed by thrusting his long arm between us to remove the empty glasses. His mien was surly in the extreme. Had he been the lady's accepted lover, my friend, he could not have regarded me with more menace.

"What'll you have?" he growled.

"The same," answered madame. "And don't be so stingy with it next time, Mister Kern."

"There's worse things than bein' stingy, Miz Thomas!" he retorted with a highly significant glance. "If some people was a little bit stingier it'd be better for 'em—better for everybody, ma'am."

And with this dark statement he stalked away to prepare the drinks.

"What does he mean?" I asked.

"Search me!" said madame with a careless shrug. "He always was a sorehead. He's one of those guys who don't know what it is to live and let live. He sure had his nerve too. The idea of him saying that!"

I could see that the druggist's remark had some special application that distressed her, but I was very far from guessing the truth. Had I done so—had I suspected for an instant what his attitude denoted—I would then and there have taken my departure. Yes, my friend; Henri Giraud is no coward, but neither is he foolish enough to place his neck in the noose.

All unsuspecting I moved my chair a trifle nearer that of madame in order that we should not be overheard.

"Now that the ogre has gone we can be cheerful again," I whispered. "Who is this fellow, madame? His face displeases me. I do not like it at all."

"Oh, he's just a friend of the family. Let's talk about something else."

"With all my heart! What shall it be?"

"Was you in earnest when you said that about my getting a limousine? Did you really mean it?"

"Most assuredly I did. You would never be bothered again, I give you my word."

"Oh, I'm So Sorry!" Cried the Beautiful Owner. "I Must Have Forgotten and Left it in Gear"

"Yes; but ——"

"You want one, do you not, madame? Think how much more comfortable you would be."

"Say, are you trying to kid me? Of course I want one! I want a million things. But it isn't what you want in this world; it's what you get."

"Indeed! Explain yourself. I don't understand."

"Usually you get what you don't want. Ain't it so? A woman never gets the kind of man she wants for a husband, for one thing. She may like him, but the sort she picked out in her mind is always a million miles different from the boob she ties to."

Imagine my consternation, m'sieu, on hearing such words fall from sweetly curving lips! I was inexpressibly shocked. However, I held my peace.

"Take poor old Uncle Andy," continued my charming companion. "If ever anybody proved my argument it was Uncle Andy."

"What did Uncle Andy do?" I inquired with no small interest.

"Why, all his life Uncle Andy liked to take it easy. He hated to see many people; and he was terrible fond of going slow—always said to go slow was to be sure. So he up and moved to Boston."

"And what befell him there?"

"Why, when he died," she said, "they went and give him a great big funeral; and the whole procession was pinched on the way to the cemetery for speeding. Yes, sir; it's a fact! Forty miles an hour they were going."

"Extraordinary! Pray proceed, madame."

But before she could impart more of the sad life history of Uncle Andy, the door of the drug shop flew open with a bang and a square-built man of about thirty years strode in. No sooner did he descry the newcomer than the proprietor ran from behind the soda fountain and endeavored to arrest his progress.

"Now, Charlie," he begged—"not here! Go outside! If you start a fight here it'll hurt my business."

"Leave me go, Rance! Turn me loose, I tell you!" the other shouted, making violent efforts to free himself.

Judge of my dismay, m'sieu, on hearing these words! And mingled with it was a vague presentiment of impending trouble. I did not know the person at all; but a threat was revealed in every line of him, and intuition told me that it was directed toward us.

Had I doubted it madame's alarm would have quickly dispelled every delusion. She rose abruptly from her chair, staring at the intruder with terror written on every lineament.

"Charlie!" she exclaimed. "Charlie!"

And then I guessed the awful truth: it was the indignant husband!

Yet I flatter myself, m'sieu, that Henri Giraud did not quail in the crisis. If ever I had need of the sang-froid that is the hallmark of the brave man in danger, it was now. It is true that this Charlie's demeanor was terrifying, but I permitted no qualms to show on the surface. No; he struggled in the firm grasp of the druggist, his eyes bulging and his horny fists clenched, but if he thought to awe Henri Giraud he was very much deluded. I smiled encouragingly at madame, as though to assure her there was no cause for fear, and advanced boldly toward him.

"What seems to be the trouble, m'sieu?" I inquired politely. "You appear agitated."

"I'll show you what the trouble is!" he bellowed. "Leave me go, Rance, so I can soak him one."

Aha! His motive was plain. He had me in mind; there could be no doubt of it.

"You are vexed with me, m'sieu? What is wrong? In what way have I offended you?"

He answered in a furious roar:

"You'll flirt with my wife, will you? I'll show you! I'll learn you whether you can break up my home or not!"

"Flirt with your wife? Break up your home? M'sieu, this is absurd. I have no such intention. I have a home of my own. You have been grossly misinformed. And as for your wife, I never saw the lady until this morning."

"Worse and more of it!" he cried, flinging the druggist from him. And with that he advanced threateningly upon me. It was patent that he planned to deliver a *coup de poing;* and I instantly put myself in a posture of defense. Yes, my friend; it is a source of gratification and pride to me that I did not falter in that supreme moment. It is true that a tremor in my lower limbs apprised me of a desire on their part to cease their functions. But it was not fear, m'sieu—I can see that now very clearly; rather was it an excess of courage, arising from a lively sense of the perils into which my daring spirit was about to hurry me. For I did not give ground an inch. My intrepid spirit prevailed and I set myself for the shock.

M'sieu Charlie covered the space between us in one jump and, emitting a hoarse cry, swung his powerful arm in a wide semicircle, aiming a blow of the fist at my head. But he little knew his antagonist if he calculated on my remaining tamely on the spot to receive it. I leaped back from his onslaught with the agility of an athlete. The stratagem, however, brought me into violent collision with a chair, and I fell prone on the floor.

My enemy let out a cry of triumph.

My predicament was now desperate. But in this emergency I received unexpected succor. The fearless Bertine rushed in between us, and throwing both arms round her angry mate besought him to be calm, to listen to reason, to remember he was a gentleman and cut out the roughhouse.

He would not listen to her pitiful plea. The brutal fellow, maddened by his fancied injuries, tore away the clinging embrace and pushed her from him.

PROTECTING AMERICA FROM ESPIONAGE—By Melville Davisson Post

A NATION of divided powers cannot act with the swiftness and secrecy of a central despotism. A republic is not the equal of an empire as a fighting device. Its scattered authority must be solidified. France is the example.

In order to give their republic the efficiency of the German Empire the whole people were willing, for the period of the war, to centralize the civil authority and to deny themselves the large democratic privileges to which they had been accustomed.

In the face of a war situation the divided authority of a democracy ought to be temporarily put together. In the American Republic this authority must be assembled in the President. We must trust somebody to act with swiftness and secrecy. And we must give him the same authority over the internal affairs of the nation that he has over its naval and military activities.

Looking to this end, the Administration has asked the Congress to enlarge the powers of the President in order to permit him to protect the country against the perils of espionage.

This authority in some of its features seems inconsistent with the ideals and traditional liberties of a republic. But it is the part of no wisdom to be slowly pressed into an unavoidable position by disaster. If we have a war to meet we may as well do in the beginning what we must inevitably do in the end—clothe the Executive with full authority to meet the situation.

The secret agents of the Department of Justice believe the country to be sown over with alien spies. The Department has sufficient information to enable it to make a rough estimate of at least one hundred thousand persons who might, in case of war, prove actively dangerous to the public safety.

Against this menace the Executive must be equipped with authority enough to enable him to use the safeguards that the experience of England and France has shown to be imperative. A modern war, it seems, cannot be fought except under a censorship system, rigid and autocratic. The government not only must have sufficient authority to censor every communication going in or out of the country and through the medium of the post office, but it must be able to say what shall and shall not be published with respect to the national defense.

No authority less than this is sufficient.

Any less authority would merely mean temporizing with a dangerous factor, which must be presently met with decision. France learned this lesson in the Franco-Prussian War. At a critical time a newspaper in Paris printed an article showing that the division of the army under Marshal MacMahon had changed its line of march. The information contained in this article was telegraphed to London and was there printed. It came to the attention of the German ambassador, who at once telegraphed it to the German authorities. It is said that this information enabled Von Moltke to undertake a military maneuver that finally resulted in the surrender of the MacMahon Division.

The French authorities in the present war did not propose to be endangered by this menace. The war correspondent was eliminated and the newspapers were restricted to the publication of authorized statements.

Penalties for Spies

WITH the large liberty of expression to which we are accustomed in this country, we should greatly feel so rigid a censorship; but if it should be deemed necessary for the public safety the President ought to have the authority to enforce it. The Congress has been asked for authority in the following terms:

"Whoever in time of war, in violation of regulations to be prescribed by the President, which he is hereby authorized to make and promulgate, shall collect, record, publish or communicate, or attempt to elicit any information with respect to the movement, numbers, description, condition or disposition of any of the armed forces, ships, aëroplanes or war materials of the United States, or with respect to the plans or conduct, or supposed plans or conduct of any naval or military operations, or with respect to any works or measures undertaken for or connected with or intended for the fortification or defense of any place, or any other information relating to the public defense or calculated to be or which might be useful to the enemy, shall be punished by a fine of not more than ten thousand dollars, or by imprisonment for not more than three years, or by both such fine and imprisonment."

It will be seen that such a law gives the President of the United States authority to control what should be published with respect to war operations, precisely as the French Government has found it necessary to do.

The American Government has also recognized that, with the great number of resident alien spies scattered over the country, there will be an organized effort to influence public sentiment and to embarrass the nation in its foreign policy. The Congress has been asked for authority to deal with this situation as follows:

"Whoever, in time of war, shall by any means or in any manner spread or make reports or statements, or convey any information, with intent to cause disaffection in or to interfere with the operations or success of the military or naval forces of the United States, or shall willfully spread or make false reports or statements, or convey any false information calculated to cause such disaffection or interference, shall be punished by a fine of not more than ten thousand dollars, and by imprisonment for life or any period less than thirty years."

It must be recognized that we are not dealing with antiquated spy methods. Both France and England warn us that it is a prime factor in the German foreign policy to build up internal resistance, through domestic channels, in countries hostile to it. There must be adequate authority in a nation at controversy with the German Empire to deal with internal propaganda designed to embarrass it in its foreign policy.

An Astonishing Prohibition

AT THE very opening of hostilities the English Government found it necessary to establish both a cable and postal censorship in order to deal with correspondence intended for Germany and Austria. This censorship was almost immediately extended to cover correspondence with neutral countries.

It may be proper to point out, as significant to us, that the whole elaborate censorship system of Great Britain was found practically useless so far as it was intended to prevent communications by alien resident enemies acting as spies in England. The system weeded out all the indiscretions of the people, but it was of little service against the resident alien system of espionage. The Home Office practically admitted this significant fact.

"It has not," it said, "except in a few instances, produced material for the detection of espionage."

The reason is apparent.

All spy messages now sent under the resident alien system are made to resemble private and business communications so closely that no censorship would be effective against them unless it practically closed the mails and cables to the whole people.

The American Government must be made to comprehend this important fact.

From one provision of the espionage bill, as introduced in the Senate, it seems evident that the modern system of spy communication is not entirely realized by the authorities. The bill prohibits the sending by post, or otherwise, any letter or other document containing any matter written in any medium that is not visible unless subjected to heat, chemicals, or some other treatment.

This paragraph fills one with astonishment.

To undertake to protect the country against the secret communications of resident alien spies by this provision is like undertaking to protect our coast with the cannon of 1776. No modern espionage system contemplates the antiquated devices against which this provision is directed. Writings in invisible mediums are the spy devices of our grandfathers. They belong with the flintlock and the ox wagon. The writer has already called the attention of the country to modern spy methods, and especially modern spy ciphers, in more than one article in THE SATURDAY EVENING POST.

Jules Lanoir, in France, pointed out how these secret communications are always written to resemble the ordinary personal or business letter, or telegram, and the cases of Lody and Ernest, tried in England, disclosed the same fact to the British Government. Lody endeavored to notify the German Government that the British Fleet would leave the Firth of Forth in four days by the following cablegram, which he undertook to send from Edinburgh:

"Must cancel. Johnson very ill last four days. Shall leave shortly."

Lody was pretending to be an American; but he was, in fact, a spy for the German Government. He was directed to travel over England and to keep Germany info about naval movements, especially about the loss of and what provisions the English Government was t for the purpose of making good these naval losses. H directed "not to spy round." He admitted at his trial his "principal instructions" were to remain in Eng until the first engagement had taken place betwee two Powers and advise the German Government abou actual losses of the British Fleet. After that he woul permitted to return to America.

It is significant at this time for us to remember that Hans Lody had married an American woman and been accustomed to conduct tours for a transatl steamship line in America. He said that he tried to a this espionage commission for the German Governm but that he was pressed to do it. He was fitted out the passport of Mr. Charles A. Inglis, an American. Inglis had left this passport with the American Embass Berlin for registration with the German Foreign Offic some Department having that authority. After the p port was sent in by the American Embassy it was n heard of again until it turned up in England in posses of Lody.

It may also be useful to remember that Lody's innoc looking messages were sent to a man named Burchard Stockholm—that is to say, to an individual in a neu country. If he had adhered to this precaution it is p able he would never have been apprehended. It was great hurry to get the information about the British F out of Edinburgh that caused his arrest. When he taken into custody a copy of the Johnson telegram found in his possession, together with full particulars the British military losses in battle and the naval losse the North Sea, and copies of four communications to F chard in Stockholm.

All the communications that were sent out of Engl by resident alien enemies through the German Se Service Headquarters, in Caledonia Road, under naturalized foreigner, Carl Gustav Ernest, were wh innocent on their faces.

If the American Government imagines that it will p vent the transmission of messages by resident alien s by the provisions of the espionage bill, it will be decide misled. The spy communications going out of this coun will likely follow the stencil cipher the writer explai in THE SATURDAY EVENING POST of March tenth, they will follow the innocent-appearing communicati explained by Lanoir and brought out in England in cases of Ernest and Lody.

Clever Pictorial Ciphers

IN ADDITION to this, all pictorial ciphers would circu vent such a law. Pictorial ciphers are legion. Gulls ing, in a water sketch of the sea; a tree in leaf or fruit; bricks in a photograph of a house—and, in fact, almost a sort of picture—may be worked into a pictorial ciph Everything connected with the cipher would be perfec visible and so not come within this law. Stencil ciph would evade it; and these ciphers are to-day among t most dangerous of devices employed by spy organizatio Codes after the plan of Heidel's cipher would escape t law. These ciphers are written in two paragraphs. T first paragraph contains the words of the secret messa and the second paragraph, by the relative position a certain letter agreed on, indicates the words in the fi paragraph that make up the secret message. Compl plans and maps of our defenses could be sent through t mails in the form of sketches, which would appear to harmless landscapes, but which could be interpreted by agreed code; as, for example, trees for batteries, clum of bushes for fortifications, and the like.

The American Government is familiar with the fa that its passport regulations have been grossly tak advantage of. The Department of Justice is asking C gress for authority to require applications for passports be under oath, and to authorize the Secretary of State, regulation, to require proof by affidavit of such facts as may deem desirable. It also asks that false statements an application for a passport be considered as perju and that it be made criminal fraudulently to obtain, tra fer or use a passport, and to alter or forge a passp already issued.

It can be seen that in time of war a dangerous reside alien spy, after having obtained the information he requir might be able to go out of the country to some neut port by means of a false or fraudulent passport. It is a

ertain that during the present European war there has een an active traffic in false American passports. English uthorities say that some two hundred passports issued by he United States and Great Britain to their own subjects, hen they were turned in to the German authorities in erlin for registration, were never returned to their owners.

The German explanation in the Inglis case was that the assport had been mislaid. We have seen no statement of he American Government with respect to this matter. The British statement is: "It has come to the notice of the oreign Secretary that some passports belonging to British ubjects leaving Germany have been retained by the erman authorities." Certain English authorities maintain that the German Government deliberately held these assports in order to furnish them to its foreign spies.

The Administration is asking Congress to give the resident full authority over all wireless stations in the nited States, and the right to censor wireless messages nd cablegrams. The Radio Act of August 13, 1912, gave he President, in time of war or public peril or disaster, the ight to close any station for radio communication, and to emove any radio apparatus; and the right to use any tation or apparatus by any Department of the Governent upon compensation to the owners.

It is from wireless stations that resident alien spies will ndertake to communicate with enemy war craft; and ere the American uthorities would nd themselves very nuch in the position f the English Gov-rnment.

Wireless

AT THE opening of hostilities the British Postal Department, under the authority of the Wireless Telegraphy Act, set about to close all private wireless stations. Very great pains were taken along this line and everything in the nature of a wireless station was dismantled.

The military authorities had every reason to fear wireless communication with the enemy. When Russia was at war with Japan an enterprising London newspaper had fitted out a boat with a wireless system and sent it out to follow the movements of the fleets. The thing was so dangerous that the Russian authorities were compelled to seize the vessel and to inform neutral governments that any craft so fitted would be taken over as a prize of war, and newspaper correspondents found on it would be treated as spies.

These wireless stations that the English authorities were endeavoring to locate were often concealed with great ingenuity; hollow trees, abandoned factory chimneys, and so on, were used. In some instances old lofts were found strung with wires; private houses were fitted up. The police discovered that what had the appearance of being a wire mattress on an ordinary bed was a part of a wireless plant. Fixed wireless stations were readily located by a modern device with which an expert is able to get a pretty fair idea of the distance, direction and point of origin of any wireless message he receives.

But portable stations gave the government no end of trouble.

The German military authorities have invented a wireless system that can be carried about, packed into a limited space. This station can be mounted on a truck or motor car. Early in the war the English Government had good reason to believe that a motor car thus fitted out was being used by German agents in order to communicate with enemy submarines in the North Sea. The car was using the coast roads in the east and northeast districts. It was shown that the apparatus, when not in use, could be concealed within the body of the car, which would have no appearance other than that of an ordinary touring car of large size, not to be distinguished from any other on the road.

It was certain that, from some private wireless stations or by means of some portable station, resident spies in England were signaling the German submarines in the North Sea; in fact, the German fleet was kept informed of the limit and position of mine fields, and especially the exact location of buoys on the east coast. The English authorities were certain of this for the reason that when the Germans made their attack on Yarmouth their first shells fell short. This was explained upon the theory that the Germans had taken their range from the position of the buoys in the harbor. It happened that the day before the raid these buoys had been moved a mile farther out to sea.

It was also certain that the success with which German submarines made sudden raids in certain English harbors was entirely due to information signaled out to them by resident spies. It was thought that these signals were principally given by some radio device.

It is worth while to remember that some English authorities considered it a mistake to close all the private wireless stations. They believed that it would have been more advantageous to leave the private stations open, under proper supervision, when in the hands of reliable persons. These private stations would be of great advantage in detecting hostile messages and the messages of concealed enemy stations. This is a point that our authorities may do well to consider. However, the consensus of the best opinion in England was to close every wireless station and to permit the operation of no station that was not directly under government supervision.

The experience of the government since the opening of the European war has caused the Administration to ask for authority to meet spy activities in new and unexpected directions.

Vessels lying in American ports have been found to be a resort for persons acting in the service of belligerent nations. These vessels, being under foreign flags, cannot be effectively policed by American authorities. In the absence of a state of actual hostilities they are entitled to a certain immunity.

In time of war such vessels would undoubtedly become the chief headquarters for spy activities directed against the United States. Neutral vessels, entirely without the knowledge of neutral governments, might be active centers for such organizations. This would be especially true if the line were owned in part by individuals of the nation with which the United States was at war; or the vessel might be secretly purchased from its owners by resident alien spy organizations, or leased, or the like. One can readily see the advantage of such spy headquarters and the embarrassment and difficulty the government would have in dealing with it.

In anticipation of this peril the Administration asked the Congress to make it a crime to allow vessels in our ports to be used as a place of resort for persons conspiring or preparing the means to commit any violations of the laws of the United States. Such authority gives the government not only power to control such spy headquarters in time of war but also to protect its obligations as a neutral nation.

The country has been pretty well informed about the scope of resident alien activities on certain neutral vessels in our harbors, and it requires no imagination to realize how dangerous any neutral vessel might be if the government had not adequate power to prevent its being used as a center for spy activities.

The Administration is justified in the belief that, in case of war, it might be embarrassed by the activity of spies who pretended to be connected with the diplomatic or consular service of a foreign government. It was greatly hampered in dealing with certain officials credited to the German and Austrian Governments during the present war.

Helpless

IT FOUND itself compelled to request the deportation of a number of persons.

In addition to this, very frequently, when resident alien activities were disclosed the individuals arrested pretended to be connected with a foreign embassy, and pretended that their offices were related to a foreign embassy, and that documents seized in their possession could not be held as evidence in the courts of the United States. This put upon the government the necessity of an elaborate inquiry; and, if the pretensions proved to be false or doubtful, or could not be precisely established, the government seemed to be without an adequate remedy against the alien.

With this situation in view, the Administration has asked the Congress to make it a crime, within the jurisdiction of the United States, for any person falsely to assume or pretend to be a diplomat or consular or other official of a foreign government duly credited to the government

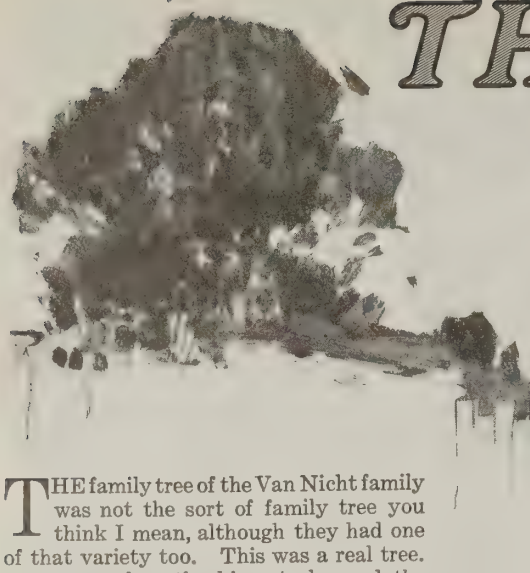
THE FAMILY TREE

By Irvin S. Cobb

ILLUSTRATED BY WALTER H. EVERETT



THE family tree of the Van Nicht family was not the sort of family tree you think I mean, although they had one of that variety too. This was a real tree. It was an elm—the biggest elm and the broadest and the most majestic elm in the entire state, and in the times of its leafage cast the densest shade of any elm to be found anywhere, probably. For more than one hundred years the Van Nicht family had lived in its shadow. That was the principal trouble with them—they did live in the shadow. I'll come to that later.

Every consequential visitor to Schuylerville was taken to see the Van Nicht elm. It was a necessary detail of his tour about town. Either before or after he had viewed the new ten-story skyscraper of the Seaboard National Bank, and the site for the projected Civic Center, and the monument to Schuyler County's defenders of the Union—1861–'65—with a dropsical bronze figure of a booted and whiskered infantryman on top of the tall column, and the Henrietta Wing Memorial Library, and the rest of it, they took him and they showed him the Van Nicht elm. So doing, it was incumbent upon them to escort him through a street which was beginning to wear that vacillating, uncertain look any street wears while trying to make up its mind whether to keep on being a quiet residential byway in an old-fashioned town or to turn itself into an important thoroughfare of a thriving industrial center. You know the kind of street I aim to picture—with here an impudent young garage showing its shining morning face of red brick in a side yard where there used to be an orchard, and there a new apartment building which has shouldered its way into a line of ancient dwellings and is driving its cast-iron cornices, like rude elbows, into the clapboarded short ribs of its neighbors upon either side.

At the far, upper end of that street, upon the poll of a gentle eminence, uplifted the Van Nicht elm. It was for sundry months of the year a splendid vast umbrella, green in the spring and summer and yellow in the fall; and in the winter presented itself against the sky line as a great skeleton shape, without a blemish upon it, except for a scar in the bark close down to the earth to show where once there might have been a fissure in its mighty bole. No grass, or at least mighty little grass, grew within the circle of its brandishing limbs. It was as though the roots of the tree sucked up all the nourishment that the soil might hold, leaving none for the humble grass to thrive upon.

It was in the winter that the house, which stood almost directly under the tree, was most clearly revealed as a square, ugly domicile of gray stone, a story and a half in height, lidded over by a hip roof of weathered shingles; with a deeply recessed front door, like a pursed and proper mouth, and, above it, a row of queer little longitudinal windows, half hidden below the overhang of the gables and suggesting so many slitted eyes peering out from beneath a lowering brow. You saw, too, the mold that had formed in streaky splotches upon the stonework of the walls and the green rime of age and dampness that had overspread the curled shingles and the peeling paint, turning to minute scales upon the woodwork of the window casings and the door frames. Also you saw one great crooked bough which stretched across the roof like a menacing black arm, forever threatening to descend and crush its rafters in. This was in winter; in summertime the leaves almost completely hid the house, so that one who halted outside the decrepit fence, with its snaggled and broken panels, must needs stoop low to perceive its outlines at all.

The carriage or the automobile bearing the prominent guest and the chairman of the local reception committee would halt at the end of the street.

"That," the chairman would say, pointing up grade, "is the Van Nicht elm. Possibly you've heard about it? Round here we call it the Van Nicht family tree. It is said to be the largest elm in this part of the country. In fact, I doubt whether there are any larger than this one, even up in New England. And that's the famous old Van Nicht homestead there, just back of it.

"It's got a history. When Colonel Cecilius Jacob Van Nicht came here right after the Revolutionary War—he was a colonel in the Revolution, you know—he built the house, placing it just behind the tree. The tree must've grown considerably since then, but the house yonder hasn't changed but mighty little all these years. It's the oldest building in Schuyler County. As a matter of fact, the town, with this house for a starter, sort of grew up down here on the flat lands below. The old colonel raised a family here and died here. So did his son and his grandson. They were rich people once—the richest people in the county at one time.

"Why all the land from here clear down to Ossibaw Street—that's six blocks south—used to be included in the Van Nicht estate. It was a farm then, of course, and by all accounts a fine one. But each generation sold off some of the original grant, until all that's left now is that house, with the tree and about an acre of ground more or less. And I guess it's pretty well covered with mortgages."

This, in substance, was what the guide would tell the distinguished stranger. This, in substance, was what was told to young Olcott on the day after he arrived in Schuylerville to take over the editorial management of the Schuylerville News-Ledger. Mayor T. J. McGlynn was showing him the principal points of interest—so the mayor had put it, when he called that morning with his own car at the Hotel Brainard, where Olcott was stopping, and invited the young man to go for a tour of inspection of the city, as a sort of introductory and preparatory course in local education prior to his assuming his new duties.

While the worthy mayor was uttering his descriptive remarks Olcott bent his head and squinted past the thick shield of limbs and leaves. He saw that the door of the house, which was closed, somehow had the look of about always being closed, and that most of the windows were barred with thick shutters.

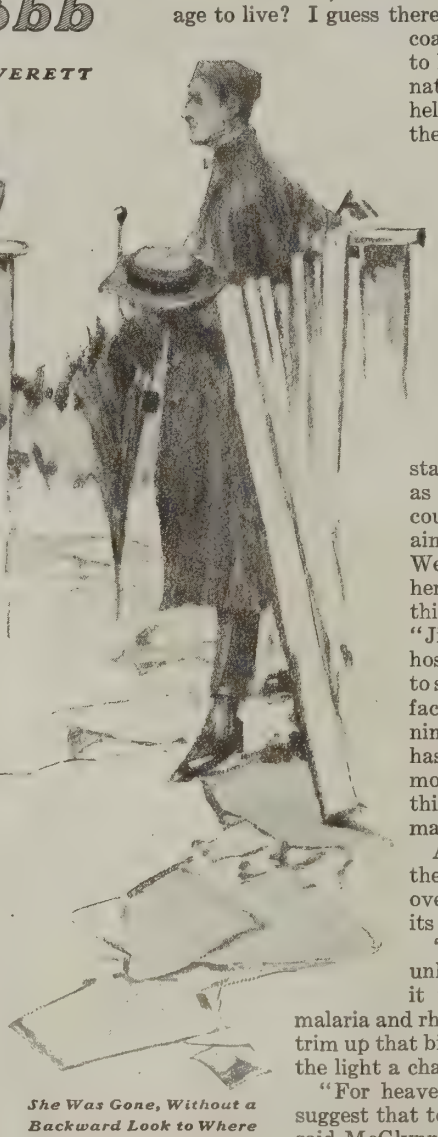
"Appears rather deserted, doesn't it?" said the newcomer, striving to show a proper appreciation of the courtesy that was being visited upon him. "There isn't anyone living there at present, is there?"

"Sure there is," said Mayor McGlynn. "Old Mr. Cecilius Jacob Van Nicht, 4th, who's the present head of the family, and his two old-maid sisters, Miss Rachael and Miss Harriet—they all live there together. Miss Rachael is considerably older than Miss Harriet, but they're both regular old maids—guess they always will be. The brother never married, either—couldn't find anybody good enough to share the name, I suppose. Anyhow he's never married. And besides I guess it keeps him pretty busy living up to the job of being the head of the oldest family in this end of the state. That's about all he ever has done."

"Then he isn't in any regular business or any profession?"

"Business!" Mayor McGlynn snorted. "I should say not! All any one of the Van Nichts has ever done since anybody can remember was just to keep on being a Van Nicht and upholding the traditions and the honors of the Van Nichts—and this one is like all his breed. The poorer he gets the more pompous and the more important acting he gets—that's the funny part of it."

"Apparently not a very lucrative calling, judging by the general aspect of the ancestral manor," said Olcott, who was beginning now to be interested. "How do they manage to live?"



She Was Gone, Without a Backward Look to Where He Stood, Puzzled and Decidedly Taken Aback

"Lord knows," said the mayor. "How do the sparrows ma-age to live? I guess there're times when they need a load f coal and a market basket full of victu to help tide 'em over a hard spell, b naturally nobody would dare to offer help them. They're proud as Luci-themselves, and the town is kind proud of 'em. They're institutio with us, as you might say."

McGlynn, who, as Olcott was learn later, was a product of n industrial and new political co ditions in the community, spo with the half-begrudged admi tion which the self-made so oft have for the ancestor-made.

"We ain't got so very many the real aristocrats in this secti any more, what with all this n blood pouring in since our boo started up; and even if they are as po as Job's turkey, these Van Nichts st count for a good deal round here. Mon ain't everything anyway, is it? . . Well, Mr. Olcott, if you've seen enou here, we'll turn round and go see som thing else." He addressed his chauffeu "Jim, suppose you take us by the ne hosiery mills next. I want Mr. Olco to see one of the most prosperous man facturing plants in the state. Emplo nine hundred hands, Mr. Olcott, a hasn't been in operation but a litt more than three years. That's the w this town is humping itself. You didn make any mistake, coming here."

As the car swung about, Olcott ga the Van Nicht place a backward scruti over his shoulder and was impressed b its appearance into saying this:

"It strikes me as having a might unhealthy air about it. I'd say offhan it was a first-rate breeding spot f malaria and rheumatism. I wonder why they don trim up that big old tree and give the sunshine an the light a chance to get in under it."

"For heaven's sake and your own, don't yo suggest that to the old boy when you meet him said McGlynn with a grin. "He'd as soon thin of cutting off his own leg as to touch a leaf on th family tree. It's sacred to him. It represents a the glory of his breed and he venerates it, the same as som people venerate an altar in a church."

"Then you think I will be likely to meet him? I'd lik to—from what you tell me, he must be rather a uniqu personality."

"Yes, he's all of that—unique, I mean. And you' pretty sure to meet him before you've been in town man months. He seems to regard it as his duty to call o certain people, after they've been here a given length o time, and extend to them the freedom of the town that h illustrious great-granddaddy founded. If you're speciall lucky—or specially unlucky—he may even invite you t call on him, although that's an honor that doesn't come t very many, even among the older residents. The Va Nichts are mighty exclusive and it isn't often that anybod sees what the inside of their house looks like—let alone stranger. . . . Say, Jim, after we've seen the hosier mills, run us on out past the County Feeble-Minded an Insane Asylum. Mr. Olcott will enjoy that!"

Within a month's time from this time, Mayor McGlynn prophecy was to come true. On a morning in the earl part of the summer Olcott sat behind his desk in his offic adjoining the city room on the second floor of the News Ledger building, when his office boy announced a gentle man calling to see Mr. Olcott personally.

"See who it is, will you, please, Morgan?" said Olcott t his assistant. Morgan had arrived less than a week before having been sent on by the syndicate which owned a chai of papers, the News-Ledger included, to serve under th new managing editor. The syndicate had a cheery littl way of shuffling the cards at frequent intervals and dealin out fresh executives for the six or eight dailies under it control and ownership.

"I'm busy as the dickens," added Olcott as Morgan go up to obey; "so if it's a pest that's outside, give him th soft answer and steer him off!"

In a minute Morgan was back with a cryptic grin on hi face.

"You'd better see him—he's worth seeing, all right, said Morgan.

"Who is it?" asked Olcott.

"It's somebody right out of a book," answered Morgan; "somebody giving the name of Something Something Van Nicht. I didn't catch all the first name—I was too busy sizing up its proprietor. Says he must see you privately and in person. I gather from his manner that if you don't see him this paper will never be quite the same again. And honestly, Olcott, he's worth seeing."

"I think I know who it is," said Olcott, "and I'll see him. Boy, show the gentleman in!"

"I'll go myself," said Morgan. "This is a thing that ought to be done in style."

Olcott reared back in his chair, waiting. The door opened and Morgan's voice was heard making formal and sonorous announcement: "Mr. Van Nicht." And Olcott, looking over his desk top, saw, framed in the doorway, a figure at once picturesque and pitiable.

The first thing, almost, to catch his eye was a broad black stock collar—the first stock collar Olcott had ever seen worn by a man in daytime. Above it was a long, close-shaven, old face, with a bloodless and unwholesome pallor to it, framed in long, white hair, and surmounted by a broad-brimmed, tall-crowned soft hat which had once been black and now was gangrenous with age. Below it a pair of sloping shoulders merging into a thin, meager body tightly cased in a rusty frock coat, and below the coat skirts in turn a pair of amazingly thin and rickety legs, ending in slender, well-polished boots with high heels. In an instantaneous appraisal of the queer figure Olcott comprehended these details and, in that same flicker of time, noted that the triangle of limp linen showing in the V of the close-buttoned lapels had a fragile, yellowish look like old ivory, that all the outer garments were threadbare and shiny in the seams, and that the stock collar was decayed to a greenish tinge along its edges. Although the weather was warm, the stranger wore a pair of gray cotton gloves.

"Good morning," said Olcott, mechanically putting a ceremonious and formal emphasis into the words and getting on his feet.

"Good morning, sir, to you," returned the visitor in a voice of surprising volume, considering that it issued from so slight a frame. "You are Mr. Olcott?"

"Yes, that's my name." And Olcott took a step forward, extending his hand.

"Mine, sir, is Cecilius Jacob Van Nicht, 4th." The speaker paused midway of the floor to remove one glove and to shift it and his cane to the left hand. Advancing, with a slight limp, he gave to Olcott a set of fingers that were dry and chilly and fleshless. Almost it was like clasping the articulated bones of a skeleton's hand.

"I have come personally, sir, to pay my respects and, as one representing the—ah—the old régime of our people, to bid you welcome to our midst."

"Thank you very much," said Olcott, a bit amused inwardly, and a bit impressed also by the air of moldy grandeur which the other diffused. "Won't you sit down, Mr. Van Nicht?"

Before Olcott's Eyes Rose a Vision of a Dried-Up, Bleak-Eyed Old Man Limping From Doorstep to Doorstep

"I shall be able to tarry but a short while." The big voice boomed out of the little dried-up body as the old man took the chair which Olcott had indicated. He took only part of it. He poised himself on the forward edge of its seat, holding his spine very erect and dramatizing his posture with a stiff and stately investiture.

Olcott caught himself telling himself Morgan had been right: This personage was not really flesh and blood, but something out of a book—an embodied bit of fiction. Why even his language had the stilted shaping of the characters in most of these old-timey classical novels.

"He wasn't really born at all," Olcott thought. "Dickens wrote him and then Cruikshank drew him and now here he is, miraculously preserved to posterity. But Charlotte Brontë endowed him with his conversation." What Olcott said—aloud—was something fatuous and commonplace touching on the state of the weather.

"I have yet other motives in presenting myself to-day, in this, your sanctum," stated Mr. Van Nicht. "First of all, I wish to congratulate you upon what to me appears to be a very gratifying stroke of journalistic enterprise which has come to light in the columns of your valued organ since your advent into the community and for which, therefore, I assume you are responsible."

"Well," said Olcott, "we try to get out a reasonably live sheet."

"Pardon me," said Mr. Van Nicht, "but I do not refer to the aspect of your news columns. I am speaking with reference to a feature lately appearing in your Sunday edition, in what I believe is known as your magazine section. I have observed that, beginning two weeks ago, you inaugurated a department devoted to the genealogies of divers of our older and more distinguished American families. As I recall, the subjects of your first two articles were the Adams family, of Massachusetts, and the Lee family, of Virginia. It may interest you to know, sir—I trust indeed that it may please you to know—that I, personally, am most highly pleased that you should seek to inculcate in the minds of our people, through the medium of your columns, a knowledge of those strains of blood to which our nation is particularly indebted for much of its culture, much of its social development, many of its gentler and more graceful influences. It is a most worthy movement indeed, a most commendable undertaking. I repeat, sir, that I congratulate you upon it."

"Thank you," said Olcott. "This coming Sunday we are going to run a yarn about the Gordon family, of Georgia, and after that I believe come the Clays, of Kentucky."

"Quite so, quite so," said Mr. Van Nicht. "The names you have mentioned are names that are permanently embalmed in the written annals of our national life. But may I ask, sir, whether you have taken any steps as yet to incorporate into your series an epitome of the achievements of the family of which I have the honor to be the head—the Van Nicht family?"

"Well, you see," explained Olcott apologetically, "these articles are not written here in the office. They are sent to us in proof sheets as a part of our regular feature service, and we run 'em just as they come to us. Probably—probably"—he hesitated a moment over the job of phrasing tactfully his white lie—"probably a story on your family genealogy will be coming along pretty soon."

"Doubtlessly so, doubtlessly so." The assent was guilelessly emphatic. "In any such symposium, in any such compendium, my family, beyond peradventure, will have its proper place in due season. Nevertheless, foreseeing that in the hands of a stranger the facts and the dates might unintentionally be confused or wrongly set down, I have taken upon myself the obligation of preparing an accurate account of the life and work of my illustrious, heroic and noble ancestor, Colonel Cecilius Jacob Van Nicht, together with a more or less elaborate *résumé* of the lives of his descendants up to and including the present generation. This article is now completed. In fact I have it upon my person." Carefully he undid the top button of his coat and reached for an inner breast pocket. "I shall be most pleased to accord you my full permission for its insertion in an early issue of your publication." He spoke with the air of one bestowing a gift of great value.

Olcott's practiced eye appraised the probable length of the manuscript which this volunteer contributor was hauling forth from his bosom and, inside himself, Olcott groaned. There appeared to be a considerable number of sheets of foolscap, all closely written over in a fine, close hand.

"Thank you, Mr. Van Nicht, thank you very much," said Olcott, searching his soul for excuses. "But I'm afraid we aren't able to pay much for this sort of matter. What I mean to say is we are not in a position to invest very heavily in outside offerings. Er—you see most of our specials—in fact practically all of them except those written here in the office by the staff—come to us as part of a regular syndicate arrangement."

Here Mr. Cecilius Jacob Van Nicht, 4th, attained the physically impossible. He erected his spine straighter than before and stiffened his body a mite stiffer than it had been.

"Pray do not misunderstand me, sir," he stated solemnly.

"I crave no honorarium for this work. I expect none. I have considered it a duty incumbent upon me to prepare it, and I regard it as a pleasure to tender it to you, gratis."

"But—I'd like to be able to offer a little something anyway——"

"One moment, if you please! Kindly hear me out! With me, sir, this has been a labor of love. Moreover, I should look upon it as an impropriety to accept remuneration for such work. To me it would savor of the mercenary—would be as though I sought to capitalize into dollars and cents the reputation of my own people and my own stock. I trust you get my viewpoint?"

"Oh, yes, indeed"—Olcott was slightly flustered—"very creditable of you, I'm sure. Er—is it very long?"

"No longer than a proper appreciation of the topic demands." The old gentleman spoke with firmness. "Also you may rely absolutely upon the trustworthiness and the accuracy of all the facts, as herein recited. I had access to the papers left by my own revered grandfather, Judge Cecilius Van Nicht, 2d, son and namesake of the founder of our line, locally. I may tell you, too, that in preparing this compilation I was assisted by my sister, Miss Rachael Van Nicht, a lady of wide reading and no small degree of

intellectual attainment, although leading a life much aloof from the world—in fact, almost a cloistered life."

He arose, opened out the sheaf of folded sheets, pressed them flat with a caressing hand and laid them down in front of Olcott. He spoke now with authority, almost in the tone of a superior giving instructions regarding a delicate matter to an underling:

"I feel warranted in the assumption that you will not find it necessary to alter or curtail my statements in any particular. I have had some previous experience in literary endeavors. In all modesty I may say that I am no novice. A signed article from my pen, entitled The Influence of the Holland-Dutch Strain Upon American Public Life, From Peter Stuyvesant to Theodore Roosevelt, was published some years since in the New York Evening Post, afterward becoming the subject of editorial comment in the Springfield Republican, the Hartford Courant and the Boston Transcript. At present I am engaged in a brief history of one of our earlier presidents, the Honorable Martin Van Buren. I have the honor to bid you a very good day, sir."

Olcott ran the story in his next Sunday issue but one. It stretched the full length of two columns and invaded a third. It was tiresome and long-winded. It was as prosy as prosy could be. To make room for it a smartly done special on the commercial awakening of Schuyler County was crowded out. Olcott's judgment told him he did a sinful thing, but he ran it. He went further than that. Into the editorial page he slipped a paragraph directing attention to "Mr. Cecilius Jacob Van Nicht's timely and interesting article, appearing elsewhere in this number."

He had his reward, though, in the comments of sundry ones of his local subscribers. From these comments, made to him by letter and by word of mouth, he sensed something of the attitude of the community toward the Van Nicht family. As he figured, this sentiment was a compound of several things. It appeared to embody a gentle intolerance for the shell of social exclusiveness in which the present bearers of the name had walled themselves up, together with a sympathy for their poverty and their self-imposed state of lonely and neglected aloofness, and still further down, underlying these emotions and tincturing them, an understanding and an admiration for the importance of this old family as an old family—an admiration which was genuine and avowed on the part of some, and just as genuine but more or less reluctantly bestowed on the part of others. It was as Mayor McGlynn had informed Olcott on their first meeting. The Van Nichts were not so much individuals, having a share in the life of this thriving, striving, overgrown town, as they were historical fixtures and traditional assets. Collectively, they constituted something to be proud of and sorry for.

Soon, too, he had further reward. One afternoon a small and grimy boy invaded his room, without knocking, and laid a note upon his desk.

"Old guy downstairs, with long hair and a gimpy leg, handed me this yere and gimme fi' cents to fetch it up here to you," stated the messenger.

The note was from Mr. Van Nicht, as a glance at the superscription told Olcott before he opened the envelope. In formal terms Olcott was thanked for giving the writer's offering such prominence in the pages of his valuable paper and was invited, formally, to call upon the undersigned at his place of residence, in order that undersigned might more fully express to Mr. Olcott his sincere appreciation.

On the whole, Olcott was glad of the opportunity to view the inside of that gloomy old house under the big tree out at the end of Putnam Street. He wanted to see more of Mr. Cecilius Jacob Van Nicht, and to see something of the other two dwellers beneath that ancient roof. Olcott had dreams of some day writing a novel; some day when he had the time. Most newspaper men do have such dreams; or else it is a play they are going to write. Meanwhile, pending the coming of that day, he was storing up material for it in his mind. Assuredly the bleached-out, pale, old recluse in the black stock would make copy. Probably his sisters would be types also, and they might make copy too. Olcott answered the note, accepting the invitation for that same evening.

It was a night of crystal-clear moonlight, and Olcott walked up Putnam Street through an alchemistic radiance which was like a path for a Puck to dance along. But the shimmering aisle broke off short, when he had turned in at the broken gate and had come to the edge of the shade of the Van Nicht elm. Under there the shadow lay so thick and dense that, as he groped through it to the small entry porch, finding the way by the feel of his feet upon the irregular, flagged walk, he had the conviction that he might reach out with his hands and gather up folds of the darkness in his arms, like ells of black velvet. The faint glow which came through a curtained front window of the unseen house was like a phosphorescent smear, plastered against a formless background, and only served to make the adjacent darkness darker still. If the moonlight yonder was a fit place for the fairies to trip it, this particular spot, he thought, must be reserved for ghosts to stalk in.

Fumbling with his hands, he searched out the heavy door knocker. Its resounding thump against its heel plate, as he dropped it back in place, made him jump. At once the door opened. Centered in the oblong of dulled light which came from an oil lamp burning upon a table, behind and within, appeared the slender, warped figure of Mr. Cecilius Jacob Van Nicht, 4th. With much ceremony the head of the house bowed the guest in past the portals.

Almost the first object to catch Olcott's eye, as he stepped in, was a portrait which, with its heavy frame, filled up a considerable portion of the wall space across the back breadth of the square hallway into which he had entered. Excepting for this picture and the table with the oil lamp upon it and a tall hat-tree, the hall was quite bare.

Plainly pleased that the younger man's attention had been caught by the painted square of canvas, Mr. Van Nicht promptly turned up the wick of the light, and then Olcott, looking closer, saw staring down at him the close-set black eyes and the heavy-jowled, foreign-looking face of an old man, dressed in such garb as we associate with our conceptions of Thomas Jefferson and the elder Adams.

"My famous forbear, sir," stated Olcott's host, with a great weight of vanity in his words, "the original bearer of the name which I, as his great-grandson, have the honor, likewise, of bearing. To me, sir, it has ever been a source of deep regret that there is no likeness extant depicting him in his uniform as a regimental commander in the Continental armies. If any such likeness existed, it was destroyed prior to the colonel's removal to this place, following the close of the struggle for Independence. This portrait was executed in the later years of the original's life—presumably about the year 1798, by order of his son, who was my grandfather. It was the son who enlarged this house, by the addition of a wing at the rear, and to him also we are indebted for the written records of his father's gallant performances on the field of honor, as well as for the accounts of his many worthy achievements in the lines of civic endeavor. Naturally this portrait and those records are our most precious possessions and our greatest heritages.

"The first Cecilius Jacob Van Nicht was by all accounts a great scholar but not a practiced scribe. The second of the name was both. Hence our great debt to him—a debt which I may say is one in which this community itself shares."

"I'm sure of it," said Olcott.

"And now, sir, if you will be so good, kindly step this way," said Mr. Van Nicht. "The light, I fear, is rather indifferent. This house has never been wired for electricity, nor was it ever equipped with gas pipes. I prefer to use lights more in keeping with its antiquity and its general character."

His tone indicated that he did not in the least hold with the vulgarized and common utilities of the present. He led the way diagonally across the hall to a side door and ushered Olcott into what evidently was the chief living room of the house. It was a large, square room, very badly lighted with candles. It was cluttered, as Olcott instantly perceived, with a jumble of dingy-appearing antique furnishings, and it contained two women who, at his appearance, rose from their seats upon either side of the wide and empty fireplace. Simultaneously his nose informed him that this room was heavy with a pent, dampish taint.

He decided that what it mainly needed was air and sunshine, and plenty of both.

"My two sisters," introduced Mr. Van Nicht. "Miss Rachael Van Nicht, Mr. Olcott. Miss Harriet Van Nicht, Mr. Olcott."

Neither of the two ladies offered her hand to him. They bowed primly, and Olcott bowed back and, already feeling almost as uncomfortable as though he had invaded the privacy of a family group of resident shades in their resident vault, he sat down in a musty-smelling armchair near the elder sister.

Considered as such, the conversation which followed was not unqualifiedly a success. The brother bore the burden of it, which meant that at once it took on a stiff and an unnatural and an artificial coloring. It was dead talk, stuffed with big words, and strung with wires. There were semioccasional interpolations by Olcott, who continued to feel most decidedly out of place. Once in a while Miss Rachael Van Nicht slid a brief remark into the grooves which her brother channeled out. Since he was called upon to say so little, Olcott was the better off for an opportunity to study this lady as he sat there.

His first look at her had told him she was of the same warp and texture as her brother; somewhat skimpier in the pattern, but identical in the fabric. Olcott decided though that there was this difference: If the brother had stepped out of Dickens, the sister had escaped from between the hasped lids of an old daguerreotype frame. Her plain frock of some harsh, dead-colored stuff—her best frock, his intuition told him—the big cameo pin at her throat, the homely arrangement of her gray hair, her hands, wasted and withered-looking as they lay on her lap, even her voice, which was lugubriously subdued and flat—all these things helped out the illusion. Of the other sister, sitting two-thirds of the way across the wide room from him, he saw but little and he heard less. The poor light, and the distance and the deep chair in which she had sunk herself, combined to blot her out as a personality and to efface her from the picture. She scarcely uttered a word.

"He Called it A Confession and an Apology, and I Ran it That Way"

(Continued on Page 85)

THE CHECHAKO WIFE

By Helen Van Campen

ILLUSTRATIONS BY P. V. E. IVORY

A WILD winter gale drove great cracking surges through Shelikof Strait, but, with cautious quartering and steadying jib, Tom Brent's launch was plunging and rolling onward. Once the Aleut steersman yelled that they couldn't make it, with an hour still to the Point and the flood tide coming.

"Can do, I tell you, Sascha; the Point ain't an hour, it's dead ahead!" Tom Brent said from where he crouched by the engine. "Sick, Eve? She's a bad one, sweetheart, but this old wagon'll weather worse; stay, hang to the stove and look through the port—ain't there lights to looard of us, dear?"

Eve Brent rose from a huddle of cargo, shudderingly breathed in gasoline exhaust, and, with desperate clutches, she climbed upon the ship stove and stared through a salty port. It was a moonless night, with squally half hours of snow. As the little craft lifted and righted itself with a lurch, the stove door erupted wood ashes, and a leaking hatch sent water into the bilges, whence it streamed about sacks of mail and grub massed on the cabin floor.

Holding her whizzing head, Eve strove to see more than that faint whiteness, shoreward, which was the bleak volcanic Coast Range. Back of it was the Alaskan wilderness, where a few fur seekers traveled prolific trap lines, and a few prospectors, snugged in shacks along remote frozen rivers, slothfully awaited distant June. The launch slewed about and Eve was suddenly dislodged, missing the engine's flywheel by a desperate grab at the mast, as she gasped:

"Yes, light—oh, Tom, is that Niklik at last?"

"Got to be," said Tom, muttering at the engine. "Hold on, hon! We'll catch tide rips from the Point in a minute."

She clung to the mast as they rode tremendous combers into shoal water.

"Turn off the gas for me, hon! If she floods she won't start easy—get the anchors, Sascha—wonder if they see our lantern?"

Tom leaped for the stern hatch, slant-eyed Sascha hustling after him. Chains ground the side of the launch, and a deluge of water poured into the hatch as a wave broke over the bow; and, looking in, Tom called that the boys were coming with the dory. Eve stumbled up into blackness, a-slop to her shivering knees, confused by the voices crying out of the gloom. A boat struck the launch and a warm hand caught her cold fingers. Tom bade her jump in—Bill would look out for her. She went fearfully over the side, exclaiming as she glimpsed oars rising and waves like engulfing snakes running along the gunwales.

"Tom! I'm afraid of it!" she cried; but a big voice said:

"He's comin'; they got to unlash their skiff from the stern. I'm Bill Dixon, Eve—Tom's partner. What you mean by bringin' this weather, when it ought to be an elegant starlit night for the queen of this camp to arrive?"

"I'm scared most into a fit," Eve frankly quavered.

"Now, leddy, it iss yust anoder pull an' you got gravel under your liddle feets," said the other rower. "Ahoy, der beach! Bring der glim, you lubbers! Here we are, an' us got Mis' Brent!"

"Just so I land on solid ground," she said.

"Ketch holt my neck, then; water's too deep for you here," said Bill Dixon's deep tones; and she discovered that his hand came from the water, where he now stood, waves frothing about him.

He carried her easily, past a group with lanterns, out of the whistling wind and into a lighted, warmed brown tent.

"Well, girlie—glad you ain't a percissy!" he exclaimed. "Good-lookin', too, ain't you? Evelyn Brent, from the big Outside!"

"Git the Girl Out o' This," Said McGrath With a Snarl

"I'm not a what?" Grateful to be ashore, though the floor boards heaved under her, Eve laughed.

"Percissies are the picked too late or too sumpin—yella-faced, mean-chinned kind of females. I know you got the makin's of a good fella if you ain't one yet—with them brown eyes. We goin' to be pards too?"

"Of course," said Eve, putting out a hand. "I thought you were a great big man!"

"An' I turn out a runt. Should have stayed in the dark," said Bill, grinning at her with large solid white teeth; he had a laugh like a lively young pony. "Hey, le's git them fool thin shoes off—don't they never sell a woman nothin' fit to wear in wet? But here's fur moccasins—sit still! Head's singin', ain't it?"

"Oh, awful!" sighed Eve, and she lay back in the home-made moosehide chair into which he had thrust her.

Abruptly he observed the sickish hot flush on her round cheeks and, with a grin, lugged her to a blanketed bunk.

"Git your corset loose an' lay still!"

"Oh, this is better," she sighed gratefully when her racked body found the hollow of the moss-filled moosehide bunk. "I don't often give way, Mr. Bill. I keep on, no matter how I feel."

She began to fluff out glinty chestnut hair, while he spread a caribou robe partly over her.

"Sure; an' git up next day with the jumps, an' grouchin'. I got sisters down in Anaconda," said Bill, with his pony laugh. "Well, you're home now, Eve; so take it calmlike an' git to likin' the country."

"I'm going to love it!"

"Not all in a bunch you won't, you —— Hey, fellas, don't all jam in here now. Mis' Brent ain't very skookum after that trip, an' she's layin' down—well, come in long's you're in, an' then git out. Hello, Tommy! She's some girl," said Bill to an inrush of laden grinning men, to whom Tom shouted throw the stuff down anywhere—put that under the other bunk, and this one too—and how about supper in a hustle?

Eve's brown eyes smiled at him. He was a fine big handsome fellow of thirty, with wild whitey hair and daring blue eyes.

"Dugan, he's throwin' a fit for fea' yo' all didn't have the mail, with the suguh roses fo' the big cake," said Bede Moore, the tall young Texan. "Pleased to meet yo', Mis' Brent; an' it's mighty nice to have yo'—that ol' Tawm, he's been sou'-faced since he come back alone—chee'ful 'nough now, ain' he?"

"You vas' a liddle afraid of dose waves, ma'am," said big blond Linus Larsen, timidly advancing a large hand, which he made limp to avoid crushing the one she gave him. "By spring you don't be scare'."

"She never hollered once from leaving Kodiak yesterday morning," said Tom Brent. "And it blew quite a few. Shake hands with Pop Paley, Evie; he's our daddy—thousand years old, ain't you, Pop?"

"No!" said Pop Paley testily. "Sixty-two; yes, an' kin drill as many feet in a day as you could, my boy. Is it your stummick painin', my dear? Hot water for that—fill up that mug, Bill; there's nothing like heat. I suffer awful every time I go South."

"Pop, he was all set to go Outside twenty years ago, an' he got off at Seward sayin' he'd wait till they ran a railroad—didn' yo'?" said Bede, while Eve drank the water, with the friendly circle surveying her.

Bill Dixon anxiously observed her as, flushed, but bound to please Tom's men, she sat up and greeted embarrassed Mikes, Kids, Macs and Henrys. Wind viciously tore at the tent, and the candles, standing in their own grease upon the window sill, flickered uncertainly. The tent frame creaked.

"Where's hersilf? An' is she alive at all afther the hor'ble thrip?" cried a voice, and, fresh-shaved and clean-aproned, Mickey Dugan, the long lanky cook, rushed in. "Congratulations, the bot' of yous. An' whadda you think of this outfit, mem—standin' idle like gooks wid a weddin' supper ready, an' me beatin' the thriangle till me ar-rm is sore! 'Tis gr-rand to see a lady, mem!"

"No; I won't lie quiet and stay alone, with everybody else at my wedding banquet," said Eve to the whispering of Bill Dixon. "I'm lots better—really! Thank you so much, Mr. Dugan. I think they're all just dears!"

Through the October darkness—it was six o'clock now, and the canvas messhouse, its three lamps glowing through white walls, was the only break in the inky night—the two shifts of the Niklik Copper Company went noisily ahead of Eve and Tom. Four canvas structures made the camp, and Tom tried to show them to his wife—that big one was the bunkhouse, then the warehouse, and the mess tent.

"But where is our house?" she inquired.

"You just left it," said Tom.

"That little one-room tent! Why, I thought—I supposed ——"

"Supposed what, dearie? It doesn't leak; it has a fly over it."

"But, Tom, you said we should keep house if I wished. Didn't you?"

"Sure! We'd just put a Yukon stove there instead of that gasoline drum—that's how we make stoves in the North—and have a little tent next, for a cache; and you can cook all you want to."

"In one room! I couldn't," she thought.

They were at the messhouse door, Tom shielding her with himself against the gale. Just below, the waves crashed on the beach. Inside, there was a racket of wooden stools being pulled about, a clatter of granite dishes, cries for Mrs. Brent—no one to sit until she came.

"We could get a woman to come in and clean, Tommy?"

"Why, hon, you're the only woman for seventy miles of coast!"

"Oh, I—I see!" said Eve blankly.

She was not smiling when she reached the table, where Mickey's own blanket-seated chair was set for her. There was a splendor of new bright green-and-white checked

oilcloth on the table. Tom slapped some butter on her granite plate, and Eve looked startled as knives were thrust at the main supply, and experienced diners stood to load their plates profusely before starting the meal. There was fried ptarmigan, moose mulligan, canned sweet potatoes and canned shrimp salad, shredded cabbage and turnips from a Kadiak ranch, mashed potatoes, the wonderful frosted cake, coffee and stewed dried fruit. Eve was abruptly hungry, and she ate, thinking how good it was, and smiling at Linus, the big diamond driller, and at little Bill, seated on Tom's right. Dugan, smoking a brown cigarette, filled cups from a dingy coal-oil can of coffee, steaming on the heater. When all were served he brought his own plate and cup, sat down, and exclaimed: "Did yous bhring a gr-reat lot of magazines an' papies from Outside, mem?"

"Oh, I left all mine on the steamer," said Eve contritely.

"Never throw readin' stuff away in the North. It's a duty to carry it on to the next fella," said Bill.

"I didn't know that."

"A female oughta reason some," said Bill severely, and Eve was hurt by the general snickering; and, she thought hotly, she wasn't going to stand that sort of thing.

She stopped smiling at Bill and devoted herself to Pop Paley, whiskered, polite, and obviously impressed with her. The night shift were already lighting faithful evil-breathed pipes and filing out into the wind. They had all finished before Eve had eaten her ptarmigan breast, and Mickey was crowding dishes on a greasy tray. Bill was showing Tom a notebook; and as old Pop excused himself, and Linus and Bede, with lingering stares at her, withdrew, Tom's voice ascended until she heard:

"We got to offer a bonus for each workin' day—that is, if they notch our production up to a tonnage of a thousand tons or over each month. We'll pay 'em straight overtime, with the bonus. Any chance of a beef over the eight-hour law?"

"Not with this gang; I got rid of the only agitator while you was gone. Law won't bother us."

"We don't get the two-dollar smelting rate at Tacoma unless it's a thousand tons. As to the law ——"

"What law do you mean?" asked Eve uneasily.

"Oh, the last legislature, down at Juneau, made it eight hours for a working day for quartz mines, starting from the face of the tunnel," said Tom, engrossed with the notes. "They had a lot to do—those guys."

"And this is a quartz mine? Copper can be quartz?"

"I'll take you down a coupla stopes an' raises, an' let you sample the ore body," chuckled Bill. "Yup; this is a quartz mine."

"Then you would be paying the bonus for men to break the law?"

"She's a judge's daughter, and she'll arraign us all next," said Tom. "Copper's twenty-six cents, dear, and even with war stopping there's contracts so far ahead that it won't drop much; but when we've the stuff here we want the high prices while they last. Every guy with a little pocket of copper is gophering after it; and we can't get men, for they're leaving jobs to go prospecting, or else they're grabbed 'way below us as they come along on the boats."

"These fellas here are all right, an' they know me an' Tom from the Bering Sea camps. They're willin' to make extry coin," said Bill.

"It's not their ideas; it's my Tom I think about," said Eve tensely; and above her dark blue serge gown her face looked pale and frightened. "You won't break the law? Oh, you mustn't! I couldn't endure that, Tommy, because it's wrong and wicked."

"I got to, dearie. Personally I don't believe there's much over eight hours' hard labor in the average man, and his steam dies away after that; but we'll have to urge 'em on to get that tonnage—it's a three-dollar rate under a thousand tons, and, with the big producers down in Prince William Sound filling the ships and yelling for more ships that don't come, unless we can guarantee a big-enough monthly tonnage we can't ship at all."

"You'll make me miserable!" said Eve with a big sob.

"Don't be talkin' like a chechako—in a new country a guy's gotta do plenty he wouldn't have to in some other place," said Bill earnestly. "Listen; we borried the change for your ticket up from the cook—Mick's always got a cache—an' our case two bits went into the outfit of second-hand stuff we started workin' with; but there's

"Fellas, There's Two of 'Em!" He Cried. "Evelyn Niklik an' William Thomas Brent. Now Then, Peek Careful—Ain't They Swell?"

hiyu plenty money in the hill, little girl. These boys will wait six months for their checks—strangers wouldn't."

"I have some money! Dad left me ——"

Growls from Tom and Bill halted her. The brown eyes were tragic.

"But, Tom—it's wrong, wicked! I have principles to live up to, and here I'm going to keep your books! Why, I—it—oh ——"

"I can't help it, honey. Soon as we get our first smelter payment I'll have money. Lord! Bill and I've worked beach lines and creeks, and panned a hundred rivers, where we froze ourselves and cracked our backs, and quit without a stake—maybe a thousand or so, but no real money. Now we've hit it."

"Squeezed into a tiny place, without even space for one of my wardrobe trunks!" said Eve hysterically. "Half dead from that awful boat, and now told I have to be a criminal!"

"Shucks!" said Bill, unimpressed. "You got room enough for a while. There's some mighty fine smart women here in the North, livin' in little shacks, an' cookin', washin' an' holdin' school for the kids. I thought you had sense."

"Indeed!" said Eve; and to Tom she flamed: "It's wrong, wrong! My principles make the following of a country's laws a vital duty, and personally I would be law-abiding at the sacrifice of everything on earth."

"You mean you think you would," said Tom.

Snowslides streaked the austere whiteness of Mount Niklik, and on the bared lower slopes the green curls of fern thrust upward. On the tundra flat below the mine salmonberries were pinkly flowering, and there were buds among the green of the wild roses. Eve had giant purple violets in fruit cans and pickle jars, and the door of the tent that was both commissary and office stood open. Decorative skunk cabbage of a tropical height, wild celery and hardy sunflowers grew just above high-tide mark. Moose flies and gnats had come, and Eve was charging out head nets from the stores, and cutting up her own less effec[tive] colored chiffon veils for special friends working in the gl[oom]-hole of the mine, where the flies whined and fed all d[ay]— and day lasted twenty-four hours in early June. She k[new] all the twenty-six men now, and had more knowledg[e] of their intimate affairs than was wholly comfortable to sc[ope]. She held what McGrath, from the Interior, called one o[f] her pesky sessions, with those who rowed out to the freigh[ter], returning with certain bottles bought from sailors [and] engine-room men. She had taken Linus Larsen's, [red], with a high color, snatched a r[ock], with which she broke the expen[sive] bottle.

"Oh, Linus! When you k[now] how sick and bad it makes [you] feel!" she cried. "[You] promised me not to— [and] you, Mac, you'd look [bet]ter keeping your mo[ney] to send home—next b[oat]; you'll have a big check [here] when the smelter mo[ney] comes, and I don't wan[t to] see you fooling it a[way] when it should go hom[e]"

"Aw, a guy can tak[e a] noggin of hootch, I gues[s]" muttered McGrath. "[Or] nor no one's got a righ[t to] tell others what's good [for] 'em."

"We have if our bra[ins] are better grade th[an] theirs," said Eve, wh[ose] ears were active. "Lin[us], you sit in the office w[ith] me until supper, whe[n I] can see you start up the [ma]chine to work. Read the Seat[tle] papers."

"I got dose t'oughts of [you], Helga," said Linus, drea[ming] following her inside.

"Poor Linus! But a w[oman] who could bear to leave y[ou] like that is better forgott[en]. You never heard a word fr[om] either of them?"

Linus' big face purpled [as] he answered—never a li[e]. Eve made friendly lit[tle] sounds as she lured him [to] repeat the tale of his trip as a lad into Norway, where t[he] beauteous pasture maidens guarded contented kine.

"Und the prettiest iss Helga, und at last I bring her [to] Fairbanks in Alaska; und on Dome Creek there vass [a] skunk named Doc Daly—a check charmer—bummin' rou[nd] the gamblin' houses, he vass. Me an' my pard makes [a] ground ready for sluicin' that spring, an' Daly he [is] always round tallin' Helga her hoosban' don't understa[nd] her right; an' me vorkin' only for her—only! Oh, M[iss] Brent!"

"Beast! I wish I had come on him, telling her!" cri[ed] Eve passionately. "She was young, Linus—oh, the slim snake he was!"

"Dey took my big poke of dust an' nuggets, an' nine bla[ck] fox pelts, vorth twelve hundred efery skin! She had h[er] like a new rope, Mis' Brent, hangin' 'vay down—und lid[dle] feets like you." He nodded forlornly.

"There is something good in life for you still, Linus—a truer woman somewhere."

"I t'ink not," said Linus, sighing. "Alvays I t'ink Daly—my liddle Helga!"

"He'll have his just deserts some fine day," said E[ve] with smoldering eyes; and she saw herself sentencing Da[ly] the home devastator, and flaying him with scorn.

Soothed by her anger, Linus rustled the papers a[nd] admired her slim fingers rushing over the typewriter ke[ys]. Letters for the mail finished, she took up a pamphlet, rea[d]ing it gravely, and obviously reflecting as she paused [to] reread a passage.

It had been an exciting day for the camp, with a fiftee[n] hundred-ton ore shipment going in ship's boats to the [big] freighter, and the captain, after a good dinner and a wa[lk] up the hill, suddenly winking and declaring he'd exce[ed] orders, and to the dickens with the mines below, waiti[ng] for space! Pile in the rest, if there was any.

Tom was normally mine manager; Bill, blacksmi[th] and meat hunter. When the hand steel was sharpened B[ill] became powder nipper, packing powder and fuse to drill holes, loading them sometimes, and helping to bar do[wn] loose rock later. Between mine work he took rifle and pac[k] board, disappearing into the scrub alder to seek caribou moose for the meat supply. To-day, Bill sacked the han[d] sorted ore at the main tunnel entrance; and Tom, in und[er] shirt and stagged trousers, ran an ore car to the beach a[nd] trimmed cargoes as the heavy sacks were dumped into t[he] boats.

"We'll have a dock this time next year, Irish!" he called
the cook, who was also racing a car beachward. "Act
ke you're in a hurry, Mick!"
"Runnin' from throuble, me b'y!" panted Mickey.
The missus is waitin' to leap down the t'roats of all of us
-night!"
"What for—we ain't done anything," said Tom, count-
g sacks and heaving them aboard.
"Ye shouldn't lift Section Th-hirty of the Tarritorial
aws in a duffel bag which for sure a nate lady would be
eanin'," said the cook. "'Tis the game law, Thomas. I
ity ye! She give me my dhressin' down a bit back."
"What the devil's in Section Thirty? I can't think,"
om wondered.
Finally the ship blew warningly and the thick black
noke from starting boilers paled. The purser hustled in
have Eve bill out the extra two hundred of ore; the mate
elled from the beach that the skipper wanted to get out
efore the stern was caught in the mud; and the men of
Jiklik hurled the last sacks in, then stood, a sweating,
rinning line, sending jestful farewells across the water.

"The first ore out of our mine!" said Tom, darting to the office in search of a lost pipe. "Now where'd I lose that? I left one afire in a coat pocket once. Well, young woman, do you know that self and respected partner, W. Dixon, sort of feel they've put it over at last?"

Linus had gone, and Eve sat dejectedly at the desk, whence she said:

"Of course I'm glad, Tommy. And I want to show you something: Do you know it's illegal, south of latitude sixty-two, to kill moose and caribou after December thirty-first? And that we kill and eat it daily?"

Tom's face lost its happy boyish grin under her cold stare.

"Legal for miners or explorers to kill all they want!"

"Ah—in case of need only, it says! They may take animals for food and clothing, in close season, for—look where I've marked—'need only.' And where a ship comes or a launch can reach isn't a case of need."

"Considering that's the first ship ever anchored off here, and weather's been such seas the launch couldn't make it past the Point—won't you be reasonable, Eve?"

"There's millions of rabbits for meat, and salmon jumping in the water at this minute."

"Oh, sure!" Tom was flushed as, glancing briefly out, he said:

"Those are dry dog salmon, my dear girl; the kings are late this year, and a workingman'd be pure bones on rabbit in a mighty few days—not enough strength in it. And as I'm standin' the boys off for their wages, and the only springs for their bunks so far are our promises, I guess they'll at least get fresh meat—it's pretty near a need."

"A court wouldn't say so."

"Aw, court! By heck, I ain't going to ask any courts to call it anything. I'm going to feed my men and call it a day—using my common sense."

"You never care how I feel!" said Eve, shaking. "Lawless, wrong ——"

Tom dashed out. She felt hurt when her eye searched for him later and found him smoking, and gayly talking with Bill and old Pop, instead of appearing chastened and regretful. In the bunkhouse it was reported that

BRINGING OUT BARBARA

The Experiences of a New York Débutante

IV

By ETHEL TRAIN

ILLUSTRATED BY CLARENCE F. UNDERWOOD

ON THE morning of December twentieth I partially woke to a sensation of portent. The fear of something vaguely grandiose was sitting astride my chest, filling me with oppression. Some cataclysm was imminent. For a moment I thought it was my wedding day—no less. I did not feel happy about it. Blinking, it was rather a relief to realize presently that it was not so bad as all that. I wasn't going to be married—yet. I was only coming out. This was the day.

I did not go out that morning. I wanted to be on hand and see what was doing. There was much in me still of the little girl whose habit it had been to rush to the front door, every time the bell rang, to discover what shape of parcel was being delivered, or to get the letters the postman brought. First, a vanful of chairs arrived; and next, a melancholy looking motor, suggestive of the undertaker. Flattening my nose against my window, which was my nearest dignified approach now to the outside world, I sighed with relief when it began to disgorge nothing more ominous than potted plants. So many things came during the next two hours that I marveled how anyone could have remembered to order them all. Caterers' wagons were not wanting. In spite of our chef and his staff we had to buy little cakes and what not, just as they do for Sunday-school picnics.

The best part of the day began after lunch, for it rained flowers the whole afternoon. The boxes were opened in the sitting room, so that the secretary could sort the cards and jot down descriptive memoranda for acknowledgments to be written by me later on; then the men brought the flowers to the drawing-room by armfuls. Mother sat in a chair at first and gave orders as to where they were to be put, but, being summoned elsewhere, left me in possession; whereupon I changed the position of every vase, and in less than an hour had that room blooming like an exhibit in a flower show.

I looked over the cards before dinner and found ninety-seven names of people I didn't know. The same people would undoubtedly commemorate the occasion of my marriage in the same way; and of my funeral too—if fate should prove so obliging as to give it precedence of theirs. If people said what they meant in this world, I could imagine any of them, supposing I were to make inquiries and tender my thanks verbally to-night, replying with a bow: "Nothing personal intended, I assure you. Merely a matter of form."

I Did Not Recognize My Own Skull When That Hairdresser Had Done With It

John Randall sent me no flowers. Allan Denning did; but I was in too much of a rush at the moment to pay much heed to them. They and the hairdresser arrived simultaneously; so I thrust them into the last remaining receptacle and let it go at that.

That hairdresser was an anatomist of no mean order. I did not recognize my own skull when he had done with it. Where it was too small it had been given the illusion of expansion, and where it was too big it had seemingly contracted. I undulated up from my neck and I tapered down from my crown; ringlets twined where wisps had been before; coils looked solid that were hollow inside; I stuck out where I ought to stick out, and where I oughtn't I didn't. The backward and upward poise of the structure there were, were personages, too, though many of them did not look it, the years having given them fantastic curves never intended by Nature and unknown to art. Fashion, in regard to concealment of such deficiencies, certainly discriminates in favor of women. A man in a white waistcoat, so far as his outline is concerned, might as well be on the slab at a Turkish bath. From distasteful contemplation of one

lent inches to my height. She was almost tall—that girl who returned my stare into the mirror; and correct, surprisingly—far too correct to be me! "It's faking!" I protested, and picked up a tiny strand of strictly débutante pearls, which had been given me for my birthday.

I let them trickle through my fingers, gleaming like dewdrops in moonlight, and then put them on. Bah! Utterly out of place, the delicate things, against a throat strong, muscular and brown! Raising discontented eyes, I beheld Yvonne, the temptress, with extended powder puff. I shook my head and snapped the clasp to. Saving my coiffure, as to which I had been allowed no say, I was determined to stand on my own merits; to be displayed—like an article put up for auction—"as is." After all, the pearls were as well suited to me as the rest of my surroundings.

In white, with an aura of tulle, I made my way to mother's room and offered myself for inspection. While it lasted my heart was in my mouth. When at length she said solemnly "I've never seen you look so well!" it fell back into place. She was not ashamed of me, then. That would make the ordeal far easier. That it was to be an ordeal I had no manner of doubt. The situation was one I could not possibly dominate as I had dominated the theater party of girls. It was too big for me.

Toward eleven o'clock we took our stand at the drawing-room door. Shortly after, the oldest and most important personages—always the earliest—began to arrive. They came by twos and threes at first, then by tens and dozens. Their glances were critical; their handclasps cold. Within half an hour they had reduced me spiritually to pulp. My spine had become a string; my pretty white dress seemed a rag; and my whole personality a hopeless proposition. It was not that they were intentionally cruel. Safe within the shells of self-importance they had provided themselves with to walk about in they felt no shafts from without, and supposed others equally invulnerable.

Would younger people never begin to come? I wondered. What had these dowagers to do with dancing? Whose entertainment was this, anyway—mother's or mine? It was fully ten minutes since any gloved fingers had touched my own; so I felt free to leave my post beside mother, near the door, and look into the ballroom. There the orchestra's spirited playing still invited in vain. Brocaded trains swept the polished floor; diamonds glittered; feather fans swung deliberately to and fro. What men

particularly offensive bulge, I was recalled by a light step behind; and, turning, I caught my breath at sight of John Randall, likewise in a white waistcoat with a glorious inward curve. The look of merry anticipation in his face was new to me; the eyes that could be so serious were actually snapping to ragtime!

"Try this!" he suggested succinctly, and we took up the rhythm in the middle of a beat.

"I didn't know you danced," I murmured. "How delicious!"

Perhaps I was prejudiced in his favor, but he seemed to me to dance divinely. Closing my eyes I gave myself up to the joy of it. I did not know whether any other couple was on the floor. Suddenly I felt my partner's muscles tighten, his pace falter. Somebody was about to cut in.

I opened my eyes upon Allan, smiling with an air of ownership, hands outstretched. He was within his rights, his act strictly in accord with the dancer's code. With entire propriety he might thus have claimed any girl he knew. I could not do otherwise than suffer him to swing me away. Allan Denning—jealous! Furious though I was at the interruption I was flattered too.

"You might have let me finish it out," I grumbled, "instead of snatching away my cake in the middle of a bite."

"Had to obey orders," he laughed, slowing down as we neared the door. "You shouldn't have bolted just then, you know. No end of people coming in. Young people. Your mother sent me to bring you back."

Then it wasn't jealousy. How flat! He hadn't come of his own accord. He'd been sent. There was nothing to be furious about. I was furious that there wasn't. He was a half-hearted lover, this lover of mine. The momentary tang had gone out of the evening, to return no more.

I had always supposed society to be exclusive; but the last few months had taught me otherwise. Mother had followed, upon this occasion, the generally recognized custom, which prevails among metropolitan hostesses, of inviting to their houses not only the young men they know personally but also those they know about. The Social Secretary had furnished the names, and the majority of those who answered to them had materialized during the evening, been presented, and done what was expected of them—namely, taken me for a turn. Some had overlooked the implied obligation, and were merely making a convenience of the house as offering certain advantages over a public dance hall. For one thing, the champagne was free.

I looked about everywhere for Randall, though I knew I was looking in vain. He had gone. What else was there for him to do when I was snatched away? He did not know any of the other girls. He had only come because I had asked him. This festivity was none of his—nor of mine, for that matter. But it had served its purpose. In half a dance we had found each other as dancing partners. Half a bar would have sufficed. Those who had danced together once could dance together again—and again—and again. We had danced to-night in a ballroom; but a studio would do as well. And, given two pairs of eager feet, a fiddle was as good as a stringed orchestra—every bit.

Once, while I was waltzing with Allan, I forgot Randall altogether; and then suddenly I felt something sharp and hard against my breast. Could it be a button? A waistcoat button? Released upon cessation of the music, I examined his outline with apprehensive eyes. N-no; no actual bulge—as yet. And oh, how handsome he was! Not so half-hearted, either, after a few digressions to the corridor, where the footmen were kept busy filling glass after glass. But I was in no mood for love-making that required artificial stimulus to give it a fillip. I refused his invitation to supper in favor of that of a black-browed count with a limited vocabulary and a curling wiry beard.

At length people grew tired of eating. Napkins were thrown aside; chairs pushed away; the elderly had had enough—they were ready to say good night. According to precedent the dancers returned to the ballroom for more dancing; then the music stopped, as music must; and everybody went home.

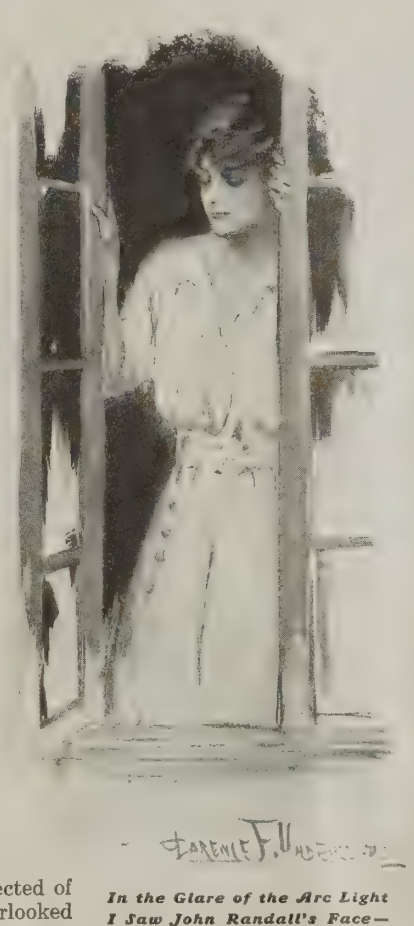
Mother disappeared to give some orders, and I was left in the great glittering drawing-room serving now no purpose, since it was meant for entertaining and there was no one left to entertain. The flowers were all drooping; and as for me, the toes of my slippers were soiled and crumpled, my tulle had wilted, my hair was coming down.

It was over! No need to stand here any longer. The deed was done. I was "out"!

When I passed into the hall the men were waiting there, motionless, to extinguish the lights. Slipping by them I ran upstairs.

There was no doubt of it; by coming out I had acquired merit with mother. From the evening of my début my status was changed. After the manner of a son who has attained his majority, I was now a person of importance in the house. I received more attention than I demanded, and was accorded a larger measure of consideration than I either desired or deserved. Luckily I had a good memory for the lean years behind and thus preserved some measure of equilibrium. They were such a little way behind—those years—just round the turning in the road! My feet had traveled that uphill road alone.

Lately mother had seen fit to resume what, to her, was motherhood; it was like a garment long discarded and left to hang in a remote corner of the closet until such time as occasion should demand that it be brought forth, shaken and aired. The result of such resumption had not displeased her. It lent a new attribute to her personality; added an element of surprise. It supplemented her and admitted of fresh combinations. It was a better fit than she had reason to expect.



In the Glare of the Arc Light I Saw John Randall's Face—Off Guard

A débutante must be heart-free. Therefore, my engagement was in abeyance; it had degenerated into a thing of naught. All summer I had been allowed to be constantly in Allan Denning's company; now I never saw him alone. I submitted because I had offered to submit, but I chafed exceedingly, and thought only of getting over the tiresome months between now and the moment of my release.

Meantime, at least, time was not hanging on my hands. During the remainder of the month of December the coming-out teas and dances were as thick as weddings in June, and I attended them all. On the whole, the teas were preferable to the balls. I was invariably crushed and breathless, it was true. On one occasion mother and I were wedged on a stairway and could not move up or down for three-quarters of an hour—I saw nobody I wanted to see and everybody I didn't—but, though I was as acutely uncomfortable as one of a crowd of trippers jamming an excursion boat, I had as personal a feeling as they of adding to the jollity of the occasion—helping things along.

One tea is pretty much like another. It does not admit of apprehension and excitement for months and even years beforehand. It can be weathered without undue mental strain, with no graver consequences than a good-sized bill at the florist's and a few sandwiches left over at the end of the day.

By the twentieth of the month everybody had come out who was coming. Then occurred the interlude of the holidays, after which the actual season broke. You supped at one ball and you breakfasted at another; if you did not keep going you were not having a good time. I would bolt my eggs and coffee early in the morning with the others, and then, before I got into the motor with my maid, stand for an instant in the street, eyes on the glowing east, despising myself, my rumpled frock, my soiled slippers, so tawdry in the portentous hush of the new day.

Once, to make my peace with it, having arrived at home, I wished Yvonne good night, dumped my finery in the middle of the floor, and, dressed in an old school Tam, a rough skirt and a sweater, went out again alone. I encountered an old Irishman—a night watchman, I judged—with iron-gray hair and majestic presence, who looked at me without surprise and inclined his head gravely, as to a fellow worker in the world. Nothing for weeks had so stirred me as this assumption. My heart blessed him as I passed and my eyes gave the countersign.

There was no sleep for me that night—or, rather, that morning. I had recovered the insight with which I had come back from boarding school, and which I had somehow lost since. My relation to the life I was leading was crystal-clear to me. I was and always should be a rank outsider. I felt no scorn for mother's point of view; but it was not and never could be mine. Sooner or later I must be free of these surroundings. It was no more possible for me to adapt myself to them than for a fish to adapt itself to life out of water.

Things had worked themselves out according to my expectation, with one exception. I had warned myself not to fall in love within the walls. Poor little fool that I d been for my pains! Treasure is treasure, in one place r another; and it was well within the inclosure that I d stumbled upon mine. Well, there was nothing for it bu o gather it up and stagger forth with it upon the highwa

In plain words I was going to get out; but I was go g to carry Allan Denning along with me—when the time l d come. I had learned enough to know that it would be h d to uproot him; that it would be myself who would have o take the initiative. Well, I was equal to the task. Out f dead air into air that was in motion I would sweep hi ; he would draw great drafts of it into his lungs, and af r that he would never want to go back. Together we wo i tackle the road that wound uphill all the way—yes, the very end!

I thrilled at the thought of it; I felt his hand in mi ; all the trivialities that had kept us apart melted i nothing; tears started to my eyes; my lips breathed name. I must see him this very day—and not over t teacups, either; I was done with pretense, so far as he w concerned. He was mine and I was his; and if we w to play the farce out for the benefit of the public we mi be fortified between scenes by a little concentrated livi and loving, to keep our courage up.

I was just going to sit down and write him an urge summons when my tooth began to ache. I had two rows exceedingly serviceable teeth and had never had a toot ache in my life; but this one started as though it mea business. It exacted the strictest attention; I laid my p down and sat, taut and dismayed, hand on cheek. Impo sible to idle in a negligee, boudoir cap and slippers, with red-hot iron in my mouth!

I dressed hastily and rang for a maid to accompany r to Doctor Read's, to seek alleviation; for, though in n real character I might walk abroad safely at sunrise, in n assumed one it was not permissible to go unaccompani in midmorning. No one responded. Neither maid w listening, for it was not in the regulations that I shou bestir myself before noon. Unable to bear another moment delay, I therefore defied custom and outraged conventi in seeking my destination not only unprotected but b means of public conveyances, taking a transfer, along wi other straphangers, and finishing 'cross-town, directly front of the dentist's door.

Not having made an appointment I was obliged to wai Another patient was "in the chair." After the custom teeth when relief is imminent, mine had ceased to thro so insistently. A little apart from the stale magazines litte ing the table lay a fresh, new copy of Gossip. I picked up out of curiosity, because I knew it was without t pale. At the very first paragraph my heart turned to ic I forced myself to read it through—not once, but thre times:

I have it on good authority that our genial friend, Alla Denning, having had pretty poor sport in salmon fishin last summer took to fishing for minnows at Newport and- by Jove!—landed one right in his hand. In the vernacula every millionairess this side of the Mississippi havi turned him down, last spring on Long Island he unearthe little Miss Innocence, who responded to his rather sho worn charms on the sly. He followed up his advantage Newport, and every day there was a twosome on the link It was a pretty romance, until my young lady's parents g onto it. Then there was the devil to pay! If the girl was t be sacrificed let her be sacrificed to some purpose, the shrieked. There might be money enough to catch a duk if sufficient splurge was made about it. Keep Allan for pet round the house! That was all he was good for, an everybody knew it.

Poor Allan! He'd fixed the girl, but the old folks we too many for him. When he found that out he crawle He adhered to his custom of letting himself be walked ov and kicked. For the twentieth time he went way bac and sat down. He's sitting down now, waiting for the fir works to go out. Then, if the duke doesn't materialize, u he'll step again. It's a long chance he's taking, but it's m guess that it's his last one of anchoring himself to a fortun The girl's spunky enough, I'm told. She's utterly inexpe rienced and he's got her cold. If he doesn't do anythin rash he thinks he can count on her to work things roun We shall see!

At the end of the third reading the letters danced befo me. I swayed to a chair and dropped upon it; the pape clutched in my fingers, sank to my knee slowly, as thoug it had been a thing of weight.

The dentist came in suavely, bowing some woman ou He made sympathetic inquiry as to my trouble, for I wa the daughter of a lucrative patient who had all her filling done in gold. Seeing the paper in my hand he murmured hasty apology for having it about; someone had brough it in and left it, he explained; he had had every intentio of destroying it; it was a scurrilous sheet.

"Scurrilous! Scurrilous! Scurrilous!" ground out th horrid buzz saw, to the jangling of my nerves.

"I don't think it'll bother you any more now," soothe Doctor Read, applying a small square of cheesecloth t my mouth as I lay extended, weak, limp and white; h referred to the tooth.

He watched me narrowly as I went out.

"May I take it?" I asked stonily.

"Take what?"

"That paper."

"Certainly; by all means, Miss West."

There was a colored maid in the dressing room when I put on my hat. She handed me my hatpins and said something about the weather in a low, musical voice. I longed to pour my sorrows into that girl's ears. I was so bewildered that I did not know what to do. I had never thought it was in dentists' offices that idols were shattered and whole structures of the imagination came crashing to the ground.

A man was in front of me at the ticket-office window when I reached the Subway. As he took the change that was shoved toward him I noticed what an extraordinary hand he had; so white, so slim, so nervous—a distinguished hand! He swept up the pile, turned away; and in the act of shoving in my nickel I glanced up. To the disgust of the official in the window, I failed to take the ticket he offered, but, instead, touched the man before me on the arm.

"Mr. Randall!" I said hoarsely.

Startled exceedingly, he turned. It had been no greeting that I had uttered. He had recognized in it a cry for help.

Out of cavernous darkness the express came rushing with its gleaming headlights; but we let it go and made our way back to daylight and the street.

"I've got to talk to someone," I appealed. "I've got to have some advice. Look at this."

I showed him the paragraph. As he read it he grew red and white by turns. At last he turned and looked at me, and in that voice of his, which was capable of as many gradations of expression as his face, he said simply:

"I can't advise you—in this matter. It—wouldn't be giving—the other fellow—a square deal."

And this was the man mother had said was not a gentleman—this the man at whom that "other fellow" had looked askance because he didn't remember having seen him "anywhere" before!

"Isn't there anybody else?" he resumed with an effort. "How about Mrs. Winslow? Couldn't you go to her?"

I seized upon the suggestion and clung to it.

"I'm not going with you," he said. "I might —— I'd better not go."

I descended alone into the cavern, boarded one of the rushing trains, and in short order reached Mrs. Winslow's house. My heart sank when I saw her motor standing in front of it. It must be luncheon time. She was lunching out. There she was now, on the step! I would snatch a hurried word with her—make an appointment. Her eyes lighted when they fell on me.

"Well, Barbara!" she said, saw my agitation, and stopped.

Before I could speak she laid her hand on my arm. I could feel the magnetic current of those fingers through her glove and my sleeve.

"Come in," she said quietly, and turned back to the house.

"Oh, no!" I cried in dismay, being by this time well versed in the paramount importance of engagements and hours to the class of society in which Mrs. Winslow moved.

Nothing short of a death in the family would have kept mother from a bridge party; or, in fact, any appointment made weeks ahead and written down on her pad.

For answer Mrs. Winslow drew her arm through mine, while the footman pressed the bell, and the door swung open.

"You'll be late," I protested. "Or you'll miss it altogether."

"What does that matter?" she returned; and I could detect a faint trace of scorn in the beautiful curve of her lips. "Eldredge shall send a telephone message for me. Come upstairs."

No sooner had the door closed upon us two than all the lines of her proud figure seemed to melt. She turned toward me eagerly, and there was such a look in her dark eyes as I had seen in the eyes of Italian women nursing their babies on the curb. I threw myself into her arms headlong and crumpled up upon her breast.

Not until she had kissed and comforted me, called me "darling"—not sentimentally, but naturally—and quieted me in her arms, did she sit down on the sofa, indicate a big chair for me to draw up near her, and ask me what my trouble was. I unfolded the paper, which I still held, and handed it to her open at the paragraph that referred to Allan Denning. She read it, laid the sheet down on her knee, and remained silent.

Confirmed in my apprehensions by the fact that she withheld comment, I broke into an impromptu defense of the subject of the attack. I pleaded his cause from the beginning in a tumult of broken words and disordered phrases. I talked until I was out of breath, and all the time I realized that I convinced neither her nor myself. I broke off in the middle of a sentence; my lips quivered. I knew I was beaten, and I felt bruised.

As I searched her face for fresh courage I was startled by her resemblance to the portrait. The same compelling look, that gripped and lifted you! Oh, the insight that had pinioned that look on canvas! . . . I felt that we were no longer two in that room, but three. . . . Neither his own will power, nor yet doors nor windows, could keep John Randall out!

"I've always felt sure," Mrs. Winslow said, "that something would save you from the catastrophe of marriage with Allan Denning. It's happened to come from outside; but it might just as well have come from within. You're such a straight thinker—about the straightest I've ever met. You would have ended by realizing that there was no ground upon which you and he could stand together. The things you hold essential he can never grasp the meaning of. You can't expect him to, any more than you can expect him to decipher words written in an unknown tongue."

"Then," I faltered, "the opinion—of the person—who wrote that paragraph—is the same as yours?"

"Essentially it is," she answered. "He's very charming to meet and very good-looking, but you can't get away from the fact that he's a poor thing! If he had great virtues you could forgive him for having great faults. He has neither. Why, Barbara! It would take a hundred of him to make one of you! His nature has an altogether different consistency from yours. It's thin and insipid!"

He Murmured a Hasty Apology for Having the Paper About

"But is he really a fortune hunter?" I asked. "Is he so despicable as that?"

"Quite," she affirmed. "When he was staying with us at Westbury in June he was very attentive to my daughter Ruth. However"—sighing—"Ruth knows how to take care of herself."

My cheeks blazed.

"He said he despised her!" I cried.

"Perhaps he did," she returned; "but he proposed marriage to her none the less."

Words half forgotten came back to me: "I stay here because—because that's the kind of thing we plotters and schemers do. If I'd come in contact—years ago—with a few girls like you I'd have been out of that class long ago. Won't you—help me—to get out of it now?"

Was it after this that he had proposed to the Alvord girl, and been rejected? He had not moved over to us for four days. Had he even then been laying the foundation for plotting and scheming in a fresh channel in case of his failure in this? Was that why he had come to see me in the intervals of his pursuit?

"What shall I do?" I cried. "How shall I tell him?"

"In the fewest possible words," she advised. "Avoid anything in the nature of a scene. You could leave it to your mother, of course."

"That would be cowardly," I replied. "After all, it's my business."

"You're no shirker!" she commented.

When I left her the only thing I had omitted to confide to her was the incident of my meeting with John Randall. Throughout our talk his name had not been mentioned.

Mother was annoyed with me, and her indictment held two counts: First, that I had gone out without a maid; and, second, that I had remained away for hours without notifying her. She had had three "days" to take me to, and my remiss behavior was the topic of our conversation all the afternoon.

It did not occur to her to inquire into the cause of my prolonged absence. Poor mother lived in a confusing world, where phenomena happened arbitrarily, without rime or reason—when they happened at all. When her mental sun set it dropped with a thud below the horizon, unhampered by any natural laws. Therefore, she never got below the outer layer of things.

I went to a dance that evening as usual; and no sooner had I entered the ballroom than I was aware of Allan Denning—the whole five feet eleven of him—leaning against a foolish, frivolous wall of white and gold. Blue of eye, bronze of head, square of shoulders, imposing of height and bulk—all these advantages I conceded him; only so complete had been my disillusionment that I didn't care a snap of my finger any more. They meant exactly nothing to me now.

How lately I had thought him out of his element in a ballroom! I remembered curiously that the blue of his eyes had seemed to me like the shadows on snow when the sun was shining. I had associated him with out of doors. I now saw that I had complicated matters which were, in fact, essentially simple. If Allan had belonged out of doors he would have been there! That was his true element—this his natural setting; here he lived and moved and had his being—amid the artificiality, the champagne, the powder and the pearls.

I might as well tell him right then and there, and get it over. The circumstances were conducive to the avoidance of any sort of scene. He saw me and approached.

"I haven't got the hang of this new step yet," he said easily; "but shall we make a stab at it?"

To his amazement I answered, so low that no one else could hear:

"Allan, something has happened—to convince me—that you don't really care for me. It was—a thing I saw in Gossip. I wanted to tell you—right out—as soon as possible. I only saw it this morning. This is my very first chance."

He paused, thunderstruck, and then muttered, incredulous:

"You don't mean to say you place any reliance on that—vile slander!"

"It's been substantiated," I returned quietly, and looked him steadily in the eyes—those eyes that, so far as I was concerned, might just as well have been stones. They dropped before mine.

With an effort he pulled himself together and bent his handsome head.

"Barbara!" he began. "Little girl! Don't let anyone tell you I'm not crazy about you! Come with me somewhere—anywhere—where I can explain."

"What's the use, Allan?" I returned sadly. "It wouldn't do a bit of good. I've made up my mind."

"Not"—he gasped—"not to throw me over?"

"Just that!" was my grave reply. "After talking with Mrs. Barton Winslow."

He blanched to the roots of his hair. Then he noticed a group of men near the door observing us rather narrowly.

"We can't discuss this here," he whispered hurriedly. "If you won't come outside, dance with me, will you? Only once round! People are looking. They can see that something's up."

I stared, trying to understand him. Either he knew me so little as not to take me seriously, or else he was proposing

THE SOUND OF MILLSTONES

By DONN BYRNE

ILLUSTRATED BY HENRY RALEIGH

FOR five years now he had been looking through the dingy pawnshop window into Second Avenue, and of that time there had not been one month, one week, one day even, but he had been gnawed by a terrible, relentless apathy.

Outside, the avenue ran past the shop southward in a boiling rapid of life. Overhead the elevated clanged by in a continuous rolling, like drums. The line of street hawkers on the curb opposite, with their push-carts loaded with vegetables, with socks, with bed and bedding; the slatternly women and dingy men who swarmed about them, like flies swarming about refuse; the grimy children stumbling against the legs of passers-by; the stuffy look of old furniture places and delicatessen shops; the garish red and white parasols flaunting above stores—all this left an evil sight in his eyes, as there might be an evil taste in his mouth after drinking polluted water.

About the shop itself there was something of a dark and shameful intimacy that appalled him—its dim light; its booths for the reception of customers of the better class; its heavy, shining safe; its scales for weighing wedding rings and jewelry; and worst of all, its license, signed and countersigned by the city officials, that took away from the store its character of being a business and hinted at its being a base predatory thing, having to pay a manner of blackmail for its very existence.

"I Want to Go Away. I'm Sick of the City. I'm Sick of the Pawnshop"

No matter how he turned, something crossed his sight that shamed him. There in the window were the unredeemed pledges offered for sale; women's dresses, relics of ancient glorious days, pledged with a pang of pride and lost in agony; blankets that someone had bought to keep warm of nights and now must go cold without; threescore wedding rings thrust carelessly on a stick; a violin worn where the chin and cheek had cuddled, so lovingly and often had its owner played it; a heap of children's silver presents thrown together carelessly and blackening with tarnish—none of these things were, to his eyes, the stock of legitimate commerce. They were shreds of souls, flayed and torn off in moments of dark tragedy.

A steady stream of customers flowed in and out of his place. An occasional Italian, a few Poles and Magyars, some of his own race, though these were few. For the most part they were the Russian folks of the vicinity—Little Russians, Esthonians, Courlanders and Finns, whitish haired, heavily built, stolid, with dumb eyes. They brought in their clothes, their tools, their little jewelry; and because Ben Harris was generous with loans, was ready to grant extensions of time, and was not overstrict about interest, they liked him. Their stolid eyes would light up with a touch of appreciation and they would nod heavily and say: "Ben Harris! That's one good Jew. If they were all like him in Russia there would be no trouble; no pogroms; no Black Hundreds. Ben is all right."

But he could no longer feel even the thrill of helping out these people, of being as generous as possible toward them. Apathy was eating at his mind and heart as a disease might eat away the body.

Five years now, since he had come out of school, he had been telling his father he wanted to do something in the country, farming preferably. His father had listened carefully, trying to understand.

"But you can't make a good living in the country," old Aaron Harris had told him. "The farmers complain. There isn't anything. Why not business? Why not? Why not?"

One could understand old Aaron Harris saying that, because he was a good and religious man. Following his creed, he was as strict as a Karaite, and no Sabbath of his adult age had passed without his baring his soul in the synagogue. There, hooded, in his striped robe of white and black, he was a prophet and a great man among his race. And because of that, in Kiev, where he had lived as a young man, he had been almost martyred by his race's enemies. He had been forced to huckster and bargain, to let no opportunity for making a penny go by, in order that he might have some single thing solid beneath him—the solidity of money. For him two things existed—the dark mystery of religion and the stark fact of commerce. For him there was no borderland of subtleties, no obscure human tragedies. He stood up with his strong hooked nose and his long, strong, iron-black beard, and he faced the mystery of the next world and the fact of this boldly and courageously.

"For why?" he asked again about the country. "We're not a farming people. We're a business people."

"Not always," his son answered him.

"But why?" old Aaron persisted. "Look at your brothers, how well they are doing! Stephen with his dentistry business. And look at Sam. He has two barber shops and three bootblack stands and the hat-checking in five hotels. And you—you've this business, and will have it when I'm gone. Fine business too. Good situation."

He couldn't tell the old man he didn't want the shop. The father was proud of the shop, which he had built up against a terrible struggle with poverty. But his mother understood. She had come from one of the rural communities in the Crimea, and there was a strain of Tartar blood in her. One saw that from the marked slant to her eyes and her high cheek bones. To her he would speak of the country.

"Fine horses and fine dogs!" she would breathe in ecstatic memory. "Blue grass and the sun on it, and trees! Ay, and the lapping of the water on the Black Sea. I know! I know!"

After her speaking like that, he would go over to Bryant Park, and the look of the grass and the trees with the birds clamoring in them would awaken a terrible nostalgia in his heart.

Perhaps it was the strain the mother had bequeathed him that awoke in him the burning desire for wide free spaces and clean air. Perhaps it was nothing but the ancient country spirit in him that his people had possessed before the Temple walls had crumbled and the Babylonian king had driven them into narrow ghettos and decaying cities. But whatever it was, sitting in that dim city park, with Second Avenue behind him, grim and sordid, and Third Avenue before him, lethargic and deserted, he could see as on a biograph screen visions no foundation for which had ever entered his life: the free movements of horses and the eager jumping of dogs, grass bending before the wind, and the wind from the sea, salt, stinging, turbulent. The visions would trouble him.

He would return home after an hour of that and his mother would talk to him.

"What is it?" she would ask. "What is it, little dove?"

"I want to go away," he would tell her. "I'm sick of the city. I'm sick of the pawnshop. If I can, I want to work somewhere away."

She would look at him carefully, at his slim, strong figure, heavy about the shoulders and the hips; at his broad, blunt hands covered with swarthy hair. From those she would glance into his face, handsome in its dark heavy way, with its strong nose and strong chin and big black eyes with earnestness in them. She would nod her head with pride.

"No one in the country could work like you," she would say. "You are strong and you want to. There is no one as fitted."

"And I would get on with the people, little mother?" he would ask eagerly.

"Why shouldn't you?" she would answer him evasively, but there would be a quick little shadow of fear in her eyes.

"But the old man!" he would object to himself. He knew how it would hurt the old pawnbroker for his son to leave him, and he shrank from it.

"Yes, the old man!" the mother would say with a touch of pathetic tenderness. There was too much fine loyalty in her to be true to her son at the expense of her husband. No, she would not counsel. If the son were to do anything, he should do it himself.

Yes, the old man was the obstacle, he thought to himself. If it hadn't been for the fear of hurting the old man, he would have been in the country three years ago. But in the intervals of attending customers in the pawnshop, of appraising their pledges, of writing out pawn tickets and drying them in sand, and of handing across the counter greasy and torn green bills, he would think of how he might accomplish his dream. There was always in his mind the memory of the night he had met Hosea Tucker, the Long Island farmer, at the restaurant of the Metropole. The farmer was with Regan, one of the bosses of the district. They had been to school together. Regan called the young pawnbroker over and introduced him. Regan had the habit of promiscuous introductions.

"Ben," he announced, "meet my friend, Mr. Tucker. He's a farmer."

Harris glanced shrewdly at the farmer's face. He was a short, squat man, with a reddish-brown beard, reddish-brown hair, and a sly, uncertain look in his eyes. There was a pretentiousness of dress about him, as though he wished to show how much at home he was in a city restaurant, that jarred on the pawnbroker.

"I've just been telling Regan here," the farmer said a little loudly, "that I don't understand why a lot of you young city fellows don't come out and farm. Why, look at you, as sturdily built as any countryman—and more so, I tell you, more so. Aren't you ashamed to spend your life in a store?"

"I am," Harris answered with a smile.

"Why wouldn't you come out and work on a farm?"

"I would." Harris' smile became a trifle longing.

"If you would, you've come to the right man. I'll call your bluff. Come out and work for me." He banged the table.

"You mightn't want me." Harris' smile became a little sardonic.

"What's wrong with you?" The farmer raised his head and looked at him with a sort of elder's contempt. "I don't see anything wrong with you."

"There's nothing wrong with me," the pawnbroker smiled on, "but I'm a Jew."

"Look you here"—the farmer waved a fat hand: "That doesn't cut any ice with me. I'm not prejudiced about that. No, sir! I'm free from that kind of thing. A man's a man in my eyes. Why, do you know"—he raised his voice—"do you know that I've had rabbis come out and preach in our church? Yes, sir! Rabbis! That's how prejudiced I am."

"Well, maybe I'll take you up on that," Harris told him.

And over and over again as he sat in the seat by the window he pictured to himself what life out there would be like. Would the man keep his promise? Not a trustworthy man, Harris judged, but hardly a man to go back on a boast. Vanity would hold him to his bond. Perhaps some day ——

A phrase out of Isaiah, that fierce, terrible old man, came to him once or twice as he dreamed there. Some prophecy of the fall of Zion, that there would be lacking the voice of mirth and the voice of gladness, and there would be lacking the sound of millstones and the light of the candle. How true that had become, he thought with a shade of bitterness. The sound of millstones! And that brought into his mind the vision of corn sprouting green on the blue Asian hills, of its turning little by little into a faint blue and then ripening goldenly. He could hear the whish of the sickle as it was cut, and the thrumming of flails at the threshing; the dull rumble of millstones as it was ground for baking, a loud and harshly harmonious sound that typified the being and end of all agriculture. That was gone. And gone, too, was the mellow golden glint from the tents and houses in the nighttime. The old habits and occupations had gone from his people. No longer were they shepherds in the hills, no longer tillers of the land, no longer owners of fleet horses and sleek kine. Now they tended sordid shops, like this shop of his, this bargaining place for tragedy, and from the hills and valleys of Beulah land they had swarmed into the sordid cañon of Second Avenue. The sound of millstones was silenced and extinct was the lighted candle!

The door of the shop opened with a hollow ping from the bell at the top and an old Italian woman entered. Her hair was white, but she was whiter still in the face, and its lack of color was made more startling by the still bright hues of her faded shawl. She did not lift her feet from the ground, but dragged them across the floor. Harris rose and went to the counter. She pushed a book across to him.

"Three dollars," she said—"three dollars on the book."

He picked the thing up and looked at it, a faded octavo volume, bound cheaply in brown and lettered cheaply in gold. Already the gilt was falling from it, disclosing gray patches in the letters. Lives of the Saints it seemed to be.

"Three dollars?" he said wonderingly. She answered nothing. She seemed to choke silently.

He looked at the flyleaf: "To Beppo Galli, from Father Tom, on his first communion, May 1, 1889." Beppo Galli? Beppo Galli? Who the deuce was Beppo Galli? Suddenly it dawned on him—and his skin pricked with a shiver, as though on a June day a snowing wind had enveloped him strangely—that the Beppo Galli of the book was Beppo Galli the gunman who was to be electrocuted for murder on the morrow. They looked at each other tragically across the counter.

"My boy," she said.

"God!" he breathed.

"Three dollars on the book," she pleaded, still with dignity. "I'll come back for it. Yes, sure. I'll come back. My boy's book."

He couldn't pick the words to say to her. He was hypnotized for the moment by the figure before him, so ghastlily tragic it was.

"I go up to-day," she went on in a trembling monotone. "I bring him something from his mother. A little bottle of wine. A few cakes. Just something from me. Three dollars. I'll come back. I'll come back for the book."

He got a ten-dollar bill from his pocket and thrust it toward her.

"I'll come back for the book. Give me the ticket, the ticket for the book."

He handed the book back.

"I can't," he said. "That's all right."

She began crying softly and speaking as if to herself.

"And from a Jew!" he heard her say. He slipped away to the back of the shop and stayed there until he heard the ping of the bell.

His father came up behind him.

"Not business, Benny," he reproved gently; "that was not business."

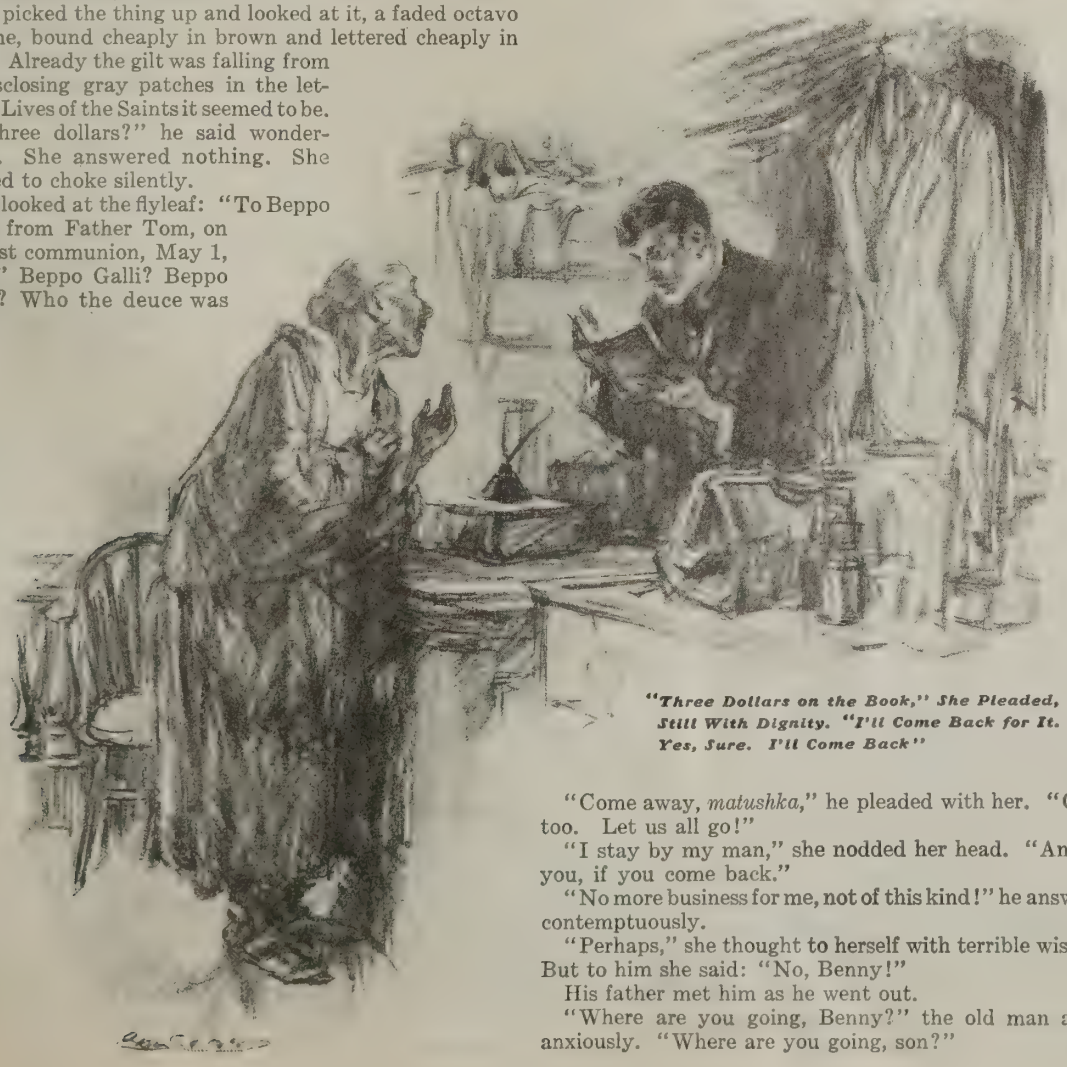
"How not?" the son answered shortly.

"To give her the money, Benny, that was fine. I do it myself. But, Benny, keep the book—you get the money back. That was business."

"That was business, was it?" He went toward the stairs at the back. "Well then, I'm through with business," he uttered savagely.

His mother came to him in his room, when he was packing a bag.

"Going away, *galoupshik*, going away?" she crooned. "The dogs and the horses! The wind amidst the grass!"



"Three Dollars on the Book," She Pleaded, Still With Dignity. "I'll Come Back for It. Yes, Sure. I'll Come Back"

"Come away, *matushka*," he pleaded with her. "Come too. Let us all go!"

"I stay by my man," she nodded her head. "And for you, if you come back."

"No more business for me, not of this kind!" he answered contemptuously.

"Perhaps," she thought to herself with terrible wisdom. But to him she said: "No, Benny!"

His father met him as he went out.

"Where are you going, Benny?" the old man asked anxiously. "Where are you going, son?"

"I am Going to Ask You to Marry Me, Mildred," He Told Her With Simple Directness

He dropped the bag for an instant and threw his arms out exultingly. His voice rang like a bell.

"I am going away, *batushka*," he answered. "My little father, I am going away. I am going to hear the sound of millstones."

II

IF YOU pass along the sea road from New York to Riverhead you cannot miss the old Tucker homestead at Setauket. A little to the left you will find it, a square-built white house, low-eaved, heavy-porched, hemmed about by tall, slim elm trees. Right and left of it the ground rolls like a heavy-swelling sea, rising back of it to a sheer brown earth cliff, beneath which is the Sound, a white pebbly beach and a haze of blue water, with the dun vista of Connecticut beyond it, like a bank of threatening cloud—and always something between them: a cargo boat with a smudge of brown smoke from her stacks; a schooner with her four jibs bellying to the breeze; a sloop, scuppers down; a line of barges like a school of porpoise.

On the square-built colonial porch Hosea Tucker received him. There was something in the man's foxlike eyes and hair that jarred on Harris more in his new surroundings than it had done in the Metropole. He seemed out of place in all this fresh world, so confiding, so natural, so sweet. The old farmer had thrown his head back slyly.

"So you came down for a summer holiday," he said shrewdly. "You came down to put one over on old Hosea."

"I came down, Mr. Tucker, to work," Harris answered succinctly. "I came down for no holiday. I'll work as hard in winter as I'll work now. You offered me a job and here I am. Do you want me?"

"Hosea Tucker never went back on his word," the farmer told him. "If you want work you'll have it. When I say a thing I mean it."

"That suits me," Harris told him.

It suited Tucker, too, after a few days, when he saw how much in earnest young Harris was. He showed him about the big byres, where the dozen cows were that were to be cleaned every day. He taught him how to milk them, and showed him the different breeds—the big, fine-boned Ayreshires, dappled in white and red; the tractable Jerseys, yellow like buttercups; the Holsteins, rugged cattle and great milkers, with their irregular markings; the few Dutch, with their peculiar belts of white. He showed how to harness and drive a team, for part of his work, after helping to gather the garden produce, was to drive in to the station. That and a thousand jobs constituted his day.

"You're wanting to work on a farm," Hosea told him. "Well, it ain't no picnic. What do you think of it?"

"It suits me," was all Harris answered.

On Second Avenue he had been somewhat of a dude in dress, inclining, with a touch of Oriental grandiosity, to marvelous vests and tight-fitting clothes, and it astonished him how glad he was to put all that aside and clothe himself in a flannel shirt and khaki trousers. He had never believed a human being could be so tired as he was after a day's work about the farm. At nine he was asleep in the low, gabled attic that had been given him, a bare, healthy room, with the salt Sound breezes blowing through it. On Second Avenue he had been in the habit of lying awake at night full of bitterness, but here something was lulling him to sleep with the drowsy cadence of a cradle song.

"The sound of millstones," he would say to himself.

He had come down with a peculiar feeling toward the people he was coming among, the feeling of a sentry who

War Prices

FOOD in the United States is not likely to be much cheaper before harvest. If Germany should shut off exports a decline might be expected; but few unbiased people are building upon such an expectation. If the United States were engaged extensively in war a still further rise in all commodity prices would be probable.

Present prices of food are due much less to shortage of production than to war. Last year's production, though notably less than that of the year before, would not have brought the present prices if it had fallen in normal times. In spite of all economies, voluntary and enforced, war on the European scale seems to involve no decrease in consumption of foodstuffs by the total belligerent populations, and perhaps to involve an absolute increase; while the great expansion of currency and credits forces all prices upward. Pretty nearly every basic commodity, the world over, is now selling at a level that would have been thought impossible a few years ago.

This is where war financing and war economics have been least successful. They have found money and materials on a prodigious scale, but they have not prevented a huge and calamitous price derangement. The trend has been upward from the first; and another great nation buying for war and issuing credits would probably accelerate the movement. It is contended that if every belligerent nation had resorted to taxation in the most drastic possible fashion, thereby meeting a very considerable part of the cost of the war, prices would have been much less affected and the cost of the war would thereby have been notably decreased.

On the economic side, war prices present a problem still to be solved.

Something Else to Buy

A BRITISH committee that is promoting thrift has been taking opinions as to the desirability of dispensing with all retail-shop-window displays—the idea being, of course, to remove all suggestions for spending money except such as come from the natural promptings of cold and hunger. Opinions of London merchants are decidedly unfavorable to the idea, and it does undoubtedly go to an unreasonable extreme.

On the other hand, in times of peace the suggestions to spend outnumber the suggestions to save a hundred to one. Any retail street offers to the eye ten thousand ways of disposing of the money in one's pocket; while if one seeks a way of keeping the money he has to hunt it up.

Recently some well-known men in New York organized a company that proposes to buy government and municipal bonds, deposit them with a trustee, and issue against them savings certificates in denominations as low as ten dollars, which, in coöperation with department stores, cigar shops, drug stores, and so on, will be offered for sale as nearly as possible wherever people go to spend money, so the man or woman with ten spendable dollars will have right at hand the suggestion that it may be safely and conveniently disposed of without exchanging it for merchandise.

The chief objection to the plan is that ten dollars is too high a minimum unit. Probably a combination of savings banks could work out a scheme whereby savings certificates for as little as one dollar could be had in any city as conveniently, say, as a bundle of cigars or a round of drinks—and the fact that they were obtainable could be kept constantly in the public's eye.

True, there would be little or no direct profit to those who issued the certificates or sold them, but the indirect profit, in the long run, might be large.

Food Riots

AT A TIME when the supply of food in the country was sufficient for its consumptive needs, and of various sorts of food there was a fair surplus for export, many poor families in New York, Philadelphia, and even Chicago, were actually going hungry because their income would not procure a fair meal of the simplest, commonest kinds of food. On the East Side in New York potatoes and onions became unattainable luxuries for enraged housewives, who threatened to wreck the City Hall.

That situation was a fault of distribution; and with any sort of adequate organization of food distribution it would never have happened. It is safe to say that if the supplying of potatoes and onions to the East Side had been in the hands of the Oil Trust, or the Steel Trust, there might have been mutterings over high prices; but there would have been no famine and no food riots.

Blaming food speculators only touches the surface. Commission merchants reported that farmers were holding potatoes, for which they were offered ten dollars a barrel, in hope of getting twelve. And when farmers held potatoes at ten dollars a barrel they were simply trying to get even for the years when they sold their potatoes and onions at less than cost of production, or saw them rot because they would not pay marketing charges. In those years producers were victimized by a haphazard distributing system.

Congress and various state and city governments immediately launched investigations, and a good many radical remedies, such as embargoes and commandeering food supplies, were proposed or undertaken. We have long believed that the right and only permanent cure for a bad system of distributing foodstuffs lies in coöperation.

Coöperation by producers has been tried many times, and has always been helpful when it was intelligently managed. Coöperation by consumers has also been tried many times, and has failed much oftener than it has succeeded, though abroad it has scored great successes. But, even without consumers' coöperation, intelligently managed coöperation by producers could so far control the business as to cure its worst faults.

Newspaper Men

THE New York Stock Exchange has solemnly condemned the employment by brokers of newspaper reporters for the purpose of getting tips or advance information of news developments. This is generally regarded as a righteous judgment; and, with it as a text, many fine little homilies have been printed concerning the sacred duty of the reporter to preserve inviolate all the trusts that are reposed in him. He must not betray a confidential source of news; above all, he must not betray his paper. It is generally noted, also, that, with amazingly rare exceptions, the reporter does live up to the exacting code of honor which these homilies prescribe.

All of which reminds us that some years ago the proprietor of a very rich and powerful metropolitan paper sent for a young reporter whose enterprise and ability had attracted his attention. The proprietor said he was about to appoint a new financial editor and had considered the young man very favorably for that responsible position; but inasmuch as the financial editor of his paper would have it always in his power to influence stock-market operations, and would be constantly exposed to temptations to use that power for somebody's gain, he wished a specific pledge that the appointee would have no connection with any broker or operator in stocks, no source of gain or income whatever outside his salary, and would never, on any account, buy or sell stocks. To the man—he added—who would discharge the exacting and difficult duties of the position with sound judgment, unremitting industry and scrupulous fidelity, he would pay fifty dollars a week.

Much is expected of the reporter—among other things, the ability to live mostly on wind, with occasional editorial commendation of his honorable record in resisting temptations to augment his modest wage by connections which the editor would disapprove.

The French Income Tax

IN JULY, 1914, France adopted the sketch, or skeleton, of an income tax. The law has now been amended, reducing the exemption to six hundred dollars and increasing the rates on a graduated scale. Incomes between six hundred and sixteen hundred dollars pay one per cent; those from sixteen to twenty-four hundred pay two per cent—and so on until the maximum rate of ten per cent is reached at thirty thousand dollars.

Compared with the British rate of twenty-five per ce on incomes above ten thousand dollars this is a moder impost; yet the low exemption will bring within the sco of the law a great part of that portion of the populati which is able materially to support the government. T exemption is one-fifth of ours, or less than a fifth in t case of a married man.

British experience shows that a tax which catch incomes above the bread-and-butter line and accretions the value of property may be made the mainstay of a go ernment's fiscal system. Probably France is moving that direction.

Our income tax is only a sketch, or skeleton. It is tr that the mainstay of the fiscal system of the United Stat is the general property tax, which produces much mo public revenue than any other single source. The amou at present is probably a billion and a half dollars, and in great many cases this tax falls more heavily on people small means than a graduated income tax with a very lo exemption would. We do not let off the person of sm means if he is a property owner. Nevertheless, the Gover ment ought to have a return as to all incomes above a tho sand dollars a year. The data would supply the basis f a better fiscal system than we now have.

New Competitors

THE great prosperity this country has enjoyed for tw years was thrown into its lap without effort on its par War gave us virtually a rich monopoly. We have bee selling almost without competition to customers who we obliged to buy on whatever terms they could get. It is doub ful whether our industrial equipment, on the whole, is mo efficient or better organized than it was three years ago.

Meantime industry among our chief competitors ha undergone a revolution for which there is no parallel. Eng land and France, especially, have been compelled to ove haul all their processes of production and distribution in way never before thought of. They are unquestionabl manufacturing and distributing with much greater eff ciency than before the war. Perhaps the most significar item in our exports is the one embracing labor-savin American machinery. Though the drastically reorganize plant is now largely engaged with war trade, it will b available for peace trade.

This, in our opinion, is the outstanding fact. Our tre mendous gold reserve and strong financial position ge erally are advantages, certainly. The rebuilding tha Europe will have to do, possibly with a shortage of capita and even of labor, will give us certain immediate advan tages. But our relative position in international trad after the war will finally turn on whether we can make an market the goods more cheaply than our big competitor can. Probably our domestic position will finally turn in n small degree upon that question.

We ought to be systematically going after the deadwoo in production and distribution. Cursory investigations b the Federal Trade Commission have indicated that ther is plenty of it.

War and Socialism
